It has been said that in our orchard districts of the great northwest we waste enough fruit which, if properly utilized in the manufacture of byproducts, would make a reasonable profit. This has been discussed so much that it seems superfluous to refer to it again, and yet as the packing season comes on, and as I have gone out over the country watching the orchardists prepare to market their fruits, I am impressed as never before that we will never permanently succeed until we devise some plan of utilizing that part of our crop which is generally wasted. Of course, we waste in many ways that are not related especially to the fruit business. I believe one of the great wastes of humanity in general is the waste of time, but war conditions are correcting that. The second is the waste of talent, in doing that for which we are not mentally adapted. The third is the waste of money in buying what does not produce permanent good. Few persons are careful about the proper use of hours and moments as they pass.

It is not popular now to utilize child labor, and yet if the ability of the child is taken into consideration and if it is given work to which it is adapted, especially on the farm, child labor is not an evil, but is a positive benefit in its development of the child.

Another waste is in the employment of persons to do things for which they are not adapted. For instance, I know a man who employs from a dozen to 20 persons in handling his fruit. He prides himself on being able to put his fruit into the market at less expense than any other person in his community. How does he do it? He studies his men and studies his work and endeavors to give each and every person employed that work for which they are by strength, nature and intelligence best adapted. By these means he will save not less than 5 cents a box on apples and 2 1-2 cents on peaches that his neighbors will not save because they do not know how to manage their help. The waste of fruit in the orchard is not the only waste; but it is the great waste in orchard work which we must, if we are successful in the future, prevent.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Dreams the Uncensored Moves of Your Subconscious Self

Dr. Hirshberg

There is at least one narrow difference between a dream and a waking state. In dreams the mental output is less likely to be corrected by rewards and punishments, trials, errors or the guidance of real impressions outside the mind. Reveries are dreams. There is no real difference between them.

Thoughts in the waking state only run riot in those who close their senses to realities, as certain enthusiastic theorists or especially crazy people. In general, the thoughts in the average persons are straightened out soon or later by the hard knocks of the world, commonly called "unkind fate."

Obviously, a dream in a healthy persons is made up in part from realities, which the memory has stored away logically and reasonably, and a complex tissue of wishes, fears, preferences and fancies unchecked and unguided.

Recently a young girl was referred to me with the complaint of intermittent attacks of emotional distress. For three or four years she had exhibited almost daily spells of crying and depression. These would disappear after a few hours only to return again.

She told me she had every reason in the world to be happy. Her home life and her occupation were most pleasant and she had everything that a fond heart could wish.

Her dreams finally gave the clue to her difficulties. She never had the same dream twice, but her dreams partook more or less of the same nature. In them she was lured away and rescued by her brother, or she was dragged away to a dungeon and tortured by criminals.

A Memory Cause.

If the all-too-universal theory of Dr. Sigmund Freud were correct this would mean a psycho-analysis or to be tortured by Ali Baba and his Forty Thieves. Or, perchance, she was afraid that she might suffer some such unhappy realities.

A rigid psycho-analysis of this case brought out the fact that four years ago she had been put through the third degree sweating process by detectives. At that time she was scarcely more than 15 years of age, and was employed by a man who had made off with some money by dispatching the girl to the bank with a package of useless paper and then accusing the poor child of the felony.

Several days of torture and suspicion directed against the girl almost undermined her glandular and emotional as innocent and given many voluble apologies, her mind did what most sane minds do, pressed out of her consciousness all memory of the terrifying experience.

Not so her dreams. There, unbidden and uncontrolled, the hidden fear burst forth like a phantasmagoria of melodramas—almost tragedies. Aroused and thus built-up in a sequence these led to the discovery of the ordeal of four years ago.

Often a Relief.

A repressed pain, mental or emotional, thus stored away in the unconscious recesses of the individual, is like a thorn in the flesh not reachable from the surface. It pricks into the physical and moral fiber of the individual like a deadly sore. Once, however, it is brought to light and on the surface, the discovery and full recognition of its irritant source in a large measure removes the evil. My patient was thus, through her dreams, relieved of mental and emotional distress of several years standing.

Tree Growing From Telephone Pole.

New Orleans has a live oak tree growing out of a cedar telephone pole. The tree, which is probably four years old, is three or four feet long. It is believed that an acorn blew into a hole which had been made in the pole when the limbs were cut off.

All the World's a Stage, and All the Men and Women Merely Players

Washing Dishes at Camp Lewis

After each meal the men at Camp Lewis wash their mess kits, which consist of plate, cup, knife, fork and spoon. Two caldrons of hot water are provided, the first for washing and the second for rinsing. They have their own tea towels for drying the utensils. Captain J. H. Como is camp quartermaster. His department feeds, outfits and subsists the men gathered here to be trained and sent forward to fight for Uncle Sam.

Wash Day in Camp

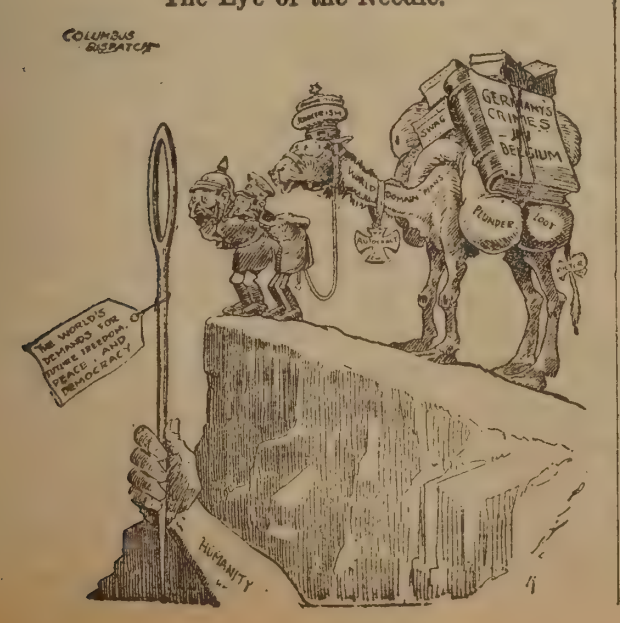
The above picture gives some idea of wash day in camp, American Lake, where about 45,000 of Uncle Sam's nephews are to be gathered. Night life at Camp Lewis is reported to be very quiet. Most everybody is tired after the day's work. Hundreds of men may be seen every night sitting on the benches and talking, or writing letters at the tables. The candy counter is busy all the time, but even this closes early and the boys trudge across the grounds to barracks, for lights go out at 10 o'clock.

Battle Training Is Intensive

Copyright by International.

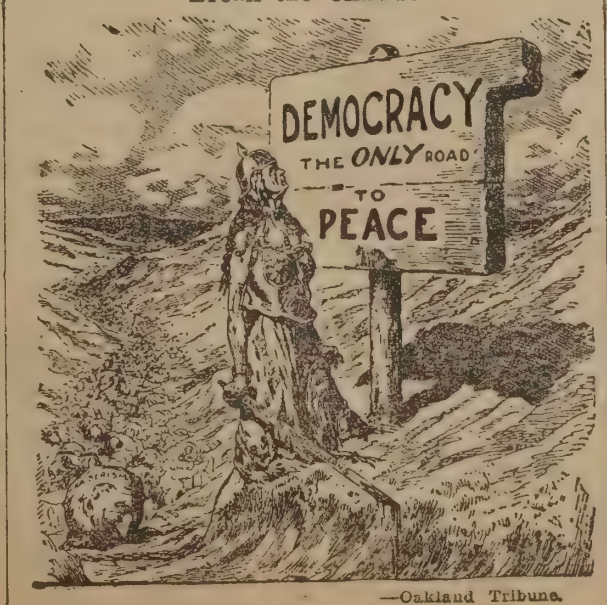
Section of a French training camp, showing the soldiers at work practicing the throwing of hand grenades and practicing bayonet fighting. The French train their men under conditions as nearly like those of actual war as possible. American troops in France are undergoing similar intensive training.

Major General Greene.



The above is a picture of Major General H. A. Greene, the commanding officer at Camp Lewis. The men see very little of Major General Greene. Three or four brigadier generals create some stir as they move around camp, but a colonel or a major gets only a ripple. Captains are so common as to be hardly noticed, and lieutenants pass unnoticed. There are plenty of sergeants and no one pays any attention unless their top sergeant goes by.

Made Record in Endurance Test



Christian Christiansen, of Swedish origin and retaining many of the old Viking qualities, has just made a new record in a versatile athletic test in California. Christiansen rode a bicycle for a mile, ran a mile, swam a mile, walked a mile and rowed a mile. He made five miles in the five different methods in 54 minutes 46 2-5 seconds.

Success of Whatcom County Fair

Exhibits Would Have Done Honor to Any County in U. S.

Two hundred automobiles were lined up in a pouring rain outside the Lynden fairgrounds Thursday of fair week, while their owners took in the races and inspected the various exhibits. This incident is quoted for two reasons: First, to emphasize the fact that Whatcom county farmers look with considerable favor on the automobile as a means of conveyance; and second, that a little thing like rain can't keep them away from the fair.

In any case, the fair of this year, which was held from September 25 to 29, was well worth whatever it cost any individual spectator, either in time, trouble or money. The agricultural and horticultural displays would have done honor to any county in the United States, while the thrifty cattle, hogs and chickens showed that Whatcom county is rapidly becoming a live stock community. The influence of the world war could be traced in many directions—in the talk of the various groups, for one thing, and in the quality and quantity of the vegetables, for another.

Probably potatoes were the dominant note in the horticultural building. They were of all shapes, sizes and varieties, but the gradual growth in favor of the long white potato advocated alike by county agents and by city buyers was quite evident. While a time will never come when potato production will be limited to this one type, in all probability, the Lynden exhibit seemed to indicate a tendency in that direction.

Two other exhibits of unusual value and interest housed in the horticultural building were the display of Washington flax, raised by Dr. Thornton, and an excellent display of field corn, both ears and stalks. This has been an off season for corn in western Washington, but nobody would have believed it, after looking at the bundles of 12 and 15 foot silage corn and the tables of solidly filled and well shaped ears. Dr. Thornton's flax display carried the fiber plant from its crude state to the finished product. Even a spinning wheel was included, to make the exhibit complete.

The poultry building was well filled, White Leghorns as usual taking first place for the number of entries, with Rhode Island Reds, Barred and Buff Rocks, and Orpingtons all well represented. A feature of this year's poultry show was the introduction of utility judging, in addition to the awarding of prizes on show points. Millard Caylor was the utility judge, while Judge Breed placed the ribbons in the show clasess.

The western Washington experiment station maintained an exhibit and as usual Professor Shoupe was surrounded with a good sized crowd from opening to closing time. This year the experiment station is featuring the advantages of eggs preserved by the water glass or lime water methods. Eggs preserved by the different methods were shown in the candler. Three striking points were brought out by this exhibit: First, lime water produces as good results as does the better advertised water glass method; second, fertile eggs kept as well as sterile eggs, when preserved in this way; and third, grease preservatives are distinctly inferior to the lime water or water glass methods.

Further and authoritative particulars of the lime water method of preseving eggs will be given in an early numbe of The Farmer.

Honors as to the numbers of entries in the cow barn were pretty equally divided between the Holsteins and Jerseys. Whatcom county, especially in the Lynden district, runs quite strongly to Jerseys and Guernseys. Among the most noticeable single exhibits in this department were A. E. Smith's "Milkyway Farm" Holsteins and Nels Jacobson's Guernseys. Professor Price of Pullman judged the cattle.

Explains Land Bank

(Continued from page three.)

signed for farmers, then all legislation that ever came out of congress or state legislatures is class legislation. No legislation can equally affect every man, woman and child throughout the country. There seems to be a tendency to look at this act from an entirely different angle than other legislation. Legislation affecting other industries is not class legislation because it is for the benefit of these industries. The fact that those engaged in them are benefited is not considered material. But the federal farm loan act, which was designed to place our basic industry on a sound financial foundation, is class legislation for the sole reason that it benefits the farmer. The weakness in this logic is too patent for argument."

The speaker then turned to criticisms of the law coming largely from farmers:

"Fault is also found with the act in that it does not make provision for short term seasonal credit. The most charitable view of this criticism is that it is due to an ignorance of the principles involved. Land credit, or long term mortgage credit, involves fixed capital It is a problem of investment finance and can be met only through the issuing of long term bonds, based upon fixed security. Short term seasonal credit, on the other hand, involves operating capital. It differs very little in principle from ordinary commercial banking To have attempted to tie up the two forms of credit in one act and to have extended short term credit from funds raised by the sale of bonds would have been the height of financial heresy. Europe, which has made considerable progress in agricultural finance, has drawn a clear line of demarcation between the two types of credit, and in practically no instance are the two covered by one legislative act or handled by one and the same financial institution.

As to Tenant Farmers.

"Still another criticism, which in many respects is deserving of sympathy, is the fact that the act makes no provision for financing the tenant farmer, the landless man, or the insolvent farmer in general. This criticism, too, arises from the failure to distinguish between two distinct problems. Financing the solvent farmer, that is, the farmer who can offer two dollars' worth of security for every dollar he borrows, is a financial problem pure and simple. All the solvent farmer needs is the machinery to place him in a position to compete with other solvent industries for the world's surplus funds. But the tenant farmer, the landless man, or the man who has no readily marketable security to offer for a loan, can not be financed on the same basis. In fact, the insolvent farmer does not present a financial problem at all. His is rather a social and political problem. That there is great need for a system of financing this type of farmer has been brought home to us by the present crisis in our national life. That the problem will eventually be solved I have not the remotest doubt. But what I am trying to impress upon you is that this problem is entirely separate and distinct from the problem which the federal farm loan act has been designed to solve."

President Robinson frankly conceded that the law was not perfect, but said its defects could easily be cured by amendments. The federal reserve act, he reminded the bankers, has been amended a number of times and will continue to be amended as experience and practice may demand.

On the whole, however, he contended, evidence is accumulating that the best opinion—among bankers and farmers alike—has crystalized into the conviction that 'the federal farm loan act is one of the most constructive measures ever passed by congress."

War Brought Home

(Continued from page eleven.)

for placing in the window to advertise the fact that this home is 'Hooverizing.'

"During the week of October 21, acting on instructions from superintendents and teachers, the children will be asked to take home these pledge cards, the pledge card for signing by the parents and to be brought back to the school authorities, the house card of instructions and window card to be left at the home.

"Sunday, October 21, all churches and Sunday schools will be asked to emphasize the necessity of food conservation and the signing of these pledge cards.

"Women's organizations and federated clubs and Boy Scouts will be enlisted for an active part in the final checking up the last few days of the week."

A state executive committee of 30 members has been appointed by Mr. Hebberd to carry through this big week's house to house campaign.

Bay Island Fair.

A good-sized premium list has been issued by the management of the Bay Island fair, which will be held at Picnic Point, Pierce county, September 28-30, inclusive. The board of directors is composed of W. R. Lotz and Mrs. Edith Shaw of Arletta, F. W. Samuelson of Cromwell and R. W. Uhlman, Mrs. A. F. Bailey, T. F. Cowgill and John Frederick of Gig Harbor. This is the first Bay Island fair. The name Bay Island "embraces all the bays and islands in that portion of Pierce county west of the Narrows."

Suits Him Better Than Any

To the Editor: Your paper suits me better than any farm paper I take. I appreciate the market reports and the way you go after grafters and so forth. Yes, and the experiences of so many different farmers in different localities, and many other things.

H. E. YEAGER.
Monroe, Wash.

New Silos in Burley.

C. B. Sprague, county agriculturist of Kitsap county, says that he visited two silos in the course of construction in the Burley district. One was rather a unique venture in silo building. It was a wooden hoop silo, 8x16 feet, built and assembled on the ground while lying down, and then raised up and put in position. Fifteen neighboring men came in to help the raising stunt. The other silo was a tongue-lock design, 10x20, 14 feet of which was up.

Canning Demonstrations.

"We have completed our food conservation demonstrations," says C. A. Cole, county agriculturist of Pierce county. "The canning demonstrations were conducted mostly under the management of the boys' and girls' clubs. Lucian Jones, county club leader, put on most of the work. Demonstrations were held in 20 different localities in the county."

Cut-Over Lands

in the

Upper Columbia Valley

of

Stevens County, Washington

Beginning October 1 we offer for sale several thousand acres of splendid cut-over land in the vicinity of Northport and located on both sides of the Columbia river.

Having unusual transportation facilities and being close to an ample market, these lands offer exceptional opportunities to actual settlers.

We offer these lands in tracts from 40 acres upwards and at very low prices, with easy payments.

Write to us for full information and illustrated booklet.

The Fred B. Grinnell Company

SPOKANE, WASHINGTON.

Driver Agents Wanted

Drive and demonstrate the Bush Car. Pay for it out of your commissions on sales. My agents are making money. Shipments are prompt. Bush Cars guaranteed or money back. 1918 models ready. Write at once for my 48-page catalog and all particulars. Address J. H. Bush, Pres. Dept. 10-PH.

BUSH MOTOR COMPANY, Bush Temple, Chicago, Illinois

The Instant Summons

"Instant, through copse and heath, arose
Bonnets and spears and bended bows;
* * * * *
As if the yawning hill to heaven
A subterranean host had given."

The whistled summons of Roderick Dhu, the hero of Scott's "Lady of the Lake," caused his Highland warriors literally to spring from the earth. Ere the echo died away, from behind bush and rock emerged the loyal and ready clansmen. In armed silence they awaited their chieftain's bidding and typified his might.

Today the Commander-in-Chief of our nation's armed forces and the resources behind them, can, by lifting the telephone receiver, instantaneously set in motion all the vast machinery of warfare, munitions, transportation and food conservation.

Like the Scottish mountaineers, the American people must stand in loyal readiness to perform any service in furtherance of the nation's high aim. Such a spirit of co-operation and sacrificing of individual interests can alone make certain the accomplishment of the great task to which our country is committed.

Copyright, 1908, by Harper & Brothers.

(Continued from page five.)

in the spring and sending them back in the late summer tired and haggard with the hunger of the North. Each year a tithe remained behind, the toll of the trackless places, but the rest went back again and again, and took new brothers with them.

"Did you like the books I sent you with Poleon when he went down to the coast? I borrowed them from Shakespeare George."

The girl laughed. "Of course I did—that is, all but one of them."

"Which one?"

"I think it was called 'The Age of Reason,' or something like that. I didn't get a good look at it, for Father Barnum shrieked when he saw it, then snatched it as if it were afire. He carried it down to the river with the tongs."

"H'm! Now that Ithink of it," said the old man, "Shakespeare grinned when he gave it to me. You see, Poleon ain't much better on the read than Iam, so we never noticed what kind of a book it was.'

"When will Poleon get back, do you suppose?"

"Most any day now, unless the Dawson dance halls are too much for him. It won't take long to sell our skins if what I hear is true."

"What is that?"

"About these Cheechakos. They say there are thousands of tenderfeet up there, and more coming in every day."

"Oh! If I had only been here in time to go with him!" breathed the girl. "I never saw a city. It must be just like Seattle or New York."

Gale shook his head. 'No. There's considerable difference. Some time I'll take you out to the states, and let you see the world—maybe." He uttered the last word in an undertone, as if in self-debate, but the girl was too excited to notice.

"You will take mother, too, and the kiddies, won't you?"

"Of course!"

"Oh! I—I—" The attempt to express what this prospect meant to her was beyond her girlish rapture, but her parted lips and shining eyes told the story to Gale. "And Poleon must go, too. We can't go anywhere without him." The old man smiled down upon her in reassurance. "I wonder what he'll say when he finds the soldiers have come. I wonder if he'll like it."

Gale turned his eyes down stream to the barracks, and noted that the long flag staff had at last been erected. Even as he looked he saw a bundle mounting towards its tip, and then beheld the Stars and Stripes flutter out in the air, while the men below cheered noisily. It was some time before he answered.

"Poleon Doret is like the rest of us men up here in the north. We have taken care of ourselves so far, and I guess we're able to keep it up without the help of a smooth-faced Yankee kid for guardian."

"Lieutenant Burrell isn't a Yankee," said Necia. "He is a blue grass man. He comes from Kentucky."

Her father grunted contemptuously. "I might have known it. Those rebels are a cultus, lazy lot. A regular male man with any ginger in him would shed his coat and go to work, instead of wearing his clothes buttoned up all day. It don't take much 'savvy' to run a handful of thirteen-dollar-a-month soldiers." Necia stirred a bit restlessly, and the trader continued: "It ain't man's work, it's—loafing. If he tries to boss us he'll get quite a surprise."

"He won't try to boss you. He has been sent here to build a military post, and to protect the miners in their own self-government. He won't take any part in their affairs as long as they are conducted peaceably."

Being at a loss for an answer to this unexpected defense, the old man grunted again, with added contempt, while his daughter continued:

"This rush to the upper country has brought in all sorts of people, good, bad—and worse; and the soldiers have been sent to prevent trouble, and to hold things steady till the law can be established. The Canadian Mounted Police are sending all their worst characters down river and our soldiers have been scattered among the American camps for our protection. I think it's fine."

"Where did you learn all this?"

"Lieutenant Burrell told me," she replied; at which her father regarded her keenly. She could not see the curious look in his eyes, nor did she turn when, a moment later, he resumed, in an altered tone:

"I reckon Poleon will bring you something pretty from Dawson, eh?"

"He has never failed to bring me presents, no matter where he came from. Dear old Poleon!" She smiled tenderly. "Do you remember that first day when he drifted, singing, into sight around the bend up yonder? He had paddled his birch-bark from the Chandelar without a thing to eat; hunger and hardship only made him the happier, and the closer he drew his belt the louder he sang."

"He was bound for his 'New Country'!"

"Yes. He didn't know where it lay, but the feet for travel was on him, and so he drifted and sang, as he had drifted and sung from the foot of Lake Le Barge."

"That was four years ago," mused Gale, "and he never found his 'New Country,' did he?"

"No. We tied him down and choked it out of him," Necia laughed. "Dear, funny old Poleon—he loves me like a brother."

The man opened his lips, then closed them, as if on second thought, and rose to his feet, for, coming toward them up the trail from the barracks, he beheld a trim, blue-coated figure. He peered at the approaching officer a moment, set his jaw more firmly, and disappeared into the store.

"Well, we have raised our flag staff," said the lieutenant as he took a seat below Necia. "It's like getting settled to keep house."

"Are you lazy?" inquired the girl.

"I dare say I am," he admitted. "I've never had time to find out. Why?"

"Are you going to boss our people around?" she continued, bent on her own investigation.

"No. Not as long as they behave. In fact, I hardly know what I am to do. Maybe you can tell me." His smile was peculiarly frank and winning. "You see, it's my first command, and my instructions, although comprehensive, are rather vague. I am supposed to see that mining rights are observed, to take any criminals who kindly offer themselves up to be arrested, and to sort of handle things that are too tough for the miners themselves."

"Why, you are a policeman!" said Necia, at which he made a wry face.

"The department, in its wisdom, would have me, a tenderfoot, adjust those things that are too knotty for these men who have spent their lives along the frontier."

"I don't believe you will be very popular with our people," Necia announced, meditatively.

"No. I can see that already. I wasn't met with any brass bands, and I haven't received any engraved silver from the admiring citizens of Flambeau. That leaves nothing but the women to like me, and, as you are the only one in camp, you will have to like me very much to make up for its shortcomings."

She approved of his unusual drawl; it gave him a kind of deliberation which every move of his long, lithe body belied and every glance of his eyes contradicted. Moreover, she liked his youth, so clean and fresh and strange in this land where old men are many and the young ones old with hardship and grave with the silence of the hills. Her life had been spent entirely among men who were her seniors, and, although she had ruled them like a spoiled queen, she knew as little of their sex as they did of hers. Unconsciously the strong, young life within her had clamored for companionship, and it was this that had drawn her to Poleon Doret—who would ever remain a boy—and it was this that drew her to the young Kentuckian; this, and something else in him, that the others lacked.

"Now that I think it over," he continued, "I'd rather have you like me than have the men do so."

"Of course," she nodded. "They do anything I want them to—all but father, and——"

"It isn't that," he interrupted, quickly. "It is because you are the only woman of the place, because you are such a surprise. To think that in the heart of this desolation I should find a girl like you—like you, like the girls I know at home."

"Am I like other girls?" she inquired, eagerly. "I have often wondered."

"You are, and you are not. You are surprisingly conventional for these surroundings, and yet unconventionally surprising—for any place. Who are you? Where did you come from? How did you get here?"

"I am just what you see. I came from the states, and I was carried. That is all I can remember."

"Then you haven't lived here always?"

"Oh, dear, no! We came here while I was very little, but of late I have been away at school."

"Some seminary, eh?"

At this she laughed aloud. "Hardly that, either. I've been at the mission. Father Barnum has been teaching me for five years. I came upriver a day ahead of you."

She asked no questions of him in return, for she had already learned all there was to know the day before from a grizzled corporal in whom was the hunger to talk. She had learned of a family of Burrells whose name was known throughout the south, and that Meade Burrell came from the Frankfort branch, the branch that had raised the soldiers. His father had fought with Lee, and an uncle was now in the service at Washington. On the mother's side the strain was equally militant, but the Meades had sought the sea. The old soldier had told her much more, of which she understood little; told her of the young man's sister, who had come all the way from Kentucky to see her brother off when he sailed from San Francisco; told her of the lieutenant's many friends in Washington, and of his family name and honor. Meade Burrell was undoubtedly a fine young fellow in his corporal's eyes, and destined to reach great heights, as the other Burrells had before him. The old soldier, furthermore, had looked at her keenly and added that the Burrells were known as "divils among the weemen."

Resting thus on the steps of Old Man Gale's store, the two talked on till they were disturbed by the sound of shrill voices approaching, at which the man looked up. Coming down the trail from the town was a squaw and two children. At sight of Necia the little ones shouted gleefully and scampered forward, climbing over her like half-grown puppies. They were boy and girl, both brown as Siwashes, with eyes like jet beads and hair that was straight and coarse and black. At a glance Burrell knew them for "breeds," and evidently the darker half was closer to the surface now, for they choked, gurgled, stuttered and coughed in their Indian tongue, while Necia answered them likewise. At a word from her they turned and saw him, then, abashed at the strange splendor of his uniform, fell silent, pressing close to her. The squaw, also, seemed to resent his presence, for, after a lowering glance, she drew the shawl closer about her head, and, leaving the trail, slunk out of sight around the corner of the store.

Burrell looked up at his companion's clear-cut, delicate face, at the wind-tanned cheeks, against which her long braids lay like the blue-black locks of an Egyptian maid, then at her warm, dark eyes, in which was a hint of the golden light of the afternoon sun. He noted covertly the slender lines of her body and the dainty, firm, brown hands flung protectingly about the shoulders of her little friends, who were peering at him owlishly from their shelter.

The bitter revolt that had burned in him at the prospect of a long exile in this undiscovered spot died out suddenly. What a picture she made! How fresh and flower-like she looked, and yet the wisdom of her! He spoke impulsively:

"I am glad you are here, Miss Necia. I was glad the moment I saw you, and I have been growing gladder ever since, for I never imagined there would be anybody in this place but men and squaws—men who hate the law and squaws who slink about—like that." He nodded in the direction of the Indian woman's disappearance. "Either that, or, at best, a few 'breeds' like these little fellows."

She looked at him quickly.

"Well! What difference would that make?"

"Ugh! Squaws and half-breeds!" His tone conveyed in full his utter contempt.

The tiny hands of the boy and girl slid into her own as she arose. A curiously startled look lay in her eyes, and an inquiring, plaintive wrinkle came between her brows.

"I don't believe you understand," she said. "Lieutenant Burrell, this is my sister, Molly Gale, and this is my little brother John." Both round-eyed elfs made a ducking courtesy and blinked at the soldier, who gained his feet awkwardly, a flush rising into his cheeks.

From the regions at the rear of the store came the voice of an Indian woman calling:

"Necia! Necia!"

"Coming in a moment," the girl called back; then, turning to the young officer, she added, quietly: "Mother needs me now. Good-bye!"

CHAPTER II.

Poleon Doret's Hand Is Quicker Than His Tongue.

The trader's house sat back of the post, farther up on the hill. It was a large, sleepy house, sprawling against the sunny side of the slope, as if it had sought the southern exposure for warmth and had dozed off one sultry afternoon and never waked up from its slumber. It was of great, square-hewn timbers, built in the Russian style, the under side of each log hollowed to fit snugly over its fellow underneath, upon which dried moss had previously been spread, till in effect the foot-thick walls were were tongued and grooved and, through years of seasoning, become so tinder dry that no frosts or heats could penetrate them. Many architects had worked on it as it grew, room by room, through the years, and every man had left behind the mark of his individuality, from Pretty Charlie the pilot, who swung an ax better than any Indian on the river, to Larsen, the ship's carpenter, who worked with an adze and who starved the summer following on the Koyukuk. It had stretched a bit year by year, for the trader's family had been big in the early days when hunters and miners of both breeds came in to trade, to loaf and to swap stories with him. Through the winter days, when the caribou were in the north and the moose were scarce, whole families of natives came and camped there, for Alluna, his squaw, drew to her own blood, and they felt it their due to eat of the bounty of him who ruled them like an overlord; but when the first goose honked they slipped away until, by the time the salmon showed, the house was empty again and silent save for Alluna and the youngsters. In return these people brought him many skins and much fresh meat, for which he paid no price and, with the fall, his cache was filled with fish of which the bulk were dried king salmon as long as a grown man's leg and worth a dollar apiece to any traveler.

These are men whose wits are quick as light and whose muscles have been so tempered and hardened by years of exercise that they are like those of a wild animal. Of such was John Gale; but with all his intelligence he was very slow at reading, hence he chose to spend his evenings with his pipe and his thoughts, rather than with a book, as lonesome men are supposed to do. He did with little sleep and many nights he sat alone till Alluna and Necia would be awakened by his heavy step as he went to his bed. That he was a man who could really think and that his thoughts were engrossing no one doubted who saw him sitting enthralled at such a time, for he neither rocked nor talked nor moved a muscle hour after hour and only his eyes were alive. Tonight the spell was on him again and he sat bulked up in his chair, rocklike and immovable.

From the open door of the next room he could hear Necia and the little ones. She had made them ready for bed and was telling them the tale of the snowbird's spot.

"So when all the other birds had failed," he heard her say, "the little snowbird asked for a chance to try. He flew and flew and just before he came to the edge of the world where the two old women lived he pulled

(Continued on following page.)

"The Barrier" By REX BEACH

(Continued from preceding page.)

out all of his feathers. When he came to them he said:

"'I am very cold. May I warm myself at your fire?'

"They saw how little and naked he was, and how he shivered, so they did not throw sticks at him, but allowed him to creep close. He watched his chance, and when they were not looking he picked up a red-hot coal in his beak and flew back home with it as fast as ever he could—and that is how fire came to the Indian people.

"Of course the coal was hot, and it burned his throat till a drop of blood came through, so ever since that day the snowbird has had a red spot on his throat."

The two children spoke out in their mother's tongue, clamoring for the story of the good beaver who saved the hunter's life, and she began, this time in the language of the Yukon people, while Gale listened to the low music of her voice, muffled and broken by the log partition.

His squaw came in, her arrival unannounced except by the scuff of her moccasins, and seated herself against the wall. She did not use a chair, of which there were several, but crouched upon a bearskin, her knees beneath her chin, her toes a trifle drawn together. She saw thus for a long time, while Necia continued her stories and put the little ones to bed. Soon the girl came to say goodnight.

John Gale had never kissed his daughter, and, as it was not a custom of her mother's race, she never missed the caresses. On rare occasions the old man romped with the little ones and took them in his arms and acted as other fathers act, but he had never done these things with her. When she had gone he spoke without moving.

"She'll never marry Poleon Doret."

"Why?" inquired Alluna.

"He ain't her kind."

"Poleon is a good man."

"None better. But she'll marry some—some white man."

"Poleon is white," the squaw declared.

"He is and he ain't. I mean she'll marry an 'outside' man. He ain't good enough, and—well, he ain't her kind." Alluna's grunt of indignation was a sufficient answer to this, but he resumed, jerking his head in the direction of the barracks. "She's been talking a lot with this—this soldier."

"Him good man, too, I guess," said the wife.

"The hell he is!" cried the trader, fiercely. "He don't mean any good to her."

"Him got a woman, eh"? said the other.

"No, no! I reckon he's single all right, but you don't understand. Hes different from us people. He's—he's—" Gale paused, at a loss for words to convey his meaning. "Well, he ain't the kind that would marry a half-breed."

Alluna pondered this cryptic remark unsuccessfully, and was still seeking its solution when her lord continued:

"If she really got to loving him it would be bad for all of us."

Evidently Alluna read some hidden meaning back of these words, for she spoke quickly, but in her own tongue now, as she was accustomed to do when excited or alarmed.

"Then this thing must cease at once. The risk is too great. Better that you kill him before it is too late."

"Hardly that," said the trader.

"Think of the little ones and of me," the squaw insisted, and, encouraged by his silence, continued: "Why not? Soon the nights will grow dark. The river runs swiftly, and it never gives up its dead. I can do it if you dare not. No one would suspect me."

Gale rose and laid his big hand firmly on her shoulder.

"Don't talk like that. There has been too much blood let already. We'll allow things to run along a bit as they are. There's time enough to worry."

He rose, but instead of going to his room he strode out of the house and walked northward up the trail, passing through the town and out of sight. Alluna sat huddled up in the doorway, her shawl drawn close about her head, and waited for him until the late sun—which at this time of year revolves in a great circle overhead—dipped down below the distant mountain for the midnight hour, then rolled slanting out again a few points farther north, to begin its long journey anew; but he did not return. At last she crept stiffly indoors, like an old and weary woman, the look of fright still staring in her eyes.

About nine o'clock the next morning a faint and long-drawn cry came from the farthest limits of the little camp. An instant later it was echoed closer, and then a dog began to howl. Before its voice had died away another took it up sadly, and within three breaths, from up and down the half-mile of scanty waterfront, came the cry of "Steam-bo-o-a-t!" Cabin doors opened and men came out, glanced up the stream and echoed the call, while from sleepy nooks and sun-warmed roofs wolf-dogs arose, yawning and stretching. Those who had slept late dressed as they hurried towards the landing-place, joining in the plaint, till men and malamutes united in the shrill, slow cry.

Downstream came the faint-sighing "whoof-whoof" of a steamer, and then out from behind the bend she burst, running on the swift spring current with the speed of a deer. She blew hoarsely before the tardy ones had reached the bank, and when abreast of the town her bell clanged, the patter of her great wheel ceased, she reversed her engines and swung gracefully till her bow was up against the current, then plowed back, inching in slowly until with much shouting and the sound of many gongs, she slid her nose quietly into the bank beneath the trading post and was made fast. Her cabin deck was lined with passengers, most of whom were bound for the "outside," although still clad in mackinaw and overalls. They all gazed silently at the hundred men of Flambeau, who stared back at them till the gangplank was placed, when they came ashore to stretch their legs. One of them, however, made sufficient noise to make up for the silence of the others. Before the steamer had grounded he appeared among the Siwash deckhands, his head and shoulders towering above them, his white teeth gleaming from a face as dark as theirs, shouting to his friends ashore and pantomiming his delight to the two Gale children, who had come with Alluna to welcome him.

"Who's dose beeg, tall people w'at stan' 'longside of you, Miz Gale?" he called to her; then, shading his eyes elaborately, he cried, in a great voice: "Wall! wall! I believe dat's M'sieu Jean an' Mam'selle Mollee. Ba Gar! Dey get so beeg w'ile I'm gone I don' know dem no more!"

The youthful Gales wriggled at this delicious flattery and dug their tiny moccasined toes into the sand. Molly courtesied nervously and continuously as she clung to her mother, and the boy showed a gap where two front teeth had been and was now filled by a very pink tongue.

"W'en you goin' stop grow, anyhow, you two, eh?" continued the Frenchman, and then in a tone of sadness: "If I t'ink you ack lak' dis, I don' buy all dese present. Dese t'ing ain' no good for ole folks. I guess I'll t'row dem away." He made as if to heave a bundle that he carried into the river, whereupon the children shrieked at him so shrilly that he laughed long and incontinently at the success of his sally

Lieutenant Burrell had come with the others, for the arrival of a steamboat called for the presence of every soul in camp, and, spying Necia in the outskirts of the crowd, he took his place beside her. He felt constrained, after what had happened on the previous evening, but she seemed to have forgotten the episode, and greeted him with her usual frankness. Even had she remembered it, there was nothing he could say in explanation or in apology. He had lain awake for hours thinking of her, and had fallen asleep with her still in his mind, for the revelation of her blood had come as a shock to him, the full force of which he could not appreciate until he had given himself time to think of it calmly.

He had sprung from a race of slaveholders, from a land where birth and breed are more than any other thing, where a drop of impure blood effects an ineradicable stain; therefore the thought of this girl's ignoble parentage was so repugnant to him that the more he pondered it the more pitiful it seemed, the more monstrous. Lying awake and thinking of her in the stillness of his quarters, it had seemed a very unfortunate and a very terrible thing. During his morning duties the vision of her had been fresh before him again, and his constant contemplation of the matter had wrought a change in his attitude toward the girl, of which he was uncomfortably conscious and which he was glad to see she did not perceive.

"There are some of the lucky men from El Dorado Creek," she informed him, pointing out certain people on the deck. "They are going out to the states to get something to eat. They say that nothing like those mines have ever been heard of in the world. I wish father had gone up last year when the news came."

"Why didn't he?" asked the lieutenant. "Surely he must have been among the first to learn of it."

"Yes. 'Stick' George sent him word a year ago last fall, when he made the first discovery, but for some reason father wouldn't go."

The men were pouring off the boat now, and through the crowd came the tall Frenchman, bearing in the hollow of each arm a child who clasped a bundle to its breast. His eyes grew brighter at sight of Necia, and he broke into a flood of patois; they fairly bombarded each other with quick questions and fragmentary answers till she remembered her companion, who had fallen back a pace and was studying the newcomer, whereupon she turned.

"Oh, I forgot my manners. Lieutenant Burrell this is Napoleon Doret—our Poleon!" she added, with proud emphasis.

Doret checked his volubility and stared at the soldier, whom he appeared to see for the first time. The little brown people in his arms stared likewise, and it seemed to Burrell that a certain distrust was in each of the three pairs of eyes, only in those of the man there was no shyness. Instead, the Canadian looked him over gravely from head to heel, seeming to note each point of the unfamiliar attire; then he inquired, without removing his glance:

"W'ere'bouts you live, eh?"

"I live at the post yonder," said the lieutenant.

"W'at biznesse you work at?"

"I am a soldier."

"W'at for you come 'ere? Dere's nobody fightin' roun' dis place."

"The lieutenant has been stationed here, foolish," said Necia. "Come up to the store quick and tell me what it's like at Dawson." With a farewell nod to Burrell she went off with Doret, whose speech was immediately released again.

In spite of the man's unfriendliness Burrell watched him with admination. There were no heels to his tufted fur boots, and yet he stood a good 6 feet 2, as straight as a pine sapling, and it needed no second glance to tell of what metal he was made. His spirit showed in his whole body, in the set of his head, and, above all, in his dark, warm face, which glowed with eagerness when he talked, and that was ever—when he was not singing.

"I never see so many people since I lef' Quebes," he was saying. "She's jus' lak' beeg city—mus' be t'ree, four t'ousan' people. Every day some more dey come, an' all night dey dance an' sing an' drink w'iskee. Ba gosh, dat's fine place!"

"Are there lots of white women?" asked the girl.

"Yes, two, t'ree hondred. Mos' of dem is work in dancehalls. Dere's one fine gal I see, name' Marie Bourgette. I tell you 'bout her by an' by."

"Oh, Poleon, you're in love!" cried Necia.

"No, siree!" he denied. "Dere's none of dem gal look half so purty lak' you." He would have said more, but spying the trader at the entrance of the store he went to him, straightway launching into the details of their commercial enterprise, which, happily, had been most successful. Before they could finish the crowd from the boat began to drift in, some of them buying drinks at the bar and others making purchases of tobacco and so forth, but for the main part merely idling about curiously.

Among the merchandise of the post there were for sale a scanty assortment of firearms, cheap shotguns and a Winchester or two, displayed in a rack behind the counter in a manner to attract the eye of such native hunters as might need them, and with the rest hung a pair of Colt's revolvers. One of the new arrivals, who had separated from the others at the front, now called to Gale:

"Are those Colts for sale? Mine was stolen the other day." Evidently he was accustomed to Yukon prices, for he showed no surprise at the figure the trader named, but took the guns and tested each of them, whereupon the old man knew that here was no "cheechako," as tenderfeet are known in the north, although the man's garb had deceived him at first glance. The stranger balanced the weapons, one in either hand, then he did the "double roll" neatly, following which he executed a move that Gale had not witnessed for many years. He extended one of the guns, butt foremost, as if surrendering it, the action being free and open, save for the fact that his forefinger was crooked and thrust through the trigger guard; then, with the slightest jerk of the wrist, the gun spun about the handle jumped into his palm and instantly there was a click as his thumb flipped the hammer. It was the old "road agent spin," which Gale as a boy had practiced hours at a time; but that this man was in earnest he showed by glancing upward sharply when the trader laughed.

"This one hangs all right," he said; "give me a box of cartridges."

He emptied his gold sack in payment for the gun and ammunition, then remarked:

"That pretty nearly cleans me. If I had the price I'd take them both.

Gale wondered what need induced this fellow to spend his last few dollars on a firearm, but he said nothing until the man had loosened the bottom buttons of his vest and slipped the weapon inside the band of his trousers, concealing its handle beneath the edge of his waistcoat. Then he inquired:

"Bound for the outside?"

"No. I'm locating here."

The trader darted a quick glance at him. He did not like this man.

"There ain't much doing in this camp; it's a pretty poor place," he said guardedly.

"I'll put in with you, from its looks," agreed the other. "It's got too many soldiers to be worth a damn." He snarled this bitterly, with a peculiar leering lift of his lip, as if his words tasted badly.

"Most of the boys are going up-river," said Gale.

"Well, those hills look as if they had gold in them," said the stranger, pointing vaguely. "I'm going to prospect."

Gale knew instinctively that the fellow was lying, for his hands were not those of a miner; but there was nothing to be said. His judgment was verified, however, when Poleon drew him aside later and said:

"You know dat feller?"

"No."

"He's bad man."

"How do you know?"

"She's leave Dawson damn queeck. Dose mounted police t'row 'im on de boat jus' before we lef'." Then he told a story that he had heard. The man, it seemed, had left Skagway between two suns, upon the disruption of Soapy Smith's band of desperadoes, and had made for the interior, but had been intercepted at the pass by two members of the citizens' committee who came upon him suddenly. Pretending to yield, he had executed some unexpected coup as he delivered his gun, for both men fell, shot through the body. No one knew just what it was he did, nor cared to question him overmuch. The next heard of him was at Lake Bennett, over the line, where the mounted police recognized him and sent him on. They marked him well, however, and passed him on from post to post as they had driven others whose records were known; but he had lost himself in the confusion at Dawson for a few weeks, until the scarlet-coated riders searched him out, disarmed him and forced him sullenly aboard this steamer. The offscourings of the Canadian frontier were drifting back into their native country to settle.

Old Man Gale cared little for this, for he had spent his life among such men, but as he watched the fellow a scheme outlined itself in his head. Evidently the man dared not go farther down the river, for there was nothing save Indian camps and a Mission or two this side of St. Michael's, and at that point there was a court and many soldiers, where one was liable to meet the penalty of past misdeeds, hence he was probably resolved to stop there, and, judging by his record, he was a man of settled convictions. Continued persecution is wont to stir certain natures to such reckless desperation that interference is dangerous, and Gale, recalling his sullen look and ill-concealed contempt for the soldiers, put the stranger down as a man of this type. Furthermore, he had been impressed by the fellow's remarkable dexterity of wrist.

The trader stepped to the door, and, seeing Burrell on the deck of the steamer, went down towards him. It was a long chance, but the stakes were big and worth the risk. He had thought much during the night previous—in fact, for many hours—and the morning had found him still undecided, wherefore he took this course.

"Necia tells me that you aim to keep law and order here," he began, abruptly, having drawn the young man aside.

"Those are my instructions," said Burrell, "but they are so vague—"

"Well! This camp is bigger than it was an hour ago, and it 'ain't improved any in the growth. Yonder goes the new citizen." He pointed to the stranger, who had returned to the steamer for his baggage and was descending the gang-plank beneath them, a valise in each hand. "He's a thief and a murderer, and we don't want him here. Now, it's up to you."

"I don't understand," said the lieutenant, whereupon the trader told him Doret's tale. "You and your men were sent here to keep things peaceable," he concluded, "and I reckon when a man is too tough for the Canuck police he

is tough enough for you to tackle. There ain't a lock and key in the camp, and we ain't had a killing or a stealing in ten years. We'd like to keep it that way."

"Well—you see—I know nothing of that shooting affray, so I doubt if my authority would permit me to interfere," the soldier mused, half to himself.

"I allowed you were to use your own judgment," said the elder man.

"So I am, I suppose. There is one chance, Mr. Gale. If you'll back me up I'll send him on down to St. Michael's. That is the most I can do."

The lieutenant outlined his plan, and as he went on the trader nodded approval.

The young man gazed back at him so squarely, his eyes were so pleasant and friendly, his whole person breathed such straight-up honesty and freshness, that shame arose in the old man, and he had hard shift to keep his glance from wavering. Without forethought he answered, impulsively:

"He's desperate and he's dangerous. I sold him a '45' just now." He was about to tell him where the man wore it, and to add a word concerning his dexterity with the gun, when the very fearless deliberation of the youth deterred him. On second thought, Gale yielded to an impulse to wait and see how Meade Burrell would act under fire. If the soldier emerged scathless, it would give him a line on his character; if he did not—well, that would be even better. The sight of his blue and brass awoke in the elder man dread and cowardice, emotions he had never experienced before. Anyhow, he owed it to himself, to Necia, and to the others to find what kind of man this soldier was.

The crowd was coming back to the steamer, which had discharged her few bundles of freight, and there was no one inside the log post as they entered except Doret and the stranger, who had deposited his baggage at the rear and was talking with the Frenchman at the bar. At sight of the lieutenant he became silent and turned carelessly, although with a distrustful stare. Burrell wasted no time.

"Are you going to locate here?" he began.

"Yes."

"I notice you go "skeleton-rigged," the soldier continued, indicating the man's baggage. "Pretty small outfit for a miner, isn't it?"

"It's plenty for me."

"Have you enough money to buy your season's grub?"

"I guess that's my business."

"Pardon me, it is my business also."

"What is this—a holdup?" The man laughed harshly, at the same time swinging around till he faced his questioner. Gale noted that his right hand now hung directly over the spot where suspenders buttoned on the right side. The trader moved aside and took up a position at some distance.

"My orders are to see that all newcomers either have an outfit or are able to buy one," said Burrell. "Those that are not equipped properly are to be sent down river to St. Michael's, where there is plenty of everything and where they will be taken care of by the government. Mr. Gale has only sufficient provisions to winter the men already in this district."

"I can take care of myself," said the man, angrily, "whether I'm broke or not, and I don't want any of your interference." He shot a quick glance at Poleon Doret, but the Frenchman's face was like wood, and his hand still held the neck of the whisky bottle he had set out for the stranger before the others entered. Gale leaned against the oposite counter, his countenance inert but for the eyes, which were fixed upon the lieutenant.

"Come," said the officer, peremptorily, "I have heard all about you and you are not the kind of citizen we want here, but if you have enough money for an outfit I can't send you away. If you haven't—"

"I'm broke," said the man, but at the note in his voice Poleon Doret's muscles tightened and Burrell, who also read a sinister message in the tone, slid his heavy service revolver from its holster beneath his coat.

He had never done this thing before and it galled him. He had never drawn a weapon on a man and this playing at policeman became suddenly most repugnant, stirring in him the uncomfortable feeling that he was doing a mean thing, and not only a mean thing but one of which he ought to be heartily ashamed. He felt decidedly amateurish, especially when he saw that the man apparently intended no resistance and made no move. However, he was in for it now and must end as he had begun.

"Give me your gun," he said; "I'll unload it and give it back to you at the gangplank."

"All right, you've got the upper hand," said the man through lips that had gone white. Drawing his weapon from beneath his vest, he presented it to the officer, butt foremost, hammer underneath. The cylinder reposed naturally in the palm of his hand and the tip of his finger thrust through the trigger guard.

Burrell lowered the barrel of his revolver and put out his left hand for the other's weapon. Suddenly the man's wrist jerked, the soldier saw a blue flicker of sunlight on the steel as it whirled, saw the arm of Poleon Doret fling itself across the bar with the speed of a striking serpent, heard a smash of breaking glass, felt the shock of a concussion, and the spatter of some liquid in his face. Then he saw the man's revolver on the floor half-way across the room, saw fragments of glass with it, and saw the fellow step backward, snatching at the fingers of his right hand. A smell of powder smoke and rank whisky was in the air.

There are times when a man's hand will act more swiftly than his tongue. Napoleon Doret had seen the manner of the stranger's surrender of his gun, and, realizing too late what it meant, had acted. At the very instant of the fellow's treachery, Doret struck with his bottle just in time to knock the weapon from his hand, but not in time to prevent its discharge. The bullet was lodged in the wall a foot from where Gale stood. As the stranger staggered back the Frenchman vaulted the bar, but, though swift as a cat, the soldier, who had also leaped, was before him. Aiming a sweeping downward blow with his Colt, Burrell clipped the Skagway man just above the ear, and he reeled; then as he fell the officer struck wickedly again at his opponent's skull, but Doret seized him by the arm.

"Ba Gar, don't kill 'im twice!"

Burrell wrenched his arm free and turned on Doret a face that remained long in the Frenchman's memory, a face suffused with fury and convulsed like that of a sprinter at the finish of a race. The two men stared at each other over the fallen figure for a brief moment, until the soldier gained mastery of himself and sheathed his weapon, when Poleon smiled.

"I spoil' a quart of good w'iskee on you. Dat's wort' five dollar."

The lieutenant wiped the liquor from his face.

"Quick work, Doret," he said. "I owe you one."

Gale's face was hidden as he bent over the prostrate man, fingering a long and ragged cup which laid the fellow's scalp open from back of the ear to the temple, but he mumbled something unintelligible.

"Is he hurt badly?"

"No, you chipped him too low," said the trader. "I told you he was bad."

"He's goin' have nice birt'-mark, anyhow," said Doret, going back of the bar for some water. They revived the man, then bound up his injury hastily, and as the steamer cast off they led him to the bank and passed his gripsacks to a roustabout. He said no word as he walked unsteadily up the plank, but turned and stared malignantly at them from the deck; then, as the craft swung outward into the stream, he grinned through the trickle of blood that stole down from beneath his wide hat, if the convulsive grimace he made could be termed a grin, and cried:

"I'd like to introduce myself, for I'm coming back to winter with you, lieutenant! (My name is Runnion." And until the steamer was hidden behind the bend below they saw him standing there gazing back at them fixedly.

As Burrell left the two men at the store he gave his hand frankly to the French-Canadian, and said, while his cheeks flushed:

"I want to thank you for saving me from my own awkwardness."

Doret became even more embarrassed than the lieutenant at this show of gratitude, and grunted churlishly. But when the young man had gone he turned to Gale, who had watched them silently, and said:

"He's nice young feller, ole man. Sapre! W'en he's had his eye got so red lak' my ondershirt."

But the trader made no reply.

Flock—1, Jackson; 2, Schoel; 3, Schmidt. Pen—1, Schmidt; 2, Jackson.

Feed Problem Solved.

The acute hay situation has led the members of the Methow Valley Live Stock association to accomplish much through their organization, according to W. A. Holt, county agriculturist of Okanogan county. The membership appointed two committees to handle the feed situation—one cattle committee and one horse committee. The latter has arranged for pasture and straw stacks in the Big Bend, where all horses not needed through the winter will be taken. The cost for each horse will be five cents per day for straw, pasture, plenty of salt, and water. This committee was empowered to judge as to which stock should be taken and which remain in the Methow. The cow committee of three arranged for the purchase of 700 tons of alfalfa, to be distributed to the dairymen in proportion to the amount of cattle they are milking. This move was inaugurated to prevent the dairymen from disposing of their stock because of lack of feed. These farmers stick together.

FALL SEEDS

We offer a complete stock of Grass and Clover Seeds, Fall Vetch, Cheat Seed, Fall Wheat, Fall Oats, Fall Rye, etc.

Buying direct from the farmers, we are in a position to offer the highest grade of seeds at the right price. Send us list of what you want and get our prices.

How Can We Help?

By MRS. THOMAS CARMICHAEL.

At this time of great national stress, when the peace and liberty, almost the very life of our country is at stake, every conscientious, good woman has the desire to be helpful and patriotic and bear her share of the burden that rests upon this great American nation of ours. In what practical, sane way can we women of the rural communities be most helpful and feel that we are having a part in the great wave of preparedness and patriotism that has swept the country in the defense of right over might.

We do not need to take up the Red Cross work, nor learn to be nurses' aids or ambulance drivers to be patriotic, though no doubt there is a picturesqueness and a sense of adventure about these tasks that makes them seem attractive. Let us leave these to the city women, who, it seems to me are so poor in opportunities for real helpfulness compared to us "tillers of the soil" or to be more exact, the feminine gender behind the man with the hoe.

If, as Gifford Pinchot says: "There never was a time in the history of the world when as large a responsibility rested on any class of people as rests on the American farmer of today," then surely we farm women have our answer to the question in our hearts, "What shall we do to help?"

If we do nothing more than look after the wellbeing of our husbands, sons and brothers, so that they may be 100 per cent efficient as workers in the great army of preparedness along the line of food production, we are doing a good work. But we can and should do more. There are several ways in which we can help our country to win the war. In every way possible, we should increase the food supply and then save every ounce of it by way of the canning, pickling, salting and drying process so that our store rooms will have enough for our own needs with plenty for good measure. If we do not have to call upon the stores for their canned products, it will mean just so much more food that can be sent over to help keep the allied forces in fighting trim. By all combining hard enough we may be a big factor in ending the war.

Save Wheat Supply.

Another thing that we women can do to serve our country is to try in every way possible to save the wheat supply. No one should shirk this responsibility. If every woman unselfishly makes some sacrifice along this line, the wheat question will be taken care of, and we none of us will be sufferers in any way. Herbert Hoover appeals to the American people to conserve the wheat supply by substituting other cereals. He says: "A saving of one pound a week of wheat flour for every person, would go far toward solving the food question."

In our family we find corn bread a very good substitute. I make enough to last two or three days and it seems to be just as good warmed over as fresh. With coffee for breakfast it is delicious and most satisfying and nourishing. Following is my favorite recipe: Two cups yellow corn meal, 1 cup white flour, 2 cups sour cream and milk mixed, or 2 cups buttermilk, 2 tablespoons sugar, 1 teaspoon salt, 1 egg, one teaspoon baking powder sifted in flour, 1-3 teaspoon soda in tablespoon boiling water and then stirred in sour cream. Pour in buttered pans and bake in rather hot oven 30 minutes. Be sure not to use to much soda, and do not have the batter more than an inch deep in the pans.

Hot Corn Bread.

Hot corn bread served with blackberry jam or any jelly, and a cup of hot cocoa, makes a fine supper for children. It is especially nice with apple sauce and a glass of milk, or spread with syrup the children love it and it is a whole meal in itselft almost.

Corn meal pancakes for breakfast made with buttermilk, or sour cream and milk mixed, are delicious, and always more light than when made entirely of white flour. Stir a small teaspoon soda in a pint of the sour milk, then beat in the cornmeal and white flour mixed with little baking powder, sugar and salt, add beaten egg, then pour on buttered iron skillet until brown. They should be thin enough to spread thin quickly.

Another thing which we like very much and which is fine for children between meals, is oat meal crackers. They are easy to make, are very wholesome and economical, and save on wheat flour. Following is my method: One cup sour cream or buttermilk, one small teaspoon soda stirred in hot water and added to the cream; one cup white flour, one level teaspoon baking powder, one teaspoon salt, one tablespoon sugar, and two cups rolled oats put through meat chopper. Mix in a crock with a cake spoon until stiff enough, then knead enough oatmeal in, on bread board until stiff enough to roll out like pie crust. Cut with biscuit cutter, bake in quick oven on buttered tins and leave piled on towel until crisp. My meat grander has several knives and I used the one that looks like a pin wheel, to grind the rolled oats. I am thinking of getting some steel cut oat meal to use for the crackers. We like them better than any you can buy and prefer them to cookies or hermits, and they are without doubt more wholesome for children than cookies. They might be all right made with sweet milk and baking powder and a little butter melted and stirred in, though I have not as yet tried them that way, as I always have sour cream to use for cooking, and I think it makes things light and crisp as well as richer.

A Distinction.

"This is sheer ignorance. Your article is full of erroneous statements."

"It is shear ignorance, then. I clipped the stuff."

Farm Pointers.

Cull potatoes make profitable pork.

Fly a flag on the farm and teach the children what it stands for.

When made into apple butter, even the ugly windfall has a glory of its own.

Use the soft-shelled eggs at home. They ship poorly and may lower the grade of the others.

Fresh air and sunlight combat disease in the stable. Dairy barns should be airy barns. Ventilation is conservation.

Put the farm machinery in first class order during odd times this winter. An hour spent in repair may prevent later on a day of despair.

The licensing of fruit and produce dealers will increase the confidence of producers as well as consumers. It will be an incentive toward greater production.

Kitchen Helps

By GLENTWORTH RUBINS SHUMAKER.

The housekeeper is often annoyed by having foods cook fast to and gradually spoil kettles and pans, particularly when using aluminum or enameled ware. This may be avoided by having false bottoms cut out of tin to fit all vessels used for cooking. The food will adhere to the tin, which can be taken out and scraped and scoured, leaving the vessel itself uninjured.

A New Use for Chard.

Carefully protect the chard bed this fall and in the early spring, while asparagus is still expensive and scarce, cut the brittle, white stems of the chard and add to the asparagus. The cooking gives it the flavor of the asparagus and only the initiated can detect it, and it also makes a bunch of asparagus go much farther.

When Baking Juicy Pies.

When preparing to bake juicy pies mix a spoonful of flour through a cupful of sugar for each pie, then thoroughly stir the mixture through the fruit before putting in the pie. This is especially practicable with fresh fruits or berries and not only keeps the juice from stewing out over the oven but also adds to the richness of the pie.

He Was Soured.

"Have you 'Love Letters of Wise Men'?" she asked timidely.

"No, miss," responded the clerk in the book department.

"And why not?"

"Because wise men never write love letters."

Crochet and Tatting Designs

By WINIFRED WORTH

GUEST TOWEL.

Towel designs are always appreciated and you will not be disappointed in the beauty of this one.

For the 3 open meshes of the filet insertion make chain of 27 sts. Always remember to ch. 5 at the end of row. In one filled mesh there are always 4 tr., in 2 there are 7, in 3 there are 10. Follow design.

Detail of Edge on Towel.

Fill end with dc., ch. 5, turn.

2d Row—Make row of open meshes with 2 chains between each treble.

3d Row—Same as second row.

4th Row—4 dc., in 1st open mesh, 1 p., 4 dc., in next space, 4 dc. in next space, 1 p. repeat to end of work, always making 1 p. over every other tr.

5th Row—Ch. 5, and sl. st. into treble missed by picot. Notice the chain of 5 forms arch over picot made in preceding row. Repeat to end of work, turn.

6th Row—4 dc. in ch. of 5, 1 p., 4 dc., 1 p., 4 dc., repeat to end of work. This edge can be used on dresser scarfs, or can be made by making chain desired length, fill ch. with dc. and proceed from 1st row.

They wear like iron—

BE SURE TO GIVE NUMBER AND SIZE.

Canadian War Cake.

No recipe has been more popular than the one for Canadian war cake. Many people like this plain cake better than the cakes that call for butter, eggs and milk.

Two cups of brown sugar, 2 cups of hot water, 4 tablespoons of lard, 1 teaspoon of salt, 1 teaspoon of ground cinnamon, 1 teaspoon of ground cloves, 1 cup of raisins.

Boil all these ingredients for 5 minutes after they begin bubbling. When cold add 3 cups of flour and 2 teaspoons of soda dissolved in 1 teaspoon of hot water. Bake in two loaves in a slow oven an hour and a quarter.

To Remove Ink Stains.

Soak ink stains in sour milk. If a dark stain remains rinse in a weak solution of chloride of lime.

Feel the Weight of Fleece-lined Hosiery

Ask your storekeeper for Durable-DURHAM fleece-lined. Notice how much heavier it is than most 25c fleece-lined hosiery. Durable-DURHAM Fleece-lined Hosiery is "full of warmth and full of wear."

DURABLE
DURHAM HOSIERY
FOR MEN, WOMEN AND CHILDREN

Is Made Strongest Where the Wear is Hardest

Besides the fleece-lined there are weights and styles for all seasons of the year, for work, play or dress. Durable-DURHAM Hosiery cuts down darning work and expense. You'll like the way the heels, soles and toes are strongly reinforced; the full-length legs; the wide elastic tops that can't be pulled off or torn by garters; the anti-run stitch; the smooth, seamless and even feet and toes; the ankles that fit snugly without wrinkles; and the way the famous Durham dyes are fast—colors will not fade or turn green from wearing or washing. Quality is uniform throughout. Durable-DURHAM Hosiery is made in all weights for all seasons of the year and sells for 15, 19, 25 and 35 cents. Buy Durable-DURHAM Hosiery for everybody in the family.

Ask your dealer to show you our women's and men's 35c silk-mercerized hosiery with the patented anti-run stitch.

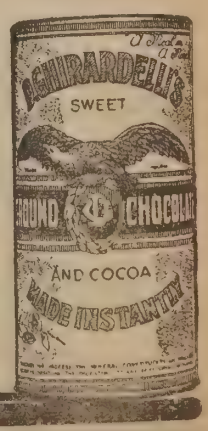
The FOOD of The HOUR

is the food that proves its economy on a basis of food value—the greatest amount of nutriment at the least cost.

Ghirardelli's Ground Chocolate is an ideal blend of two ideal nutritious foods—cocoa and sugar.



By using Ghirardelli's Ground Chocolate freely and wisely—in place of other less nutritious and more expensive foods—you will save money and aid in food conservation.

Ghirardelli's
Ground Chocolate

Comes in ½ lb., 1 lb. and 3 lb. sealed cans.

D. GHIRARDELLI COMPANY

Since 1852 San Francisco

Dear Corner Children: I suppose by this time you are all hard at work, some at school and some at home helping mother and father. I think most of the nephews and nieces must be busy, for our Corner has not had as many letters as it had a year ago. Many have done good work for our Corner, asking others to write letters and loyally supporting it.

I want to call attention to a letter which was so good that I am going to print it again:

"Dear Aunt Nellie: I have been reading the cousins' letters from the Corner and think it would be nice to all write on the subjects that Aunt Nellie suggests so often and to all write oftener, so our Corner won't get so low as two or three letters; to all write neat and try to spell words correctly would help our section of The Farmer. I think it is the most-read section of The Farmer, for whenever it comes into our home all pages go by 'unread' until I have thoroughly read every letter written by old, young or any one that takes time to write to our welcomed Children's Corner. I think The Farmer is the paper loved and welcomed most by the children, and it is all over the 'sacred' little space that covers a page (the Children's Corner.) I think this space in The Farmer has made more friends for itself than any three or four pages of the paper, don't you?—Myrtle Cox."

My! Such a time as I had judging these letters this time! There were so many good ones and it was so hard not to give a prize to many more than three.

Do you know, I think your teacher would like to have you write to the Corner, for it is a help in spelling, in writing, in grammar and composition. It is a little school, but a funny one. You don't have to come, unless you want to, and you can recite just what you please. And the teacher, Aunt Nellie, only marks the good ones and none of the bad ones. But Aunt Nellie would like a big enrolment this fall and winter in her Corner school and it will be also a "get-acquainted club." Lovingly your

AUNT NELLIE.

The new contest will conclude December 1 and the subjects are:

Helping the Red Cross.

Sunset.

Thanksgiving.

The prize winners for the contest just closed are: Mary Esther Symington, Selleck, Box 97, Selleck P. O., Tall Tree Center, Wash.; Edna A. Tueth, May View, Wash.; Gladys Powell, Bow, Wash.

Roll of Honor—Anna Straube, Pampa; Lenora Fox, Washougal; Marguerite Blankenship, Seattle; Avah Sharp, Alameda; Lucile Turnley, Moxee City; Laura E. Hatley, Waitsburg; Evis Erickson, Lynden; Hilma Anderson, R. 3, Olympia; Catherine Borden, Satsop; Helen Calkins, Sunnyside; Harvey Norris, Goldendale; Walborg Brandt, Mt. Vernon; Stella Dawson, Bow; Hazel Colbert, Tonasket; Marie Houk, White Bluffs; Alexander Weitz, Endicott.

Reba Likes to Play With Her Doll.

Dear Aunt Nellie: This is my first time to try to write to you. I like to read the Children's Corner very much. My father takes the Farmer. I always hunt for the children's page first. I am going to school now and I am in the fifth grade. I am 10 years old and my birthday is January 13. Have I a twin? We have 11 cows, three horses, 14 pigs, three calves and 30 chickens. I help my sister milk her cows. I have one large doll and her name is Josie. My cousin and I have a lot of fun playing with her. Sometimes she brings up her big doll and we have a great time. Her doll's name is Josephine. Hers is bigger than mine. I have one brother younger than myself. His name is Robert. I have seven sisters. Their names are Frankie, Blanche, Myrtle, Nora, Alice, Ida and Nellie. I have one sister and one brother dead. My brother's wife and her little children are coming over to stay all winter with us. They live over the mountains at Lake Chelan. This is not a very good letter.—Reba Watkinson, Route 2, Bow, Wash.

A Mountain Picnic.

Dear Aunt Nellie: I have written before to the Children's Corner and I thought I would write again. I went to the Washington State fair at North Yakima and I had a very good time. I have named the kittens that Lightfoot has Spotty and Muggins. There has been a call for Liberty bonds. I was going to buy one, but I could not get to town just then, but there is going to be another call for them, then I am going to buy one. Our school began the first of October. Mama has made me one dress and is going to finish one this afternoon. Our cow, Smutty, has another black and white calf and he is very cute, too. We went on a picnic up in the mountains. After we had eaten our lunch we made up our minds that we would go up to Rimrock. When we got up there we went for a walk to see where they were going to build the dam. There was what we call a big flume which comes from a place up in the mountains farther. It goes into our big ditch, I think. There is a place up there that the flume opens and a lot of the water spills into the river down below. It is pretty to watch. The roads are good up there now. Rimrock is a pretty place and there are about 600 or 700 people up there. It is quite a place. Next summer I hope we can go up there to stay a few days, but I am kindof afraid we can't. I had a boil on my hand and I can hardly do anything. I can not practice my music. It is on my left thumb joint. I like the letters you write to the Corner and I wish you would write again. I enjoy writing to the Children's Corner very much and will write again.—Helen Mehl, Naches, Wash.

All the Outdoor Sports They Want.

Dear Aunt Nellie: This is the third letter to The Washington Farmer. I like all the letters fine, so I thought I would write. I see that the Children's corner is growing. I am glad it is growing, too. School has started now. My teacher's name is Miss Foxwell. I am in the fifth grade at school. My subject is "Fun on the Farm." In summer we can go swimming and in winter we can go skating. We can have all the outdoor sport that we want. My birthday is August 8. I am 11 years old. Have I a twin? I would like to have her write to me if I have one. I have one sister and one brother. My brother is going to start to school this year. He is 6 years old. My sister will be in the third grade this year.—Hilma Anderson, R. R. 3, box 19, Olympia, Wash.

Rags, Hick and Nero Are Effie's Dogs.

Dear Aunt Nellie: This is the third time I have written to the Corner. Alice in Wonderland, Beautiful Joe, Three Bright Girls and Black Beauty are the books I like best. I have three dogs and their names are Rags, Hick and Nero. I have two old cats and five kittens. The old cats' names are Tabby and Tom, the kittens' names are Pussy, Jackrabbit, Goldie, Whiteneck and little Gray. My schoolmates' names are Evelyn Kellogg, Elizabeth Preston, Mabel Huble, Bessie Allen, Ethel Boyd, Myrtle Boyd and Guicell McCarty. We have lots of fun at school. I would not change with any city girl. I would like to correspond with Joyce Hatch. Our school began September 4. I like to go to school. I guess I will close.—Effie G. Ludditon, Bright, Wash.

We Enjoy Ora's Letters.

Dear Aunt Nellie: This is the fourth time I have written to the Corner. I enjoy it very much and hope all the children will enjoy my letter as I enjoy theirs. We have six cows and one real little calf and three last winter's calves. The cows' names are Buster, Bill and Baby. The real little one's name is Tip. He is red. I found him up in the field. We have five real little kittens, three are Cougar's and two are Lady Gray's. We have three older ones, named Leopard, Black Ned and Grayie. Papa used to work for Joe L. Ashlock's father. I read the "Ups and Downs of a Bunchgrass Boy" and like it.—Ora J. Hayden, Box 25, Mold, Wash.

Been in Washington Just One Year.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes The Washington Farmer and I enjoy reading the letters from the nephews and nieces. We have one calf named June and a pig and some chickens. I passed into the fourth grade. I shall be 10 years old the 28th of September. Have I a twin? I have lived in Washington a little more than a year. I like the climate much better than that of Maine or Canada, where we lived before coming here. I have a little niece whose name is Dorothy and a brother 16 years old.—Eileen Runnals, Puyallup, Wash.

A Healthy and Happy Farm Girl.

Dear Aunt Nellie: I have been a constant reader of the Children's Corner, and so I decided to contribute my letter for the children to read. I am a healthy, happy, hearty and hale young farm girl. I love the farm and like the out-of-doors. I am a member of the national boys' and girls' garden club, and of course did my bit by raising a garden. I am 13 years of age, and am in the first grade of high school. My birthday is the 25th of June. I wish the Corner great success. —Marguerite Blankenship, R. F. D. 5, Box 379, Seattle, Wash.

Have a Little White Spitz Dog.

Dear Aunt Nellie: I am in the third grade and am 7 years old. I live 21 miles from Coulee City. I go to school three miles from home. We have a little white Spitz dog. His name is Shorty. My sisters' names are Mabel, Neva, Gladys, Merl and Bertha. My brothers' names are Clyde, Donald, Norman and Arthur. I like to read the Children's Corner very much.—Mamie Martin, Coulee City, Wash.

Pearl Has a Twin Brother.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I hope it won't be the last. Lucile Peterson is just two days younger than I am. I am 12 years of age and will be 13 years old the 22d of April. I have dark brown hair and brown eyes. I have five teachers and I am in the sixth grade. Have I a twin? If I have I would like to hear from them. I live on a 10-acre farm. We have two horses and two cows and three pigs. Our horses' names are Jimmy and Daisy. We can ride horseback on Daisy, but we can't on Jim. I have a twin brother. His name is Earl. I would like for some of the cousins to write to me, for I will gladly answer their letters.—Pearl Roberts, R. F. D. 5, Box 379, Seattle, Wash.

Willie Is in the Third Grade.

Dear Aunt Nellie: I enjoy reading the Children's Corner. We live on a 500-acre farm and we milk 120 cows; we have nine horses and two pigs. I will be 9 years old February 20. I go to school and am in the third grade. My teacher's name is Miss Mabel Ross. If I see my letter in print I will write again. Willie Righetti, Monroe, Wash. (You will see your letter in print, Willie. Aunt Nellie always tries to put all the letters she can in the Corner, and she surely wants you to write again. I wonder if many of the cousins can imagine milking 120 cows; what fun this would be. Willie, do you use a milking machine? Write and tell us about it.—Aunt Nellie).

Piggies Are Funny Little Things.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I like to read the letters very much. I was sick last night and better today. School has started. I am in the fourth grade. It really seems to be upstairs to me. I like school very much. My teacher is Stella Hansen. We have a little colt now. We call him Jasper. It's mother's name is Star. We have two big pigs and nine little ones. They are the funniest little things. They are all cream colored but two. I spent three weeks in Horse Heaven not long ago. —Nellie Neil, Kennewick, Wash.

Kitty Is a Perfect Mischief.

Dear Aunt Nellie: In The Farmer in the Children's Corner the little letters I love to read I discovered a letter written by a little girl named Stella. I see she has a big white kitty. I have one, too, but my kitty is black, with large yellow eyes. He is a perfect mischief. I call him Timothy. I am 10 years old. My birthday was on April 12. I am in the fourth grade. I help my mama with dishes and sweep the floor and do many other things that little girls can do. I walk a mile and a quarter to school. I will close for this time. I would love to correspond with some of the cousins.—Stella Dawson, R. D. 2, Bow, Wash.

Tabby and Fluffy Are Marion's Cats.

Dear Aunt Nellie: I am 10 years old and I have three sisters and one brother. This is the first time I have written to the Children's Corner. I live in a depot and my papa is the station agent. School starts Tuesday. There are not many children here to go to school. We have two cats, one of them is Tabby and the other is Fluffy. I am in the fourth grade and my brother is in the fourth grade, too. My sisters and brother and I have a garden of flowers. We have sweet peas and morning glories, climbing beans and roses.—Marion Greene, Benge, Wash.

The Books That Beulah Likes.

Dear Aunt Nellie: This is the second time I have written to the Corner. I am nine years of age. My birthday is the 11th of April. I told all about the farm last time so I will tell about something else. The Girl of the Limberlost, Black Beauty and Flora Garland's Courtship are my favorite books. Have I a twin? If I have I would like to hear from her. I have brown eyes and light hair. I have a little white dog named Teddy. I like to read the letters of the Corner. I will write again when my letter is in print.—Beulah Shaw, Grandview, Wash.

The First Time Merl Has Written.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live 21 miles north of Coulee City. I have five sisters and four brothers. My youngest brother, who is 5 years old, has had an operation for pneumonia at the Spokane hospital. He was there six weeks, but is home now. We have a Hupmobile car. Mabel, my oldest sister, has graduated from high school. I was 12 years old the 12th of June. I am in the sixth grade.—Merl Martin, Coulee City, Wash.

Marie Belongs to a Garden Club.

Dear Aunt Nellie: I never had time to write before because I have been visiting my sister. My subject is "My Vacation." I am having a fine vacation, playing and working in the garden. I am in a garden club. My garden is growing very fine. I have been picking berries this week and have been very busy. School will start pretty soon, and I will be busy studying. I will be in the fifth grade.—Marie Anderson, R. F. D. No. 1, Box 31, Kalama, Wash.

Velma Has a Little Shetland Pony.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We take the Farmer and I enjoy reading the cousins' letters very much. I am 10 years old. My birthday is July 30. I have three brothers. I have a little Shetland pony. I live in the country five miles from town. —Velma LeMaster, Eatonville, Wash.

Pearl Likes to Pack Peaches.

Dear Aunt Nellie: My papa takes The Farmer and I enjoy reading the Children's Corner very much. I am 12 years old and my birthday is January 27. Our school will start October 15, and I will be in the sixth grade. Papa intends to pick peaches tomorrow and I like to pack peaches. Mama gave me two hens and one of them set and brought off 12 chickens. Some of them died, but I had enough to sell that brought me $4.80. This is my first letter and I hope it isn't too long. I will write again.—Pearl A. Mathis, Selah, Wash.

Brought Grandpa Home With Them.

Dear Aunt Nellie: I thought I would write to you. This is the third time I have written to you. My father takes The Farmer, and I enjoy reading the children's letters. We got back from Seattle two weeks ago. We went over in our Ford. We brought my grandpa back with us. We had a very nice trip. I am 8 years old. My birthday is July 11. Have I a twin? If I have I would like for them to write to me.—Mildred Marks, Wapato, Wash.

Theresa Lives on a Wheat Ranch.

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 10 years old. My birthday is the tenth of December. My name is Theresa Jurgensen. Have I a twin? I live on a wheat ranch. We have about 25 or 30 head of horses, one dog and four little pigs.—Theresa Jurgensen, Wilbur, Wash.

Went Swimming This Summer.

Dear Aunt Nellie: I am 10 years old. I am in the fourth grade. I go to Marble Creek school. School started the fourth of September. I went swimming this summer. My name is Alfred Frederickson. I live on the Lewis river.—Alfred Frederickson, Reno, Wash.

Mollie Is the Cow's Name.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two sisters and one brother. I was 10 years old March 2. We have one cow and a calf. The cow's name is Mollie.—Fern Heuston, Winlock, Wash.

Eat Lunch Down by the River.

Dear Aunt Nellie: I am a little girl 10 years old and I would like to join the Children's Corner. Our school began September 10. There are only three pupils in our school, my two girl cousins and myself. Our teacher's name is Mrs. Duffy. Every nice day we four eat our lunch down by the river, under the trees. We have nice times together. When I grow up I want to be a teacher, so I am learning all I can. When I finish going to school in the country I want to go to high school and then to normal. I think I shall then be ready to teach.—Eula Belle Fletcher, Uva, Wyo.

Hopes We Won't Lose the Corner.

Dear Aunt Nellie: I like the children's Corner just fine and hope we will not lose it. I live on a farm of 333 acres and not quite a quarter of a mile from school. I like to go to school. I have one brother and his name is Glenn. I am 12 years old and my birthday is February 22.—Mollie Rickard, R. D. 4, Box 83, Junction City, Ore.

Remove Those Stains

To give clothes a longer period of service, and to conserve garments or fabrics which may appear to be hopelessly stained, is the object of a new publication just issued by the United States department of agriculture.

One of the first requisites in removing stains, says the bulletin, is to know the kind of fabric which is spotted and, if possible, the nature of the stain. Some stain removers which will give admirable results on cotton or linen may, if applied to woolen or silk, remove pieces of the fabric as well as the stain. Likewise, stain removers which are entirely satisfactory for cleaning silk or woolen materials can not always be used for removing stains from vegetable fibers, such as cotton or linen. Similarly, treatment which will remove some stains immediately will cause those of a different nature to take firmer hold on the fabric.

The second cardinal principle in spot removal is to work while the stain is fresh. Cold or lukewarm water is usually the housewife's best bet for a first step, the bulletin indicates, if the nature of the stain is not known and if the fabric is not injured by water. Hot water should not be used until it is determined that the straining material is such that it will not be "set" by heat. Stains from meat juice, blood, egg, milk, and other materials containing protein are set by hot water.

If stains are of such a nature that they will not yield to laundering or sponging with water or with water and soap, it is necessary to use one or more of a number of chemicals. Besides water and soap the bulletin names as the substance most useful in removing stains, Javelle water, potassium permanganate solution, oxalic acid solutions, ammonia water, carbon tetrachlorid, French chalk, and cream of tartar, each of which may be used successfully, provided the right one is used at the right time. Detailed instructions for treating various stains are contained in the publication.

Dairy Stock Sell Well

(Continued from page four.)

for the entire sale was slightly less than $280.

The sales list follows, the person named being the buyer in each case. Henry Lindley was purchaser of the first 32 head:

Carnation Stock.

Korndyke Rag Apple Milk, No. 163749, born April 5, 1915, $300.

Mutual Clothilde Boelyn Gem 2d, No. 392544, born July 11, 1915, $275.

Daybreak Mercedes Girl, No. 182325, born April 3, 1912, $400.

Pearl Watson Canary, No. 192585, born December 7, 1912, $165.

Model Pauline Segis, No. 209498, born October 4, 1912, $250.

Daybreak Molly Prilly Segis, No. 269500, born October 14, 1914, $325.

Daybreak Prilly Canary, No. 269499, born October 8, 1914, $160.

Hollywood Lilith Colantha, No. 334914, born January 5, 1916, $300.

Hollywood Lilith Shadeland De Kol, No. 297085, born December 6, 1914, $600.

Daisy Johanna Netherland 2d, No. 283439, born June 2, 1915, $250.

Hollywood Midnight Fayne 2d, No. 332430, born July 31, 1915, $200.

Hollywood Bessie De Kol Fayne, No. 334916, born January 31, 1916, $250.

Flore Ella Canary, No. 282287, born January 13, 1911, $325.

Tsussie Mabel 2d, No. 286956, born August 18, 1913, $400.

Tsussie Mabel, No. 286955, born November 3, 1909, $250.

Hengerveld Bessie Corona, No. 289124, born June 3, 1915, $300.

Canary Violetta Mechthilde 2d, No. 282296, born January 31, 1913, $260.

Hazelwood Hengerveld Colantha, No. 183880, born June 22, 1912, $325.

Duroc Jersey Swine
Herd Heading Prize Winning Boar

Second prize boar under 1 year, Interstate fair, 1917. His litter mates won first and third in same class. Two of his litter mates won first and second from sows under 1 year in the biggest Duroc Jersey show ever held in the northwest.

His dam's litter mate was junior champion at the 1916 Interstate fair and won over $360 in prizes last year, and her dam's litter mate was first prize winner at the world's fair at San Francisco. The price on this boar is only $87.50. He is bred in the purple and $150 sent east will not duplicate him.

Also a few crackerjack younger boars, fine breeding and fit for service, $35 to $50, and a few extra choice March and April gilts, $35 to $50.

Worthwhile Farm Route 1, Spokane, Wash.
DAVID BROWN

Grain and Produce Markets

Chicago Grain.

CHICAGO, Oct. 6.—Killing frosts which visited large sections of the corn belt last night were regarded by many traders today as more of a benefit to the crop than a harm. The effect was to weaken prices, which, although steady at the close, were 1-8 to 3-4 net lower at $1.18 7-8 for December and $1.15 1-4 to $1.15 3-8 for May. Oats finished 1-8 to 3-8@1-2 down, and provisions 35 to 75.

Slackness of export inquiry left the oats market limp and prices dragged lower with corn.

Active demand for provisions contrasted sharply with the inert aspect of grain. Commission house buying was stimulated as a result of new purchases of meats and lard for Belgium.

Live Stock Quotations.

At Chicago.

CHICAGO, Oct. 6.—Hogs—Receipts 4000; unsettled at yesterday's average. Bulk, $18.25@19.35; light, $17.80@19.30; mixed, $17.90@19.65; heavy, $17.90@19.60; rough, $17.90@18.15; pigs, $14@17.75.

At Portland.

PORTLAND, Ore., Oct. 6.—Hogs—Steady; receipts 430. Prime light, $17.65@17.75; prime heavy, $17.50@17.65; pigs, $15.50@17; bulk, $17.50@17.75.

Cattle—Steady; receipts 105. Best beef steers, $9@9.75; good beef steers, $7.50@8.75; best beef cows, $6.75@7.50; ordinary to good cows, $4@6.75; best heifers, $7@8; bulls, $4@6.50; calves, $7@9.50; stockers and feeder steers, $4@7.25.

Sheep—Steady; receipts 2. Western lambs, $13.50@14; valley lambs, $12.75@13.50; yearlings, $11.25@11.50; wethers, $11@11.50; ewes, $8@9.50.

At Salt Lake.

SALT LAKE CITY, Oct. 4.—Cattle—Receipts, fair; market 10 cents higher; demand especially strong for good fat steers. Choice steers, $8.75@9.25; good steers, $7.50@8.50; choice cows and heavy heifers, $6.75@7.50; fair to good cows and heifers, $6@6.75; cutters, $5@6.25; canners, $4@5; fat bulls, $6@7; bologna bulls, $5@6; veal calves, $9@11.50.

Hogs—Market 50 cents per cwt. higher. Tops this week reached $19 per cwt., weighed with a fill, the highest price ever paid in intermountain section. While receipts were more liberal they were not sufficient to supply the demand. We advise our friends to come in with finished stock weighing 175 to 225 pounds. Choice hogs, 175 to 225 pounds, $18.50@19; mixed hogs, 160 pounds and up, $18@18.50.

Sheep—Receipts fair; market 50 to 75 cents higher on lambs. Good choice lambs, $15.50@16.50; ewes, $8.50@9.50; wethers, $10@10.50; yearlings, $10.50@11.

Spokane Stock Yards, Saturday.

Hogs—Receipts 226; market steady. Prime light, $18.35@18.50; prime heavy, $18.25@18.35; pigs and skips, $16.25@17.50; stockers and feeders, $12@14.50; bulk of sales, $18.35.

Cattle—Receipts 158; market weak. Best beef steers, $8.75@9.25; good steers, $7@8; best beef cows, $6.25@7; good cows, $5@6; common cows, $3.50@4.50; best heifers, $6.75@7.50; bulls, $5@6.25; calves, $7.50@8.25; stockers and feeder steers, $5@6.75.

Sheep — Receipts none; market steady. Prime lambs, $12.75@13.50; good lambs, $11.50@12; prime yearlings, $10.25@11.25; prime wethers, $10.25@11; best mutton ewes, $7.75@9.

San Francisco Produce Market.

SAN FRANCISCO, Oct. 5.—Butter—Fresh extra, 46c; prime firsts, 45c.

Eggs—Fresh extras, 50c; fresh firsts, 49c; fresh extra pullets, 42½c; extra first pullets, 42½c.

Poultry—Hens, 28@31c; fryers and broilers, 28@31c; roosters, 16@17c; squabs, $2@2.50; pigeons, $1.50; geese, 18@20c; ducks, 15@17c.

Hay—Wheat and wheat-and-oat, $20@22; tame oat, $20@22; barley, $15, $17@19; barley straw, 50@90c; alfalfa, $17@20.

Mill feed—Cracked corn and feed corn meal, $83@84; alfalfa meal, $28@30; cocoanut meal, $35@35.50.

Flour—$11.20 per barrel.

Receipts—Flour, 1640 quarters; barley, 3190 centals; beans, 2553 sacks; potatoes, 3355 sacks; onions, 7845 sacks; hay, 387 tons; hides, 510; wine, 13,600 gallons.

Seattle Wheat.

SEATTLE, Wash., Oct. 6.—Misunderstandings between grain buyers and farmers as to dockage and warehouse charges has resulted in holding up the movement of wheat to tidewater, already well started. So far little red Russian has been offered, but considerable forty-fold has been moved. Early bart is running heavier than bluestem, samples of this grade showing 60 pounds to the bushel having been offered on the Seattle market during the week. Growers are getting a premium of 4c per bushel on 60-pound early bart, or $2 country in sacks and $2.05 bulk Puget sound.

There has been much confusion as to brokerage and commissions charged. Millers have got into trouble by valuing sacks at 4c. They claim that farmers have been endeavoring to compel the man who handles the wheat to pay the broker a cent. These are only a few of the things put up to M. H. Houser, agent of the food commission of the Federal Grain corporation, as a means to getting the wheat started to tidewater. Mr. Houser has confessed his inability to solve the problems and has referred a bunch of questions to Washington, urging the need of haste.

Portland Market.

PORTLAND, Ore., Oct. 6.—The butter market is weakening. Dealers are offering country creamery cubes at 46 cents, but there is no satisfactory outlet. The local make is gradually increasing and to supplies here have been added a car of eastern butter and a car from Los Angeles. Print prices for the present hold steady.

The firmness of the cheese market has resulted in a 1-cent advance on the Tillamook product.

Eggs are also firm with light receipts. Poultry is steady, except small hens, which have sold as low as 15 cents. Heavy hens are taken readily at 17@18 cents. Dressed meats are unchanged.

Salway peaches are beginning to arrive from The Dalles and similar points and are bringing 85c@$1. The market is firmer on late receipts of storage Elbertas from Yakima, the best going at 90 cents.

Wool trading has been resumed here, but particulars as to the deals are not made public. It is known, however, there has been no weakening of the market.

Hops are still inactive. There is an easier market east and this is causing some apprehension among growers.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $50; brewing, $52.50; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 44@45c per dozen; candled, 47@50c.

Poultry—Hens, 15@18c; ducks, 18@20c; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 46c.

Cheese — Tillamook triplets, 26c; Young Americas, 27c.

Dressed meats — Veal, 15 1-2@16c; pork, 21½@22c.

Hops—1916, 25@26c; 1917 crop, 41c.

Potatoes—New, 1 1-2@2 1-4c per lb.

Wool—Eastern Oregon, fine, 52@61c; coarse, 60c; valley, 58@60c.

Beans — California small white, 14 1-2c; large white, 14 1-4c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prics paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $2 cwt; sweet potatoes, $3.50 cwt.

Apples—Large eating apples, $1.25 box; crabapples, $1.25; cooking apples, $1.50 box.

Butter—Blanchard cartons, 48c lb; Medo-Maid, 48c lb; Cascade, 48c lb; Gold Leaf, 48c lb; Better Butter, 48c lb; Attalia, 48c lb; Diadem, 48c lb; Hazelwood, 48c lb; Solid Pack, 47c lb; Jersey Bell 47c lb; Peerless, 44c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 28c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 30c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $13 case; fresh eastern eggs, $13 case.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

Seattle Market.

SEATTLE, Wash., Oct. 6.—Seattle operators are throwing their entire weight on the side of the bears in the potato market, confident that growers' quotations are too high in view of the demand, the large crop over the country and the prospects for fall and winter consumption. While there have been no breaks this week, neither have there been any cash purchases of importance.

Concessions to a uniformly firm price for apples for the remainder of the season are being generally made. Some weak spots have shown in the market for Jonathans, due to the preponderance of small sizes and the cessatcn of eastern buying, but this is the only exception.

The egg market has an easier aspect for the week-end and indications are now for steady prices for an indefinite time. The market has reached such an altitude that California eggs of the white shell variety can be brought in at a profit and first delivery is now being made. This will prevent any more fancy values in the local product. Statistics in the hands of dealers show that the peak of the market here is reached by October 15, and with an abundant supply of Petalumas to check the upward tendency no higher levels are looked for.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 50@55c per dozen; pullets, 33@38c dozen.

Poultry—Live hens, fat, over 4 lbs., 21c per lb.; 4 lbs. and under, 16@19c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 12c per lb.; springs, live, 23c per lb.

Butterfat—54c per lb.; dairy butter, 33c.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 12@13c per lb.

Hides—Salted, 16c per lb.; flint-dry hides, 27c per lb.; salt kip, 16c per lb.; green hides, 13c per lb.; green calf, 22c per lb.; dry calf (under 6 lbs.), 25c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 11c per lb.; dry full wool sheep pelts, 36@38c per lb.

Wool—Puget sound, 52c per lb.

The Wool Market.

BOSTON, Oct. 5.—The Commercial Bulletin will say tomorrow:

"The demand for wool continues steadily through the trade and the volume of business accomplished during the week has been as large doubtless as that in the weeks immediately preceding, while prices have kept very strong. Low scoured wools advanced about 5 cents a pound in the last fortnight, although greasy wools showed hardly any rise. Manufacturers are getting further orders from the government and apparently are having a fair trade in light weight goods. Some further buying from the west at fully last week's price for country "bunch lots."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California—Northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Oregon—Eastern No. 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65.

Territory—Fine staple, $1.80@1.82; halfblood combing, $1.70@1.75; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Portland Wheat.

PORTLAND, Ore., Oct. 8.—Wheat is reaching Portland in a steadily increasing volume, the receipts last week amounting to 486,200 bushels, as compared with 250,000 bushels in the same week last year. Mr. Houser, agent of the grain corporation, announces that tenders by farmers to the corporation have as yet been light, but he expects a big week.

The government has purchased between 300,000 and 400,000 barrels of flour in the northwest for October shipment and it will be forwarded as soon as shipping instructions are received. It is understood the flour is for Europe. It will be shipped by rail east, as no ocean tonnage is available now. Orders for flour for later months' deliveries have not been placed yet.

There is a fair domestic movement in flour. Millfeed is easing off. Spot bran is quoted at the mills at $30, but there have been sales at the exchange at $27 for later delivery, and November shorts have been sold at $28.

Butter and Eggs.

PORTLAND, Ore., Oct. 6.—Butter—Weaker. The presence here of a car of California and one of eastern butter has resulted in city creameries refusing to buy Oregon cubes at any price. Quotations are really only nominal.

Butter—Weaker. City creamery prints, 48c; cartons, 49c; buying price butter fat, 47@49c, Portland; cube extras, 46c; prime firsts, 44c; firsts, 40c; dairy, 34c.

On the Farm

Waterproofing the Top.

Double-boiled linseed oil may be used to waterproof the top. The oil should be spread evenly over the fabric with a fine brush. Naturally two coats of the linseed will give better results than one.

Lighting Troubles.

Owners of cars wired by the single-wire method should examine the ground connections at frequent intervals. A loose or corroded ground will often cause dim burning and sometimes it may even eliminate all flow of current.

Testing Levels.

When testing the oil level by opening the level cocks in the crankcase it is essential to run a wire through the cock before concluding that the level is low. It frequently happens that sediment settles over the level cocks and prevents the flow of oil in spite of the fact that there is plenty in the reservoir.

Terminal Corrosion.

If trouble develops in the battery, which upon examination is found to be up to normal and yet is not delivering enough current to furnish lights nor spark enough to ignite the fuel, the basic fault will very possibly be found in corrosion of the terminals. When the terminals are covered with a hard green deposit, no current can flow. Sometimes this deposit is so hard that it takes a chisel to remove it.

To Prevent Skidding.

Unequally adjusted rear wheel brakes are a potent cause of skidding and it is wise to make frequent tests of the parts for incorrect adjustment. It is necessary to have some one with you to watch the wheels. Drive the car along a dry road, accelerate quickly and then suddenly apply the brakes. If one wheel slides while the other is revolving, it may be taken for granted that the brakes are not holding with equal effectiveness.

Want Ads

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

FARM LANDS—FOR SALE 651 Continued.

THIS YEAR HAS BEEN EXtremely out of the ordinary in the length of the hot dry weather, but if you will come and look over some of our farms you will find what subirrigation means. Of course you can write and ask us, but that's not like seeing it for yourself.

You know we have improved farms in running shape, and we also have raw cut-over lands, on which we can make arrangements to put up small improvements and add the cost of them to the price of the land on long terms basis at the 6 per cent interest, which gives a chance for an ambitious person of small means to "dig in." Also we need help in clearing more land and if you want to take one of our places and spend part of your time working for us, you can do so—our work is steady and our wages are fair.

Cordwood is worth good money, and we have lands with lots of cordwood on them, like the 480 acres mentioned below, close to railroad and within the "dollar limit" of Spokane.

HERE ARE SOME IMPROVED PLACES:

30 acres, all in cultivation, fenced, some clover, timothy, alfalfa, etc., and balance of land for diversified crops. Nice improvements. Only $2250. We will take FOUR or five hundred dollars down and give ten years on the balance at 6 per cent. You will be close to school, close to good town, have daily R. F. D. This is a nice little home.

50 acres, about 45 in cultivation, all fenced, nice rustic bungalow; this place has its own water system that puts water in the house; nice large barn, chicken runs, etc. This has all community advantages. We will take $3750 for this place and give good terms.

RAW LANDS:

80 acres of willow brush land, volcanic ash soil, on county road, lies fairly level, can be easily cleared, has close neighbors. We will take $2000 for it; $200 cash, balance ten years, 6 per cent, and if you want a little house, we will build it and add the cost of it to the price of the land and give you the advantage of long time.

480 acres of cordwood land, no improvements; close to loading station, in good range; the cordwood should pay for it; $12.50 per acre.

We have most anything you want along this line. Ask for folder.

MILAN FARMS DEVELOPMENT COMPANY.

or
ALLIN REALTY COMPANY.
"REALTORS."
408 West Sprague Ave.
Tel. Main 2750.
Spokane, Washington.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence. Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; 20 years to pay. $2000 loan in improvements, or ready-made farms. Loans of live stock; taxes average under 20c an acre; no taxes on improvements, personal property or live stock. Good markets, churches, schools, roads, telephones; excellent climate; crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Alan Cameron, Gen'l Supt. Land Branch, Canadian Pacific Ry., 93 Ninth ave., Calgary, Alberta.

THE FAMOUS WHEAT-GROWING DIStrict, northern Lincoln county; 2600 or 1320 acres, improved wheat or diversified ranch; spring water; dark loam soil, clay subsoil. Price $65 an acre. 390 acres, improved, in Latah Co., Idaho, 6½ miles from Moscow, 1¼ miles from electric station. Price $27,600. Farms of all sizes for sale, or exchanges made.
NORTHERN PACIFIC LAND EXCHANGE.
ZIEGLER BUILDING,
SPOKANE, WASH.

WHEAT LAND BARGAIN—640 ACRES, all under cultivation; one-half summerfallowed, ready for crop; all fenced; good well, small house, barn for 20 horses, wheat granaries and other outbuildings. Price $25 per acre. Terms $4500 cash, balance $1280 per year, 6 per cent. Owner called to war, is reason for selling. Write H. D. McMillen, Ephrata, Wash.

BIG LAND OPENING—6000 ACRES A1 farm land in Snohomish county, $25 per acre; 10 yearly payments. Canneries, factories, mills, plenty of labor. Opportunity of your life. Send for literature. BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

$30 AN ACRE WILL BUY A SPLENDID 200-acre farm, 3 miles from railroad town; high school on the land; fenced to four fields; over 100 acres in cultivation; good buildings. Long time on part. No trades. A. Z. Lucas, New Meadows, Idaho.

GOVERNMENT LAND IN CAL. FREE book. Joseph Clark, Sacramento, Cal.

FARM LANDS—FOR SALE 651 Continued.

ONE OF THE SHOW RANCHES OF THE NORTHWEST is now offered for sale. 560 acres, 55 miles from Spokane and 2 miles from railroad station; 540 acres of the choicest farm land, with 300 acres in TIMOTHY AND CLOVER, none of which is over 3 years old; present owners have cut $10,000 worth of hay in the last two crops; buildings consist of a comfortable 7-room house; fine hay barn 30x110, with feed racks; stock barn 30x100 feet, stable room for 30 head; machinery building and grain bins; blacksmith shop with complete equipment; spring water piped to house, barn and lot; with place go 3 head of good cattle, 3 wagons, 2 mowers, binder, 2 buggies, hack, 2 disks, manure spreader, drill, racks and harness, gang plow, 14 h. p. Russell engine and complete set of small tools. Price $40,000; $25,000 cash will handle. No trade considered. Now, Mr. Buyer, if you are wanting the cream of the northwest in a stock, hay or diversified farm, don't fail to get more details on this ranch. Write or see Mr. Tipton. HEGE & WATKINS CO., 717 Paulsen bldg., Spokane, Wn.

DO YOU WANT A GOOD FARM? We have it—something to suit you—large or small, improved or unimproved—with stock and machinery if you want it—in Wash., Idaho or Mont. Call or write and tell us what you want. HEGE & WATKINS, 717 Paulsen bldg, Spokane. Wn.

7 ACRES AND 4-ROOM BUNGALOW, mile south city. Price $1800. Terms. Write for particulars. F. S. Mathias, R. D. No. 2, Chehalis, Lewis Co., Wn.

FARM LANDS—WANTED 654

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wisconsin.

FARM LANDS—Wanted to Rent 660

I HAVE A RESPONSIBLE CLIENT DEsiring to rent a good farm, either on shares or for cash. W. M. Frost & Co., 410 Chamber of Commerce bldg., Spokane, Wn.

IRRIGATED FARM LANDS.

ALFALFA LANDS, under government irrigation; abundant water; low altitude; rail and water transportation to coast markets; good schools, good roads; products alfalfa, corn, cream, hogs, honey, fruits, vegetables; long growing season; unimproved land $30 to $60 per acre; improved $100 to $260. Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

TO EXCHANGE—REAL EST. 705

$20,000 WORTH OF CLOSE-IN FIRST-class Spokane property to exchange for a good farm. W. M. Frost, 410 Chamber of Commerce bldg., Spokane, Wash.

STATEMENT OF THE OWNERSHIP, management, circulation, etc., required by the act of congress of August 24, 1912, of The Washington Farmer, published weekly at Spokane, Washington, for October 1, 1917.

State of Washington, county of Spokane, ss.

Before me, a notary public in and for the state and county aforesaid, personally appeared J. F. Young, who, having been duly sworn according to law, deposes and says that he is the vice president of The Washington Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Cowles Publishing Company, Spokane, Washington; editor, ——; managing editor, Edwin A. Smith, Spokane, Washington; business managers, none.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

W. H. Cowles, Spokane, Washington; J. F. Young, Spokane, Washington; F. J. Whaley, Spokane, Washington; Cowles Publishing Co. (a corporation), Spokane, Washington.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds or other securities than as so stated by him.

COWLES PUBLISHING COMPANY,
By J. F. YOUNG, Vice Pres.

Sworn to and subscribed before me this 29th day of September, 1917.

(Seal) F. J. WHALEY.
(My commission expires Oct. 17, 1919.)

GIANT POWDERS
Lift them out

It will pay you to test Giant Farm Powders in competition with any other stumping powder.

In the last year more than 2,000,000 pounds of these Giant Powders were used for stump blasting in Washington and Oregon alone. The users included farmers in every county in both states, the largest lumber and development companies, and the United States Government. They use the Giant brands because they have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

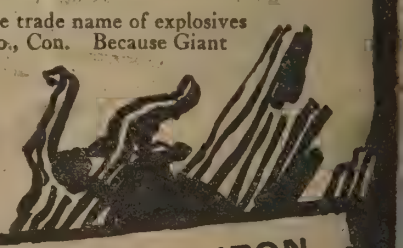
always give satisfaction and do their work at the lowest possible cost and in the most thorough manner.

In the Pacific Coast states the farmers require explosives that will disrupt, crack, split and heave the stumps and at the same time lift and loosen the roots for easy handling. Giant Farm Powders do this because they are made especially to suit western conditions. Because of their wider-spread force, they remove the stumps more economically than powders or dynamites that merely shatter and pulverize.

Test one case. Compare it with any explosive that you have ever used for stump blasting. After you have blasted a dozen stumps you will understand why farmers who have once used them always continue to use the Giant Farm Powders. Fill out and mail the coupon at the right, and we shall arrange with our nearest distributor to supply you promptly at the lowest market price.

There are two Giant Farm Powders—Giant Stumping Powder, used for blasting in wet soil, and Eureka Stumping Powder (which costs a little less) for blasting in dry soil. Both resist cold to a remarkable extent, seven days' exposure to a temperature of 32 degrees failing to freeze them. Ask your dealer for these brands.

THE GIANT POWDER CO., CONSOLIDATED — HOME OFFICE: SAN FRANCISCO — ESTABLISHED 1868



"Everything for Blasting"

BRANCH OFFICES: Seattle, Spokane, Portland, Salt Lake City, Denver

Have You Our Stump Book?

It is the most helpful and interesting book ever issued on Stump Blasting. It tells and shows how to save money and make land-clearing easier. It is written by Western men, from the Western viewpoint, and is full of pictures showing latest methods of blasting. Mark and mail the coupon and get it free. Other books—on boulder blasting, tree planting, ditching and subsoiling with explosives—also free on request. Mail the coupon *now*, before you lay this aside.

Warning. Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by the Giant Powder Co., Con. If your dealer has only ordinary dynamite, write us and we will see that you get the genuine.

Should Enlist Money

Liberty Loan Bonds May Win the War

"Shall we be more tender with our dollars than with the lives of our sons?"

This question Secretary William G. McAdoo of the United States treasury department pointedly asks the American people. Thousands of homes are giving up their sons to help right the wrongs of the world and drive inhumanity into external exile. Millions of men and women who can not play their part on the field of battle have before them the opportunity of playing as real a part in civilization's stupendous task. The second Liberty loan!

America is the great financial power of the world, and upon her has devolved the plain duty of giving freely of her wealth to finance the war against Prussianism. Through various appropriations, taxes and bond issues she has undertaken to raise a total of $20,000,000,000, the most gigantic sum for any single purpose in the world's history. One item of this sum is that of the second Liberty loan, which the government hopes will reach $5,000,000,000.

The bonds are for sale in denominations of $50 to $10,000. Many of the wealthy individuals and corporations of the country have subscribed for large blocks of them, in some instances running as high as several million dollars. But the success of the loan, and hence the success of the war in a large measure, rests upon the shoulders of the common people of the nation—the farmers, merchants, working men, women—and the war department is hoping that 10,000,000 citizens, one-tenth of the country's entire population, will buy small bonds.

When the first Liberty bond issue of $2,000,000,000 was placed on sale last June the first part of the campaign was disappointing. The same was true of the early stages of the four weeks' campaign for the sale of the second issue. The first issue was oversubscribed when the final

LIBERTY BOND FACTS.

A Liberty bond is a mortgage on the honor of the American people.

It bears 4 per cent interest.

It is exempt from regular taxation.

If a later bond issue is sold to bear higher interest, a Liberty bond may be converted into a bond of the higher rate.

It matures in 25 years, but may be redeemed after 10 years if the government wishes to so redeem it.

It is transferable and is almost legal tender, being the finest collateral for loans in the world.

It may be bought on the instalment plan, 2 per cent down, 18 per cent November 15, 40 per cent December 15 and the remaining 40 per cent January 15.

Any bank or postmaster can give complete information as to the way to secure a Liberty loan bond.

Control Food Prices

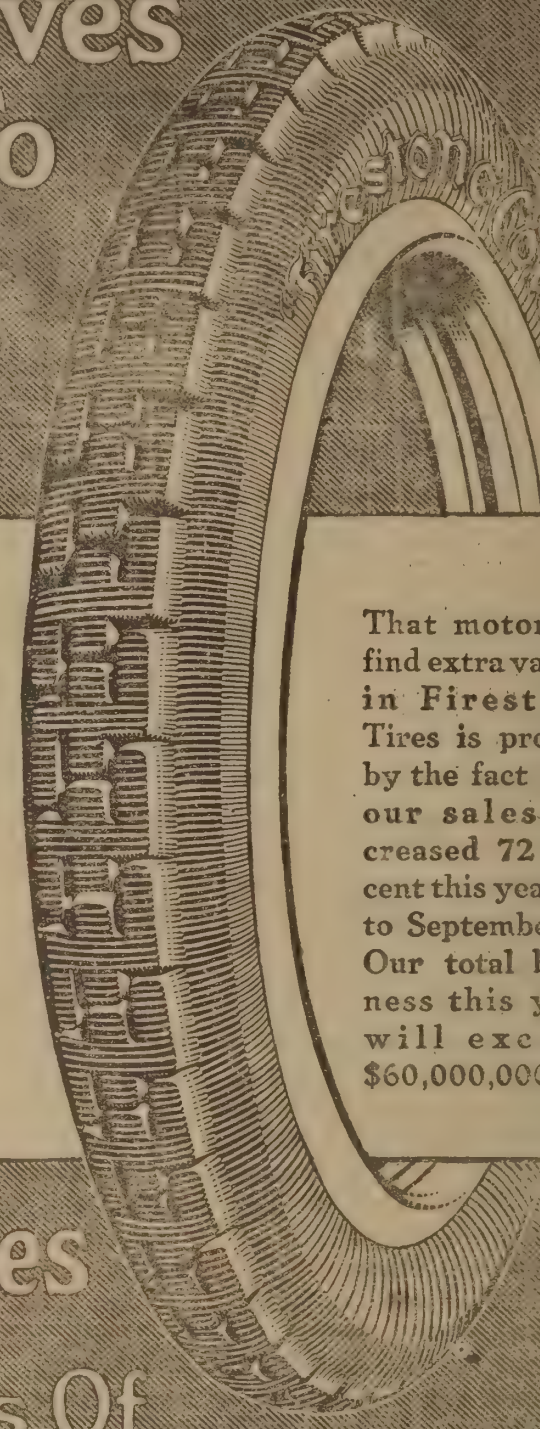
Government Announces Sweeping Plan

The prices of the necessary foods are to be regulated by the government. This was assured when President Wilson issued a formal proclamation requiring all big importers, manufacturers, storers, dealers and distributors to take out a government license to do business. The license must be taken out not later than November 1, or such concern will not be permitted to continue in business.

The price control will be exercised over such staples as wheat, corn, rye, oats, milk, butter, beans, peas, fish, eggs, sugar, fruits, and all the various products manufactured from them.

The provisions of the licenses were not ready to be announced at the time of the issuance of the proclamation, but they are planned to be such as to prohibit absolutely all undue profit from the buying, storing, transportation or selling of the things that the American people must have to eat.

Failure to take out the required license, or failure to live up to its provisions after it is taken out, will subject the guilty person to a fine of $5000 or imprisonment for two years.



Accompanying this article is the complete list of foods to be controlled as given in the president's proclamation, and a study of the list will indicate how far-reaching is the order, and what the possibilities of price relief to the consuming public are. Absolute prohibition of food profiteering is the intent of the president's action, which is taken under the provisions of the food control bill of August.

The following are the concerns over which the regulation will be placed: All persons, firms, corporations and associations engaged in the business of either (1) operating cold storage warehouses (a cold storage warehouse being defined as any place artificially or mechanically cooled to or below a temperature of forty-five degrees in

Continued on page 5

First Read; Then Act! Are you willing to support a plan which aims to eliminate the middleman?—a plan which is in harmony with the government's program to release workers from non-productive lines so as to utilize their brain and brawn in producing necessaries?—a plan which means money saved right from the start? If this plan is to succeed it must have the loyal backing of readers everywhere; see details on pages 18 and 19.

Actual Service Gives Leadership To Firestone SUPER CORD TIRES

WITH numerous makes of cord tires contesting, the past year has witnessed the sharpest rivalry for Tire Supremacy that motordom has ever known.

In this contest the Firestone Super Cord rightly came into its acknowledged leadership, rightly because of the construction which is designed to produce strength, durability and flexible action.

The body of the Firestone Super Cord Tire is built of walls of stout cord, each cord imbedded in pure gum, no two cords ever touching to cause friction. The cushion (which is under the tread to absorb shocks and protect the inner body) is a thick layer of pure gum; the tread is tough and thick. The beads which hold the tire in the rim are specially reinforced. The sidewall is also reinforced, giving extra strength against rim-cut and raising the bending point of the tire safely high. More mileage at less cost. Users of Firestone Cord Tires are getting the highest average mileage enjoyed by car owners.

That motorists find extra values in Firestone Tires is proved by the fact that our sales increased 72 per cent this year up to September 1. Our total business this year will exceed $60,000,000.

New Fabric Tire Features Suggested By Success Of Cord Construction

Firestone FABRIC TIRES

have benefited by every feature of cord tire construction which can be used to advantage. THICK, TOUGH TREAD gives longer surface wear. MORE RUBBER BETWEEN LAYERS. Added protection against internal friction and greater resiliency. THICK CUSHION STOCK. Still more resiliency, protection against tread separation and stone bruise. REINFORCEMENT IN SIDE WALL. Greater strength at the bead. Firestone dealers will show you a cross section of the newest output of FIRESTONE FABRIC TIRES, explaining the features that add more miles to Most Miles per Dollar.

Pledge Week Postponed

Will Make National Food Drive Oct. 28 to Nov. 4

At the request of President Wilson, the food conservation drive has been postponed from the week of October 21 to 28, inclusive, to the following week, October 28 to November 4, inclusive.

This change is made in order to allow the centralization of all public effort on the second Liberty bond campaign. The week originally announced for the nationwide signing of the food-saving campaign is the final week in the great drive for the sale of the second Liberty loan bonds, and the government is so vitally concerned that the Liberty loan succeed that the postponement of the food campaign seemed necessary to the president.

Enlist 20,000,000 Homes.

It is the aim of the food administration during the week from October 28 to November 4 to secure the signed pledges of 20,000,000 homes in America that they will follow out the recommendations of the administration as fully as possible in the saving of the staple foods for the use of the soldiers of this country and the allies. These recommendations urge the using of less wheat, less beef, pork and mutton, and less sugar and fats. They urge, on the other hand, the use of larger amounts of vegetables, corn bread, fish, poultry, eggs and the like, which are not suitable for use in the battlefield camps.

The following is a message directed by President Wilson to Food Commissioner Herbert C. Hoover, and by Mr. Hoover transmitted to the state food commissioners throughout the nation:

The White House, Oct. 10.—Mr. Hoover: The exigencies of the treasury have required setting the final week of the Liberty loan campaign during the period of October 21 to 28. This, I understand, brings it into the same week as the food conservation pledge campaign. It seems to me undesirable in the interests of both these capital matters that this should occur. In all the circumstances, therefore, I should be glad if the pledge campaign could be deferred one week, that is, until October 28 to November 4.

In asking this alteration of the plans of yourself and your association I shoud like to take this occasion to impress upon them that I in no way underrate the importance of their efforts. If we are to supply our allies with the necessary food, and are to preserve our own sources of foodstuff during the coming winter it can only be accomplished by the utmost self-denial and service on the part of all our people through the elimination of waste and by rigid economy in the use of food. Therefore, I would be glad if you would convey to all of your staff throughout the country my feelings of the prime importance of their plans and their work. I wish particularly to express my great appreciation of the service which this additional tax on their time will impose upon the many thousand volunteers who have already deferred their own concern to public interest in this important work.

I ask them not to allow this alteration in the program to dampen their fine enthusiasm, but rather to redouble their energies in their very great branch of national service. Cordially and sincerely yours,

WOODROW WILSON.

National Apple Show Prize

Will Pay $50 for a Hoover Dinner for One Person

The National Apple show, to be held in Spokane November 19-24, will pay $50 for a dinner for one person, provided that dinner best carries out the Hoover idea of food conservation and also has as a basic feature the use of apples in the makeup of the various dishes.

Fifty dollars for one dinner is a pretty good prize, but the apple show trustees are seeking to interest women all over the country in a most unique and original plan of food conservation along the lines indicated by Food Administrator Herbert Hoover. The administrator has given the apple a foremost place as a food necessity during the war period.

The "Hoover Special" dinner prize is open to any woman in the Inland Empire and requires no entrance fee nor is there any age limit or experience requirement.

The $50 award will be given to what is considered by the judges to be the best, well balanced meal for one person, the elements to consist of from five to 10 dishes, all of them made wholly or in part from apples, and best embodying the idea of food conservation. The judges will make their award on a basis of 100 points total, allowing 30 points for food value; 35 points for conservation or economy; 20 points on palatability; 10 points on attractiveness and 5 points on the variety of food units.

It is required that the weight of each article used in the composition of each dish must be given at the time entries are made, also the formula used. The exhibitor must furnish all table appointments. The exhibits will remain on display at the apple show throughout the entire week.

It is the intention of the trustees to present to the National Council of Food Administration all particulars on the prize-winning dinner with the object of securing its adoption throughout the nation as a war food measure.

Instead of giving second and third prizes the judges will select the four dinners which rank next in order to the first prize-winner, and will give a $10 prize to each of the four.

Helen Howe, Chamber of Commerce building, Spokane, who is in charge of the women's department of the apple show, will receive entries and make arrangements to accommodate all women who desire to participate in the contest.

Keep Feed at Home

This Is Food Administration Aim

"It is part of the fundamental plan of the food administration that sufficient grain shall be retained locally for consumption and manufacturing purposes."

This is a statement made by the secretary of the national grain buying corporation of the federal food administration. The statement came as a result of inquiry from the state public service commission of Washington. The tendency to ship northwestern grain to eastern points for manufacture into flour and feed was such as to greatly reduce the supply of mill feed in the northwest and increase the price of that which was available, said the commission, but a message was received immediately from Washington, D. C., that there was no need to worry on that point, as the policy of the food administration was that indicated above.

Should Enlist Money

Liberty Loan Bonds May Defeat the Kaiser

(Continued from page one.)

count was taken, however, by over $1,000,000,000. Civilization is hoping that the second issue will likewise be oversubscribed. The sum of $3,000,000,000 has been named as the minimum that must be raised through the sale of the bonds. The hope of the administration at Washington is that it will actually reach $5,000,000,000.

The failure of the bonds would have a two-fold adverse effect on the progress of the war from this country's viewpoint. It would leave the allies actually in need of funds, and it would convince the adversaries of the United States and her allies that the American people were not putting their shoulders patriotically behind the wheel to win the war.

The second Liberty loan must not, and will not fail.

President Sets Aside October 24.

What should be one of America's greatest patriotic days has been named by President Wilson in his setting aside of October 24 as Liberty day for the purpose of popular Liberty loan subscriptions. The president urges public gatherings in every city and village in the United States on that day. It is probable that the day will virtually be made a holiday throughout the entire country, and it is hoped that on that occasion the second Liberty loan will be oversubscribed by hundreds of thousands of dollars. The following is the official proclamation:

"The second Liberty loan gives the people of the United States an opportunity to lend their funds to their government to sustain their country at war. The might of the United States is being mobilized and organized to strike a mortal blow at autocracy in defense of outraged American rights and of the cause of Liberty. Billions of dollars are required to arm, feed and clothe the brave men who are going forth to fight our country's battles and to assist the nations with whom we are making common cause against a common foe. To subscribe to the Liberty loan is to perform a service of patriotism.

"Now, therefore, I, Woodrow Wilson, president of the United States of America, do appoint Wednesday, the 24th of October, as Liberty day, and urge and advise the people to assemble in their respective communities and pledge to one another and to the government that represents them the fullest measure of financial support. On the afternoon of that day I request that patriotic meetings be held in every city, town and hamlet throughout the land, under the general direction of the secretary of the treasury and the immediate direction of the Liberty loan committees which have been organized by the federal reserve banks. The people responded nobly to the call of the first Liberty loan with an oversubscription of more than 50 per cent. Let the response to the second loan be even greater and let the amount be so large that it will serve as an assurance of unequaled support to hearten the men who are to face the fire of battle for us. Let the result be so impressive and emphatic that it will echo throughout the empire of our enemy as an index of what America intends to do to bring this war to a victorious conclusion.

"For the purpose of participating in Liberty day celebrations all employes of the federal government throughout the country whose services can be spared may be excused at 12 o'clock Wednesday, the 24th of October."

Creameries Exhibit.

The dairy and creamery exhibits were smaller in numbers than usual at the Washington state fair this year. Selah creamery won first on cheese, score 91.5; Harwood creamery second, 91; Cowiche third, 90.5 On creamery butter Winlock Cooperative creamery won first, Fairfield creamery second, Lewis county cooperative creamery third.

On dairy butter Mrs. R. R. Peden of North Yakima won first for best 110 pounds and first on unsalted butter, with the Cascade creamery second.

On ornamental display Mrs. Thornton was first, Mrs. Peden second. Granulated butter, Mrs. Peden first; Cascade creamery second.

A. D. Fish of Seattle was in charge of the exhibit and Professor Frevert of Salt Lake did the judging. H. A.

Helps Construct Three Silos.

C. F. Monroe, county agent of Grays Harbor county, reports that he recently assisted in the construction of three silos and in the filling of two. It is hard now to find any one in Grays Harbor county that talks against the use of silos.

Banker-Farmer Meet

Conference at Pullman Nov. 9

Announcement has been made by State Bank Examiner W. E. Hanson of the annual bankers' convention at Pullman, November 9-10 this year, at which time special attention will be given to the problems of farm finance. It is urged by Examiner Hanson that the meeting be made a conference between farmers and bankers, that they may thresh out their problems together. The program announced includes the following subjects:

"The problem of encouraging the maximum production of foodstuffs and the ways in which the financial interests of the state can aid in this production.

"Problems of distribution of the products of the farm with the least loss of transportation and least waste of products.

"Conservation of waste products of the farm.

"Most judicious consumption of products.

"The service of the banker in the purchase of live stock from centers of surplus, and redistribution of same where needed for consumption of by-products.

"Financing the wholesale purchase of good seed for distribution where a scarcity now exists."

PINCHOT IS COMING.

Address Stockmen at Lewiston.

Announcement has been made that Gifford Pinchot, chairman of the live stock branch of the national food administration, will be present one day at the Northwest Live Stock show at Lewiston next month and will deliver a public address to the stockmen and others who may attend. Pinchot was formerly prominent in the nationwide conservation movement.

Mason County Shows Big Change

Tendencies of County Well Expressed at Annual Fair

By Alvara P. Williams.

The eighth annual fair of Mason county, held September 27-29, shows a marked improvement in quantity and quality of exhibits. Last year was a surprise to many from outside the county, who had not realized that Mason county was rapidly changing from a logging county to an agricultural district. This year was even more of a surprise to many old timers, who had summed up weather conditions, the late date of the fair, the scarcity of labor, and decided that the fair wouldn't be up to standard. With very few exceptions, the exhibits were far better than ever before; especially was this true of the fruit, vegetable and grain exhibits.

A new arrangement this year left the main floor of the main building clear for dancing, and for several lectures. Fruits, vegetables and grains were displayed in a tent which has the foundations for a permanent building. The quarters for the live stock were not entirely filled, but the showing was excellent as far as it went. It will be some years before much of the best live stock in Mason county can be brought to Shelton for exhibit, owing to the great distance, over poor roads, from a few directions.

One who understands Mason county well will find the tendencies of the county well expressed in the attractions of this fair. It is a region which does its bit, and more, so quietly that an outsider does not realize the undercurrent of patriotic feeling. There is little publicity for this county, which raised three times its allotment of voluntary Red Cross subscriptions several months ago, and which has over a thousand members of the Red Cross society at present. There is little news of war gardens in the local newspaper, but these same gardens were a large factor of the exhibits at the fair. No one realizes the strength of the 49 school districts in the county, until a program by the school children of the entire county is presented.

The most striking feature of the entire fair, as far as the future of the county is concerned, was the parade and program given by the school children of Mason county, on Saturday. Practically every school district of the county was represented, forming by schools and marching to the fair grounds, with their school banners flying. A portable platform was used for their program, which included songs, drills and marches and brought nearly every school in the county in closer touch with the others.

Another feature of the fair, which was carried on so quietly at the end of the last day that few realized its significance was the sale of donated exhibits, the proceeds going to the Red Cross fund. Over $50 was realized from this sale, not such a large amount in itself, but characteristic of the people of the county and their patriotism.

Live stock was a small exhibit, except for cattle. Some good registered stock was shown, with surprisingly few grades exhibited. The poultry exhibit was small, but included nearly all varieties. B. E. Williams of Oakville, who placed the awards, claimed that the quality of the entire live stock exhibit was better than at several larger fairs he had attended in this state and Oregon.

An attempt was made last winter to standardize potatoes in Mason county, with the result that larger premiums were offered for a dozen varieties this year and the competition was keen on the varieties selected, especially on Beauty of Hebron, Green Mountain, Early Rose, Pride of Multnomah, White Star.

The display of corn was excellent. First prize went to an exhibit 14 feet high. Many specialties were shown, and all were of practical value. There was very little of the old-time "freak" idea in exhibits this year. New varieties of pole beans, stock beans, field peas, exhibits of hulless oats, soy beans, a variety of field peas with 23 pods to a vine, instead of the usual seven or eight pods—these show what the farmers are doing in a practical experimental way.

Perhaps as a result of the war gardens the premiums this year were much better distributed than in former years. There was close competition in many classes where formerly one or two exhibitors won a string of premiums year after year.

The programs included several patriotic speakers. There were also two lectures by Professor Blanchard of Western Washington experiment station at Puyallup. Jitney dancing on two evenings helped out on the expense account of the fair association.

Awards on live stock were made as follows:

Horses—Hambletonian, team in harness, Mell Saegar; draft team, Paul Hunter; mare, Axel Anderson. Belgian colt, C. H. Wivell.

Sheep—Shropshires, William Cooke; Lincolnshire, Mell Saegar. William Cooke; Cotswold, C. H. Wivell.

Hogs—Chester White boar, 1, Waldo Insel; boar under 1 year, 1, W. A. Hunter; sow, 1, Jay Needham. Duroc Jersey, sow and pigs, Arnold Rex; barrow, A. M. Johnson.

Cattle—Registered Shorthorn, bull, 1, Ed Taylor. Grade Shorthorn, cow, 1, Will Tucker. Registered Jersey, bull, 1, Waldo Insel; cow, 1, Axel Anderson; heifer, 1, C. H. Wivell; heifer, 1, C. H. Wivell. Grade Jersey, cow, 1, J. T. Butts; cow, 1, A. M. Johnson; heifer, 1, G. T. Booth. Guernsey Registered, bull, 1, William Cooke; cow, 1, Buster Leslie; cow, 1, Buster Leslie. Grade Guernsey, heifer, 1, David Getty; heifer, 1, G. C. Angle. Registered Holstein, bull, 1, William Cooke; cow, 1, Harry Winsor; cow, 1, G. C. Angle.

Poultry—Barred Plymouth Rock, cock, 1, Mrs. Mary Insel; cockerel, 1, Mrs. Mary Insel; pullet 1, Mrs. Mary Insel; old pen, 1, Mrs. Mary Insel; young pen, 1, C. A. Wiss; White P. R., Mrs. Mary Insel; White Wyandotte, Mrs. W. G. Rex; White and Buff Orpingtons, H. E. Loop; R. C. R. I. Reds, C. A. Wiss; S. C. R. I. Reds, cockerel, William Banks; hen, Edward Burnett; pullet, C. A. Wiss; Buff Leghorns, Mrs. McKay; White Leghorns, Arthur Wingert, all premiums except old pen; C. K. Fossum, young pen, J. H. Haskell; Ancons, Mrs. Mary Insel; Black Cochin, cock, Mrs. F. H. Jones; hen, Mrs. L. Kendall; ducks, Mrs. Mary Insel; geese, Mrs. Levi Shelton.

Three grange exhibits from Shelton, Skokomish and Agate granges were uniformly good. The diploma went to Skokomish, which had exhibits that would have been winners if exhibited separately. The entire exhibit was marked in enormous size of specimens, fruit well colored, and a most representative display of all farm products.

The prize for best farm exhibit was awarded to Lakeview Farm, Waldo Insel.

Premiums on fruit, vegetables and grain were placed by C. H. Bergstrom, county agent of Thurston county.

Potatoes, firsts as follows:

Beauty of Hebron, Harry Shelton; Green Mountain, H. L. Alden; Up to Date, Robert Johnson; Early York, R. R. Williams; Carman, Robert Johnson; American Wonder, Mrs. Mary Insel; Irish Cobbler, J. F. Moody; Early Rose, Mrs. Mary Insel; Banner, William Banks; Late Rose, Mrs. Ottermatt; Mayflower, William Banks; Gold Coin, Robert Johnson; Rural New-Yorker, Henry Mente; White Star, C. H. Wivell; Goodrich, William Banks; Netted Gem, L. G. Shelton; Early Fortune, William Banks; Pride of Colorado, M. W. Logan; Pride of Multnomah, Robert Johnson; Million Dollar, W. J. Becker.

Premiums on shelled grain were won by C. H. Wivell. Sheaves of grain were awarded to the following:

Spring wheat, William Rediske; black oats, C. S. Holman; timothy, C. S. Holman; beardless barley, Henry Mente; Siberian millet, R. R. Williams; millet, R. R. Williams; oats and vetch, W. J. Becker; red clover, W. J. Becker; sweet clover, W. B. Eaton; wheat and vetch, W. G. Rex; field peas, R. R. Williams; rye, W. J. Becker; vetch, C. A. Wiss; alfalfa, A. L. Bell; Swede pole beans, John Ahl.

Display of corn—Mrs. Frank Fredson; sweet corn, J. F. Moody; amber corn, J. Wingert; corn, William Malpass; field corn, W. G. Rex; flint corn, William Malpass; sweet corn, Hans Bergeson; Essex Rape, R. R. Williams; three-eared corn, William Banks.

Specialties—Pole bean, Mark Shelton; China potatoes, William Rediske; soy bean, R. R. Williams; hulless oats, C. A. Wiss; field peas, 23 pods to vine, L. G. Shelton; stock bean, Hans Bergeson.

W. G. Rex won 20 firsts on apples, taking about all except on Lady, Olympia Baldwin and Paragon, which were won by C. H. Wivell. Pears, with an enormous display, especially of Bartletts, were divided between W. G. Rex and J. Wingert of Harstine.

Very few plums and prunes were shown. An excellent display of grapes by Ed Wilson of Harstine took all firsts.

Part of the vegetable exhibit at the Mason county fair.

Mason county school children gathered at the fair at Shelton.

Community Cooperation

Good, Clean, Live Town Helps the Farmer

Living cost on the farm is increasing just as well as the living cost among the people in the town.

Taking this fact into consideration there is greater need than ever of community cooperation. Working together the farmer and the townspeople of all rural communities can do more for each other in the way of reducing the cost of living than each can do for himself. The right kind of cooperation between the farmer and the local merchants in the town will bring about this lessoned cost, but just as long as farmers send to the cities for merchandise, just so long it will be out of the question for country merchants to keep stocks in quantity and quality and to sell them at prices to advantage both to the farmer and to the merchant.

It is up to every progressive farmer to compare prices of city merchants with those of their country store, and if by cooperation you can buy the same quality for the same price of your home merchant, it is up to the spirit of cooperation and mutual benefit to give that trade to the country merchant.

It is up to the farmer to keep a record of prices in the larger cities as well as the country towns, including the delivery costs to his home. Compare these prices and the quality of the purchases for the same merchandise carried by the local trader. Then they will know who is giving them the most for their money. They can not afford to ignore the country merchant if the prices of the average of all they buy is as low as the prices furnished by the larger cities, nor can they afford to let the local trading center go by default just because in some instances they can buy cheaper from the big cities.

Of course every farmer has the right to buy where he can buy the cheapest, but in arriving at where he can buy the cheapest, is it not wise to total the prices for a year?

It still remains true that a good thriving, healthy, up-to-date town with good churches, good stores, good social privileges, is a valuable asset to the farming community surrounding such a town. Farmers simply can not have such an up-to-date town as their trading center unless they coperate with the townspeople. It is just as much up to the farmer as to the trader or the preacher or the public spirited townsmen to make a good, clean, live, hustling town.

Think this over and if this reasoning is not sound, write to the Farmer and tell why.

First Farmers' Marketing Association

Organized Under the Direction of the State Office of Farm Markets

By ASHER HOBSON
Director Office of Farm Markets

The Eastern Lewis County Farmers' exchange is the first farmers' marketing association to be organized under the direction of the state office of farm markets. Since organization work is one of the projects of the newly created office and since the methods of carrying on this work are not generally understood, a detailed description of the formation of this cooperative selling agency will not be amiss.

First, let it be understood that the office of farm markets does not stand for indiscriminate or wholesale organization. It does not look favorably upon cooperative movements which are not based upon conservative economic principles. Experience teaches that cooperation founded upon hopes, sentiment or enthusiasm is likely to fail. If the history of cooperation were written in detail its failures would occupy many more pages than would its successes. Consequently, if there is not a great preponderance of evidence from an economic standpoint in favor of organization such a movement should not be undertaken. Because of a lack of such evidence this office finds it necessary to discourage as many organizations as it encourages.

Furthermore, this office believes that growers' selling organizations have greater chances for success than have growers' buying organizations. This statement requires an explanation.

In the first place, a producer is primarily a seller and not a buyer; that is, he sells more products than he buys. A great part of his expense of production is purchased in the form of taxes, interest on investment and labor. These are things which can not well be purchased cooperatively. Hence 5 cents saved on the dollar of the material things he buys will net him much less than 5 cents on the dollar of the commodities he sells.

Secondly: The classes of commodities which he has to sell are generally fewer in number and offered in much larger quantities than those which he wishes to buy. Fewer classes of commodities offered in larger quantities simplifies the nature of the transaction, which, in turn, lowers the overhead charges of the usual selling organizations as compared to the transactions and overhead charges of the usual buying organizations.

On the whole, it is not well for producers to form themselves into associations performing work of a highly technical or of a complex nature. The successful management of such an association requires so much attention on the part of the grower that he has little time for attending to his own business—that of farming.

To be sure, a capable manager may be hired to conduct a farmers' cooperative manufacturing plant or a mercantile store, but little chance has such an undertaking of succeeding unless the board of directors, who are composed of farmers, have a keen insight into the details of the business, in order that they may successfully dictate the policies of that business.

The writer does not wish to infer that all farmers' cooperative stores are failures. Such is far from being the case. The point to be brought out is that it requires more favorable economic conditions and more skillful management to insure success than does a selling organization doing an equal amount of business under like circumstances.

On the other hand, a selling agency may do buying of a certain sort for its members which will often result in a saving without endangering its chances of success.

Bulky, nonperishable commodities of a staple variety, such as flour, feed, coal and machinery, may well be handled by a farmers' marketing company. These commodities can be purchased in car lots and can often be delivered to the members of the association direct from the car without the intervention of a warehouse. This sort of buying should be encouraged. It can profitably be carried on to some extent in nearly every farmers' commercial organization.

To return to the question of the methods of organization, quite often the task of an organizer is the collection of sufficient data and the analyzing of that data, in order to determine the feasibility of an undertaking. Consequently, when the farmers of eastern Lewis county made application to the office of farm markets for assistance in perfecting a marketing association the first step was a survey of the field.

What were the commodities to be handled by the proposed company and their probable amount; present system of marketing those commodities and the approximate cost; improvements expected from proposed organization, capital required, anticipated running expenses, number of prospective members and extent of territory covered? These and many other influencing factors were considered.

For the most part, the desired information concerning local conditions was obtained through the county agricultural agent.

It is the established custom of this office to do its extension work through the county agent, providing the community is represented by one. Because of his intimate knowledge of local conditions the information supplied by him is the determining factor in most cases in deciding the question as to whether the people of a community are ready for cooperation; and, if so, the kind of an organization that will best suit their conditions.

Since the results of the survey pointed toward what were taken to be favorable conditions for the promotion of a cooperative selling organization, the director of the office of farm markets and the county agent met with a committee of seven representative farmers from eastern Lewis county. At this meeting tentative constitution and by-

(Continued on page twenty-one.)

GRASP THIS OPPORTUNITY

On pages 18 and 19 of this issue you will find details of a plan which means money saved for you and men released for service in agricultural and industrial lines.

Will Control Prices

Government Announces Sweeping Food Plan

(Continued from page one.)

which food products are placed, and held for 30 days or more); (2) operating elevators, warehouses or other places for storage of corn, oats, barley, beans, rice, cottonseed cake, cottonseed meal or peanut meal, or (3) importing, manufacturing (including milling, mixing or packing), or distributing (including buying or selling) any of the commodities in the accompanying list.

Farmers are excepted from the license requirements. There are many other exceptions, al lof which are designed to be only of those persons or corporations whose business is normally conducted upon a just and equitable basis, or whose business will be regulated automatically through the regulation of the big concerns. The following is the complete list of exemptions as given in the president's proclamation:

"Operators of all elevators or warehouses handling wheat or rye, and manufacturers of the derivative products of wheat or rye, who have already been licensed.

"Importers, manufacturers and refiners of sugar and manufacturers of sugar syrups and molasses, who have already been licensed.

"Retailers whose gross sales of food commodities do not exceed $100,000 per annum.

"Common carriers.

"Farmers, gardeners, cooperative associations of farmers or gardeners, including live stock farmers and other persons with respect to the products of any farm, garden or other land owned, leased or cultivated by them.

"Fishermen whose businesses do not extend beyond primary consignment.

"Those dealing in any of the above commodities on any exchange, board of trade or similar institutions, as defined by section 13 of the act of August 10, 1917 (the food control bill), to the extent of their dealings on such exchange or boards of trade.

"Millers of corn, oats, barley, wheat, rye or rice, operating only plants of a daily capacity of less than 75 barrels.

"Canners of peas, dried beans, corn, tomatoes, salmon or sardines, whose gross production does not exceed 5000 cases per annum.

"Persons slaughtering, packing, distributing fresh, canned or corned beef, pork or mutton, whose gross sales of such commodities do not exceed $100,000 per annum.

"Operators of poultry or egg packing plants, whose gross sales do not exceed $50,000 per annum.

"Manufacturers of maple syrup, maple sugar and maple compound."

"Ginners, buyers, agents, dealers or other handlers of cottonseed who handle yearly, between September and August 31 less than 150 tons of cottonseed.

CONTROL NECESSITIES.

The following is the complete list of foods to be regulated under the president's proclamation:

Wheat, wheat flour.
Rye, rye flour.
Barley, barley flour.
Oats, oatmeal, rolled oats.
Corn, corn grits, cornmeal, hominy, cornflour, starch from corn, corn oil, corn syrup.
Rice, rice flour.
Dried beans.
Pea seed, dried peas.
Cottonseed, cottonseed oil, cottonseed meal.
Peanut oil, peanut meal.
Soy bean oil, soy bean meal, palm oil, copra oil.
Oleomargarine, lard, lard substitutes, oleo oils, cooking fats.
Milk, butter, cheese.
Condensed, powdered, evaporated milk.
Fresh, canned or cured beef, pork or mutton.
Poultry, eggs.
Fresh or frozen fish.
Fresh fruits or vegetables.
Canned peas, dried beans, tomatoes, corn, salmon, sardines.
Dried prunes, apples, peaches, raisins.
Sugar, syrups, molasses.

"Kitchen's Joker" in Tax Bill.

The country is waking up to "Kitchen's joker" in the revenue bill imposing the tax of eight per cent on earned incomes exceeding $6000. The joker consists in exempting the incomes of senators and representatives and other governmental officials whose salaries exceed $6000, as well as exempting those whose income from money invested in stocks, bonds, real estate, etc., exceeds $6000. A professional man is obliged to pay an eight per cent tax on all that he earns from his profession above $6000, in addition to the regular income tax, while another man whose income from investments bring him in over $6000 a year has to pay an income tax but is exempted from this eight per cent tax. This eight per cent tax was not in the revenue bill when it passed the house nor was it in as the bill passed the senate, but was forced into the bill by Representative Kitchen in secret session of the conference committee on the threat, it is alleged, of holding up the entire bill unless his demands were met.

Yakima Potatoes

Federal and Local Standards

By RAY W. FELTON.

No. 1 Washington potatoes will weigh not less than three ounces and No. 2's, not less than two ounces, if the recommendation of the potato grading committee, appointed at the state fair, is adopted by Commissioner of Agriculture E. F. Benson. Meeting with representative potato growers of the Yakima valley, Tuesday, October 8, at Toppenish, members of the committee decided upon the above recommendations as to size. In other requirements the grade as suggested by the federal department of agriculture will be recommended. Thirty days after the committee's recommendation is approved by the state agricultural commissioners, the grades become fixed and all shipments will be made according to that standard if sold under grade.

The Toppenish meeting was well attended and of intense interest to potato growers throuhout the state. Among those present were: Asher Hobson, director of state farm markets; M. L. Dean, state commissioner of horticulture, and John Gourley, of the Potato Dealers association. Mr. Hobson urged the Yakima growers to adopt the federal standard if they graded their product at all. Considerable opposition developed, many growers contending that if Yakima potatoes were sold on the same standard as other Washington spuds, they would lose their individual quality reputation. The meeting decided however to adopt the federal standard for the general shipment, but to retain the association minimum of four ounces for all potatoes shipped under the name of the Yakima Valley Potato Growers' association. The discussion was heated at times and the conference lasted all day.

President Benz, of the association, who recently returned from the principal potato-growing sections of the east and middle west, told the growers not to grow anxious about the potato market. A normal crop has been produced he said and the demand will be great.

"Uncle Sam is a pretty good business man," said Mr. Benz. "He certainly realizes the value of spuds this year when he says: 'Put your spuds in storage and I'll loan you money on them.'"

Digging in the Yakima valley has just been started. It is not general as yet. Buyers are plentiful, but growers are inclined to hold. Some storage facilities have been provided and growers declare they will hold all winter before selling at present bearish quotations.

National Dairy Show.

Secretary of Agriculture Houston and Food Adminstrator Herbert C. Hoover are scheduled for addresses on food conservation at the national dairy show which begins at Columbus, Ohio, today, October 18, and will continue until October 27. Many conventions will be held and a variety of demonstrations during the continuance of the show. Among these will be cattle demonstrations and demonstrations of manufacturing various dairy products by the United States department of agriculture and the agricultural colleges. Students' judging contests will be a feature. The conventions will include those of the National Milk Dealers' association, American Dairy Farmers' association, and horse fairs and cattle parades are scheduled for the evenings.

Not One Mouthful Wasted.

To the Editor: We like The Farmer very much, have been much interested in articles on what woman can do to aid our country in her time of need. I should be glad to sign a pledge to conserve our food supply and prepare for winter use everything we have. In fact we are doing all those things and have been ever since the declaration of war. I assure you not one mouthful of food goes to waste on this farm.

CLARA F. HYERSTAY.
Woodland, Wash.

Avoid Sheep Sorrel.

Sheep sorrel is not often eaten by live stock owing to its sour taste, but it is well not to pasture horses or sheep on sorrel as the weed is somewhat poisonous to these animals.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Free Speech May Become Treason

Written into the national constitution of the United States is a guarantee that the right of free speech shall not be denied the American citizen. But there is also written there a guarantee that treason shall not go unpunished. What if free speech and treason become bedfellows? Free speech and something dangerously near treason are abroad in this country, traveling together. Occasionally some one whom many have admired appears under the protecting wing of the right of free speech and gives comfort and aid to the enemy, which is what the constitution defines treason to be.

It is rendering invaluable aid to Germany for an American citizen to declare that this country has no cause for entering the war; that the sinking of the Lusitania with her load of helpless men, women and children traveling on missions of peace was justified; that peaceful, neutral people have no right to travel on the sea during the war; and inferentially that Germany has a right to instigate industrial disturbances in this country, sink our ships without warning or succor to their crews, induce Mexico and Japan to make war on the United States and spend thousands of dollars to "influence" our congress to tie the president's hands so he can not retaliate against German viciousness.

There are citizens making declarations like these. May Heaven forbid that any American be influenced by such utterances to believe that liberty-loving, humanitarian America has no ground for being in this war, when Prussian autocracy has violated every law of liberty and humanity. May the people of this country rise one hundred million strong to denounce such treason, and may their denunciation take form in union of life and resources until the unspeakable outrages that Germany has inflicted upon an otherwise civilized world are righted and their repetition rendered impossible.

Train a Boy for Next Year

Every farmer should begin now, if he hasn't already, to train a boy as an efficient helper for 1918. The war has taken much farm help both directly and indirectly. There is much work to be done. The boys are capable of being splendid helpers if they are trained.

But how are they to be trained? Not by harsh measures. Not by compulsion, even though it might be possible to compel them to work. Treat the boy as a junior partner, whether he is your own or another's son. Try to explain to him the importance of what he is to do, how he can help both you and himself, as well as his nation. Pay him honest wages for what he does. Give him a show and he will respond. He deserves patience and care in training; of course, he will make mistakes, but you never expect a colt to do the work of a sober old farm horse.

Germany and the I. W. W.

Sweeping action is being taken by the federal government against the I. W. W. National leaders to the number of something like 150 have been arrested, following indictment by a federal grand jury in Chicago, the charges against them being that they and their organization are carrying out un-American propaganda, violating a number of specific provisions of law. Not only is it charged that they have violated law, but it is charged that they are working with German aid to hamper this country as greatly as possible during the present crisis. The following extract from a letter written by James Rowan, one of the leaders in the northwest, to William D. Haywood, national secretary, indicates the validity of that latter charge:

"We have the good will of the German people here (in the northwest) and feel that they are in sympathy with our cause. We do not call them Germans, however, but refer to them the same as others, the fellow workers."

That is quite plausible. The aim of the I. W. W. is to utterly destroy the efficiency of the government, and Germany is certainly in sympathy with any move in that direction in the United States. The purpose of the I. W. W. is one of destruction from first to last, and the Germans are "fellow workers" indeed to that end.

It is high time that the government should take the steps it is taking. There is no room in America now for any person who is in sympathy with the cause of Germany, be that person an I. W. W. member, a pacifist, a former citizen of Germany or a United States senator. All such persons must be suppressed, and the government is justified in inflicting the full penalty provided by the constitution for the crime of treason against the United States when any such person is proved guilty of actions which lend aid and comfort to the enemy.

Sweeping Order on Food Control

On another page we give the news of the government's sweeping order licensing manufacturers and wholesalers dealing in a wide range of food products of the soil. The farmers will cry "amen" to the food administration's declaration that it will apply and enforce the law, to the end that—

"The producer must have a free outlet and a ready market.

"There must be no manipulation or speculation in foods.

"There must be no hoarding of foods.

"Unfair or unreasonable profits must be eliminated.

"Discriminatory and deceptive or wasteful practices which in any way restrict supply or distribution must be stopped."

The law clearly confers these powers and duties on the president. It empowers him to require all manufacturers and jobbers, and all retailers doing a business in excess of $100,000 a year, to take out licenses obligating them to charge only reasonable profits, charges and commissions. Licensed dealers violating these restrictions are made liable to a fine not exceeding $5000, or to imprisonment for not more than two years, or both.

The licensing provision of the law properly exempts "farmers, gardeners, cooperative associations of farmers or gardeners, including live stock farmers, or other persons with respect to the products of any farm, garden or other land owned, leased or cultivated by him."

The evils of combination and excessive profit-taking against which the law is aimed do not sprout or take root on the farm. The farmer must sell his produce against the open competition of the world.

It is also the theory of the law that keen competition in retail lines will be a sufficient protection against excessive profits there. That expectation seems reasonable, but if it should fail of realization, the temper of the country will demand quick amendment of the law.

Washington Gleanings

Sales amounting to $30,000 were made at North Yakima in the opening of the state fair sheep sale.

Mackey Brothers of Clarkston recently sold 1536 sheep for $18,800 to C. C. Clark of Arlington, Ore.

Apple picking has been started at both Deer Park and Denison. At Denison 13 Indians, in charge of their big Chief Jim, are industriously picking aples.

Spokane County Farm Expert J. R. Shinn, who is conferring with farmers to aid them in conserving food, has a new slogan: "Hooverize the pea straw by baling it."

The Puyallup and Sumner Fruit Growers' association has received a check from Uncle Sam for $10,764. Berry jam has been ordered from the company that will bring $212,160 more.

Never in the history of Lewis county has the wild evergreen blackberry crop been so large as this season, and never before has there been so many pickers engaged in gathering the fruit.

Recently the Thurston County Dairy and Farm Products association was awarded the privilege of furnishing ice cream to the army at American Lake, the privilege carrying exclusive rights.

Tom Lease of Neppel, from 2400 ewes, has sold $28,000 worth of meat and wool. Last year he estimated his investment of 2400 ewes at $24,000 and this year his returns so far have been $28,000.

The Wenatchee city schools, of which G. W. Bohannon is superintendent, started school early in August so that the children might have a month's vacation later in order to help harvest the fruit crop.

Waterville companies one day recently paid out about $500,000 for grain. The largest check was paid by the Waterville Union Grain company to the Hinderer Brothers for $35,998, which represented about half of their crop.

Districts in the East Side national forests, from which the state will seeure about 250,000 acres of government land in exchange for the school lands locked up in the forest reserves, were approved by the state land board recently.

Gilmore & Rae, horse buyers of Spokane, recently brought to Spokane a long carload of 28 horses from Ferry and Okanogan counties. The animals were received by a board of government inspectors in Spokane and sent to American Lake.

The amalgamation of all of the farmers' unions of the three states of Washington, Oregon and Idaho into one big pool for the purpose of handling the grain crop of the northwest is the plan that is now being outlined by the leaders in the farmers' movement.

About one-half of the former Spokane Indian reservation was swept by fire this year. In many places thousands of dollars' worth of benefits resulted from the fires by clearing away underbrush and putting the lands in shape for cultivation with much less labor.

A constitution and bylaws for the Thurston County Farm and Dairy Produce association have been adopted by more than 150 farmers and dairymen of the county. The association recently received the exclusive concession to market vegetables, milk and eggs at Camp Lewis.

The Moxee National Farm Loan association has received its charter from the federal land bank of Spokane, making this association the first in Yakima county to perfect its organization. Loans aggregating between $55,000 and $40,000 have been allowed and are in process of closing.

What Others Say

Herald, Concrete: Last spring we had a great campaign to stimulate production; now the crops have been produced and the great need is to prevent waste.

Independent, Chewelah: The speculator and the producer have compelled the food controllers of the government to lower the price and at the same time force a higher standard of patriotism.

Independent, Port Orchard: Hogs are now near the $20 per hundred mark. But that does not mean an increased profit for the hog producer. Feed for hogs has increased in price faster than the price of pork.

Mason County Journal, Shelton: It is the patriotic duty of every established farmer to hold to his live stock as long as possible, and it is the patriotic duty of every other citizen to give his second thought to encouraging the small farmer in every way possible—his first thought being, of course, to direct war movements.

Double Margins of Safety Mean

Lifelong Service—Less Repair Costs

Three years ago, after 11 years of car building, we decided to double the usual margins of safety.

We adopted the standard of 100 per cent over-strength. We based our requirements on the careful watching of many thousand cars. Then we devised radical tests to prove that parts had twice the needed strength.

It meant some added weight. It meant oversize parts. It meant higher grades of steel. The Mitchell of today has a wealth of Chrome-Vanadium. It has 440 parts made of toughened steel. It has gears which are tested for 50,000 pounds per tooth. It has rear springs which have never yet been broken.

$100,000 For Inspection

We spend $100,000 yearly for testing and inspecting parts and cars. Our steels are made to formula. They are proved in a crushing machine of 200,000 pounds capacity. We have our own speedway for testing the finished cars.

The result of these standards, apparently, is a lifetime car. Two Mitchells that we know of have already been run over 200,000 miles each. That is 40 years of ordinary service. Repair cost has been lessened by some 75 per cent.

Mitchell endurance has become world-famous. Under the hardest road conditions—in Russia, Australia and South America—it has won a great reputation. It is known in America as "The Engineers' Car"—so many noted engineers have bought it. The demand for the Mitchell has quadrupled since this standard was adopted.

Many Extra Attractions

The Mitchell is also a most complete car. It has 31 wanted features which nearly all cars omit. These include a power tire pump, reversible headlights, a dashboard engine primer and shock-absorbing springs.

It is also an extra-luxurious car. It has a deep, enduring finish, fixed by electric heat. It has extra-grade leather, deep upholstery, a light in the tonneau, a locked compartment, etc.

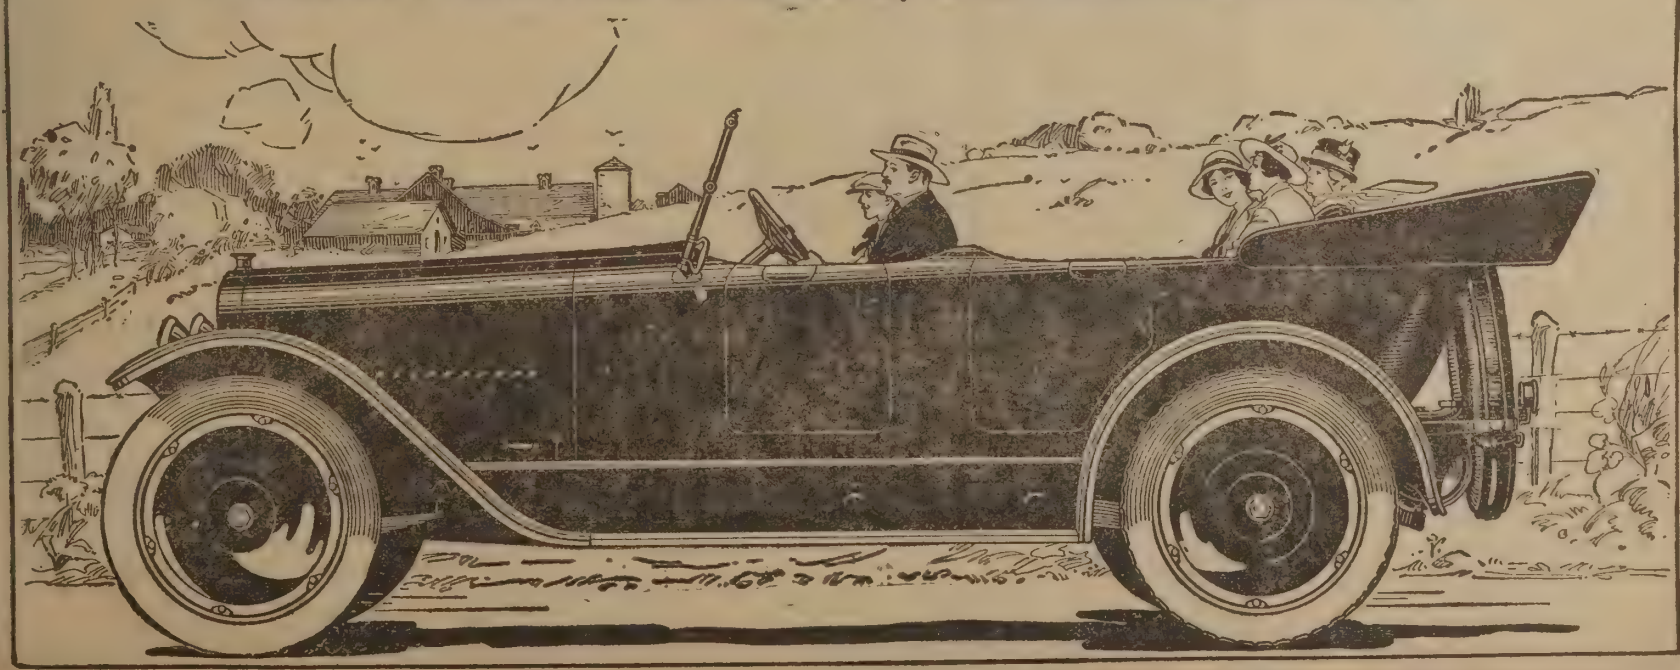
Before designing these Mitchells, our experts examined 257 show models. So all the known attractions are combined in these new cars.

A Bate-Built Factory

With all these added values, Mitchell prices are far below other cars in this class.

The reason lies in factory savings, in minimized labor cost. This mammoth plant was built and equipped under John W. Bate, the efficiency expert. Every building, every machine was designed to build this one type economically.

Here we build the whole car—chassis and body—under Bate efficiency methods. The yearly saving amounts to millions of dollars. Under no other conditions could cars like these be built at Mitchell prices.



The Mitchell comes in two sizes, at two basic prices. The smaller Six—at $1250—has a 120-inch wheelbase and a 40-horsepower motor.

When you buy a fine car and a car to keep, you will want a car like this. It means low upkeep, small repairs, and a car to be proud of. See the latest models. If you do not know our nearest dealer, ask us for his name.

Must Depend on Farm for Income

Practice of Leaving the Farm to Work Outside for Wages Has a Bad Influence on General Prosperity.

GIGHARBOR, Pierce County, Wash., Oct. 9.—Except for the harvesting of late beans and like crops that require continued dry weather, the weather has been ideal for the farmer in this section of the state. The rains and warm weather have given a tremendous growth to fall feeds during the last 30 days, and have put the ground into fine shape for plowing. Much of this is now being done, and a considerable amount of fall seeding in rye, vetch and grasses is being done. The results of the past season's operations are fairly satisfactory, nearly everything being salable at a good price. Many of our small ranchers still adhere to the old practice of working outside for wages, while the weaker members of the family carry on the small ranches in a half-hearted sort of way. Outside service is particularly attractive this year owing to high wages, and much demand for labor at the cantonment and elsewhere. We can not hope for great development of farming interests while this practice of leaning on outside incomes is followed. The prospects for the next year are good and it may be fairly said that our farmers are in an optimistic mood. While good seed for fall crops is not plentiful, it is generally obtained, although at very high prices. We have just closed a very successful Bay Island fair at Picnic Point, a beautiful spot on the waterfront of Wollochett Bay. Beside the main hall we had two wooden buildings and four large tents well filled with exhibits.
W. D. BOYNTON.

Fall Planting in Order.

CHEHALIS, Lewis County, Wash., Oct. 1.—Crops were a little late maturing, but most of the grain in Lewis county was threshed before the rainy spell in September and all of it has since been cleaned up, little damage having been done by the rain. At present rain is threatening, but as some ground is still too dry to plow easily a good rain would do no harm and considerable good. Manure spreading, plowing and seeding fall crops of vetch and wheat are in order this month, and undoubtedly the crop of fall feed for soiling and for the silos will be large. Farmers with dairy herds have had better prices than ever before, and in spite of the scarcity of labor and high wages have come through in good shape and are preparing to do their best for next season. There is no trouble in securing seed for fall planting, although the home grown vetch seed is not cleaned as well as it should be, owing to lack of proper machinery.
J. C. BUSH.

Lose Hay and Grain.

SHELTON, Mason County, Wash., Oct. 6.—Weather conditions have been exceedingly unfavorable for harvesting since September 1, resulting in loss of grain and hay. There was, however, a favorable result in the growth of grass and other pasture plants, which will furnish good fall and winter grazing for stock in the open. Summer dryness cut short very largely the supply of hay for the winter, and has forced many stock raisers, even dairymen, to sell stock for beef, and young cattle which otherwise would have been kept. The fall growth of grass will relieve to some degree. Soil has been in prime condition for early plowing and seeding, and farmers generally have taken advantage of such conditions; fall-sown crops are in much earlier than usual. Farmers in Mason county are generally disappointed as to crop results for 1917. Especially have forage and potato crops been below normal, and in some localities fruit of various kinds has been a failure or short of the yearly average. Corn has been an unusually successful crop, and resulted in a fine showing at the late county fair. The fair won the credit of being the best ever held in the county. Patriotism as well as good stock, fine vegetables and evidences of strong domestic activities were a marked feature of the three days of the annual coming together of our people. SCOTT HAYES.

Farmers Are Cooperating.

BELLINGHAM, Whatcom County, Wash., Oct. 6.—The winter feed prospects in this county are very gratifying. The weather this year during haying was very favorable and both cuttings were put up with practically no waste due to rain. This office of county agriculturist has been successful in getting many farmers to cooperate in the growing of alfalfa, and to date many are raising this crop on lands that they thought were not suited for this purpose. We are also growing more legumes and less timothy for dairy feeds. A mixture of Alsike clover, red top, white clover and Italian rye grass has given good results, both as a hay and pasture crop. The farmers are also cooperating, and have bought many carload lots of hay and grain, which has resulted in the saving of many hundreds of dollars to them. This work was a result of a cow-testing association. Several farmers are mixing third cutting clover and straw together by putting them through a hay chopper. Others are baling their straw to sell and also for their own use. Baled straw has sold for $6.70 f. o. b. track. Loose straw has been bringing $2 per load. Most farmers appreciate the value of their straw and have had it blown into barns at threshing time. This is very essential because of the heavy rains from now on.

The numbers of silos has increased considerably this year and they will all be filled to capacity with oats and vetch, wheat and vetch, corn, clover and Canadian thistles. The silage for the most part is keeping nicely and will solve the problem of expensive dairy rations this winter. The potato crop is nothing to speak of this season, due to the excessive long spell of dry weather. The potatoes set well, but they lack size; however, the quality is there. Considerable work will be done this fall and winter along lines of potato grading. We are advocating increased production of crops for next season and with that idea in mind this office has the cooperation of many farmers that want to plant rye and winter wheat. Much land has been cleaned up this summer that will come under cultivation for the first time this fall. H. B. CARROLL JR.

Straw Is $12 a Ton.

OMAK, Okanogan County, Wash., Oct. 2.—Feed for stock will be scarce this winter. Many farmers are selling all spare cattle to save feed. Hay is around $20 a ton and straw is about $12. In most places potatoes are good, but a light crop. There will be a considerable increase in crop acreage next season. J. O. WOODS.

Whitman County Needs Rain.

LACROSSE, Whitman County, Wash., Oct. 5.—Weather conditions have been most ideal for finishing up late harvest, but lack of rain has almost completely stopped all field work, nearly all farmers not caring to chance seeding in dry soil, preferring to wait until sufficient rain has fallen to germinate weeds before seeding if possible. Taken on an average, farmers haven't made farming very profitable this year and most of the yields are light and the quality very poor. Feed is not overplentiful and is high, for which there is no room for complaint, as the farmer should not allow himself to get short of feed, no matter how light the wheat crop, as straw is scarcely ever short. Should timely rains fall to insure fall wheat acreage, prospects for the coming year should be better than the average. M. E. SCHRECK.

Mix Cut Roughage.

BOSSBURG, Stevens County, Wash., Oct. 3.—Feed for winter will be pretty scarce here, but most all the farmers will have enough to carry their stock through by utilizing everything in the feed line. All straw has been put up in good shape and none will go to waste this year. Most of the straw will be cut and mixed with alfalfa or other hay and some farmers will mix cut straw and alfalfa hay with bran

DIRECT TO THE SUBSCRIBER

That is the aim of a plan, details of which you will find on pages 18 and 19 of this issue. By cutting out the middleman, money is saved and men are released for producing necessaries. Read the details.

Always the greatest value at the price

Styleplus Clothes $17 (black label) always excel at that price
Styleplus Clothes $21 (green label) always excel at that price

Progressive merchants from coast to coast are this week featuring Styleplus suits and overcoats—the only clothes in America sold on a known price basis—all wool and guaranteed.

This policy has made a hit with the men of America. It means that whenever and wherever they buy Styleplus, they know the quality and the price.

We developed the known price idea in clothing. It enables us to concentrate our volume, lower our costs, give exceptional all-wool fabrics, style and tailoring at moderate price.

For three years we have maintained Styleplus Clothes $17 in the face of war conditions, because we could buy in advance and operate on an increasingly larger scale.

When the United States entered the war, the fabric market underwent violent changes. To meet these new conditions we added a $21 grade, thus insuring the wide selection of fabrics and models and enabling Styleplus Clothes to meet every individual demand as usual.

Each grade the greatest possible value at the price. See for yourself at the Styleplus store. Write us (Dept. S) for free copy of "The Styleplus Book."

Style plus all-wool fabrics + perfect fit + expert workmanship + guaranteed wear.

HENRY SONNEBORN & CO., INC. Founded 1849 Baltimore, Md.

and shorts for cows. There has been but little straw sold here, but some at $3 to $5 per ton, loose. Potatoes are a short crop here, except a few fields and very moist land, which has turned out quite well. There is more activity among the farmers than usual. Fall plowing and clearing up new land is being done and there will be more fall seeding if we get rain soon. There is quite a lot of land ready to seed to wheat, but the ground is too dry yet. There will probably be more wheat seeded this fall and next spring than ever before, but the alfalfa acreage will be increased also. Threshing has been finished and although a very light crop, none of our farmers seem to be discouraged.

W. W. PALMER.

Skagit County Fair

High Quality of All Exhibits

The Skagit county fair was held at the Burlington fairgrounds, October 1 to 6. Although entries in some classes were not as numerous as last year, the high quality of all exhibits made this one of the most successful sessions ever held.

Among the general entertainment features, probably first honors went to the Philip Pelz Russian band. Mr. Pelz and his talented orchestra were heard by large crowds at the western Washington fair, and the Land Products show last year, and the directors of the Skagit County Fair association showed good judgment in securing them as the leading attraction for this year. Trotting and running races and a clean line of side shows and carnival features filled out the program for the visitor uninterested in the strictly agricultural features.

Among the latter, the cattle, swine and poultry divisions spoke eloquently of the progress Skagit county is making in animal husbandry. The old days when the broad, fertile valley was known solely for the wonderful oat crops it produced are gone forever, and now general farming at its very best is found throughout the county.

The growth in favor of the Guernseys was made very apparent by the entries in the cattle barn, where nearly 50 per cent of the animals shown were of that breed. J. M. Miller's Burlington Guernsey farm, Fisher Brook farm Guernseys and A. J. Sinnis' Fairview farm Guernseys all maintained a high level of excellence. Among the Holstein entries were those of the Milky Way farm, Achison & Co., Lockhart & Sons and J. H. Hurbert. Nels Anderson entered eight head of roan Durhams, all of them attractive specimens of dual-purpose cattle. Mr. Anderson has been handling milking Shorthorns for five years, and looks upon them as the coming breed in this country.

In the hog barn, John B. Peterson's Durocs made a splendid showing, in spite of the fact that they had been on exhibition at the Snohomish county fair the previous week and had been handicapped by the railroad journey to Burlington between the two shows. Mr. Peterson has the honor of having individuals of his breeding stock scattered among 50 different Skagit county breeders, and, in fact, at the present time there is hardly a herd in the county which is not related to his. Other Duroc exhibitors were H. S. Ruley, whose Duroc-Jersey hogs and Jersey cattle both made an excellent showing for quality, and F. D. Helm of Utopia. Fisher Brook farm had several pens of Berkshires.

In the poultry department, the heavier breeds had it all over the Leghorns. The explanation of this rather unusual condition, according to a local poultry authority, is that most of the Leghorns in this part of the state are utility stock and that "you can't scare a utility man out to any kind of a show." There was a good showing of Rocks, Wyandottes and Rhode Island Reds, with the latter very much in the lead for numbers.

Passing from animal to vegetable husbandry, the wonderful fertility of the local fields and gardens became at once apparent. In spite of the fact that this has been an "off" year for corn, the silage and ear corn entries of Edson Bassett of Sterling, W. W. Swank of Burlington and J. B. Hall of Avon gave no indication of having suffered from unfavorable weather conditions. Corn planted May 21 by Mr. Bassett showed large, well-formed ears, with the grains already well dented and quite firm.

Among table crops, potatoes, of course, came first in importance and in number and excellence of entries. Some growers report that this year's crop is not as large as vine growth led many to expect, but that the set is unusually even in size and quality. Onions, pumpkins and squashes were also strongly represented.

P. E. T.

WE BUILT THIS CAR FOR YOU

WE take it that the average American buys his motor car to *use* —for himself and his family to enjoy, at a cost within reason.

We have built this new Oakland Sensible Six to this idea, and we believe it more faithfully expresses it than any other car on the market.

It is not a racing car, in the sense that comfort is sacrificed to speed, nor is it a show car, in the sense that efficiency is sacrificed to size.

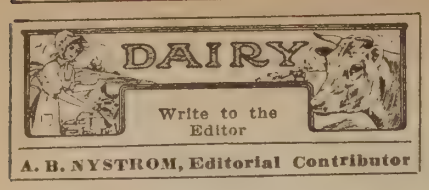
It is simply a very well-made, competent and comfortable automobile—a *sensible* car.

The overhead-valve motor in this new Oakland is simple and compact; it delivers at 2600 r. p. m., 44 horsepower, or one full working horsepower for every 48 pounds of car weight.

It is exceedingly economical of fuel, and in relation to the weight of the car is perhaps the strongest in the world.

The body of the car is very roomy and of exceptionally solid construction; it is swung on specially graded springs of great comfort, and is upholstered in genuine leather.

We know that the present market cannot equal Oakland value except at a considerable advance in cost.



The light weight and even power of the Oakland Sensible Six makes it extremely easy on tires

Prepares For Winter

By LYNN S. KEYES, Kelso, Wash.

F. S. James of Kelso, Wash., is preparing for winter by building a covered yard for his dairy cows, providing plenty of straw for bedding, and for the construction of a silo. This covered yard system of wintering cows has given splendid satisfaction on the west side of this state and is being used by many of the most successful dairymen. Mr. James ran his straw through a cutter and intends to feed much of it. This is not a general practice here.

Hooded Milk Pail.

In a government bulletin on the extra cost of producing clean milk is found the above illustrations of the open and hooded milk pail. It will be easily seen from the picture how a hooded pail will keep much dirt out of the milk. If the hoded pail is not found in stock it is said that the hood can be put on by any competent tinsmith for a small price.

Snohomish Valley Association.

The Snohomish Valley (Wash.) Cow-Testing association had 345 cows on test during the month of August, according to V. B. Riley, official tester. They averaged 423 pounds of milk, 29.2 pounds of butterfat at a cost of $4.02 uer cow per per month. The cows dropped off considerably during the month due to dry pastures. Quite a few cows were sold for beef during August and more are being prepared for the block. V. W. Haselton has just purchased a registered Ayrshire bull calf, Peter Pan 73d, sired by the famous Peter Pan of Willomoor farm. The high cow for the month, Spot, a grade Holstein, age five years, owned by Koorstra and Dykstra, produced 1789 pounds of milk, testing 4.1 per cent, making 73.3 pounds of butterfat. The second high cow, Violet Blossom, a registered Holstein, age 9 years, owned by E. A. Holcomb, produced 2108 pounds of milk, testing 3.25 per cent, making 68.5 pounds of butterfat. The third high cow, Everett De Kol Plum, a registered Holstein, age eight years, owned by Koorstra and Dykstra, produced 2306 pounds of milk, testing 2.9 per cent, making 66.9 pounds of butterfat.

Eradicating Tuberculosis.

At the last annual meeting of the Holstein-Friesian Association of America held at Worcester, Mass., Fred F. Field made an address embodying the methods for eradicating tuberculosis in cattle successfully in use for several years at his Dutchland Farms at Brockton, Mass. This has been printed for distribution by the association, according to announcement made by Secretary F. L. Houghton of Brattleboro, Vt. Mr. Field began his address by saying: "You must be honest with yourself. That is, take it for granted that there are some animals in your herd that have tuberculosis; that you desire to know which ones they are; that you will not sell them except as tubercular; that you want to protect your animals from the spread of the disease; that you want to raise a healthy young herd, and, finally, that you want to do everything you can to accomplish these ends."

Cleanliness, plenty of sunlight and fresh air, taking the calf away from the mother at once, pasteurizing all the milk given the calf, never allowing the calf to mingle with any reacting animals, keeping the new herd separated from the old by a double line of fence in the pasture are some of the methods discussed by Mr. Field.

The pamphlet is well worth careful reading by those desiring to clean up their herds from tuberculosis, "while at the same time you have preserved your tubercular breeding herd without any material loss."

These last quoted words are from Mr. Field's address, and they put forth a claim which even he himself says can be made good only by exacting adherence to the details of his "Method of Eradicating Tuberculosis in Cattle."

Make Good Records.

The total production of 10 Jersey cows on the Oak Ridge Jersey farm at Albany, Ore., S. J. Hulbert & Son, proprietors, for one year was 82,736.4 pounds of milk, 4362.45 pounds of fat and 5025.17 pounds of butter.

Ogla's Pomela (344 days), aged four years and four months, produced 8923.9 pounds of milk, 527.01 pounds of fat and 620.01 pounds of butter; Frosty's Trilby (365 days), seven years and six months old, produced 9604.1 pounds of milk, 508.10 pounds of fat, 598.12 pounds of butter; Lady Mollie Moore (365 days), aged seven years and two months, produced 8296.6 pounds of milk, 454.28 pounds of fat and 534.44 pounds of butter, and Frosty's Bessie, two years and eight months old, produced in 365 days 7735.7 pounds of milk, 446.33 pounds of fat and 525.09 pounds of butter.

This Jersey herd has just been officially testing a little over one year and their records speak for themselves. The cows were not fed and blanketed like many other cows, but just pastured along with the rest of the herd and on the same kind of feeds.

Information Bureau

The Farmer will be glad to answer questions of general interest, as well as those of a practical nature, relating to the farm or farm home. There will be no charge for this service. Questions must be signed with your name and postoffice address and will be answered either by personal letter or by publication when of general interest.

Address Farmers' Information Bureau, Room 35 Review building, Spokane, Wash.

Somewhere I have read of a mystical word supposed to be an antidote against fever. This word to be written and worn suspended by a thread around the neck. A. N.

Answer—"Abracadabra" is probably the word you have seen. This is a mystical word, constructed out of certain letters of the alphabet, and supposed to be an antidote against ague and fevers. The word was generally arranged in the form of an equilateral triangle inverted, each line being shorter than the preceding one by the omission of the final letter, and the letter a alone remaining as the apex. It was written on parchment and suspended around the neck by a linen thread. It was worn as an amulet for nine days; and was finally thrown backward, before sunrise, into a stream running towards the east. The following arrangement of the letters is the one generally seen:

```
a b r a c a d a b r a
  a b r a c a d a b r
    a b r a c a d a b
      a b r a c a d a
        a b r a c a d
          a b r a c a
            a b r a c
              a b r a
                a b r
                  a b
                    a
```

What is the rank of an earl in the aristocracy of Great Britain? P. W.

Answer — In the nobility of England the title of earl is third in rank, being next below that of marquis and next above that of viscount. It is the representative of the Norman title of count. Originally the earls, like the counts, had jurisdiction over a certain district or shire. The title is now wholly unconnected with any territorial jurisdiction. The earl's coronet consists of a richly chased circle of gold, having on the upper edge eight strawberry leaves, between each pair of which is a pearl on a spire rising above the leaves.

Earl's Coronet.

One Cow's Record.

To the Editor: A three-year-old Jersey heifer belonging to W. A. Gray of Leahy, Wash., began giving without previous milking from three to five quarts of milk daily in June. This milk was fed to the bottle baby of the family until September first when the cow was found with a young calf by her side. The baby was taken off her milk for a few days, when he was put on it again. He weighs 18 pounds at six months of age, and the calf is fine for its age. Who can beat that for an accommodating cow?

MRS. W. A. GRAY.

Leahy, Wash.

CUTTER'S
BLACKLEG PILLS
"California's Favorite" for nearly 20 years
For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:
10 dose pkge. Single pills $1.00
50 dose pkge. Single pills 4.00
10 dose pkge. Double Pills 1.50
50 dose pkge. Double Pills 6.00
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

CONSIDER RYE FIELD.

Offers Possibility for Pasture.

The need of spring pasture arouses in the minds of many the possibilities of sowing a crop of rye this fall on a part of the place that is perhaps less desirable for other crops. Rye has several possibilities to its credit. For instance, it comes on rapidly in the spring and makes excellent pasture for hogs or sheep or calves or even older stock. If it is desired to put it up for hay it may be pastured a short time until there is plenty of other feed and then left to mature for cutting. Rye yields abundantly, and if cut at just the proper stage makes a good feed for cattle and sheep.

Another possibility is not yet fully recognized. Rye is an excellent fertilizer crop. Some reports of excellent success have been made in sowing stubble land to rye in the fall after harvest, allowing it to come for spring pasture and then allowing it to grow a foot or more high to be plowed under. This is said to be an excellent way to secure additional fertility in the soil that is to be summerfallowed, and has the apparent double advantage of affording a little forage as well.

MILKING SHORTHORNS.

Their Popularity Is Increasing.

The war apparently is resulting in something of a victory for the milking Shorthorn. This leader of the dual-purpose cow is a producer of both meat and milk. Her calf makes a baby beef that is more than worth keeping over until a year or more old, whereas there is always difficulty in making a profit out of the calf of the dairy breed.

The urgent need of the present day for maximum production of both milk and meat has caused much thought to be put on the dual-purpose animal, says the American Shorthorn Record, and it is readily understood why.

Veterinary

Dr. S. B. Nelson

Mountain Fever.—I have a four-year-old horse that has been worked for a year. While working him through harvest I noticed he went with his nose stuck out and was rather dull. Is this mountain fever? There have been four horses lost near here with that disease this summer. His gums are swollen like lampers and his lips, tongue and mouth are nearly white and seem to be sore. A. F., Polson, Mont.

Answer.—Two different diseases are known by the general term of mountain fever. The one is influenza or pink eye or epizootic in horses. This disease shows so many different forms that I cannot give you treatment for them all, but for the simple cases good quarters, light, easily digested feed and a teaspoonful of potassium nitrate in the drinking water once daily frequently give very good results. For the other cases you would have to get specific treatment. The other disease, which is known as mountain fever, is pernicious anemia. This disease is nearly always fatal. Ninety to ninety-five per cent of the horses affected die with it. Up to the present time there is no treatment for it. The first disease is contagious and the second one is probably carried by a host.

Calf Loses Hair—I have a Holstein calf that was taken from its mother when five days old and given Jersey milk from cows that had been fresh about six months. It never had scours, is four weeks old and has been fed twice a day on new milk. The hair is all off of its legs and is now coming off of its back and neck.—J. L. L., Sedro-Woolley, Wash.

Answer—I am not able to tell whether the disease affecting your calf is one due to indigestion or whether it is due to external parasite. It would take a personal examination to determine this. Of course, if it is from indigestion the calf's feed should be regulated by cutting it in two, giving a little feed like linseed meal and possibly a few spoonfuls of artificial carlsbad salts in a little water every other day or such a matter. If it is an external parasite, then possibly washing with a weak solution of liquor cresolis compositus, about one or two per cent or three per cent, depending upon the age of the calf. I think, however, it might be well for you to consult your local veterinarian, and let him determine which of the two diseases it is and let him give you treatment.

Calves Die—Lately I lost three calves. They mope around one day before they die and do not eat much. There apparently seems to be nothing wrong until a day before they die. Their eyes seem to be swollen a little. They are about six months old and were fed milk until the middle of Auguts. They had been kept in a field where we cut oat and clover hay—J. N. P., Denzer, Ore.

Answer—As you do not give any symptoms except that the calves mope, do not eat, and the eyes seem slightly swollen, I can not make a diagnosis of the trouble with the calves from such few symptoms. See the article to A. A. U. regarding disease in calves, and see if that meets what you have in your calves. As serious as the trouble seems to be in Oregon I wonder if it would not be wise for you to write a personal letter to the state veterinarian, at Salem, Oregon, and get his advice or even see if he can see some of your dead calves, make a post mortem, and determine what the trouble is and give you advice.

WITHIN REACH

An opportunity to save money and help release men for productive labor. For details see pages 18 and 19 of this issue.

This Cow Is a Factor Toward Beating the Kaiser

Here is the photograph of a Hereford cow that is doing her bit to help win the war. Both calves are her very own, and they are the kind that it pays to raise beyond the veal stage, though they will make excellent "baby beef." They are on the C. C. Bull farm of purebred Herefords near Mabton, Wash.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

JOHN B. STUMP & SON, Monmouth, Ore.

1120 Pounds of Butter in a Year

by St. Mawes Poppy is the sixth highest official record of a Jersey cow in the world. She is dam of my herd bull, and his first heifers in milk are heavy producers. Write for prices on young bulls by him out of register of merit dams.

F. E. LYNN. Perrydale, Ore.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Fit for Herd Headers

Young bulls of good individuality, ready for service, sired by Landseer's Tormentor Boy, a strongly bred Tormentor bull, with high-producing cows in his pedigree. Dams of Brown Bessie and Tormentor breeding, with register of merit records. Price reasonable.

J. C. BROWN & SON. Shedd, Ore.

Wynoochee Home Farm

Home of
The Gold Medal Jerseys.

Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.

JOHN H. TAYLOR, Montesano, Wash. Box 426.

MAPLE LAWN PLACE, ALBANY, ORE.,
Home of
Register of Merit Jersey Cattle.

Herd headed by a double grandson of Spermfield Owl—"Moose o' Fernwood" No. 137024, whose dam has an official record of 916 lbs. butter.

We are offering young stock from this rich butter inheritance whose dams are now on official test.

ROBT. L. BURKHART, Albany, Oregon.

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Look Up My Winnings on Jerseys

at Oregon State Fair. Junior championship and other prizes; only five shown. For nine months my herd has had highest record in Marion County Cow Testing Ass'n. Lowest records since June, 470 lbs. butter as senior yearling in 10 months. Other two lowest, over 600 as 2-year-olds.

F. A. DOERFLER, Silverton, Ore.

$100 to $250

Young Jersey bulls, ready for service, sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Some out of Register of Merit dams, priced according to quality of dam.

M. H. JONES, Perrydale, Ore.

Register of Merit Jerseys

A few REGISTER of MERIT cows and their offspring FOR SALE.

H. T. THIESSEN & SON,
Milwaukie, Ore.

Bull From Gold Medal Dam

Out of Brown Bessie Alphena's Gem, 827 lbs. butter in year. Sire, Engineer's Bluster, whose dam, Mabel's Bluster, once held world's record for 3-year-old production. His first daughter on test, in this herd, beginning under 2 years old, will make over 500 lbs. butter. Other bulls from Register of Merit dams.

N. H. SMITH, R. D. 2, Oregon City, Ore.

ASHBURN FARM
Register of Merit Jerseys

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON, Shedd, Ore.

Oak Ridge Jersey Farm
Register of Merit Cattle

Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address

RILEY E. HULBURT, Albany, Ore.

Ashwood Farm Jerseys

FOR SALE—BULL CALVES; sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

JAMES DRYDEN
Editorial Contributor

Waste in Stubble Field

Speaking about conservation, there are about 25 pounds of eggs, in the raw state, going to waste on the average acre of grain stubble. There are probably a hundred pounds of grain left on an acre. That would produce about 25 pounds of eggs, worth at the present prices about eight dollars.

With a few cheap colony houses or sheds on skids, it is an easy matter to haul them into the fields. With the waste grain and weed seeds, the grasshoppers and other bugs, the chickens will do well, in fact better than if they were kept cooped up in the average chicken yard. In the nice fall weather it is not even necessary to have houses for them, unless to protect them from vermin. If the weather is warm they should have some shade. Roost perches may be built under the trees for them to roost on at night. Poles will do for perches, but they should be kept at least two feet apart.

Until bad weather comes the fowls will do well in this way, better than crowded together in small coops. After a month on stubble fields the chickens will be in good shape for market if they are cockerels, or for laying, if pullets. If there are grasshoppers and grit and green stuff in the fields they will need no other feed, but water will need to be provided unless there is a running stream near. If there are no grasshoppers it will pay then to keep a hopper of meat scrap or fish scrap in the field where they can help themselves at will. If colony houses are used they should be moved on to fresh ground about twice a week or after they have cleaned up the grain as far as they range. In some sections coyotes may defeat this plan. J. D.

Food Values and Eggs

Farmers are figuring earnestly these days on the economy of feeding high priced feed to animals. The question is, can the feed be converted into ham and eggs and beefsteak at a profit? His investigations lead the farmer to consider which is the most efficient producer—the cow, the hog, the sheep, the beef animal, the hen. In other words, which animal produces the most human food for every pound of feed eaten?

If we take the total product, the cow will of course produce more food than any other animal. The product of the milk cow is measured by several thousand pounds in a year. But a pound of milk can not be compared with a pound of meat or of eggs either in food value or in market value. The reason is that the cow is thrifty and adds considerable water to the milk. In 100 pounds of milk there are only 14 pounds of solids. There is more or less water or moisture in all animal products. In eggs for instance there is some 66 per cent of moisture and in meats there is considerable moisture. The total product therefore is not a good basis on which to figure. The solids in the food, or that which remains after the moisture is extracted, is a better basis.

Dr. Jordan, director of the New York experiment station, in comparing a Leghorn hen, weighing 3½ pounds and laying 200 eggs in a year, with a Jersey cow that weighs 1000 pounds and produces 7000 pounds of milk, says:

"If you take the dry matter of the hen and compare it with the dry matter of the eggs she lays in a year, there will be 5½ times as much dry matter in the eggs as in her whole body. The weight of the dry matter in a cow's body will be to the weight of the dry matter in the milk as 1 to 2.9. In other words, based upon the dry matter, the hen does twice as well as the cow. I suspect that the hen is the most efficient transformer of raw material into the finished product that there is on the farm. Her physiological activity is something remarkable, so in that particular the hen stands in a class by herself."

It is another question of course as to what kind of live stock or fowls eat the most feed to produce a given amount of product. This varies with different classes of stock and also with different individuals of the same kind of stock. A flock of fowls at the Oregon station produced in a year an average of 180 eggs per hen weighing 22 pounds. In this case it required four pounds of feed to produce a pound of eggs, not counting the green feed. This means, roughly, that a pound of feed costing about 3½ cents, produced five cents worth of eggs, with eggs at 30 cents a dozen.

Good laying hens therefore are efficient and profitable transformers of raw material into finished food product, and they should be given every consideration when the question of supplying foods to meet the war emergency is being discussed.

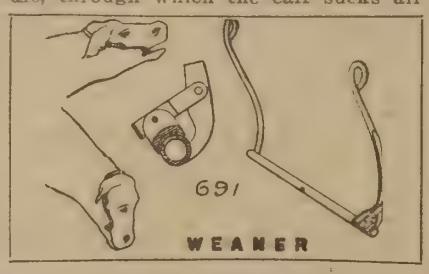
As to the relative value of different kinds of food, the campaign literature is not always to the point. Many writers and speakers refer to calories and compare different foods on the basis of heat units. That is one function of foods, to produce heat in the body. But foods must furnish materials for building and repairing bodily tissue. They must furnish bone and flesh to cover the bone. The material for building up and keeping up the body is more important than the material for furnishing the heat, because it is more costly. The heat-producing elements, which are the starches, come from such cheap foods as corn, which has a high percentage of heat-producing elements. The flesh-forming elements are not so abundant. They comprise only about 10 per cent of the corn while there is some 80 per cent of the heat-prpoducing compounds. The feeder must purchase meat foods and other high priced foods that are rich in protein or flesh-formers to make the balanced ration.

So it is not a question altogether or primarily of heat units or calories; it is more a question of protein and protein compounds and also of mineral matter. If we want heat units we eat corn and fats; if we want flesh-formers we eat lean meat and eggs.

There are many things in foods that chemistry does not tell us about. They tell us, for instance, that there is a certain amount of protein in certain foods, but then what is protein? It is made up of other compounds the functions of which have not been clearly defined. Why, for instance, does protein from grains give a certain result, and the protein from meat give another result in egg production? When the chemists can tell us all about the different compounds of protein and their functions in human food we will be better able to decide on the comparative merits of different kinds of food.

Meantime the high nutritive value of the egg is properly appreciated. The wounded soldiers must have eggs. They constitute the only nourishment in certain hospital cases, and the egg has not a high caloric value. It nourishes the body; the heat units can be secured from cheaper foods. J. D.

Earth's Temperature.

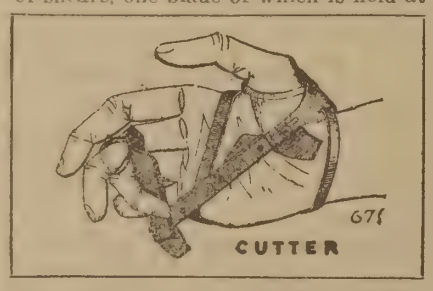


The temperature of the earth appears to increase from the outer surface downward at the rae of one degree Fahrenheit for every 50 or 60 feet and at the relatively short distance of a few miles the temperature must be exceedingly high.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

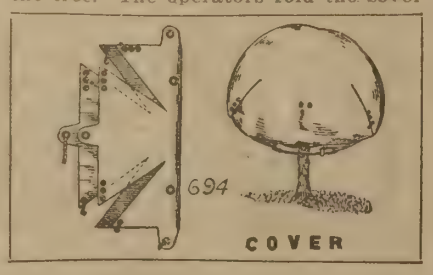
Can Drink But Not Suck.



This weaning bit is a piece of piping with a number of holes near the middle, through which the calf sucks air

when it tries to suck its mother. The new feature is the valve at one end which opens by gravity, when the calf raises its head, and prevents sucking; but it closes when the calf lowers its head, and permits drinking.

Maize Cutter.

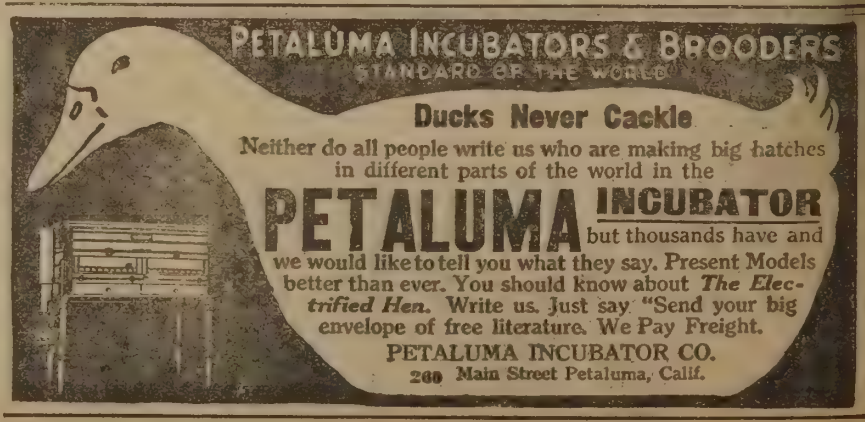


This cutter is in the form of a pair of shears, one blade of which is held at

rest by a metal place bearing against the palm, while the other blade is moved in and out by the fingers.

Protects the Budding Fruit.

The special feature of this cover is that it has two pairs of eyes which are used only when it is placed over the tree. The operators fold the cover



until the eyes are together and then insert two poles in the eyes and place the cover far enough over the tree for the fold to fall into place. The cover protects budding trees from frost.

Wonderful Egg Producer

Any poultry raiser can easily double his profits by doubling the egg production of his hens. A scientific tonic has been discovered that revitalizes the flock and makes hens work all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs" and you will be amazed and delighted with the results. A dollar's worth of "More Eggs" will double this year's production of eggs, so if you wish to try this great profit maker, write E. J. Reefer, poultry expert, 4667 Reefer bldg., Kansas City, Mo., who will send you a season's supply of "More Eggs" tonic for $1.00 (prepaid.) So confident is Mr. Reefer of the results that a million dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and the "More Eggs" cost you nothing. Send a dollar today, or ask Mr. Reefer for his free poultry book that tells the experience of a man who has made a fortune out of poultry.

Dr. Hess Instant Louse Killer Kills Lice

Mutiny Hits Germany

Discontent Found in Kaiser's Navy

What the state departments of the allies consider one of the most hopeful signs of the failure of Germany to hold out much longer against the attacks of the allied armies, the embargoes that are shutting off her food supplies and the internal dissatisfaction with the conduct of the war was noted last week when what appears to be reliable information reached the public of mutiny aboard German naval vessels.

It is stated that the discontent in the navy began to manifest itself as much as eight months ago, but that it was suppressed until recently when the crews of four battleships openly mutinied. In one case, that of the battleship Westfalen, the captain was thrown overboard and drowned. The crews deserted their ship and landed. Apparently in sympathy with the mutineers, the marines refused to fire upon them when ordered to do so, and soldiers of the army were called upon to arrest them. Later a few of the leaders were executed for insubordination.

Another significant incident of the mutiny was that aboard the warship Nurnburg, the crew of which seized the officers and headed the ship toward a port in Norway, with the evident intention of having the ship interned for the period of the war, thereby escaping further participation in the war. The vessel was followed by torpedo boat destroyers, however, and compelled to surrender before reaching the neutral port.

It is stated that evidence of insubordination has been seen in the actions of the armies on certain parts of the western fronts, and many are watching the developments with the firm conviction that the fall of the kaiser is indicated in the opposition of the sailors and soldiers.

That the reports are true is virtually guaranteed by the open admissions of Chancellor Michaelis in the German reichstag. Because of this admission, together with certain criticisms that he made, there is a strong feeling for the dismissal of the chancellor finding expression in Berlin. It is predicted that he will be discharged or voluntarily retire within a few weeks at the most.

Allies Still Gaining.

Reports from the battle front indicate that the vigor of the attack of the English and French armies is not abating as it had been feared it would. Gains are still reported, with the German armies unable to withstand the terrific onslaught of the allies.

What looks like an attempt to make a march on the Russian capital, Petrograd, is being made by the Germans on the northeast. The navy is playing the leading part so far, silencing Russian fortresses while soldiers make landings near Riga.

U. S. Army Is Growing.

It is officially announced by the war department that the number of men in the new national army has now reached over 431,000. The department's statement also says that more than 13,000,000 pieces of clothing or bedding have been distributed among the soldiers in the 16 army camps.

Camp Funston, in Kansas, has the greatest quota of men of any of the camps, its number being 39,533. Camp Lewis, in Washington state, is second with 39,171, and Camp Devens, Massachusetts, third with 33,098. Camp Custer, Michigan, has the smallest number, 16,193.

The number of men at or ordered to the other camps follows: Camp Dix, New Jersey, 19,363; Camp Dodge, Iowa, 20,324; Camp Gordon, Georgia, 22,507; Camp Grant, Illinois, 25,502; Camp Lee, Virginia, 27,601; Camp Meade, Maryland, 20,300; Camp Pike, Arkansas, 24,639; Camp Taylor, Kentucky, 27,462; Camp Travis, Texas, 29,249; Camp Sherman, Ohio, 32,886; Camp Upton, New York, 29,555.

Articles sent to cantonments for the new men include 1,402,390 blankets, 422,346 bed sacks, 436,749 cotton breeches, 259,805 woolen breeches, 267,579 cotton coats, 204,728 woolen coats, 289,713 overcoats, 4,002,856 pieces of underclothing and 937,734 pairs of shoes.

More Intrigues Discovered.

The state department at Washington has given publicity to further documentary evidence showing the scheming of Count von Bernstorff and other German representatives while Bernstorff was ambassador in this country. That many thousands of dollars were spent in the campaign to cripple this country while she was still neutral is proven by messages discovered. Also, plots were laid, and in some cases executed, against the Canadian government under the leadership of the German embassy at Washington. Among the plots uncovered was one whereby it was intended to destroy important stretches of the Canadian Pacific railway, thus completely tying up the transportation facilities of Canada. This scheme was nipped in the bud through the work of secret service men, and the calamity prevented.

The Revenue Bill.

The new government revenue bill is the largest tax producing measure in the world's history, it is claimed. It will raise more than $7,000,000,000. Probably the most important item in the bill is the increased income tax provision, by which it is planned to make excessive incomes pay the larger part of the tax. The tax increases rapidly with the increase of income, as indicated by the following figures:

Income.	Income tax.
$1,000	None
2,000	None
3,000	20
4,000	40
5,000	80
7,500	205
10,000	355
12,500	530
15,000	730
20,000	1,180
40,000	3,580
60,000	6,780
80,000	10,980
100,000	16,180
150,000	31,680
200,000	49,180
250,000	69,680
300,000	92,680
500,000	192,680
750,000	327,680
1,000,000	475,180
1,500,000	800,180
2,000,000	1,130,180
4,000,000	2,470,180

However, the item of the bill that will touch the largest number of individuals is the postage item, whereby postage is increased one cent above what it has been. That is, a letter requiring two cents in the past, will require (after November 2) three cents, a postal card that has required one cent will require two cents, and so on.

Raise Plenty of Money.

Champ Clark, speaker of the house of representatives, says that congress will raise enough money to carry on the war successfully, whether the second Liberty loan succeeds or not. He says it will be merely a case of higher taxes or subscriptions to the Liberty loan.

To Protect From Rain.

Folding vestibules for automobile doors have been invented to protect persons entering or leaving them from rain.

ONE MILLION DOZEN EGGS SHIPPED TO EUROPE

—Reports State Department of Agriculture. And George L. Dillingham, past master of the New Jersey state grange, predicts eggs will go to $1.00 a dozen.

Cash in on your hens. You can increase laying and improve the health of your layers with Sloan's Liniment, discreetly mixed with food. Sloan's Liniment

Finding Workers for the Job

Maryland Proposes That No Man Shall Escape Work

By GRANVILLE LOWTHER.

For 24 years, or ever since the hard times of 1893, when there were said to be 3,000,000 of idle men in the United States looking for jobs—not professional tramps, but real men, some of them good citizens—I have advocated government employment agencies for the purpose of finding employment for the unemployed. This implies, of course, that the government must have industries, such as irrigating projects, good roads, canals and other industries on which persons can be profitably employed.

Things are changed now, and the problem is to find workers to do all the work that is necessary to be done. It is a war emergency, and if we win this war—as we will—we must push every department of industry. In this emergency I am in favor of government agencies to properly adapt men to places and guide them in finding the work to which they are best suited.

Many of the states are modifying their laws so as to provide for these emergencies. Perhaps Maryland has the most drastic and progressive legislation on this subject. Most of the states have "vagrancy laws," and a man who has no visible means of support, especially if he becomes obnoxious to the community, may be arrested as a vagrant, fined and set to work on the roads, streets or some other public institution. This, however, implies that the person so treated is a criminal and under sentence.

The Maryland law does not presuppose that the man is a criminal simply because he is without work. It presupposes that every man has a right to a place to work and desires to exercise that right. In case he is not employed it undertakes to find him a place. Then, in case he does not care to exercise that right, he is forced to do so whether he desires it or not.

It presumes that when he does not want work that the habitual idler is an habitual criminal or parasite, or both, and probably both. Therefore, society is being damaged to the extent that it furnishes him what he does not earn. Reports from that state show that the enforcement of this law is having a most beneficial effect, and that the saloon loafers, negroes whose wives and mothers supported them and the professional tramp is being eliminated. I believe this law should become national.

Recognize Club Work

Boys' and girls' club work was given its first recognition by the Clallam county fair this year. The Clover Canning club of the Fairview grange made a display exhibit of 74 varieties of canned meats, fish, fruits and vegetables and won first prize on the exhibit.

Ben N. Philips, cashier of the Port Angeles Trust and Savings bank, provided a booth for the boys and girls who entered the potato-growing contest inaugurated by that bank last spring. Forty dollars in prizes were awarded to country and city boys through prizes offered by that institution. Gordon Vert of Ramapoo was awarded the first prize for the best potatoes exhibited by club members, and also second prize for the best lot of potatoes exhibited at the fair.

The showing made by the boys and girls occasioned considerable comment favoring such work by the people visiting the fair. Secretary-Manager Pollock of the Clallam county fair, in his recommendations for next year, says: "More attention should be given to boys' and girls' club work and agriculture should be taught in the country and city schools of Clallam county."

The idea of a neighborhood or community exhibit which was started by the Fairview community last year was a feature of the recent Clallam county fair. Four communities made exhibits of farm and garden products, canned and dried fruits and vegetables, fancy work, and culinary art. The competition was spirited and close. When F. W. Rader, county agricultural agent of King county, who was acting as judge, made his decision giving the Fairview community first and elwha second, he stated that there was only four points difference between the first and second places, Fairview having a total score of 132 and Elwha 128.

The Merchants' association of Port Angeles offered a silver cup valued at $35 for the best community exhibit, the same to be won three times before becoming the permanent property of that community.

ELIMINATE THE MIDDLEMAN

That is the object of a plan described on pages 18 and 19 of this issue. It means money saved for you.

Cut-Over Lands
in the
Upper Columbia Valley
of
Stevens County, Washington

Beginning October 1 we offer for sale several thousand acres of splendid cut-over land in the vicinity of Northport and located on both sides of the Columbia river.

Having unusual transportation facilities and being close to an ample market, these lands offer exceptional opportunities to actual settlers.

We offer these lands in tracts from 40 acres upwards and at very low prices, with easy payments.

Write to us for full information and illustrated booklet.

SAVE YOUR WHEAT FROM WINTER KILL!

GRANVILLE LOWTHER
Editorial Contributor

One of the teachings of the grange was "he who makes two blades of grass grow where only one grew before is a benefactor." How much greater then he who makes two splendid fruit trees grow where none grew before? Or, better still, to make an orchard grow where sagebrush grew before?

The soil is a laboratory in which millions of microscopic forms of life and energy are at work during the portions of the year when the ground is not frozen. They are at work breaking down the organic matter and converting it into forms in which it becomes available again for plant food. The farmer would become poor in a short time were it not that every year a crop of these invisible creatures prepares the soil for the crop on which he lives and makes his money.

Is nature cruel? It must seem so to those who are crushed, but to the philosopher it seems like a mode of improving the species. Our sympathies have always been with the failures; we have often felt like quarreling with the nature of things; but it does no good. It has been demonstrated in cyclones that nature will destroy a city with as little mercy as she will destroy a bird's nest; and in the floods, whole valley of inhabitants have been ruined as surely as the ant hill in the same pace. Nature is beneficent if we keep her laws; but ruinous if we violate them.

Apple Tree's Big Yield

By E. F. STEVENS, Nampa, Idaho.

Twenty-two boxes of apples from a 7-year-old tree were picked the other day in the Stephens orchards. This illustrates the surprising fertility of the Idaho soil that could grow a tree large enough in seven years to safely carry a half ton of apples. This incident also illustrates the fact that orchards during the first five years of their growth cultivated 24 times a year grow to a larger size and form than trees receiving average care. Time is saved and early production hastened by seeding to clover the sixth season, which tends to throw the tree into early fruitfulness. Some 250 acres of the Stephens orchards are now in standing clover. Instead of taking off this clover for hay, the mowing machine is run four times in a season, cutting growth secured, and allowing it to lie on the surface to act as a mulch. This lessens the loss of water from evaporation and increases the amount of nitrogen and humus. Handled in this way the trees have already attained a breadth of 18 feet of branches, 16 feet in height and have developed such early bearing qualities as to develop the above noted crop of 22 boxes on a single tree with three additional boxes on the ground under the branches.

Mark Ripening Period

I have two or three times called attention to the importance to growers of marking on the boxes the ripening period of apples. I do not think that it has had much effect, because nearly every one continues to do as he has done in the past and as the folks about him are doing. Such is the force of habit and of environment. I, too, am a slave to custom in some degree at least and, while in some important particulars I have broken away, there are others I follow, knowing that they subject me to considerable inconvenience. For instance, why should a man wear a stiff linen collar, white shirt and cuffs, when a soft collar, colored shirt and wrist bands are so much cheaper and better? It is because of custom and I am as much addicted to it as a toper to his cups.

Now if a fruit grower can be made to see that to change is financially to his benefit, gradually the change will come. Some of the reasons why the period of ripening should be marked on the box are that the consuming public do not as a rule know when the different varieties are ready for use. They are just as likely to buy an Arkansas Black for use in December as they are to buy a Jonathan. But the Arkansas Black should be used in April, May and June. Suppose the boxes were labeled about as follows: King of Tompkins County, ripe in November. Grimes Golden, ripe in December. Jonathan, ripe in December. Esopus Spitzenburg, ripe in January. Yellow Newtown, ripe in February and March. Winesap, ripe in February and March. Arkansas Black, ripe in April, May and June.

Names Not Sufficient Guide.

The names of the different varieties are not sufficient guide, because climatic conditions change the ripening period. For instance, a Spitzenburg, grown in the lower Yakima valley, will ripen from one to four weeks earlier than the same variety grown in the Upper Naches, Upper Ahtanum or at Ellensburg. The same is true in a greater or lesser degree with all the other varieties. The Delicious is a late keeper, when grown in the higher altitudes or upper valleys, but should be used in November or December if grown in the lower altitudes.

What Is the Ripening Process?

The ripening process in apples is one in which the starch turns to sugar. This process is the beginning of decay, but is a period when the fruit is good for eating without cooking. The next period is one in which the sugar turns to alcohol, and then to vinegar. In other words, the last period is one in which the apple is rotten.

If the growers would extend the demand for their products, they must teach the people when these products are fit for use, so that when the consumers buy a sample or quantity, they will want more. No one who buys an Arkansas Black for eating in December, will prefer another as compared with an orange; but that variety has its period and is exceedingly nutritious.

Causes of Change in Organisms.

Specific characters (that is characters that belong to species) are more variable than generic.

The following causes affect them.

1. Quality of food.
2. Quantity of food.
3. Water.
4. Air.
5. Light.
6. Climate.
7. Changes of treatment such as cultivation or neglect.
8. Chemical changes in sap as poison from insects, bruising the bark and consequent exposure to air.

The above causes of change in organisms was given by Charles Darwin over 50 years ago. About 30 years ago, I first read it and in so far as it concerns forms or material changes, I have not seen since a better description. The farmer, especially the orchardist, will find much in it to guide him in improving the quality of his crops.

G. L.

Eyeglasses for a Diver.

A new eyeglass has been patented for the use of submarine divers. It is well known that the human eye does not function properly under water, objects appearing badly blurred and distorted. This is due to the fact that the speed of light in water is different from the speed of light in air, and hence the light rays enter the eye with a different angle of refraction. The eye, being designed for focusing rays coming through the air, is unable to focus rays coming through the water.

MAKE MONEY on Your Own Land

Present prices of all farm products are higher than ever before.

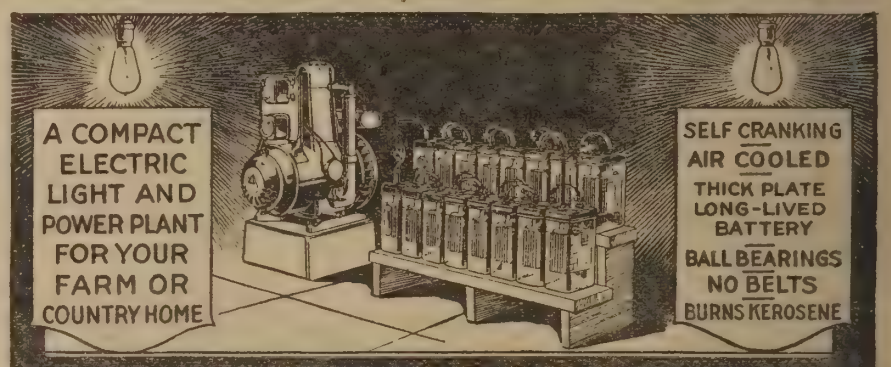
The prices of our lands have remained the same.

Are You Taking Advantage of This Opportunity?

Follow our advice and make a trip over the property within the next two weeks. The season for starting on logged-off land is drawing short.

Don't let this year and this opportunity pass by without any benefit to you.

Our booklet and full information is mailed to you free upon request.



Phoenix Lumber Co., Dept. D.
Spokane, Washington.

Please send me your folder on Stevens County logged-off land.

The World needs Food!

With millions of men in the armies of Europe, and millions of acres of land lying idle, all the world is crying for food.

The Northwest farmer must "do his bit" by producing maximum crops at the minimum cost. As the most progressive farmer in the country, he must till every possible acre at the least possible cost.

BIG BULL TRACTOR

Burns Kerosene or Gasoline

Is ready to help him make money out of the high prices that will prevail for years to come. The Bull Tractor has demonstrated itself to the Northwest farmer as the best all-around tractor. Possessing features to be found in no other make, it finds plenty of ways to save money on the little farm as well as the big farm.

It is the Northwest farmers' duty to till every foot of soil that will grow food stuffs. **The Bull Tractor will help him do it,** for it is The One Tractor that will plow within 12 inches of the fence, turn a corner quickly, and follow the most crooked and irregular furrow.

ALL YEAR TRACTOR

From late in the Fall to early Spring, the "Big Bull with the Pull" will make you money by saving you men and horses, and increasing crop yields.

Learn what the Big Bull will do on your farm.

There are more Bull Tractors in use in The Northwest than any other make.

Let us tell you what others think of it.

One of the Many Dairies on the West Side

A herd of 36 pure-bred Holsteins, owned by A. H. Buck and Ed Hoem, Glenwood farm, Monroe, furnishes milk for part of the certified trade of Everett, Washington. Messrs. Buck and Hoem started their herd with stock from the Carnation farm, and have since been building it up by careful purchases in various directions. The cows are entered in the local cow testing association.

Some of the dairy buildings, Glenwood farm, Monroe, Wash., and Prince Aralia De Kol Burke, No. 142092, owned by A. H. Buck and Ed Hoem, Glenwood herd, Monroe, Wash.

Alfalfa Pointers

Here are a few more interesting pointers from alfalfa growers in the state of Washington:

J. A. LOCKHART of St. John, Wash., says that upland in his vicinity will raise one fair crop a year of alfalfa, but that the sub-irrigated bottom lands seem better adapted to the crop.

JAMES C. FARR of Albion, Wash., has no alfalfa now but expects to raise some when the price of wheat drops. He finds that the weeds seem to take the stand, especially when pastured. Another objection is the difficulty in plowing up the alfalfa.

NAGLE BROTHERS of Ringold, Wash., have about 100 acres in alfalfa and report about an average yield. The land is irrigated. They are not increasing their crop.

P. C. NISSEN of Ritzville, Wash., has about 10 acres in alfalfa. He declares he should have about 50. The reason why he has not 50 acres of alfalfa is given in his own words: "Prohibition. I will say, to force the farmer down to the eight-hour law, and prohibition, is simply against the law of this great nature we are living in. Too many retired farmers is proof of it. The farmer should finish up on the farm and not in town."

W. C. SEAGLE of Elberton, Wash., is well satisfied with his alfalfa results and is thinking of increasing his acreage.

PETER HANSON of Boyds, Wash., is the only alfalfa growers in his vicinity, having 12 acres. He reports that this year's first crop was better than ever, but the second crop was yielding yet better. He figures on irrigating his alfalfa in the future.

A Grand Champion.

The above photo shows the gray two-year-old Percheron stallion, Kyrube, owned by L. P. Schumacher of Chehalis, Wash. While Kyrube was not on his good behavior and would not pose as was desired for The Farmer camera, he is a young horse of much quality and fine Percheron type and was awarded grand championship at the Southwest Washington fair the week of August 24. H. A.

Guernsey Breeders Organize.

The Guernsey breeders of Snohomish county organized a breeders' club at a meeting held at Arlington September 4, the object of which is to promote the breeding and improvement of high-grade purebred Guernsey cattle in Snohomish county, to aid its members in buying, breeding and selling first-class animals, and to establish a good reputation for Snohomish county as a Guernsey center.

The following officers were elected until the annual meeting, which will be held at Snohomish September 29, 1917: John Wrage, Arlington, president; Albert Westover, Marysville, vice president; E. Lenfest, Snohomish, secretary; N. N. Nelson, Three Lakes, treasurer.

...MINATED!

...With Farmers, Big Cut in Price ...ossible, and Many Men Are ... Productive Labor in This State

...the call of the government to release as many men as possible ...r in the fields, forests, mines and factories. We are willing and ... can in meeting this emergency.

...on the farms and ranches of Washington are fully alive to the seriousness of the present labor ...question which any one will ask in this crisis is, "What can I do to help?"

...nal conditions, The Washington Farmer employs a big force of agents in securing new subscriptions ...l renewing old ones. It is worth repeating more than once that to visit the farms, ranches and remote homesteads throughout the length and breadth of Washington requires a big army of men.

If instead of waiting for an agent to call, each and every one of our readers would send in his or her subscription direct to this paper, just think what it would mean! It would enable us to release practically every one of those scores of agents for work in producing the necessaries of life.

We think you will agree that it is a small thing for each subscriber to do—to mail his subscription direct to us; but in the aggregate it will mean an enormous saving in agents' salaries, automobiles, gasoline, rigs, hotel bills, railway fares, and miscellaneous expenses.

In order to give the plan a thorough tryout, we have adopted a schedule of rates designed to give our readers the benefit of every dollar saved through the elimination of the middleman —25 cents for one year's subscription, 50 cents for three years and $1 for five years.

Of course, you realize that unless our readers act upon this offer, and act quickly, it must be withdrawn. But we think we know our readers. We are confident they will see the common sense of this plan and will send in their subscriptions without urging and without delay. Do your part. Mail your order today together with stamps, money order, personal check or silver figured on the new rate. And be sure and tell your neighbors about this plan.

COMING

IN THE NOVEMBER FIRST ISSUE of this paper we shall give our subscribers a very interesting summing up of what has been done along the lines of ***Live Stock Breeding in the Pacific Northwest*** during the past year. Also a forecast of the constructive plans of successful Live Stock Breeders and Live Stock Organizations in our own and adjoining states for the future.

A great many of the most prominent and successful live stock men of the Pacific Northwest will use this issue to offer surplus stock they have for sale. Our November 1st issue will therefore prove a very valuable buying guide for all subscribers who are intending to make the right start with live stock of the best blood and type.

Subscribers having good animals to sell will find this big live stock issue a particularly good one in which to advertise. Our advertising rates will be sent promptly on request.

First Farmers' Marketing Association

(Continued from page five.)

laws were discussed and the plan for financing the company was decided upon. The committee also arranged a series of five meetings to be held in different sections of the community. These meetings were for the purpose of explaining to the growers the expected benefits to be derived from cooperative efforts, the proposed plans of organization and methods of raising necessary funds.

Each meeting was addressed by a local representative, the county agricultural agent and the director of the office of farm markets.

Briefly, the purposes of organizing, as set forth at these meetings, were as follows:

1. In order that a warehouse might be maintained at a railroad point which would enable the growers to haul their produce and place it in storage while the roads were good—before the fall rains set in—and to market it on short notice, at such times as they deem advisable.

2. A warehouse would permit the pooling of the products of several farmers into car lots for shipment. Car lot shipments result in a saving on freight rates. It also opens new outlets for the produce inasmuch as car lot shipments can travel wider distances than can smaller sales. Furthermore, some highly desirable markets require more than car lots—army and navy orders—on some classes of produce. Individual farmers can not take advantage of this sort of a demand. Collectively they can do so.

3. The principle advantage to be derived from such an organization, and the one most emphasized, was that of standardization. Through an organization the growers can employ a manager whose business it is to find out what the market demands and grade the produce according to those demands. This sort of an arrangements results in putting a commodity on the market in a form that will enable it to hold its own in competition with other commodities that are graded to suit market demands. It saves freight charges by keeping the low-grade products, which have no market value, at home where they can be utilized to the greatest advantage.

The suggested constitution and bylaws were discussed in full at these preliminary meetings, and detailed explanations were made as to moral and financial obligations of members.

Some of the more important points set forth in the constitution and bylaws may be worthy of consideration. The purposes of the organization, as defined in the bylaws, are:

To encourage better and more economical methods of production.

To secure better results in grading, packing, advertising and marketing farm products.

To buy supplies in a cooperative way.

To rent, buy, build, own, sell and control real and personal property as may be needed.

To cultivate the cooperative spirit in the community and to perform any other work which may tend to the betterment of the members and the uplift of the community.

Any producer of farm and horticultural products is eligible for membership. This stipulation makes it solely a farmers' affair.

Since there were six different communities interested, each elects a representative to serve as one of the board of directors and all the communities elect a representative at large. Hence seven members compose the board of directors that manages the association.

The office of farm markets favors the organization of cooperative companies without capital stock, for the reason that the benefits one derives from such an association should come through patronage and not through the ownership of stock. To explain: If A buys or sells ten times as much as B, then A should benefit ten times as much as B regardless of the amount of stock owned. If there is no stock no one who is not a farmer who wishes to buy or sell will have any desire to join the company because of the profits he can make from the patronage of some one who does buy or sell.

Furthermore, the recent Clayton amendment of the Sherman anti-trust law (section 6) exempts farmers' companies having no capital stock from the provisions of the anti-trust law.

It is an admitted fact that nearly every farmers' commercial organization of any considerable size or importance does restrain trade at some time. That is one of the reasons for organizing. But before the Clayton amendment such organizations could be prosecuted for so doing. Congress, however, realized the benefits to be derived from farmers' cooperative efforts and exempted them from the Sherman anti-trust laws, providing they do not make a profit or have capital stock. True cooperation does not make a profit. It affects a saving—a saving in proportion to the amount bought and sold. Hence, why capital stock?

Unfortunately, our state cooperative law specifies capital stock. It is hoped that the next legislature will see fit to amend our present law or to enact another permitting our incorporated cooperative companies to take advantage of the privileges granted by the federal law.

In order to conform to the provisions of the state law concerning capital stock, the Eastern Lewis County Farmers' exchange asked each member to buy one share of stock at $10. These shares are non-transferable, and the board of directors propose that they shall be nondividend-paying. These provisions make the shares of stock in reality membership fees—evidences of good faith—so to speak. It is not expected that the sale of stock will furnish sufficient capital for financing the company. So, in addition to buying one share of stock, each member is asked to give a noninterest-bearing collateral note to the amount of $25. This note is deposited in the bank by the association as security for the association note when it wishes to borrow money. These collateral notes do not draw interest, since they are merely held as security to the association's note which draws interest. The interest on the association's note is counted as part of the running expense of the business and paid out of the proceeds of the business.

The board of directors contemplate building up a sinking fund that will retire these notes within three years, when they may be returned to their signers. Hence all the Eastern Lewis County Farmers' exchange is asking from a member is that he give $10 for a share of stock, which is merely a manifestation of interest in the organization and to lend his credit to the amount of $25 for a term of three years. Farmers can hardly expect to cooperate commercially with smaller financial obligations.

In brief, the above topics were the ones presented and discussed at the five preliminary meetings.

Two weeks were allowed to elapse before the final organization meeting was held. This gave those interested time to discuss the proposition among themselves, also it afforded them an opportunity for informing themselves on points and questions which were not entirely clear.

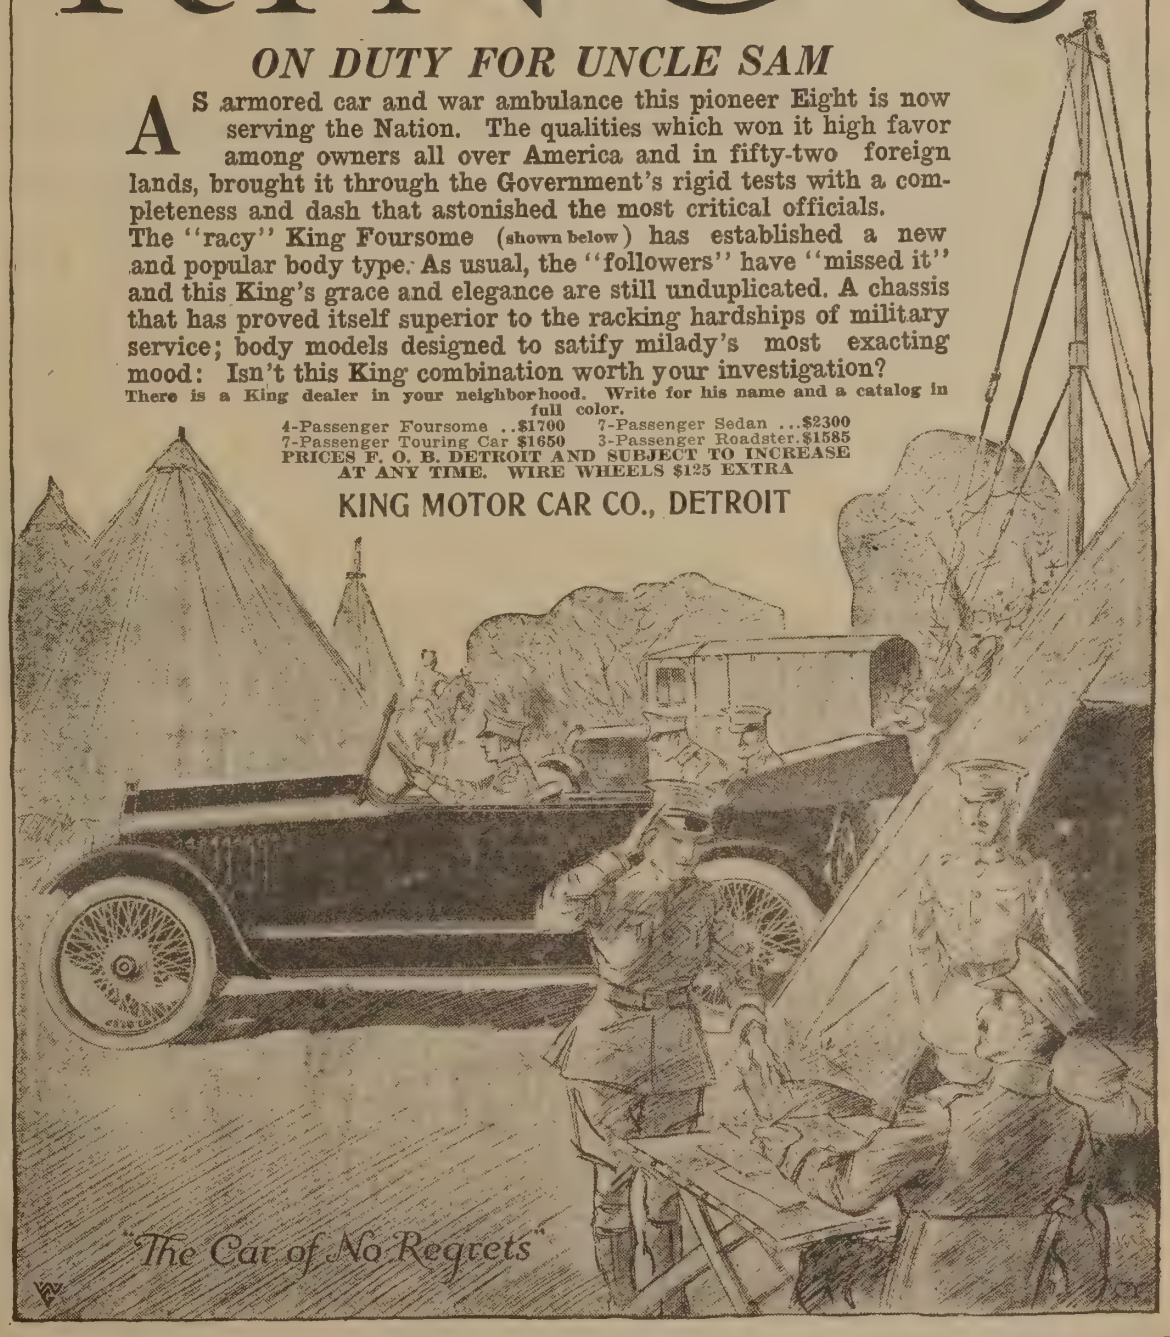
At the end of two weeks' time 70 farmers had signified their desire to become members of the proposed organization. These met in Morton on September 4th and adopted a constitution and bylaws and elected a board of directors. Hence, September 4th marks the completion of the first farmers' association organized under the direction of the office of farm markets.

Since this is one of the regular functions of the office of farm markets it will gladly confer with and advise any group of farmers who are thinking of forming a cooperative enterprise. If local conditions are thought to be favorable for such an enterprise the office will personally assist in forming an organization.

KING "8"

ON DUTY FOR UNCLE SAM

AS armored car and war ambulance this pioneer Eight is now serving the Nation. The qualities which won it high favor among owners all over America and in fifty-two foreign lands, brought it through the Government's rigid tests with a completeness and dash that astonished the most critical officials.



The "racy" King Foursome (shown below) has established a new and popular body type. As usual, the "followers" have "missed it" and this King's grace and elegance are still unduplicated. A chassis that has proved itself superior to the racking hardships of military service; body models designed to satify milady's most exacting mood: Isn't this King combination worth your investigation?

There is a King dealer in your neighborhood. Write for his name and a catalog in full color.

New York Dairymen's League

Grows Within a Year From 14,000 to 44,000 Members

The Dairymen's league in the region that supplies New York city's milk has grown within a year in membership from 14,000 to 44,000, and is now fighting to maintain its organization. District Attorney Walrath of Syracuse, working in cooperation with District Attorney Swann of New York, has started an official inquiry into charges that the producers' league is engaged in a criminal conspiracy under the laws of New York state. When questioned regarding the specific information which he had received, Mr. Swann pointed to a circular of the Dairymen's league dated September 22, 1917, and containing the following:

"The great test of our organization has come, and local dealers will receive notice of and when dealers can sign contracts. Stand fast. Failing to receive notice, farmers and manufacturers are to take care of their milk and continue until we make sale thereof. The dealers are determined to destroy the league."

District Attorney Swann declares his purpose of taking this problem before the grand jury.

Support of the dairy farmer's demand for better prices comes from an unexpected quarter, the Wall Street Journal. It is our guess that the writer of the following leading editorial from that publication was either brought up as a boy on a dairy farm, or that he has tried his hand at "scientific dairying" and gathered in his experiments a great deal of costly first-hand information. He writes:

"It is said that Mr. Hoover is about to investigate the milk problem and determine the cost of milk.

"If Mr. Hoover once attempts the solution of this problem and gets so far as to set down the figures on paper, we are sure of one thing: He will never dare to publish them.

"Milk and eggs are produced by unpaid farm family labor. It is all right for eggs, because chickens can be fed from table scraps and surplus eggs sent into market without danger to the public health. But milk, produced by unpaid family farm labor and sold as a surplus or refuse product from the farm, has long been a danger to the public health.

"Yet, certified milk is only natural milk, as the calf gets it, safeguarded by about 80 rules as laid down by the medical milk commissions to insure surgical cleanliness in production and delivery. One-half the cows in the northern states are known to be infected, more or less, with tuberculosis, yet the authorities do not dare to stamp out the disease. They are content with its arrest by killing off a certain number of cows as they approach the dangerous stage.

"Now, when Mr. Hoover approaches the problem of milk cost, where will he find his standard of cleanliness? Where is the cost sheet that can guide him in determining the expense? He must first value the labor of the farmer, and of the farmer's wife in the milk room, assisted by the daughter, and also value the labor of the farmer's boy who gets the cows in and out of the pasture, or feeds them irregularly in the barn.

"Will Mr. Hoover determine the cost of producing milk within 10 feet of a barn carrying manure piles six feet high or will he determine the cost of milk where barn yards are kept clean and grassed over and the barn refuse carted a mile away twice daily? Will he determine the cost of keeping cows' udders and flanks washed and clipped; also the cost of clean hands, cost of ice and icing, bottle washing and sterilizing? Will Mr. Hoover determine the value of a cow giving 2500 quarts of milk a year, and the average cow gives less than this, or the value of a cow giving 5000 quarts of milk a year, and some valuable cows give more?

"Next, will Mr. Hoover, with his engineering talent, tell the life of that cow and what should be the size of the cow family entitled to be fed—bulls, calves, yearlings and 2-year-olds—that the producing cows may be promptly replenished?

"Here is where the poor farmer—poor in many more senses than the world knows and richer in freedom and possibilities of good living than he himself knows—needs engineering and accounting talent.

"Let Mr. Hoover begin with his lead pencil. We know where he will come out if he pursues his task. Hoover will find that milk is produced below real cost and, like chickens and eggs, always will be.

"But the world will probably persist in paying hundreds of millions for common sense answers to every day questions."

Commenting on the foregoing editorial a dairy farmer said:

"From my 34 years in dairying, I know every word you say in your editorial is true, but you do not go even far enough. The average age of a dairy cow is between seven and eight years, and from my experience the dairymen of this country have for many years been producing clean milk at a loss. For myself, with a herd of 125 animals, my loss at the present time, even at an advance in prices of milk, will average $1500 monthly; while small farmers with no capital will not be able to stand it much longer without they receive at least an advance of 50 per cent in prices. So in many instances I do not think they will be able to hold out. I have increased my prices lately 16 per cent, while the price of labor, grains, feeds and other things pertaining to the dairy business will show an average increase of over 90 per cent. I believe that the dairymen will cease shipping to the cities and use their product on calves, hogs and chickens in preference to shipping as usual. This will cause great suffering in the cities to many children."

The Motor Car
On the Farm

Graphite the Rims.

This is a good time to apply some graphite to the rims so that they will not rust. A good graphite grease or plain graphite may be used for this purpose.

Spare Tire Destruction.

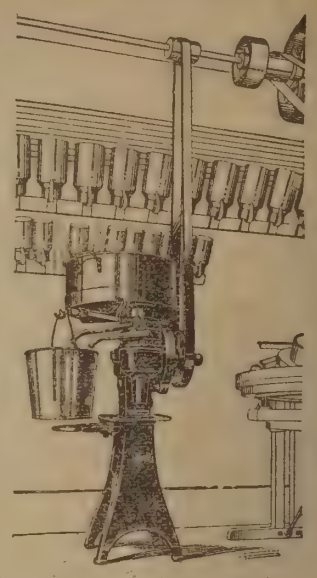
One of the factors making for deterioration of the spare tire is the exhaust. The heat and corroding gases issuing from the exhaust, right near the spare when it is carried in the rear, tend to impair the rubber and shorten the life of the tire, even more than if it had been in active service on the road.

Dash Illumination.

The substitution of a blue bulb for the ordinary clear one, which illuminates the dash, has certain advantages. The blue light is brilliant enough to afford ready reading of the various instruments and yet all back glare is eliminated. Moreover, the blue light rather improves the appearance of the compartment at night.

Driving the New Car.

Many owners in driving their first cars make the mistake of keeping the spark advanced all the time, even on grades, provided no knocking is heard. This practice is likely to cause premature wearing of motor bearings. When an engine is new the piston-to-cylinder clearance is very slight and a slight knock resulting from the spark s being too far advanced, may not be audible. This means bearing stresses, however, and when the motor has worn in, the noise will be distinctly heard. Merely because the knocking is not audible is not reason for keeping the spark unduly advanced. The new car owner should assume that there is a knocking even though he does not hear it and should retard the spark on a heavy pull.



Farming Day and Night.

Great Britain has decided to carry on farming operations for 24 hours a day by means of hundreds of American gasoline tractor plows, searchlights, expert chauffeurs and taxicab drivers, and a civilian army of night plowmen and plowwomen. Great estates which have lain fallow for countless generations are to be broken up, and soon moors and vast parkland expanses which have been the delight of the British sportsmen will hear the strange clatter of the gasoline tractor.

Potash in Banana Stalks.

Banana stalks may help to solve the fertilizer problem of this country. Experiments indicated that a ton of stalks yielded 188 pounds of dry matter, containing 13.7 per cent potash, or about two-thirds as much as is yielded by the dried kelp of our Pacific coast. An examination of banana skins showed a total potash content of 1.05 per cent, the dry matter containing 9.03 per cent potash.

Pick a Lily or a Primrose—You Can't Lose

CREAM is the fruit of the dairy farm. The land, the equipment, the herd, and the labor of the farm hands find themselves justified chiefly at separating time.

That is why it pays to be very careful in picking a cream-saving, money-making machine. That is why thousands of prospering farmers have built up their herds around **Lily** and **Primrose** cream separators.

Lily and **Primrose** separators have become famous by living up to the slogan "Save all the cream, down to the last drop in each gallon of skim milk." And behind that fact are the other prime qualities that go to make up the satisfactory cream separator. **Lilys** and **Primroses** are of very simple, lasting design, easy to clean around and under, and they can be washed and thoroughly cleaned in a few minutes. When you buy them they are completely adjusted for everyday use except for the one adjustment regulating bowl height—and this one is very easily made on outside of frame. The splendid spray oiling system, the phosphor bronze bushings, the one-piece spindle, the quick-grip quick-releasing clutch, etc., etc., all have their reasons for being built into the **Lily** and **Primrose**.

Our catalogues are bound to interest you; they show why a **Lily** or a **Primrose** will save you money twice a day. Write us or see the dealer, as you prefer.

Truth of Food Situation in France

Way to Arouse Nation Is to Lay the Facts Fully Before the People

ARTICLE I.

By FRED B. PITNEY

Telling the truth about the food situation in France is an extremely difficult thing to do, for one comes immediately into contact with so many counter currents of opinion. There is no question in the mind of any one conversant with the facts that it is not only with Germany, but with the allies as well, that the food situation is serious and needs prompt and effective treatment. But in the endeavor to deal with this question one finds constantly in the official mind an attempt to reconcile two irreconcilable positions.

Governments Alone Can Not Win War

On the one hand, there is the open and full recognition of the seriousness of the situation, of the demand for prompt, full and efficacious cooperation and coordination of effort among all the nations warring against Germany, in order that each many be able to sustain its striking power at the point of highest efficiency. This opinion recognizes that governments alone can not win the war. It must be a war of the allied peoples against Germany. And this opinion sees the necessity of laying the situation fully and fairly before the people, so that they will voluntarily adopt the conservation methods necessary to victory.

On the other hand, confused in the same minds with this opinion there is an idea that if the people are told too much they will become frightened and will weaken. That is a bald statement, very plainly put, but that is what it boils down to. The statesmen and politicians have a peculiar idea that they are the only men who are farsighted enough and strong enough to face the whole truth and go on fighting. So they try at the same time to arouse the people and to reassure them.

We find a fine example of this in the submarine. On the one side we are told that our efforts to overcome the submarine must be redoubled, while on the other side we are told the submarine is a failure and it is to laugh at the German threats. In regard to food we are told that the allies must guard their every resource and immediately on top of that we are told they have reserve stocks for the next three years. We are told that it is vitally necessary for America to put a great army in the field at once and in the same breath we hear that the allied preponderance in man power over Germany is increasing every day.

Whole Truth Must Be Known.

How can one expect to arouse a nation to war with such a stream of contradictory statements? My own opinion is that the peoples of all the allied nations are strong enough to know the whole truth and that knowing it will only make them more determined and fight harder, while at the same time their collective action will be much more intelligent. I do not believe in any government trying to win this war. I believe that only an aroused nation will be victorious. And I believe that the way to arouse the nation is to lay every shred of fact fully and completely before the people.

In France, however, one meets with a third phase of official opinion that further complicates the situation. France has borne the brunt of the fighting on the side of the allies for three years. Her resources in men and material have been strained to the uttermost, and every one realizes that France can not go on bearing the brunt of the fighting for another three years. Yet, French statesmen are so afraid of the possible effect at time of the peace conference of an admission that France needs assistance now that immediately the idea is suggested there comes an official denial in one form or another. French statesmen, perhaps with reason, are obsessed with the idea that France will get an extremely short end of the stick at the peace conference, if there is a suspicion that she does not go into it stronger than she went into the war and able to fight on for another million years. But how is she going to get anything at the peace conference if the allies are not the victors? And how are the allies to be the victors unless the people of America know the full truth about the task imposed on them?

This complicated situation makes it extremely difficult, however, to tell the truth about food conditions in the face of the imminent probabilities of thereby injuring susceptible official feelings.

As It Affects the Individual.

As I have kept house in Paris during the war I can speak from experience on the food situation in France as it affects the individual. And let me remark in passing that one learns a great deal when keeping house of which one gets no inkling when living in a hotel and eating in restaurants. One can always go to a restaurant and order a meal and get it. I have heard many visiting Americans who lived in France in that way pooh-pooh the idea that there was a food shortage in the country. If those same persons had had to search the markets before they had their meals they would have gained a very different idea of the food situation.

Sugar offers an excellent concrete example. In a restaurant one is fairly certain of sugar for one's coffee. Three lumps to a person is the rule. Formerly the sugar was put on the table in a bowl, and one helped one's self. Now the ration is served to each person separately. Still one is fairly sure of one's sugar in a restaurant.

But if one is keeping house one finds that one must have a "sugar card," permitting him to buy a stipulated amount of sugar in a month. The allowance is 1 1-2 pounds of sugar a month if three meals a day are taken at home, 1 pound if two meals are taken at home, and 1-2 pound if only one meal is taken at home. This means for the person who takes three meals a day at home 18 pounds of sugar a year. The annual sugar consumption per person in America is 85 pounds.

One would not be likely to find this out, if one were living in restaurants in France, but one finds it out very soon if one is keeping house.

It is soon learned, also, that the "sugar card" does not mean that one can demand a pound and a half of sugar a month, but only that one is permitted to buy that much, provided a dealer can be found who has it to sell. A dealer who has sugar will not sell it to anyone who comes in. He sells only to his own regular customers.

We paid last winter in Paris 11 cents apiece for eggs and $2 a pound for butter and there was frequently neither butter nor eggs nor milk to be had. Private families were allowed to buy one-eighth of a pound of flour at a time. The grocers could not sell flour, only the bakers. The flour mills could not choose their own customers, nor could the bakers and restaurants choose the mills they would buy from. Lists were made out, telling each miller to whom he could sell. This was in order that one section should not be able to eat up the stock of flour belonging to another section, or one baker deprive the customers of another, when all were short.

Wheat Situation in France.

Let me give you the official figures on the wheat situation in France, so that there can be no question.

It is estimated that there will be a deficit of approximately 5,000,000 tons of wheat in France over the period from September 1, 1917, to September 1, 1918.

The normal annual consumption of wheat in France is from 9,200,000 tons to 9,400,000 tons. France has always been an importer of wheat, her average production for several years before the war being 9,000,000 tons, or slightly less than the consumption. Since the beginning of the war her production has fallen off radically. In 1914 it was 7,700,000 tons, in 1915 6,065,000 tons and in 1916 5,840,000 tons, while for this year the crop is estimated at 4,000,000 tons, with a possibility of rising to 4,500,000 tons, leaving for the period from September, 1917, to September, 1918, a deficit of nearly 5,000,000 tons, which must be made up by imports.

Wheat Must Come From America.

Where can those imports come from except from America? Italy by reason of her position in the Mediterranean takes the first toll from the wheat of the far east, while England, of whom the far eastern wheat producing countries are colonies, takes the remainder. France can get a little from South Africa. Argentina has stopped the exportation of wheat. This country is the only resource left to France.

I have spoken of the scarcity of flour, resulting from the shortage in wheat. Let us try to see what this means to France. In the first place, it must be realized that there bread is the staple article of food. It is the base of all meals, especially among the working population. Breakfast consists of coffee or chocolate and bread. Luncheon is bread, soup, coffee and often, though not always, some meat or fish and a vegetable. The big dish is bread. Bread is again the base of dinner or supper, however the meal may be called. Bread and cheese will make an entire meal for a French peasant, with a glass of wine to wash it down.

Bread Allowance and "Bread Cards."

The French soldier's allowance of bread was a trifle over a pound and a half a day. On account of the shortage of wheat it has been necessary to cut this ration to a pound and a third a day. And it is not necessary to say that only dire necessity will countenance the cutting of the soldier's ration.

Another thing that has happened is "bread cards" in some localities. There is no national "bread card" in France, as there is a "sugar card," but in some parts of the country it has been necessary to restrict the use of bread by local regulations. I have in mind several letters from my friends among the peasants of Brittany, telling of the privations they were enduring because their bread was cut down so much. Remember that bread is the chief article of diet among those people.

France Suffers in Silence.

Oo not think they complained. There is no finer souled, stronger or greater people in the world than the French peasants. They are heroes among a nation of heroes. No trial that justice and right could demand could wring a complaint from Josephine Herve, one of the grandest women among a grand race. That simple peasant woman can neither read nor write, but without a word of bitterness she gave her husband to her country, and she is schooling her five sons and raising them for her country. The oldest goes to the army with the next class that is called out. When little Charlot, next to the youngest of her boys, writes for her and tells what they are enduring, there is no complaint, no bitterness. It is a simple statement of facts in plain and homely language, the story of a peasant cottage told to the child she nursed and loved.

And one can not help her. One can send her money, but it is not money she needs, but bread.

The second article by Mr. Pitney, which will be published in the Farmer next week, points out who and why the French army receives better food than the civilian population; also some of the methods used to stretch the rapidly disappearing supplies of grain and meat. The agricultural machinery in France is also in bad condition as the result of a shortage of mechanics to keep it in repair, and to the cessation of imports of new machinery from the United States.

He Did as He Was Told.

The class was seated, ready for recitation, when a young student rushed in and dropped a great pile of books on the floor. The nervous professor jumped and then said angrily:

"Young man, go down to the president's office and drop those books just like that!"

The youth departed, returning in a few moments and calmly taking his seat in class.

"Did you do as I told you to?" demanded the irate professor.

"Yes, sir."

"What did the president say?"

"Nothing," coolly returned the student. "He wasn't there."—Ladies' Home Journal.

Civil War's Cost.

The civil war cost the United States $3,000,000,000.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Your Expression an Index to Your Physical Condition

Dr. Hirshberg

Your conversation, "line of talk" and "gift of gab," as slang expresses it, is more than an index to your mind. It may be a symbol of your physical as well as your mental health.

While physiology is not supposed generally to have much or anything to do with correct speech and vocal expression, as a matter of fact, the production and character of the voice depends to a gargantuan degree upon various physiological states within and without.

You may split hairs as some students do and call muscular sensation and muscular motion, perception and imagination psychologic and not physiologic activities of the human fabric. That is the difference between Tweedledum and Tweedledee.

Until there is a correct adjustment between parts of the anatomy and parts of speech, speaking and singing will continue to be merely a hap-hazard pot-pourri of defects and incapacity.

The quality of the speaking voice is dependent upon the internal inspiration, the outside physical impulses and the creative and imaginative qualities of the mind.

When you speak, you should not appear or feel sarcastic or superior to others. If you sniff disdainfully or contemptuously as you speak; if you think the whole world and most of the people in it evil or beneath you in one way or another, your facial expression and your voice will partake of that mean character.

A Smile's Aid.

When you speak, you should nearly always smile. A slight smile at once relaxes the lips and allows them a full, free play of words. Since the lips and the tongue must form most words, there occurs then enough elasticity to make your expressions melodious, sweet and appropriate to any occasion.

It is utterly impossible for most people to speak well, if they are mentally depressed, annoyed, worried or absent-minded. Nay, physical disorders, pain, fever or other actual disturbances interfere with facility of speech as well as its timeliness and agreeableness.

Helps the Voice.

Your muscles must all be toned up to the qui vive and under your absolute control, if you would be a natural and intelligent talker. Moreover, unless you can bring smiles into action, although you are not in such a happy mood as to assume it spontaneously, your voice will lack some of its resonant, musical quality.

If this is all true in talking, it is much more applicable to singing. The singer whose mouth is wreathed in a gentle smile, has her throat and windpipe nicely arranged for the emission of sweet, clear tones.

The lips are nature's first assistant. They shape, shade and moduate the voice. If you are able perfectly to relax your jaws and control your lips and tongue, you should be able to fascinate others with your voice. The mouth of a melodious talker or singer ought always to look pleasant. A crooked and distorted mouth does more than create a bad impression; it makes a poor, raspy, slovenly and unmusical voice.

A pretty, smiling mouth induces a charming, resonant, conquering voice, one hard to resist, lighting up speech and song like Promethean fire.

Government Crop Report for October

A summary of the October crop report for the states of Oregon, Washington, Idaho and Montana, and for the United States, as compiled by the bureau of crop estimates (and transmitted through the weather bureau), United States department of agriculture, is as follows:

Crops.	Oregon.	Washington.	Idaho.	Montana.	United States.
All wheat, bu., preliminary estimate	13,000,000	29,200,000	13,800,000	18,000,000	660,000,000
Production last year, December estimate	19,550,000	37,635,000	15,071,000	28,665,000	639,886,000
Oats, bu., preliminary estimate	11,100,000	11,200,000	13,000,000	13,600,000	1,580,000,000
Production last year, December estimate	17,280,000	14,300 000	13,330,000	25,080,000	1,251,992,000
Barley, bu., preliminary estimate	5,280,000	4,930,000	5,820,000	1,350,000	202,000,000
Production last year, December estimate	5,390,000	6,814,000	7,410,000	2,660,000	180,927,000
Potatoes, bu., October 1 forecast	7,670,000	9,680,000	6,450,000	5,880,000	453,000,000
Production last year, December estimate	8,250,000	9,900,000	4,050,000	4,875,000	285,437,000
All hay, tons, preliminary estimate	1,809,000	1,813,000	2,337,000	1,465,000	92,000,000
Production last year, December estimate	2,175,000	2,048,000	1,946,000	1,983,000	109,786,000
Apples, agricultural crop, bbls. of 3 bu., Oct. 1 forecast	1,160,000	4,553,000	705,000	322,000	58,900,000
Production last year, December estimate	1,285,000	4,608,000	147,000	256,000	67,415,000
Apples, commercial crop, bbls., October 1 forecast	.....	3,660,000	.....	.....	.....
Production last year, December estimate	.....	3,467,000	.....	.....	.....

PRICES.

The first price given below is the average on October 1 this year and the second the average on October 1 last year.

Crops.	Oregon.	Washington.	Idaho.	Montana.	United States.
Wheat, cents per bushel	190 and 118	189 and 120	184 and 119	191 and 137	200.6 and 136.3
Corn, cents per bushel	150 and 43	157 and 100	150 and 90	140 and ...	175.1 and 82.3
Oats, cents per bushel	91 and 40	74 and 43	68 and 44	78 and 35	62.3 and 44.5
Potatoes, cents per bushel	138 and 71	113 and 63	105 and 77	144 and 78	122.1 and 112.0
Hay, dollars per ton	15.50 and 9.70	18.90 and 12.20	17.00 and 9.90	19.00 and 9.10	14.29 and 10.36
Cotton, cents per pound	.....	.....	.....	.....	23.3 and 15.5
Eggs, cents per dozen	39 and 31	43 and 32	41 and 30	41 and 30	37.4 and 28.1

Scare of Australian Wheat

Clumsy Effort to Frighten Our Own Growers

At a meeting in Portland of about 50 local grain dealers, T. B. Wilcox, chairman of the Pacific coast milling division of the food administration, said that he had been assured that a quantity of Australian wheat was coming here. This wheat may be milled in the Coast cities and in that event it might be necessary to ship a portion of the domestic crop to the east. The Australian wheat, Mr. Wilcox declared later, should not be brought here. At any rate, the larger part of the northwestern crop should be milled first.

Wheat growers and others with whom the Farmer has discussed this covert threat of dumping Australian grain into the Pacific northwest look upon it as a clumsy effort to frighten our own growers and cause them to market their crop without further delay. They consider as highly remote the possibility of the government bringing in Australian wheat, saying that the natural course for that product, if ships can be had to move it at all, will be to transport it direct from Australia to Europe through the Panama canal.

That would mean but two handlings —from the Australian docks to the ships, and from the ships to the docks in Great Britain and France, while to mill it in transit at Portland and Seattle, and then move it across continent to ships at New York, would mean half a dozen handlings.

Australia has at least 100,000,000 bushels of surplus wheat, the accumulation of three successive harvests, which it has been unable to ship to Europe for lack of ships. William A. Holman, prime minister of New South Wales, one of the states of the Australian commonwealth, was in New York the other day, returning from the European front. He said that Australia has plenty of foodstuffs and other supplies which she was ready to send to England and the other allies as soon as she obtained the necessary ships. These vessels, he added, were now being built through a friendly agreement with American yards.

"We have the surplusage of three wheat crops on hand ready to ship in addition to having plenty for our own needs," the Australian premier explained.

"The total amount of wheat we can spare, I should judge, is between 3,000,000 and 4,000,000 tons. Our farmers have all this potential wealth in the form of grain and are unable to move it toward its best and most natural market on account of the lack of vessels. But the bankers are lending the farmers all the money they need on an equitable basis, with the grain as collateral, and so conditions are prosperous."

Quite aside from this menace, or threat, or bluff, or whatever you want to call it, from the coast millers to bring in Australian wheat, the consensus of opinion among large growers in the Inland Empire is that nothing further could be gained by our growers holding their wheat. It is generally thought that the prices and marketing conditions have been definitely established by the government for this year, and that any change, one way or the other, is highly improbable.

Alfalfa Hay

Is Best for All-Round Purposes

By GEORGE HINGSTON, Mead, Wash.

I usually have about 25 to 30 acres in alfalfa. I only have six acres this year, having broken up the rest for the purpose of reseeding next spring. We do not irrigate. I find a field which has been in potatoes the previous year one of the very best in which to sow alfalfa. Cabbage ground is also very good. Disk early and harrow well every 10 days till time to seed. We usually cut twice, getting about three tons per acre. Then pasture balance of the season. It should never be pastured close and should be left alone a short time before killing frosts. Care should be taken not to let cattle on it when frozen, or wet from rain or dew, especially if young and tender. No pasture equals it for hogs. As a hay it is the very best for all round purposes. We have kept working horses in good shape all summer on it without grain of any kind. Of course, the time of cutting and success in curing has much to do with its quality and value as a feed. I prefer first cutting for horses and second for cows and hogs. We have never made silage of it or grown it for seed. It has been entirely free from pests with us. There is no better ground for potatoes than an old alfalfa field. On upland in this part of the country it should be reseeded about every five or six years. It is the best paying crop outside of apples that we grow. It is apt to winter kill on lowlands once in a while.

Milking Contest Staged.

In the milking contest at the Washington State fair this year Carnation Stock Farm had the only entries. They entered five cows, and all made good records in the two days' milkings, but as the values are computed on the basis of only 30 cents a pound for butter fat and 25 cents a hundred for whole milk the figures do not indicate the real value of the produce.

Two-year-olds—Matador Metchthilde Vera, $1696; Segis DeKil Flower, $1488. Three-year-old—Korndyke Model Hartog, $1347. Four years and over—Canary Violetta Metchthilde, $2218; Nena Newman Cornucopia, $1649. H. A.

Glass Scarce in Britain.

The scarcity of glass in Great Brittain has led to the adoption of drastic measures by chemists and doctors. A charge of 6 cents usually is made on an 8-ounce bottle. A doctor says he has had to go round in his car collecting bottles "like a rag and bone merchant." Merchants have to get permission from the ministry of munitions for large deliveries of glass bottles. In the beer, wine and spirit trade the shortage of bottles has not been so great owing to restricted consumption.

Ship Many Lambs.

Already something like 40,000 spring lambs have been shipped from the Yakima valley for the Chicago markets, where they have brought an average of about $9 net to the growers. It is estimated that the total shipments for the season will approximate 200,000 head of lambs.

State Officers Attend Fair.

State Officials at the fair were a busy lot. Besides the presence of Governor Lister Thursday representatives of the department of agriculture were present all week to assist Secretary Frank Meredith. Their cooperation has been a big factor in the success of the new state fair.

Why a Good Job of Cleaning?

'Clipper' Seed and Grain Cleaners

This Year of all Years

get the light, shriveled grains from your seed stock.

"Clipper" Cleaners are used by 90 per cent of the seed dealers. Why? **Grain** and **seed must pass through a vertical air blast.** It makes a separation by **weight** that can be made by no other mill.

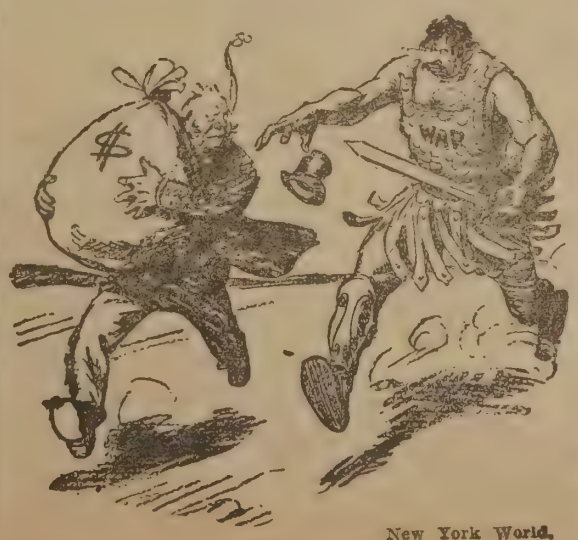
Do Heavy Work Same as Men

Many of the English railroads have engaged large numbers of women. In the Somertown freight station women do all porter work. Everything from a box of berries to bulky piano cases must be shifted around and installed in cars or on trucks. The women are doing everything that a year ago was done by men. As to the "woman problem" after the war, there will be plenty of work for the returned soldiers and those women who may wish to remain in positions into which war conditions have drawn them. Many of them, however, will be only too glad to return to the domestic life from which patriotic motives have led them.

Englishmen at Capital



Lord Reading, Great Britain's financial representative to the United States, and Colonel E. D. Swinton, secretary of the British war cabinet. Lord Reading heads a special mission in behalf of the British war cabinet and also came to discuss financial affairs and arrange for important details of cooperation in the war. Colonel E. D. Swinton is colonel of the Royal Engineers and has won worldwide fame as "father" and promoter of the British "tank."

SYNOPSIS.

Old man Gale, the trader of Flambeau, a frontier on the Yukon, is a man weighted down by some great trouble. He has always been a friend of the settlers. For years he has known that some day his isolation would be broken and civilization would come to Flambeau, and he anticipates it with a strange dread. And so, to this place, where the only law is man's own will and the only court, his inborn conscience, there comes one day, Lieutenant Burrell, a Kentuckian, with all the Kentuckian's ideas of birth, blood and family, to preserve law and order in the camp. That same morning Necia, Gale's beautiful daughter, returns from a mission, where she has been studying under Father Barnum. Burrell is surprised to find a girl of her refinement and education in this country and tells her so. As they are talking in front of Gale's store a squaw and two little, gurgling, half-breed children appear. Burrell speaks of them contemptuously and Necia informs him that the children are her little brother and sister and that the slinking squaw is her mother. The next day Poleon Doret, six feet two, and with a spirit as great, returns from Dawson, and on the same boat, Runnion, a desperado. Gale, who distrusts Burrell, tells him that since he has come to preserve law and order he must get Runnion out of Flambeau immediately. In attempting to do so Burrell is shot at by Runnion and only the quick wit and ready hand of Poleon saves him from death. Runnion departs with the threat that he will visit them again before the winter ends.

CHAPTER III.

Without Benefit of Clergy.

When the steamer had gone Napoleon Doret went to look for Necia, and found her playing with the younger Gales, who reveled in the gifts he had brought. Never had there been such a surprise. Never had there been such gorgeous presents for little folks. This was a land in which there were no toys, a country too young for babes; and any one whose youth had been like that of other children would have seen a pathos in the joy of these two. Poleon had been hard put to it to find anything suitable for his little friends, for although there was all manner of merchandise coming into Dawson, none of it was designed for tiny people, not even clothes.

It was evident that he had pleased them, for when he appeared they ran at his legs like twin cubs, incoherent and noisy, the pleasure within them too turbulent for expression. They had never played with a toy that Poleon had not built for them, nor worn a garment that Alluna had not made. This, then, was a day of revelations, for the first thing they beheld upon opening their packs was a pair of rubber boots for each. They were ladies' knee boots, the smallest size in stock, but the Gales entered them bodily, so to speak, moccasins and all, clear up to their hips, like the waders that duck hunters use. When they ran they fell down, for were not these like the boots that Poleon wore, and not of Indian make, with foolish beads on them? Next, the youthful heir had found a straw hat of strange and wondrous fashion, with a brim like a board and band of blue, which Poleon had bought from a college man who had retained this emblem of his past to the final moment. Like the boots, it was much too large for little John, and hard to master, but it made a brave display, as did the red cravat, which covered his front like a baseball catcher's harness. Molly had also two sets of side combs, gorgeously ornamented with glass diamonds, and a silver-handled toothbrush with which she scrubbed the lame puppy. This puppy had three legs and the mange, and he was her particular pride.

There were certain other things, the use of which they did not understand, like queer-smelling, soft, yellow balls which Necia said were oranges and good to eat, although the skins were leathery and very bitter, nor were they nearly so pleasant to the nose as the toilet soap, which Necia would not allow them even to taste. Then there was a box of chocolate candies such as the superintendent at St. Michael's sent them every spring, and an atomizer which Necia had filled with Florida water. This worked on the puppy even better than the toothbrush.

The elder girl laughed gladly as Poleon entered, though her eyes were wet with the pity of it.

"You seem to bring sunshine wherever you go," she said. "They have never had things to play with like other children, and it makes me cry to watch them."

"Ho, ho!" he chuckled, "dis ain' no time for cryin'. Ba gosh! I guess you don' have so much present w'en you was li'l' gal you'se'f, w'at? Mabbe you t'ink I forget you. Wal, I didn't."

He began to undo the fastenings of a parcel he carried in his arms, for Napoleon Doret had brought other things from Dawson besides his gifts to the children. Necia snatched at the package.

"Dont you dare open it! Why, thats half the fun." She was a child herself now, her face flushed and her hands-a-tremble. Taking the package to the table, she hurriedly untied the knots while he stood watching her, his teeth showing white against his dark face, and his eyes half shut as if dazzled by the sight of her.

"Oh, why didnt you tie more knots in it?" she breather as she undid the last, and then, opening the wrappings slowly, she gasped in astonishment. She shook it out gently, reverently—a clinging black lace gown of Paris make. Next she opened a box and took from it a picture hat, with long jet plumes, which she stroked and pressed fondly against her face. There were other garments also—a silken petticoat, silk stockings, and a pair of high-heeled shoes to match, with certain other delicate and dainty things which she modestly forbore to inspect before the Frenchman, who said no word, but only gazed at her, and for whom she had no eyes as yet. Finally she laid her presents aside, and, turning to him, said, in a hushed, awe-stricken voice:

Poleon pleases the children.

"Its all there, everything complete! Oh, Poleon—you dear, dear Poleon!" She took his two big hands by the thumbs, as had been her custom ever since she was a child, and looked up at him, her eyes wet with emotion. But she could not keep away from the dress for long, and returned to feast her eyes upon it, the two children standing beside her, sprouting out of their rubber boots, with eyes and mouths round and protruding.

"You lak it, eh?" pressed Poleon, hungry for more demonstrative expression.

"Oh-h," she sighed, "can't you see? Where on earth did you get it?" Then suddenly realizing its value, she cried, "Why, it must have cost a fortune!" A quick reproach leaped into her face, but he only laughed again.

"Wan night I gamble in beeg saloon. Yes, sir! I gamble good dat night, too. For w'ile I play roulette, den I dance, den I play some more, an by-an'-by I see a new dance gal. She's Franche gal, from Montreal. Dat's de one I tol' you 'bout. Ba Gar! She's swell dress, too. She's name' Marie Bourgette."

"Oh, I've heard about her," said Necia. "She owns a claim on Bonanza creek."

"Sure, she's frien's wit' Charlie McCormack, dat riche feller, but I don' know it dis tam', so I ask her for dance wit' me. Den we drink a bottle of champagne—twenty dollar.

"'Mamselle,' I say, 'how much you charge for sell me dat dress.'

"'For w'y shall I sell im', she say; 'I don' wear 'im before till tonight, an' I don' get no more dress lak' dis for t'ousan' dollar.'"

Necia exclaimed excitedly.

"'For w'y you sell 'im?' I say. 'Biccause I'll tak' 'im down to Flambeau for Necia Gale, w'at never had no dress lak' dat in all her life.' Wal, sir, dat Marie Bourgette, she's hear of you before, an' your dad, too—mos' all dose Cheechakos know 'bout Old Man Gale—so she say:

"'W'at lookin' kind of gal is dis Necia?' An' I tell her all 'bout you. W'en I'm t'rough she say:

"'But maybe your little frien' is more bigger as I am. Maybe de dress won't fit.'

"'Ha! You don' know me, mamselle,' I say. 'I can guess de weight of a caribou to five poun'. She'll be same size la'kin' one inch 'round' de wais'.'

"'Poleon Doret,' she say, 'you ain' no Franchemans to talk lak' dat. Look here! I can sell dis dress for t'ousan' dollar tonight, or I can trade 'im for gol-mine on El Dorado creek to some dose Swede w'at want to catch a gal, but I'm goin' sell 'im to you for t'ree hondred dollar, jus' w'at I pay for 'im. You wait here till I come back.'

"'No, no, Mamselle Marie, I'll go 'long, too, for so you don' change you' min',' I say; an' I stan' outside he' door till she pass me de whole dam works.

"'Don' forget de little shoes,' I say—an' dat's how it come!"

"And you paid three hundred dollars for it!" Necia said, aghast. The Canadian shrugged.

"Only for de good heart of Marie Bourgette I pay wan 'tousan,'" said he. "I mak' seven hondred dollar clean profit!"

"It was very nice of both of you, but — can't wear it. I've never seen a dress like it, except in pictures, and I couldnt—" She saw his face fall, and said, impulsively:

"I'll wear it once, anyhow, Poleon, just for you. Go away quick, now, and let me put it on."

"Dat's good," he nodded, as he moved away. "I bet you mak' dose dance-hall women look lak' sucker."

No man may understand the girl's feelings as she set about clothing herself in her first fine dress. Time and again she had studied pictures from the "outside" showing women arrayed in the newest styles, and had closed her eyes to fancy herself dressed in like manner. She had always had an instinctive feeling that some day she would leave the North and see the wonderful world of which men spoke so much, and mingle with the fine ladies of her picture-books, but she never dreamed to possess an evening gown while she lived in Alaska. And now, even while she recognized the grotesqueness of the situation, she burned to wear it and see herself in the garb of other women. So, with the morning sun streaming brightly into her room, lighting up the moss-chinked walls, the rough barbarism of fur and head trophy, she donned the beautiful garments.

Poleon's eye had been amazingly correct, for it fitted her neatly, save at the waist, which was even more than an inch to large, notwithstanding the fact that she had never worn such a corset as the well-formed Marie Bourgette was accustomed to.

She pondered long and hesitated modestly when she saw its low cut, which exposed her neck and shoulders in a totally unaccustomed manner, for it struck her as amazingly indecent until she scurried through her magazines again and saw that its construction, as compared with others, was most conservative. Even so she shrank at sight of serself below the line of sunburn, for she was ringed about like a blue-winged teal, the demarcation being more pronounced because of the natural whiteness of her skin. The year previous Doret had brought her from the coast a Spanish shawl, which a salt-water sailor had sold him, and which had lain folded away ever since. She brought it forth now and arranged it about her shoulders, but in spite of this covering the fair flesh beneath peeped through its wide interstices most brazenly. She had never paid marked attention to the fairness of her skin till now, and all at once the difference between herself and her litle brother and sister struck her. She had been a mother to them ever since they came, and had often laughed when she saw how brown their little bodies were, rejoicing in blushing quietude at her own whiteness, but today she neither laughed nor felt any joy, rather a dim wonder. She sat down, dress and all, in the thick softness of a great brown bear-skin and thought it over.

How odd it was, now that she considered it, that she needed no aid with these alien garments, that she knew instinctively their every feature, that there was no intricacy to cause her more than an instant's trouble. This knowledge must be a piece with the intuitive wit that had been the wonder of Father Barnum and had enabled her to absorb his teachings as fast as he gave them forth.

She was interrupted in her reverie by the passing of a shadow across her window and the stamp of a man's feet on the planks at the door. Of course, it was Poleon, who had come back to see her; so she rose hastily, gave one quick glance at the mirror above her washstand, choosing the side that distorted her image the least, and, hearing him still stamping, perfunctorily called:

"Come in! I'll be right out."

She kicked the train into place behind her, looped the shawl carelessly about her in a way to veil her modesty effectively, and, with an expectant smile at his extravagance of admiration, swept out into the big room, very self-conscious and very pleasing to the eye. She crossed proudly to the reading-table to give him a fair view of her splendor, and was into the middle of the room before she looked up. Taken aback, she uttered a little strangled cry and made a quick movement of retreat, only to check herself and stand with her chin high in the air, while wave after wave of color swept over her face.

"Great lovely dove!" ejaculated Burrell fervently, staring at her.

"Oh, I—I thought you were Poleon. He——" In spite of herself she glanced toward her room as if to flee; she writhed at the utter absurdity of her appearance, and knew the lieutenant must be laughing at her. But flight would only make it worse, so she stood as she was, having drawn back as far as she could, till the table checked her. Burrell, however, was not laughing, nor smiling even, for his embarrassment rivaled hers.

"I was looking for your father," he said, wondering if this glorious thing could be the quaint halfbreed girl of yesterday. There was nothing of the native about her now, for her lithe young figure was drawn up to its height and her head, upon which the long black braids were coiled, was tipped back in a haughty poise. She had flung her hands out to grasp the table edge behind her, forgetful of her shawl, which drooped traitorously and showed such rounded lines as her ordinary dress scarce hinted at. This was no Indian maid, the soldier vowed; no blood but the purest could pulse in such veins, no spirit save the highest could flash in such eyes as these. A jealous rancor irked him at the thought of this beauty intended for the Frenchman's eyes.

"Can't you show yourself to me as well as to Poleon?" he said.

"Certainly not!" she declared. "He bought this dress for me, and I put it on to please him." Now she was herself again, for some note in the lieutenant's voice gave her dominance over him. "After he sees it I will take it off, and——"

"Don't—don't take it off—ever," said Burrell. "I thought you were beautiful before, because of your quaintness and simplicity, but now——" his chest swelled ——"why, this is a breath from home. You're like my sister and the girls back in Kentucky, only more wonderful."

"Am I?" she cried, eagerly. "Am I like other girls? Do I really look as if I'd always worn clothes like these?"

"Born to them," he said.

A smile broke over her grave face, assuming a hundred different shades of pleasure and making a child of her on the instant; all her reserve and hauteur vanished. Her warmth and unaffected frankness suffused him, as she

stood out, turning to show the beauties of her gown, her brown hands fluttering tremulously as she talked.

"It's my first party dress, you know, and I'm as proud of it as Milly is of her rubber boots. It's too big in here and too small right here; that girl must have had a bad chest; but otherwise it fits me as if it had been made for me, doesn't it? And the shoes! Aren't they the dearest things? See." She held her skirts back, showing her two feet side by side, her dainty ankles slim and shapely in their silk.

"They won't shed water," he said.

"I know; and look at the heels. I couldn't walk a mile to save my life."

"And they will come off if they get wet."

"But they make me very tall."

"They don't wear as well as moccasins," Both laughed delightedly till he broke in, impulsively:

"Oh, girl, don't you know how beautiful you are?"

"Of course, I do!" she cried, imitating his change of voice; then added, naively, "That's why I hate to take it off."

"Where did you learn to wear things like that?" he questioned. "Where did you get that—well—that air?"

"It seems to me I've always known. There's nothing strange about it. The buttons and the hooks and the eyes are all where they belong. It's instinct, I suppose, from my father's side——"

"Probably. I dare say I should understand the mechanism of a dress uit, even if I'd never seen one."

"I've always had visions of women dressed in this kind of clothing, white women—never natives—not dressed like this exactly, but in dainty, soft things, not at all like the ones I wear. I seem to have a memory, although it's hardly that either—it's more like a dream—as if I were somebody else. Father says it is from reading too much."

"A memory of what?"

"It's too vague and tantalizing to tell what it is, except that I should be called Merridy."

"Merridy? Why that?"

"I'll show you. See?" She slipped her hand inside the shawl and drew from her breast a thin gold chain on which was strung a band ring. "It was grandmother's—that's where I got the fancy for the name of Merridy, I suppose."

"May I look?"

"Of course. But I daren't take it off. I haven't had it off my neck since I was a baby." She held it out for him to examine, and, although it brought his head close to hers, there was no trace of coquetry in the invitation. He read the inscription, "From Dan to Merridy," but had no realization of what it meant, for he glimpsed the milk-white flesh almost at his lips, and felt her breath stirring his hair, while the delicate scent of her person seemed to lose every strong emotion in him. She was so dainty and yet so virile, so innocent and yet so wise, so cold and yet so pulsating.

"It is very pretty," he said, inanely.

At the look in his eyes as he raised his head her own widened, and she withdrew from him imperceptibly, dismissing him with a mere inflection.

"I wish you would send Poleon here. It's time he saw his present.'"

As Burrell walked out into the air he shut his jaws grimly and muttered: "Hold tight, young man. She's not your kind—she's not your kind."

Inside the store he found Doret and the trader in conversation with a man he had not met before, a ragged nondescript, whose overalls were blue and faded and patched, particularly on the front of the legs above the knees, where a shovel handle wears hardest; whose coat was of yellow mackinaw, the sleeves worn thin below the elbows, where they had rubbed against his legs in his work. As the soldier entered the man turned on him a small, shrewd, weather-beaten face with one eye, while he went on talking to Gale.

"It ain't nuthin' to get excited over, but it's wuth follerin'. If I wasn't so cussed unlucky I'd know there was a pay streak som'ere close by."

"Your luck is bound to change, Lee," said the trader, who helped him to roll up a pack of provisions.

"Mebbe so. Who's the dressmaker?" He jerked his bushy head towards Burrell, who had stopped at the front door with Poleon to examine some yellow grains in a folded paper.

"He's the boss soldier."

"Purty, ain't he?"

"If you ain't good he'll get you," said Gale, a trifle cynically, at which Lee chuckled.

"I reckon there's several of us in camp that ain't been a whole lot too

TALKING MACHINE HEADQUARTERS OF THE WEST

Eilers Music House

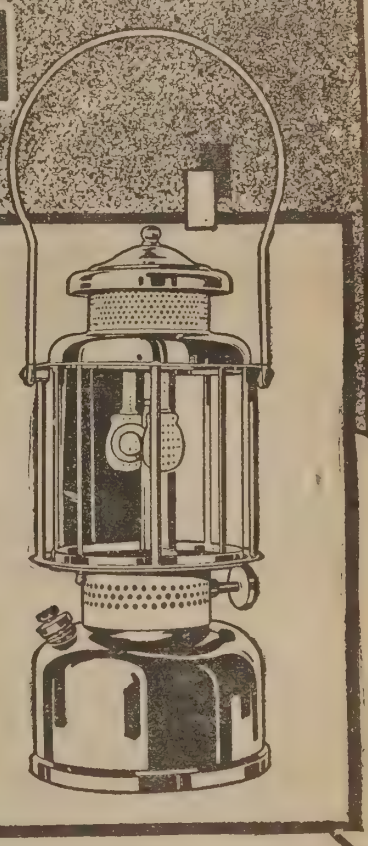
Sprague at Post, Spokane, Wash.

"Just Use a Match—"

THE COLEMAN QUICK-LITE

Here's the perfect light, a lamp which **makes and burns its own gas** from common gasoline, lighting with an ordinary match. No bother with the old style lighting torch—just hold a lighted match under the patent coil—in an instant you have a wonderful, steady, white light—more powerful than 20 common oil lamps, giving a large mellow cheerful glow, without flicker. Best reading lamp in the world. A miniature gas plant—

300 Candle Power



Costs a fraction of a cent per hour while burning. Much brighter than the brightest electric light, safer than the safest oil lamp, cheaper than candles.

The **Coleman Quick-Lite** is a beautiful lamp—beautiful in design, made of nickeled brass and handsomely finished. Provided with universal shade holder which fits any shade you prefer.

Absolutely Safe

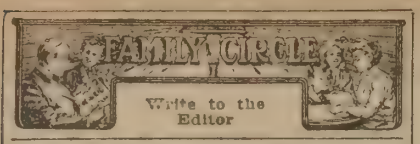
In the "Quick-Lite" you have a lamp perfectly safe among all the family, old or young. Fuel can't spill—can't explode. No danger even if tipped over. Nothing to get out of order. No wicks to trim, no globes to wash. Absolute freedom from dirt, grease, smoke, smell or soot.

The wonderful success of the Coleman Quick-Lite has naturally induced imitation. But you need not take an imitation—if your dealer does not handle, write us direct and we will fill your order promptly.

Coleman Lamps and Lanterns were awarded the Gold Medal at San Francisco Panama Exposition. Every Coleman Quick-Lite Lamp and Lantern is guaranteed against any defect in material or workmanship for five years. With ordinary use the lamp or lantern will last a lifetime.

The Coleman Quick-Lite Lantern

With reflector—Operates on same principle as the Quick-Lite Lamp. More powerful than 20 ordinary oil lanterns, and only a tenth the cost of kerosene lighting. Gives most brilliant light of any lantern made. Nothing so good ever offered before for farm use or for where a dependable lantern is needed. Lights with a match. A "fool-proof" light. Can't be filled while burning. Can't spill, can't explode. Won't blow out in the wildest storm. You can light it right out in the wind. Roll it over in straw—no danger. Strongly built of heavy nickeled brass, durably finished. Weight only 3½ pounds. Mica globe. Carries, hangs or stands anywhere. Guaranteed five years. Will last a lifetime.



Hundreds of dealers sell the Coleman Quick-Lites. If yours can't supply you write direct for Catalog No. 69. We will give your order immediate attention.

COLEMAN LAMP CO. St. Paul, Wichita, Toledo, Dallas, Chicago.

Dealers

We want live dealers in every town to handle Quick-Lite Lamps and Lanterns. Ask for Catalog No. 69.

Learn to Save

Dear Readers of the Family Circle: Whenever I am impressed by the wise or foolish things I notice people doing, I always think of you, and how you might be helped, as I frequently am, by knowing about them. This letter is prompted by recent knowledge of the calamity of poverty which has overtaken a couple, known to me for many years. The couple have no children, have never had much sickness. The man has always had either a good business or a fine salary and yet, at the age of almost 70 years, he faces downright poverty, and the fact that he is past the age when he can command any kind of a living salary.

In the 30 or more years since I have known these people their income has never been less than from $150 to $200 a month, and many times it has been more.

The man did not gamble away his money nor drink it up, he just simply did not have any kind of system about saving, but used every dollar from month to month. Finally he used more than he had, borrowed all he could on his life insurance policy and is face to face with a poverty stricken old age.

I knew another couple with but one child, a son. He was not given to study, and no money was used on his education. The head of the house had no bad habits whereby he would waste money. He was a corporation lawyer in New York and made thousands of dollars for many years. He and his wife were fond of beautiful things and they had a fine home filled with choice paintings, rare books, silver, linen, every thing beautiful. Year followed year, money was spent as if it would never cease to come their way. But there came a time when the tide of fortune turned and the beautiful things were sold for debt.

For years, these old people, who lived to be nearly 80, were a burden to their friends and finally were buried by charity, the old man was actually buried in the potters' field.

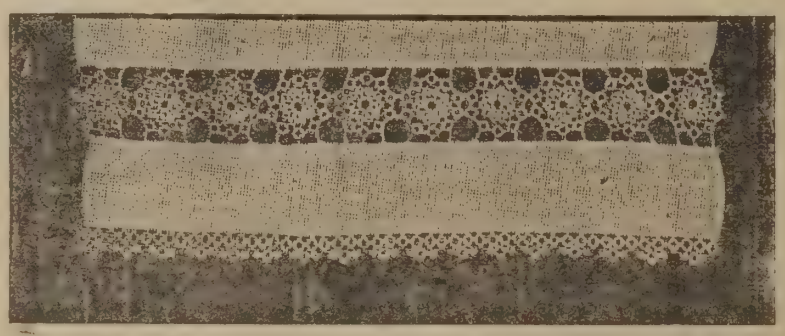
In contrast to these two cases let me tell you of an old woman who was employed in my family for years to do our washing and house cleaning. She bought a few acres of land with a small house upon it for $800, and earned every cent of it by working around at 50 cents a day. It took her years to do it, but she got a great deal of pleasure in looking forward to the time when she would have it all paid for.

Supposing the first man of whom I told you, who seldom earned less than $150 a month had begun 30 years ago to save some definite amount every month, say $75. At the present time he would have the nice sum of $27,000 even if he had just laid the money away and never received a cent of interest on his savings. Now after 30 years, when he finds his earning years are past, he could have loaned out his money at 6 per cent interest and enjoyed the comfortable income of $135 a month and live on that indefinitely, never having to draw from his principal of $27,000. But he could have had very much more than that had he saved and taken the interest which banks pay, about 4½ per cent.

It will be good practice for the young folks in the Family Circle to compute the interest and find out whether or not it pays to put money out at interest. Just to give you a start I will say that interest being paid twice a year as it usually is, our man would have started out on his second year with the comfortable sum of $941.41 even at 4½ per cent. It is so easy to drift along from day to day taking the good things as they come, using a little money, for this, that and the other thing which we could get along without.

I do not advocate miserliness. I dispise that trait in any one, but I do believe every person should cultivate the habit of saving something. Some definite amount can be set aside if one is earning a salary and many of the young people of the Family Circle are, or sometime will be.

Farmers frequently put their surplus earnings into stock or better buildings and that is just as good as money in bank and often better. I particularly want to impress upon the minds of young people the importance of forming the habit of saving. The first $100 comes the hardest, everyone who has experience agrees. After that it is pretty easy.



This is a good time to commence to practice thinking twice before we spend our cash. The whole world is saving, making a business of it.

Let us get into the procession, even on the band wagon and see what we can do before another 12 months rolls around.

Crochet and Tatting Designs

By WINIFRED WORTH

TATTING TOWEL.

A novel towel motif which brings into use the quaint art of tatting Makes up attractively.

Detail of medallion:

1st Row—Make ring 20 st. and 10 picots, close ring and fasten thread.

2d Row—Make ring 2 st., 1 p., 2 st., fasten to p. of ring first made, 2 st., 1 p., 2 st., close ring and turn.

3d Row—Make ring of 4 st., 1 p., 4 st., 1 p., 4 st., 1 p., 4 st., close ring and repeat from 2d row.

Detail of Edging of Tatting Towel.

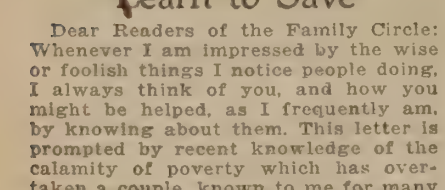
Make ring 4 st., 1 p., 4 st., 1 p., 4 st., close ring and fasten thread. Turn. make ring 2 st., 1 p., 2 st., 1 p., 2 st., 1 p., 2 st., close ring, fasten thread. Turn, make ring like first and fasten to last p., made on first ring. Close ring and turn again. Make ring, 3 st., fasten to last p. on small ring, 3 st., 1 p., 1 st., 1 p., 1 st., 1 p., 3 st., 1 p., 3 st. Close ring and fasten thread—turn work—repeat 1 st., ring, turn. Make small ring, turn. Make 1 st., ring. This completes the first festoon—continue, always having 4 large rings on one side, 2 small and 1 large on the other. This patterns made of linen finish crochet thread is very handsome on scrim curtains.

To Make Fruit Butters

Pear butter is made like the apple butter without cider. The pears should be ripe enough to cook up well. After being peeled they are cored and sliced, put in a preserving kettle with a little water and cooked slowly until soft. The sugar is then added, one cup to one quart of sliced pears, and cooking is continued very slowly, with frequent stirring for one and one-half to two hours. The butter should then be smooth and of the consistency of thick apple sauce. A little lemon juice, with ginger, cinnamon or other spices to taste, should be well stirred into the hot butter. Pack while hot in hot sterilized containers and sterilize with steam as directed for apple butter.

If a grape flavor is desired in apple butter it may be obtained by the use of grape juice. To each gallon of peeled and sliced apples, cooked into sauce and strained, one pint of grape juice, one cup of brown sugar and one-quarter of a teaspoonful of salt should be added. These should cook slowly and be stirred often for two hours or until of the desired thickness, then stir in one teaspoonful of cinnamon and pack hot in hot containers and sterilize as directed for other apple butter.

Patriotic Place Cards.



It is the successful hostess who recognizes the artistic and conversational possibility of the place card. As a means of stimulating table talk really novel place cards will do it as nothing else will, says the Washington Post. Designing and making ones' own place cards is good sport. Cunning little things can be made from bits of khaki, navy wool and white duck. Wee soldiers and sailors might be cut out of cardboard, mounted on stands and dressed in their respective "stuffs." A bit of glue is quite the only thing necessary for the dressing. The little hat, suit and even the leggings can be made realistic.

Other realistically patriotic cards can be made from plain white bristol board by "tacking" on wee tin sabers, wooden guns, miniature tents and even a whole company of tin soldiers standing upright. Then, too, little silk flags might be dropped on the cards with artistic effect.

Another charming thing to do with place cards is to press flowers and paste somewhere on the card. Now that goldenrod is so plentiful, a huge flat bowl of it might be used for a centerpiece, with oblong cards, each bearing a single sheaf of the pressed flower.

India's Sunday Schools.

The first Sunday school in India, established in 1803 at Serampore, has increased to 16,936 schools, with 636,614 pupils and teachers, who speak forty-five dialects.

Best of All Was the Merry-Go-Round.

Dear Aunt Nellie: This is the first time I have written to the Corner. I don't believe it will be the last time either. I am 12 years old and I will be 13 years old the 16th of October. I like to live on a farm better than to live in the city. In the city you can not raise anything, but in the country you can. I go to the Clearbrook school. I like school better this year than I did last year. The name of my teacher is Miss Swanson. There are four other teachers, too. I am in the seventh grade. I have six brothers and two sisters. My brothers' names are Ernest, John Gustav, Sten, Evert and Malcolm and my sisters' names are Agnes and Ruth. Gustav, Sten and Ruth go to school also. Gustav is in the same grade as I am, and Ruth is in the fifth grade. Sten is in the third. At 6 o'clock now I milk two cows. I like to milk. Our cows' names are Esther, Emma, Aster, Vesta, Karin, Lilly, Rose and Nigger. The cows I milk are Emma and Esther. My sister Agnes is not home now. She is in Seattle working. I have written letters to her very often and so has my sister Ruth. My father writes her often, too. I went to the Lynden fair last year. The best part was to ride on the big merry-go-round. I nearly fell off the first time I rode, but I took hold of the horses' ears and so wouldn't fall. Have I a twin? I was born in Sweden and came over here in May of 1910.—Jennie Loreen, Route No. 3, Everson, Wash.

Mamie Knows How to Crochet.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have one sister and one brother. My sister is 3 and by brother is 1, and I am 8 years old. My sister's name is Phoebe and my brother's name is Robert. My name is Mamie. We have eight cows and three calves. We have a big pig and six little pigs. We live in a tent. I know how to crochet. My grandma and grandpa live in Eatonville. My uncle came over here. We live on a ranch in a coulee. The baby just woke up from a nap. Not very long ago my sister and I were awful sick, and now the baby is sick.—Mamie Lien, Coulee City, Wash.

Has Gladys a Twin Cousin?

Dear Aunt Nellie: I have been reading the letters in the Children's Corner. I am going to school and am in the third grade. We do not go to school now, for the city waterworks are broken down and we do not know when we will have school. I hope we will soon have school, for I like to go to school while it is cool. I have two sisters in high school. One brother is in the eighth grade and a brother and sister in the primary room. I am 9 years old and have light blue eyes. I will be 10 the 20th of May. Have I a twin?. If so, will they please write to me?—Gladys Brummund, Box 757, Connell, Wash.

Glad to Go to School Again.

Dear Aunt Nellie: I am glad to go to school again, and like my teacher fine. I am 14 years old and in the fifth grade. We are going to school in a cart, and have lots of fun. Paul is in the third grade and Rudolf is in the first grade. We had a nice Scotch collie dog and her name was Lady. One day she took sick and died. But we are raising a pup of hers and his name is Rover. We have three cats, nine hogs and 14 head of cattle. We have 50 chickens, big and little, but we do not raise many of them, because they are so hard on the garden.—Anna Straube, La Crosse, Wash.

Writes to Some of the Cousins.

Dear Aunt Nellie: I am going to write to the Corner again. I am going to school now. Our school started September 24. I like to go to school and also like my teacher. His name is Mr. Stevens. He taught our school last year. There are 21 pupils going to our school this year. I am writing to some of the girls of the Corner, and I like to write to them. I am writing to Anna McLean. She is about two months older than I am, but we are the same in height. I saw my other letters in print and also would like to see this one in print. I will be 15 years old the 15th of next May. I am going to write again if I see this letter out in the Corner.—Viola Augst, R. F. D. 1, Box 30, Beebe, Wash.

Guy Herded Sheep All Summer.

Dear Aunt Nellie: This is the first I have ever written to the Corner. Willie, my brother, and I herded sheep all summer and we never came home for dinner. We had some lunch with us. We had to herd the sheep from the grain field, and one of our sheep has got a broken leg. We do not know how it happened to get broken. Last spring we were herding sheep in a different pasture. We herded the cows and horses, too, and the horses would try to get around us every way. We go to school now. We take our lunch to school. I am 11 years old and am in the fifth grade and study arithmetic, language, history, physiology, geography, reading and spelling. We have two pet colts. One is black and one is bay. The black colt is mean to feed. The bay colt's name is Pet and the black colt is named Suse. We turn them out in the pasture every day. We have all our hay stacked and put in the barn.—Guy Smurthwaite, White Bird, Idaho.

Used to Live in Washington.

Dear Aunt Nellie: I have never written to the Corner before. I hope I see this in print. I am 12 years old and will be 13 the 17th of December. Have I a twin? f so, will be very glad to hear from them. We live on a rented grain ranch. I do not like it here at all. I always lived in Sultan, Wash., till last March. If any of my friends in Sultan see this I wish they would write and tell me. I am going to school now. I am in the fifth grade. The school children all came to our place yesterday and we had lots of fun. I have five brothers and one sister. Their names are Henry, Frank, Ivan, Carl, Oren and Ada. I forgot to say that my brother Ivan takes the Farmer and we all like it very much.—Leonora Beatrice Chaffee, Conrad, Mont.

A Little White Dog Named Buster.

Dear Aunt Nellie: I am a little girl 10 years old the 21st of October this year. I never wrote to the Corner before so thought I would try for a prize. I am in the third grade in school. There are 15 scholars. I have two big brothers in Sultan, Wash. I have three brothers here in Montana. Carl goes to high school in Conrad. Ivan is driving a header wagon. Oren and my only sister go to school with me. We have some chickens, one turkey and a little white dog. His name is Buster. We have a dove, too.—Ada Graves Chaffee, Conrad, Mont.

Jack Worked Hard This Year.

Dear Aunt Nellie: I thought I would write to the Children's Corner. This is the first time I have written to it. I live about five miles east of White Bird. I am 13 years old and I am in the seventh grade. Last summer I hoed beans and helped cultivate them. I helped herd the sheep out of the grain field. I harrowed last spring. I broke a horse to ride. I raked hay and helped haul it. I helped stack the hay. I hope to see my letter in print. —Jack Smurthwaite, White Bird, Idaho.

Sold Fluffy, the Dog.

Dear Aunt Nellie: I have written to the Corner several times. I like to read the letters very much. I will tell how I earned my first money. I sold my dog and his name was Fluffy. He would catch our chickens. I am taking music lessons, and my teacher's name is Mrs. Hyde. I like her fine. I like to go to school. My school started the third of September. I was anxious for school to start. My teacher's name is Mrs. Cramer.—Neal McKinley, Cottonwood, Idaho.

A Pony to Ride to School.

Dear Aunt Nellie: I have never written to the Children's Corner before. I am 9 years old. We have one mile and a quarter to go to school. I have a pony. Last winter we had to walk to school and we had boots to wade snow. We had to wade water. We have been riding to school this year. I am in the second reader. We had many dances. We have six horses to feed in the winter time.—Ariel Fuller, White Bird, Idaho.

Found 11 Little Baby Chicks.

Dear Aunt Nellie: I have not written to the Corner for a long time. I have a surprise for you. Just think, I found 11 little baby chicks. We did not set the eggs for them. A hen laid them and then sat on them. I claim them, but papa jokes me and says: "You should have gathered the eggs closer." I am 9 years old, born on the 27th of December. Have I a twin? I have a very good friend. Her name is Faye Huber. She is 9 years old, too, and sits right in front of me in school. The fifth grade and the sixth grade are together this year. Yesterday our teacher gave the fifth grade and sixth grade an arithmetic match and the fifth grade beat. I hope to get a prize. Well, I will take the whole Corner.—Dorothy Jones, R. F. D. 1, Florence, Col.

Vega Tells About School.

Dear Aunt Nellie: I saw my last letter in print. I want to tell you about school. My teacher is Miss Aymie. The other teacher is Miss Jewell. I am in the seventh grade and I like school fine. I will tell you once more what I look like because some of the cousins never saw it the first time. I am some over five feet tall. I have light hair, a fair complexion with the exception of freckles. I weigh about 100 pounds. Now if any of the cousins wish to write to me and learn about this part of the country I will answer any letters. My birthday was September the 16th. I was 13 years old. I had a big boil on my left arm. It is healing up now. I wish all cousins and Aunt Nellie good luck.—Vega Danielson, age 13, Emida, Idaho.

Can Beans for Grandpa.

Dear Aunt Nellie: I will now write my second letter to the Corner and you. I have been so lame for a week or two I haven't gone to school. My favorite studies are reading, history and geography. My sister Hazel is very sick; she has an awful cold. My papa is a carpenter and is away from home now. He is only home on Sundays. To amuse myself I will take care of the little children. Next week mama is going to cull shell beans, and I am going to can 12 quarts for grandpa. There are so many of us that play all kinds of games. We have a pretty nice garden. My sister Alice milks the cows. My letter is getting so long I will close for this time.—Lilla Floy Rice, Marshfield, Ore. (Aunt Nellie hopes that you are better by this time, Lilla, and able to go to school. Write me again. I am sure all the cousins will enjoy your letters as they do this one. I hope that Hazel is better, too.)

Helping With the Apple Harvest.

Dear Aunt Nellie: This is the first time I am writing to the Children's Corner. I enjoy reading the letters that the other children write for the corner and I hope to see my letter in print. I am 12 years old and in the seventh grade at school. My teacher's name is Mr. Dykstra. He is a very nice teacher. Our school has stopped for a few weeks so that the children can help with the apple harvest. We live in a valley noted for apples. People in Hood River valley are busy harvesting apples this month and will be busy with apples next month, too. We live on a farm and have a large apple orchard. I have seven brothers and one sister. Her name is Irma. We have great fun playing in our playhouse or with the dolls. I will write some more letters for the Corner if Aunt Nellie wishes it.—Hilja Annala, Hood River, Ore. (Aunt Nellie does want you to write again, for she enjoyed your letter and is sure that the cousins will also. Write just as often as you can, and your letters will be printed gladly.)

Holland's Soap Production.

Holland has 100 soap factories, producing about 10,000,000 pounds of soap

Muggins "Does His Bit."

This handsome silver Spitz, known as "Muggins," is four years old and owned by Mrs. G. Woodward, Victoria, British Columbia.

His present mission in life is collecting for the "Flower Guild" in that city, and the proceeds of the flower sales are divided between three funds, namely, returned soldiers, Red Cross and Blue Cross, says Our Dumb Animals.

On "Tag" days arranged for the assistance of other patriotic funds Muggins follows the usual custom and devotes his energies to "tagging." He is a constant visitor to incoming boats, particularly the Empress of Asia and the Empress of Russia.

Muggins contributed $300 to the different patriotic funds in five months.

FOR LESS MONEY

There are few chances in these days to get an article for less money than you are accustomed to pay. You will find one such opportunity described on pages 18 and 19 of this issue.

"The Barrier" By REX BEACH

(Continued from page twenty-seven.)

good," said he. "Has he tried to git anybody yet?"

"No, but he's liable to. What would happen if he did? Suppose, for instance, he went after you—or me?"

The one-eyed man snorted derisively. "It ain't wuth considerin'!"

"Why not?" insisted Gale, guardedly. "Maybe I've got a record—you don't know."

"If you have, don't tell me nothin' about it,'" hastily observed Lee. "I'm a God-fearin' citizen myself, leanin' ever towards peace and quietudes, but what's past is dead and gone, and I'd hate to see a lispin' child like that blue-and-yeller party try to reezureck it."

"He's got the American army to back him up—at least five of them."

"Five agin a hundred. He aims to overaew us, don't he?" snickered the unregenerate Lee, but his wrinkles changed and deepened as he leaned across the counter confidentially.

"You say the word, John, and I'll take some feller along with me, and we'll transfer this military post. There's plenty that would like the job if you give the wink."

"Pshaw! I'm just supposing," said the trader. "As long as they play around and drill and toot that horn, and don't bother anybody, I allow they're not in the way."

"All right! It's up to you. However, if I happen to leap down on this pay streak before it sees me comin', I'm goin' to put my friends in first and foremost, and shut out these dressmakers complete. So long!" He thrust his arms beneath the legs of a new pair of blue overalls that formed his pack-straps, wriggled the burden comfortably into place between his shoulders, and slouched out past Doret; to whom he nodded, ignoring the "dressmaker."

Having given Necia's message to Poleon, the Lieutenant took up his business with the trader. It concerned the purchase of certain supplies that had been omitted from the military outfit, and when this was concluded he referred to the encounter of that morning.

"I don't want you to think I bungle everything in that manner," he said, "for I don't. I want to work with you, and I want to be friends with you."

"I'm willing," said Gale.

"Nobody dislikes playing policeman more than I do, but it's a part of my duty, and I'll have to do it," continued the young man.

"I reckon you simply aim to keep peace, eh? You ain't lookin' for nobody in particular?"

"Of course not—outside of certain notorious criminals who have escaped justice and worked north."

"Then there is a few that you want, eh?"

"Yes, certain old-timers. The officers at every post have descriptions of a few such, and if they show up we will take them in and hold them till courts are established."

"If you've got their names and descriptions, mebbe I could help you," said the trader, carelessly.

"Thank you, I'll bring up the list and we'll go over it together. You must have been here a good while."

"About ten years."

"Then Miss Necia was born out in the States?"

Gale shot a startled glance at the soldier before he answered in the affirmative, but Burrell was studying a pattern of sunlight on the floor and did not observe him. A moment later he inquired, hesitatingly:

"Is this your first marriage, Mr. Gale?" When the other did not answer he looked up and quickly added:

"I beg your pardon, sir. What led me to ask was Miss Necia—she is so—well—she is such a remarkable girl."

Gale's face had undergone a change, but he answered, quietly:

"I 'ain't never been married."

"What?"

"When I took Alluna it wasn't the style, and neither one of us has thought much about it since."

"Oh, I see," exclaimed Burrell, hurriedly. "I'll bring that list with me the first time I think about it," and, nodding amiably, he sauntered out.

"Gale likewise left the store and went into his house, the odd look still strong in his eyes, to find Necia posing in her new regalia for Poleon's benefit. At sight of her he fell into a strange and unexpected humor, and to their amazement commanded her roughly to take the things off. His voice and manner were harsh and at utter variance with any mood he had ever displayed before; nor would he explain his unreasoning fury, but strode out again, leaving her in tears and the Frenchman staring.

(To be continued.)

Snohomish County Fair

The ninth annual exhibition of the Snohomish County Fair association was held at Snohomish from September 25th to 29th. Weather conditions considered, the attendance was unusually good. Evidently the advertising given to the business of food production by the various public discussions of the last year or two is serving to educate the public to the importance of the farmer's work.

The various educational institution exhibits attracted much attention. Basket work and weaving from the Tulalip Indian reservation, the canning achievements of the various schools, and the remarkable carpentry turned out by the manual training department of the Snohomish schools all came in for commendation, while Garden City grange, Monroe grange, Tualco and French Creek entered displays which showed that the grange is not lagging behind in this matter of production.

Probably the floral department caught and held the eyes of as many visitors as any exhibition on the grounds. There were approximately 2000 entries of dahlias alone, with roses, carnations and sweet peas in smaller, but very attractive displays.

If the comparative excellence of this year's vegetable entries is to be taken as a criterion, there is little danger of a food shortage as far as these staples are concerned. Potatoes, onions, cabbage, mangels and squash and pumpkins, together with large quantities of dried vegetables offered eloquent testimony as to the productiveness of the Sound country. The state reformatory, of Monroe, put in an especially attractive display along this line.

Cattle, swine and poultry were creditably represented by the displays of Snohomish county farmers. Holstein cattle and Duroc Jersey hogs seemed to have the upper hand as to numbers.

Among the exhibitors were the following:

Mrs. G. C. Howard, Snohomish, and Mrs. John St. Peter, Everett, both won awards on roses; Miss Julia Moehring, Snohomish, carnations; Mrs. Frank Tucker, Monroe, and Mrs. E. M. Mathewson, Everett, won on cactus dahlias, and Mrs. Gordon Hutchinson of Monroe on pompoms; Mrs. George Lawler, Tacoma, gladioli; Miss Cora Henry, Snohomish, and Mrs. Thomas Reid, Snohomish, cut flowers; Mrs. F. A. Kneipp, Snohomish, and Mrs. T. O. Lian, Snohomish, house plants.

In the poultry building, displays were placed by Arthur Wade, Marysville, brown Leghorns and Rhode Island Reds; Peter Formoe, Snohomish, Leghorns; J. J. Zimmerla, several breeds; J. A. Middleton, Snohomish, white Leghorns; E. H. Curtis, Seattle, Bantams. Carrol Stevens, Fred Lecog and A. Memitz of the Snohomish schools, also entered displays of poultry.

In the Holstein department, entries were placed by Herman Steffen, Monroe; Treosti and Velle, Snohomish; E. A. Holcomb, Snohomish; G. B. Shadinger, Snohomish; D. F. Sexton, Snohomish.

Exhibitors of swine were John B. Peterson, Mountborne, Duroc Jerseys; W. L. Cochran, Snohomish, Duroc Jerseys; L. F. Krassin, Snohomish, Berkshires.

W. M. Coates of Vancouver, B. C., placed the ribbons in the poultry show, while Professor W. A. Linklater of Puyallup, judged the stock.

Alfalfa on New Land

By S. P. FLOWER, Mabton, Wash.

I am rotating and have plowed up most of the old alfalfa. I have always contended that there is only one way to farm and that is diversified farming. All new land under irrigation should be seeded to alfalfa. After several years it will be in fine condition for corn, spuds, or beans. All of our crops are good this year. Our alfalfa is under irrigation. There is an increase in acreage of about 3500 acres in this vicinity. We only pasture hogs. Alfalfa pasture is not safe for cattle or sheep as they bloat too easily. We tried raising a few cattle. It did not pay. We keep horses for work only and cows for our own use. Hogs only pay when hay and corn are a drug on the market. The prices seldom profit. For all round feed there is nothing better than alfalfa. I have had no experience with alfalfa silage. In preparing the seed bed, level the land and wet it up good, redisk or plow, sow the alfalfa then drill wheat or barley. It always pays to harrow or disk alfalfa particularly in the spring. I am a firm believer in putting something back on the land, a few sheep are very profitable to keep weeds down, and they eat up all refuse hay as well as stubble and cornstalks.

Here are a few more interesting pointers from alfalfa growers in the state of Washington:

W. FRENCH of Conconully, Wash., has about 120 acres under irrigation, mostly in alfalfa and timothy and clover. He has a crop of about 350 tons this year. He says that alfalfa makes a fine pasture, although he does not use it extensively for that purpose. He finds it a great feed for any kind of live stock when cut and cured in good shape. He adds: "To secure a good stand of alfalfa we must be particular to have a well cultivated seed bed, the same as if you were going to sow onions. I have been troubled somewhat with gophers, the only trouble I have had.

GROVER CHADBOURNE of Deer Park, Wash., tried out sowing alfalfa in rows, but says it is a good way to start the plant, but after it is once started he can not see any advantage over broadcasting. He has been growing alfalfa for some years. The first field he sowed was on weedy ground and did not do quite as well as a field he sowed later.

Start With Wheat

To the Editor: I came here 13 years ago with the expectation of seeing this locality change its methods of farming to a considerable extent before this time. But, while I could show you a farmer here and there who has added some kind of good stock as a side line, it has been more than outdone by the wheat raisers adding to their areas by buying out their neighbors and thereby depopulating our county. Personally I have, in addition to my grain crops, raised colts from my work mares each year, kept a few brood sows; but my main stock business has been in handling a flock of sheep, and have found them each year fully as profitable cash bringers as wheat, as well as being very desirable tenants in raiser," and to add any additional lines it takes more capital, and the additional help needs to be of a more intelligent class than can be used solely as wheat help. Under existing conditions I can not blame the young man for becoming a wheat raiser for a start, but wish that he might soon add something else in a small way and by so doing grow into a better farmer than he would otherwise become.

JULIUS M. FISK.

Spring Valley, Wash.

Power Machinery Shown.

The general use of power machinery on Washington farms was made manifest by the large showing of power-driven trucks, auto attachments, spray pumps, ensilage cutters, tractors, and the like, at the Washington state fair this year. The number and variety of farm implements far exceeded that of any previous state fair, it is claimed. This also was true of automobiles, and interest in each and every one of these showings was great. The increased purchasing power of the general run of northwest farmers has served as a splendid impetus to the automobile and its allied industries this season. While interest was general in automobiles, more attention was paid to practical labor-saving devices being demonstrated in the open spaces on the grounds. Implement dealers wore broad smiles at the close of the week's activities.

New Dryer at Goldendale.

Goldendale Sentinel: A motor-driven automatic peeling and paring machine will be installed, and sufficient help will be secured to handle the run as received. The dryer is a practical standard equipment for this purpose, and is decidedly an advantageous enterprise for Goldendale, and this part of Klickitat county.

News for Breeders

A fine gold watch, offered by the Berkshire World to the Berkshire herdsman keeping his alleys and pens in the best condition during the Berkshire Congress show at the Oregon State fair, was awarded to C. E. Barrows, in charge of the Brush herd from Santa Rosa, Cal. Mr. Barrows, who was formerly an Oregon Berkshire breeder, was heartily greeted by his old Oregon friends and congratulated on his winning. He took the herd on to the National Swine show at Omaha, in an express car, at the cost of $1000.

William T. Tracy, who for the last 20 years has been connected with the great horse breeding and importing firm of Dunhams, Wayne, Ill., has located in Kennewick, Wash., and has purchased 160 acres of land, which will be improved and made a great breeding ranch. During Mr. Tracy's connection with the Dunhams he made three trips to France, three to England, two to Germany and two to Belgium. For the last four years Mr. Tracy has operated on the Coast region. He has a reputation for handling first-class horses and has sold a majority of the sweepstakes Percherons in the last few years.

For the last year Mr. Tracy has been doing business for himself. He knows horses and horse conditions. He says Europe is badly depleted of horses, that the United States is short and that there is a great future for the horse breeders, of purebred and ordinary work horses of large size and proper conformation. Kennewick is to be congratulated on securing Mr. Tracy's horse breeding and importing operations. H. A.

Cattle Raisers Hold Meetings.

The executive committee of the Oregon Cattle and Horse Raisers association closed a series of very successful meetings in central Oregon at Prineville Tuesday, October 2. Starting from Baker with 13 members in the party, the first meeting was held in Canyon City, where a big dinner was served, then a banquet at night and, for breakfast next morning, half a venison brought in by John Muldrich. The next meeting, September 24, was at Burns, with another big attendance. Free lunch was served on the arrival of the party. The meeting began at 2 p. m. and closed at 6. William Hanley, "the sage of Harney," better known as "Bill" Hanley, then took them to his home ranch, where the swellest ranch dinner eaten in many a day was served.

After early breakfast in Burns a start was made for Lakeview and at 9:30 the O'Donnell ranch, another of the Bill Hanley places, was reached and a hearty "second breakfast" was served. Lunch was eaten on Warner prairie and Lakeview was reached at night, where a smoker was held, and next day the surrounding country was visited and a meeting held.

A part of the day's program was a visit to Fairport, Cal., where a dinner for 80 plates was served. Bly was reached at 10 the next morning, where luncheon was served at noon, and Klamath Falls reached at night, where lodging was found at the White Pelican. The following day, the 29th, a meeting was held at Fort Klamath at 1 p. m. and before night Crater lake was visited and the party spent the night there. Sunday Prineville was reached, the party royally entertained and the meeting was held at 10 a. m. Tuesday.

Secretary Carrell says the great encouraging feature of the trip is that where there has been some coolness before, this year they were received with open arms and stockmen were anxious to see and hear them.

H. A.

To Be Great Shorthorn Show.

"We expect the greatest Shorthorn show ever held on the Coast at the Pacific International at North Portland this year," said Frank Brown of Carlton, Ore. "We are looking for 250 purebfed Shorthorns there, and I have every assurance that that number will be shown. Herds are coming from all parts of the northwest, and California will send a big delegation, according to their expectations.

"There will be a big Shorthorn sale at the Lewiston show, too, with probably 75 head offered from such breeders as Minor, Dunn, McCroskey, Day & Rothrock and myself, as well as others whose names I have not secured certainly. A like number will be sold at North Portland November 22."

Mr. Brown, who is manager for the sales, expects catalogues for the sales to be ready for distribution about October 27.

Unusual Holiday.

On the day of his baptism, a Japanese manufacturer, a recent Christian convert, gave a holiday with full pay to all his employes.

Feeding Cotton Seed Cake to Sheep

By R. A. WARD, Agriculturist Crook and Deschutes Counties, Ore.

Cotton seed nut cake is now used very extensively on the western ranges for wintering stock sheep. It is only within the last 40 or 50 years that the value of cotton seed has been appreciated. Previous to that time it was thrown away as useless. Today it is regarded as the source of one of the best concentrated feeds on the market. In sheep feeding cotton seed cake (nut size) can be economically fed in conjunction with alfalfa or other hay, or to supplement winter pasture. Ewes fed in this manner come through the winter in excellent shape, and tests show the percentage of lambs is higher, and the losses much lower than when wintered on hay alone. The following ration has been entirely satisfactroy. It will be noted there is a great saving in hay.

Alfalfa hay, 2 to 3 pounds.

Cottonseed cake (nut size), 2 to 3 ounces.

H. C. Wood of Spencer, Idaho, has successfully wintered his sheep for a number of years on a ration containing cotton seed cake. He starts feeding about 1 1-2 ounces per ewe about breeding time, and continues to feed until the range is green in the spring. As the weather gets severe, he increases the cotton seed cake until each sheep is receiving from two to three ounces daily. After the first snow each sheep received 2 pounds of hay in addition to the cotton seed cake. These sheep came out in the spring stronger than they went in in the fall. They also sheared two pounds more wool apiece than those fed hay alone.

Cotton seed cake for range feeding gives better satisfaction and less waste when fed in the nut size, than in meal or pea size. If scattered on the ground, the sheep will find it. Many of our sheep men feed it in connection with hay in muddy weather and the sheep will follow the nut cake down into the mud with practically no waste. It has been found better to feed it on bare ground than in the sage brush. When sheep are fed cotton seed cake they must have plenty of moisture. Sheep fed cotton seed cake on range where the snow was blown off lost weight. Sheep will cease feeding on the cotton seed cake naturally in the spring, with the coming of the warm weather and green grass. Two lots of range ewes, one fed straight hay at the rate of five pounds per sheep and the other lot fed two pounds of hay and 1 1-2 ounces of cotton seed nut cake, showed the followed interesting results: The ewes fed the cotton seed cake and hay ration sheared 2 pounds more wool apiece and produced 8 per cent more lambs than those fed the hay straight.

Calf Scours

This Treatment Is Saving Many Calves

Scouring calves indicate a germ infection that is likely to run through your entire herd with serious losses.

The loss of one calf is bad enough, but nothing compared to your loss when the infection spreads, as it will unless checked. Then your year's work in building up your herd is wasted and your profits lost.

Our method of handling calves will promptly stop scours and finally banish it from the premises. One good calf saved will repay the expense of protecting your stock for a long time against the disease. This plan is simple and practical.

Our germicide and disinfectant is especially adapted to this work. It is called Bacili-Kil (B-K for short). The remarkable germ-killing strength of B-K is plainly marked and guaranteed on every package. B-K contains no poison, acid or oil. When used internally it destroys germs, heals inflamed membranes, relieves irritation, restores healthy action. B-K may be given freely in the milk and drinking water.

B-K is convenient. Just add water as directed, and you have your treatment for calves, bulls and cows and also your disinfectant for general use.

B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased five hundred per cent in three years. A well-known breeder of registered stock says:

"We found vaccines of no value is stopping calf scours, but the prompt, efficient treatment with B-K checked the trouble quickly and saved us the loss of many valuable calves."

Clean and clear as water.

Awarded Gold Medal Pan.-Pac. Expo.

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted in every town.

Write us for more evidence from users and for our bulletin No. 136, "How to Save Every Calf."

B-K B-K B-K B-K B-K B-K B-K

Hornet an Ancient Insect.

The hornet is a well-known insect even now in Palestine. Many of the Canaanites, as described in the Bible in Exodus 23:28; Deuteronomy 7:20; Joshua 24-12, were driven out before Israel by means of this insect.

Book of Esther.

The book of Esther is read through by the Jews in their synagogues at the feast of Purim. It has often been remarked as a peculiarity of the book that the name of God does not occur in it.

The Pacific Northwest Shorthorn Breeders' Association

Grain and Produce Markets

Chicago Grain.

CHICAGO, Oct. 15.—Conditions just right for drying out the corn crop had a bearish influence today on the corn market. Prices closed nervous, 1-8 to 1c net lower, with December $1.12 5-8 to $1.12 3-4, and May $1.08 1-4 @1.08 3-8 to $1.08 1-2. Oats finished 1-4 to 1-2c down. Provisions gained 15 to 57c.

Oats gave way with corn after it seemed evident a lull had developed in export business.

Packers' buying lifted provisions. Much reduced stocks in warehouses were looked upon as certain to be disclosed by the semi-monthly statement this afternoon, and the belief was later justified. Lower quotations on hogs failed to attract notice.

Cash Quotations.

CHICAGO, Oct. 15.—Corn—No. 2 yellow, $1.94½; No. 3 yellow, $1.94; No. 4 yellow, nominal.

Oats—No. 3 white, 59¼@60¼c; standard, 59½@60½c.

At Chicago.

CHICAGO, Oct. 15.—Hogs—Receipts, 24,000; slow, 10c to 15c under Saturday's average. Bulk, $17.20@18.35; slight, $18.35@18.40; mixed, $16.75@18.50; heavy, $16.50@18.50; rough, $16.65@16.85; pigs, $11.75@15.75.

Cattle—Receipts, 43,000. Weak. Native steers, $7@17.40; western steers, $6.15@14.25; stockers and feeders, $6.20@11.50; cows and heifers, $5@12.15; calves, $9.50@16.

Sheep—Receipts, 33,000; slow. Wethers, $9@12.80; lambs, $12.75@17.90.

Seattle Wheat.

SEATTLE, Oct. 13.—If the government will make one more concession to the wheat interests of Puget Sound it will have done much toward easing the movement of grain to market and in preventing a threatened congestion at tide water terminals on Puget Sound. Grain dealers here feel that they will be compelled to ask the government to modify its order for recognizing wheat only at Puget Sound terminals and honor warehouse receipts in the country. As this would involve complications in inspection and force the employment of a horde of inspectors, it is not yet clearly seen how the plan can be inaugurated.

Food Administrator M. H. Houser yesterday advised A. H. Hankerson, Seattle representative of the food administration corporation regarding sacking and cleaning, as follows: "Advise all concerned that where sacked wheat has been run in there and bulked that we will take it as bulk wheat only, bags, if necessary being for the account of the seller; also, the cost of bulking it. In other words, we will not take it on the sack basis and be responsible for the bags where it has been bulked. We will not buy wheat where the grade has been altered by cleaning. We want wheat just as it comes from the country, and not otherwise. We may need some graded at a later time."

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New focal potatoes, $1.75@2 cwt; sweet potatoes, $3.50 cwt.

Apples—Large eating apples, $1.25 box; cooking apples, $1.50 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 33c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—Fresh local ranch eggs, $13 case; fresh eastern eggs, $13 case.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs. to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

The Wool Market.

BOSTON, Oct. 12.—The Commercial Bulletin will say tomorrow:

"While less activity was noted in the Boston market during the last week, there was a fair volume of business involving practically everything in the shape of wool, at very firm prices.

"With the announcement officially made that part of the 45,000 bales promised for America out of Australia has been shipped and the balance is about to be shipped, it will be interesting to watch the course of the future market, especially in view of the 225,000 bales additional that have been recently promised. Manufacturers are still receiving government orders and civilian demand is reported only fair."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California—Northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Territory—Fine staple, $1.80@1.82; halfblood combing, $1.70@1.75; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled, extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Butter and Eggs.

PORTLAND, Oct. 13.—Butter weak. City creamery prints, 48c; cartons, 49c.

ELGIN, Ill., Oct. 13.—Butter, 25 tubs sold today at 43 1-2c per pound. No other offers received.

SAN FRANCISCO, Oct. 13.—Eggs—Fresh extras, 52c; first pullets, 43c.

Portland Market.

PORTLAND, Ore., Oct. 15.—The wool movement is assuming larger proportions. In the last week upwards of 1,500,000 pounds that were stored in Portland warehouses were sold to local and eastern buyers. Prices ranged from 40 to 65 cents with the bulk of sales at 55 to 57 cents, or on a scoured basis of $1.65@1.78. The wools ran mainly to half blood, fine medium and fine, little of it being lower than half blood. Wool men estimate its shrinkage at 65 to 78 per cent. Sellers appear to have come to the conclusion that wool will go no higher this season. They have been influenced by the fact that the government is taking over wool on the basis of $1.40@1.65 clean, and also because the movement of Australian wool to the United States has started.

The local butter market is in a peculiar condition. Although the supply is increasing the city creameries have boosted the price of butter fat from 49 up to 53 cents. At the same time they have refused to buy country creamery cubes, getting eastern butter in place of them. With the country creamery cubes piling up, the agents of the latter have secured the mayor's permission to use the municipal retail store, where they will retail the butter at cost. This has made it impossible for the Portland creamery men to raise the price of prints, which they evidently intended to do, yet they are voluntarily paying an excessive price for fat.

Egg receipts are now at the minimum and an increased quantity of storage stock is being used.

The local demand for poultry is poor and only limited quantities can now be shipped to Seattle and other northern markets. Dressed meats are steady, but jobbers look for lower pork prices in the near future.

There is no trade in hops at the present time. Eastern buyers are not interested, nor are growers here offering to sell. Unsold stocks in Oregon and Washington are estimated at only 5200 bales.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $49.50; brewing, $51; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 48@49c per dozen; candled, 52@55.

Poultry — Hens, 15@18c; ducks, 18@20c; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 45 1-2c.

Cheese — Tillamook triplets, 26c; Young Americas, 27c.

Dressed meats — Veal, 15 1-2@16c; pork, 21½@22c.

Hops—1916, 25c; 1917 crop, 40c.

Potatoes—New, 1 1-2@2c per lb.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans — California small white, 14 1-2c; large white, 14 1-4c per pound.

Seattle Market.

SEATTLE, Oct. 15.—Inactivity in the potato market is due to fears of large operators that the government will fix prices, and that all who have bought heavily for future trading would be caught for some vigorous losses. There is a reasonably fair local demand for both eastern Washington bakers and Puget Sound stock, and the feeling is that the market should decline $5 per ton to fit in with the sentiment of retailers, but growers have shown no sign of yielding.

Poultry prices will remain unchanged for next week, with the exception of heavy springs, which will sell off a cent.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 55@57c per dozen; pullets, 42c dozen.

Poultry—Live hens, fat, over 4 lbs., 21c per lb.; 4 lbs. and under, 16@19c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 12c per lb.; springs, live, 23c per lb.

Butterfat—54c per lb.; dairy butter, 35c.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 12@13c per lb.

Hides—Salted, 17c per lb.; flint-dry hides, 27c per lb.; salt kip, 18c per lb.; green hides, 14c per lb.; green calf, 25c per lb.; dry calf (under 6 lbs.), 27c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 11c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Wool—Puget sound, 52c per lb.

Marketing Crops---a Warning

By A. B. HALLOWAY.

Now that there is a prospect for the farmer to realize a competence for his crops and so rise from the dead level which has held him for years because of low prices, there is a fatal error he may still commit, that in getting the cash. The country is as full of beats who come to buy of the farmer as it is in any other craft. Speaking from bitter experience, I can now say there is one safe way to be safe, if you have the goods to sell. That way is to demand the cash before you release the car, or if in smaller lots, the goods. I warn you to make no exception.

The Way to Do It.

Say to the buyer right out and out: Now, I must treat you buyers all alike. I can sell you the goods if you can pay for them. When I am loading these potatoes or oats or wheat or what not, I want you, Mr. buyer, to have your inspector—remember I say inspector—here to pass upon the grades and to accept the goods before I release them, and I want the money.

This game of getting the goods before payment, cost the writer several hundred dollars, a few months back. Other farmers were warned and two cars were saved grain by the warning.

How They Work It.

The ordinary "gag," if I may call it that, is for the skinning buyer to get possession of the farmers' hard earned crop, take it to the city, then regrade it and kick on the grade, go broke on the sale by speculation, or run behind by high living and become compelled to skin patrons.

Now, no two graders grade exactly alike. So there is no hope in trusting any one of them. Lawsuits are of no avail. You may as well give away the crop outright. Not one in a dozen speculators have any soul for the farmer. One ranch in Grays Harbor county lost two cars of hay not many months ago by the gag game. One of the buyers went broke, the other claimed the hay was wet, damaged, etc. Another lost two cars of potatoes and went to financial ruin. The story can not be given space for print, but the way is

To Demand Cash!

and you will weed out the green-booted, unsound produce companies for they have not the money and they borrow on the farmers' car as soon as they get it into the city. There they fatten upon the product while the farmer and his poor wife and children wait a sad wait till they find the dregs of an experience. Again, I say, demand the cash. This will not hurt a sound buyer, and the unsound produce faker, located in his little terantula hut, is the one all of us want to get rid of. The rascal generally pays more—agrees to pay more—than the sound man because he often steals more or less of the crop. He can afford to pay any price agreed to, so that he will not raise suspicion, and fail to get the goods. One farmer lost potatoes because he thought an ignorant buyer was honest because he was ignorant. It proved that the buyer was dishonest because of that very fact. Cities like Chicago turn out a bunch of fakers every year who come to the Sound cities and are despised by legitimate buyers there, but nothing can be done. These eastern crooks take it for granted that they are not known and that the farmers here are not up to caution in sales as they are east.

Recently, in April, two cars of potatoes were loaded, even under this inspector plan and came near being a goner. The terms were cash!

Cash, f. o. b. station, and pay at the bank the next morning before the cars left the station. To the bank the inspector went with the farmer. But the banker said he did not know the buyer and that he could not accept the freight receipt for a car of potatoes because the security was not sufficient, etc, etc. "Well, well, this will be all right," says the inspector to the farmer. "We can send you a draft from our Sound bank just as well, you know, etc, etc., just as soon as I get into the city." (Right here it is up to you, Mr. Farmer. Speak right out. And this farmer did.) He said: "Well, I think it not best that I release the cars until you settle with me." This farmer had not allowed the buyer to bill out the cars in his own name, but in any case the cars could have been held, and they were held. "Oh, well, oh, well," said the buyer, "we will let them stand and I will send you the draft at once when I get in." What happened? Those cars were not moved for some 10 days and the buyer paid $116 demurrage. The potatoes were shipped east and the money for them, it is guessed, had to come from some eastern point to pay for them. But one farmer got his money and something like $75 per ton for his potaotes. This was the highest price any farmer got in the county for a car of potatoes last year, notwithstanding the noise that farmers were getting $100 per ton for this crop.

Settling Disputes

Between the Buyers and Sellers

Word comes from Asher Hobson, Washington state director of the office of farm markets, that a movement is on foot to facilitate the settlement of disputes between buyers and sellers of farm products. Mr. Hobson says:

"It is the duty of the office of farm markets to investigate disputes which arise between buyers and sellers of farm produce. In most cases the point of issue between buyers and sellers is that of price. The reasonableness or unreasonableness of a price can not be determined unless the quality of the product be known. Since the complaints reach the office of farm markets long after the products in question have been disposed of, it is a difficult task to definitely determine the quality of the commodity or commodities at the time they reached the market.

"In view of this fact, the office of farm markets has made cooperative arrangements with the state department of agriculture, whereby horticultural inspectors will inspect shipments of farm products upon their arrival at any market in the state of Washington. Inspection will be made only upon request of the buyer or seller of the produce in question. Upon inspection a certificate of quality will be furnished each of the contracting parties. Then should a dispute arise, the office of farm markets, with quality known, is better able to determine the question of a reasonable price. This service should be of advantage to both the shipper and receiver.

"Application blanks with directions for their use may be secured from any state horticultural inspector, or from the office of farm markets, direct. There will be no charge for this inspection service except in case travelling expenses are incurred by inspector. In case travelling expenses are incurred by an inspector carrying on the work, the expenses must be borne by the applicant. It must be remembered that the applicant for inspection should not wait until a disagreement arises before having his goods inspected."

Spokane, Washington.

MONTANA DIVERSIFIED FARM, FULLY EQUIPPED.

800 acres in the very best part of the famous Shields River Valley of Montana; nearly all tillable land and about three-fourths in cultivation; fair set of buildings; 200 acres sowed to winter wheat, which is up in nice shape; about 50 acres in alfalfa; 50 inches of water sufficient to irrigate 50 acres of land; improvements consist of a 6-room house and fairly good barn; fine stream through the place and good spring. This place is fully equipped with stock, implements and machinery as follows: 12 head of good mares with foal and 4 sucking colts, 4 yearlings, about 20 head of cattle, lot of hogs, chickens, good tractor, binders, mowers, rake, hay equipment, etc. Personal property worth about $10,000. Is extra good land for raising winter wheat and can't be beat for stock and would not be offered for sale except for the reason that it is owned by three young men of draft age. One of them expects to be called in the very near future. Price for immediate action $55 per acre—$15,000 cash required.

HEGE & WATKINS CO.
715-16-17 PAULSEN BLDG., SPOKANE.

$20,000 WORTH OF CLOSE-IN FIRSTclass Spokane property to exchange for a good farm. W. M. Frost, 410 Chamber of Commerce bldg., Spokane, Wash.

Harvest Your Energy

as well as your crops! Your country's pressing needs demand that you soldiers of the soil guard your health. So, store up vitality for tomorrow's work. Get out the car—take the wife and youngsters out for a spin in the keen Autumn evening air. There's nothing like it for rest and recreation—nothing that will give you so much of that "get up and get at it" feeling when you wake up in the morning.

But you naturally want to get the greatest comfort and pleasure with the least tire trouble, don't you? Then, of course, you will equip your car with the famous *United States 'Chain' Tread Tires*—or the equally popular *'Usco' Tread.*

Either one is the tire of maximum quality, resiliency, long-life and anti-skid efficiency at minimum cost.

When you ride on *United States 'Chain'* or *'Usco' Treads*, you ride in comfort with economy one of the party.

Hoover Predicts Lower Prices for Food

Government Regulation Is Showing Good Results, but the Retailer Needs More Patriotism

"The food administration considers that, subject to cooperation of the farmers and retailers, the corner now has been turned in high prices and that most of the essential commodities should, one after another, continue to show reductions between now and the end of the year," says Herbert C. Hoover, national food administrator, in a formal statement just issued reviewing the food situation. He takes up several of the staple foods, showing the tendencies of prices under the regulations that are being promulgated by the food administration. Lack of patriotic cooperation on the part of the retail dealer is suggested as one of the principal reasons why greater reductions in the cost of necessities have not been made. His statement continues:

"The current prices at which flour is being sold at the mill door in jute bags vary somewhat with the locality and freight charges on wheat. Toledo showing the lowest prices at $10 for first patent and $9.70 for second patent; Minneapolis being $10.60 for first patent and $10.46 for second patent. This shows a large reduction under August prices.

Still Too High.

"The regulations on the distribution of wheat and the manufacture of flour were put into force the middle of September.

"The average retail price on first patents in 796 cities on October 13 was $13.77, or from $1.50 to $2 per barrel higher than is warranted by the price being made by the millers. In other words, the retail price has not wholly responded to the reductions made by the millers.

"The bean harvest this year is estimated by the department of agriculture at approximately 7,000,000 bushels in excess of last year or nearly double last year. Growers' associations in prominent bean producing states are holding beans for from 13 1-2 to 15 cents per pound, as against an average price realized by the grower last year of 8 cents per pound. There has been 100 per cent increase in the Manchurian bean crop, and it is now estimated at 2,000,000 tons. Owing to shipping shortage, practically the only outlet is to the United States, and these beans will flow into the American market from December on much below the prices now being demanded for American beans.

"The corn harvest this year is 600,000,000 to 700,000,000 bushels more than last year, and generally will be available about the end of November. The price of corn rose to $2.30 per bushel in July, and now stands at $1.90 per bushel in Chicago. New corn is quoted in Chicago at $1.13 per bushel for December, and indicates nearly a 40 per cent drop in the price of cornmeal when the new corn is generally available.

"The very large corn supplies from the new harvest, together with the larger supplies of barley, velvet beans, cottonseed, peanut and soy bean meal, all promise much cheaper cattle, hog and poultry feed, and will enable the production of beef, pork, poultry and dairy products at much lower level of cost to the farmer than today, and his earnings can be maintained with lower prices of products. The packing, cold storage and other manufacturing and wholesale distributors in these trades are in course of regulation.

Retailer Stubborn.

"Beef already shows some tendency toward reduction in wholesale prices, but these have not been so far reflected in the prices quoted by the retailer. The price of beef at the packer's door is 14 1-2 cents per pound, as compared with 16 cents in July, while the average retail prices of round steak in the cities is 31 cents per pound, against 27 cents per pound in July, thus showing that retail prices have increased while wholesale prices have decreased.

"We have a potato harvest of 59 per cent in excess of the crop of last year. The price at loading points varies from $1.50 to $2.80 per hundred pounds. The price, which is somewhat higher than at this period last year, is due to a tendency on the part of producers to hold the potatoes for higher prices than last year, despite the greatly increased crop and the temporary inability of railroads to furnish equipment sufficient to move the quantity available at this time. The average price of potatoes delivered in the markets has closely followed the price which the producer has received, plus the cost of distribution, to the market.

"The larger supply of cars and the large harvest warrant lower prices later in the fall.

Sugar at 9 Cents.

"Beet sugar prices are being controlled by the manufacturers upon a basis that should reach the retailer from 8 to 8 1-2 cents per pound, depending upon the locality. Sugar to confectioners from beet factories now is being restricted and a temporary shortage in the northeastern states gives no warranty for the advances by retailers to over 9 cents per pound. For this allows fair margin upon the prices paid by them for cane sugar they are now selling. In any event the rise in retail prices of sugar during the last three days in the eastern states is solely due to the advancement of these prices by the retail dealers in the face of a short supply and does not bear any relation to the prices at which these sugars have been purchased.

"The new Cuban, Porto Rican and Hawaiian harvest in December will maintain the beet price as soon as it is available. The beet level is one and three-quarters below August prices and without concerted action of beet manufacturers and the refiners of cane sugar, prices would now be up to 15 cents owing to the short supply during the next few weeks.

Importing Fats.

"In order to provide equally good substitute for lard and cooking fats, the food administration is arranging for the import of larger supplies of cocoanut, palms, nut and soy bean oils. This should also affect the prices of soap.

Continued on page three

Next Week Is Win-the-War Week

In common with the other states of the nation Washington is organizing thoroughly for next week's great food conservation drive, during which the national food administration hopes to enlist practically all of America's 20,000,000 homes in the food-saving campaign. During the week every family will have an opportunity to sign a definite pledge to save food insofar as possible along the lines suggested by the food administration, and every home that makes the pledge will be given a colored window card to show membership in the administration.

"Let us remember," says the food administration, "that every flag that flies opposite the German one is by proxy the American flag, and that the armies fighting in our defense under these flags can not be maintained through the winter unless there is food enough for them and for their women and children at home. There can only be food enough if America provides it. And America can only provide it by the personal service and patriotic cooperation of us all."

In this state Charles Hebberd, federal administrator for Washington, has appointed an executive committee to work with him in carrying out the week's state-wide campaign. In turn a county committee is organized with a chairman in each county. Still further, this county committee organizes each precinct in the county, so that there will be

Are Baling Pea Straw for Winter

Shortage of Feed Results in Prevention of Waste That Has Been Practiced Heretofore; Value of Pea Straw Is Recognized

The spirit of optimism is growing throughout the farming districts of the northwest. This is clearly manifest in reports received of general conditions throughout the four states. During the summer there was a tendency to feel blue, but in general conditions have been better than expected, and the fall has been such as to make the coming season look hopeful.

The following are letters received by the Washington Farmer, and in nearly all of them optimism is expressed:

FAIRFIELD, Spokane County, Wash., Oct. 13.—Harvesting was a short job this year and weather conditions were ideal. Just now many hay balers are running, baling pea straw which is commanding good prices for feed. Formerly the pea straw has been mostly wasted, but owing to the scarcity and high price of hay the pea straw will be used. The continued dry spell is causing the farmers much concern owing to the fact that the fall sown wheat is not coming. That which has managed to grow is very scattered and patchy. On the pea sown land the wheat has not even started and many predict a failure and the work and seed wasted. Seed grain has been plentiful. ROY G. ADAMS.

Wheat Coming Up Poorly.

SPOKANE, Spokane County, Wash., Oct. 11.—Weather conditions have been very good for the maturing of late-growing crops this season in Spokane county. But owing to the extreme drouth, it has been very unfavorable for the preparation for next year's crop. In many places where the wheat has been sown, it is coming up very spindling, and in other places, it is only coming up in spots. The dry weather is even killing some that has already started to grow. Generally speaking, farmers have been very much disappointed from the results of their season's work, and this disappointment is intensified because of the continued drouth, this fall. However, they are looking forward to next year's crop with much optimism. There is plenty of seed available in this county for crops next year. J. R. SHINN.

Feed Skim Milk at Home.

CASTLEROCK, Cowlitz County, Wash., Oct. 11.—Prospects for a good yield of potatoes in this county are better than a month ago as the rains set in and picked up the late planted crop and seemed to put life into those planted earlier in the season. Blight did not do any serious damage, although in a few fields the wilt is quite noticeable and will cut down the percentage considerably. The fall weather has been ideal for gathering and harvesting the grain crop. Some have covers on the straw stacks to keep out the rain; others are drawing them into the barns as the prospects for all the fodder this winter at a big price is bright. The big price of butter fat, 54 cents, paid by the Mutual Creamery company, has given the farmers encouragement to conserve all their surplus for the dairy stock this winter. Several farmers have been down in Oregon and bought cows ranging in price from $100 to $250 each of the Jersey strain. Silos are filling up fast with corn and late clover crop. The town citizens are getting anxious for their winter's wood supply, which is furnished mostly by the farmers at prcies from $4 to $6 per cord. The farm help problem has been practically eliminated by the farmers taking turns of helping each other. Women and children are picking blackberries, which grow wild in the logged land and along the old fences; they are making from $2 to $5 per day.

Tons of blackberries have been shipped out of the county to the Challis Canning company, which pay 3 1-2 cents per pound at the shipping point. It is paying $15 per ton for pears which is better than other years when they rotted on the ground. Hay is selling for $25 per ton, eggs 40 cents a dozen and old hens and roosters are all cleaned up. Wheat is $65 per ton and oats are selling for $52 per ton. No barley to sell. There seems to be a scarcity of pigs for home raising. Farmers are scouring the country for winter stock to take care of the skim milk. Fruit is about normal; apples, pears and prunes are being gathered. Several driers are working and they pay 1 cent per pound in the picking state. Veal calves are selling readily at a good price. As a rule the farmers are fully satisfied with the crops and they are very optimistic for next year's crop. They are sending away for seed oats, wheat and rye for fall sowing. Plowing is nearly all done. Wheat is selling in small lots from $2.10 to $2.50 per bushel. Potatoes are selling at $1.75 per hundred and prospects of them going lower as the digging progresses. Dairying is the prime factor in the county. The practical farmer and the one that is getting ahead is the one that feeds his produce at home. Good roads and the city markets make farming a little easier to plan out to make both ends meet.

C. C. BROWN.

Baart Wheat Is Favorite.

EPHRATA, Grant County, Wash., Oct. 11.—The fall is exceptionally dry. We have had no rain yet. The roads are in bad condition where wheat hauling is being done. There would be considerable acreage of fall wheat planted in this county if it would rain. Some few are planting anyway, but most people have discontinued planting fall wheat unless there are rains to bring it up. Some plowing is being done even though it is so dry. The crops this year were very light, but the prices have been good, so there is not a great deal of complaint on the returns.

Baart wheat is far better than the bluestem. In every case it will test from two to three more pounds per bushel and the yield will also be greater. In all probabilities 90 per cent of the wheat next year will be planted to the Baart variety. There is plenty of good seed in this county of every variety and believe that the acreage planted next year will be fully as great as this year. H. W. REAUGH.

Feed Prospects Good.

FORT ORCHARD, Kitsap County, Wash., Oct. 8.—The winter feed prospects in this county are good. A big hay crop was successfully harvested and put away in good shape. However, much hay is being bought and brought in here. Some of the farmers are planning on feeding straw to their cows as outlined in the monthly bulletin of the western Washington experiment station. There is very little straw in the county, so it will have to be shipped in. The cost price per bale, as delivered here, I am not able to estimate just at this time. The potato crop looks very promising for a large yield. Digging is not yet well under way. Late varieties are still growing and the vines are green. No frosts have appeared to this date. There are active preparations and plans being made for an increased acreage for the next season in practically all the crops as grown here.

C. B. SPRAGUE.

Roads in Bad Condition.

MABTON, Yakima County, Wash., Oct. 11.—This section is experiencing an unusually long period of dry weather. Hardly a trace of moisture has fallen all summer and fall. Roads are consequently in a poor condition. The apple picking has just begun and will continue for several weeks. The yield is good. The last cutting of alfalfa is in the stack. The raising of beans has become an important industry in this locality and the harvesting of the same is crowding out other work. Help is scarce and many women and children are from necessity being urged to help out in the orchards and packing houses. Wheat is also beginning to move although farmers have been undecided whether to sell or not. The dry weather has prevented much fall sowing of wheat so far. Sugar beets are new in this locality. The harvesting has not yet begun so it is not yet known what the success of this crop will be. No prices have yet been established on beans and potatoes.

E. F. HUTEGRENN.

Rain Damages Grain.

CHIMACUM, Jefferson County, Wash., Sept. 28.—We have had considerable rains the last two weeks, which was a little late for the pastures, but think if we do not have any frost during October there will be plenty of fall grass. Some of the grain was damaged by the rains, but the root crop, such as carrots and mangels, are looking fine. Threshing is under way, also the silos are being rapidly filled by oats and peas and vetch, which are yielding heavy crops. Most people are satisfied with the crops with the exception of the potato crop, of which a large acreage is in the ground, but the yield is not expected to be large. Fall plowing has not yet started, as we have had a backward year.

JOHN VAN TROJEN JR.

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pound pull on the lever gives a 48-ton pull on the stump. Made of the finest steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Liberty Loan Will Win

People Rally to Finance War Against Kaiser

The American people have rallied during the last few days with a patriotism that, at this writing, seems to assure the success of the second Liberty loan. The pessimism that persisted the first two weeks of the campaign for the $3,000,000,000 loan, owing to the slowness with which subscriptions came in, gave way during the third week to a feeling of pronounced optimism. The fourth week opened with a feeling that a grand, nationwide effort at the close of the campaign would insure the desired total of subscriptions. This week, however, is seeing no cessation of the effort, and everybody is urged to make a subscription of whatever amount is possible.

"Every dollar you lend your country now will mean a saving of American blood," declared a member of the national campaign committee. "You can not stop the war. Our soldiers will go to the trenches—and more will go, and still more—until the decisive day. Hence, the better you help now the harder we strike. And the harder we strike the sooner the end of the bloodshed."

The second Liberty loan bears 4 per cent interest from November 15, 1917; the bonds due November 15, 1942; are redeemable at the option of the United States, with accrued interest, on or after November 15, 1927. Interest is payable May 15 and November 15 of each year.

You can have your choice of coupon or registered bonds in denominations of $50, $100, $500, $1000, $5000, $10,000. The $50,000 and the $100,000 are registered bonds only.

On a registered bond your name is inscribed; it is a receipt made out direct to you, and it can be signed over to some other party only by you and only before certain authorized authorities. The interest on a registered bond is mailed to you by the government when due without any action on your part.

On a coupon bond little tickets like small street car transfers are stamped on the side. One ticket is cut off each half year when the interest is due, and you cash the ticket at any bank as you would a check or money order. Each bond has its own special number thereon, and each coupon has thereon the same number as that bond. Then a record of all the numbers issued is kept in the vaults of the treasury at Washington.

Some Bond Facts.

Here are some pertinent facts about the Liberty bonds:

1. **A loan**—You lend your money at interest; you do not give it.

2. **Easy payments**—A few dollars down buys a bond. Bankers and employers everywhere arrange payment of balance out of savings.

3. **Superlative safety**—The promise to give you your money back, a promise signed by all our 110,000,000 people, including the signature of every multimillionaire in America. Your bond is like a mortgage on the whole United States.

4. **Safe keeping**—Absolutely safe in any honest banker's vault; safer anywhere than currency, for it is plainly a receipt for money you deposited in the treasury of the United States.

5. **Tax free**—Bonds up to $5000 in amount are exempt from taxation.

6. **Market value**—You can sell your bond or borrow on it on a moment's notice.

Which Shall It Be?

The United States is in this war to win.

She will finance it by Liberty bonds or by taxation.

A Liberty bond pays 4 per cent untaxed interest, and after a while the principal comes back in full.

Taxes are money gone forever—no interest, no principal returned.

Which Shall It Be?

A Liberty bond, safe, certain, patriotic, good business, or additional war taxes?

Win-the-War Week

(Continued from page one.)

during the week an army of workers running up into the thousands, who will see to it that every person having to do with the management of a kitchen is given a chance to sign the pledge.

On page 4 of this issue of the Farmer will be found a graphic statement of the aims of the national food administration, showing exactly what it is desired each person shall do in the great food-saving movement.

The following are leaders in the various counties who will play big parts in the week's campaign:

Governor Ernest Lister, Olympia.
Henry Suzzallo, Seattle.
Mrs. W. R. Smith, Seattle.
Mrs. Ruth Karr McKee, Hoquiam.
W. A. Linklater, Puyallup.
Mrs. J. F. Manning, Everett.
E. O. Holland, Pullman.
Miss Gertrude L. Huntington, Spokane.
Mrs. Henry McCleary, McCleary.
Mrs. J. C. Todd, Tacoma.
J. F. Sears, Prosser.
Miss Mary Rausch, U. of W., Seattle.
Mrs. Josephine Preston, Olympia.
W. H. Paulhamus, Puyallup.
Miss Agnes Houston Craig, Pullman.
W. S. Thornber, Pullman.
Erastus Brainerd, Seattle.
Mrs. N. S. McCready, Snohomish.
C. B. Kegley, Spokane.
Miss Lulie Nettleton, 1419 Sixth Ave. W., Seattle.
E. F. Benson, Olympia.
R. Insinger, Spokane.
F. W. Shultz, Wenatchee.
W. A. Peters, Seattle.
E. M. Stephens, Monroe.
A. E. Larson, Yakima.
John Langdon, Walla Walla.
George Severance, Pullman.
Sidney W. Rogers, Newport.

Hoover Predicts Cheaper Foods

Results of Government Regulation Already Being Felt

(Continued from page one.)

"Since the food administration came into existence August 10, a great deal of exertion has been required to remedy food situations growing out of the over-export and short supplies of he 1916 harvest. There were no reserve stocks in practically all of the main staples with which to enter the new harvest year, and, in fact, in some of the principal staples the exports had proceeded to such lengths that there was an absolute under supply of our own necessities during the last two months.

"On the top of this situation some factors have interfered with the earlier arrival of the new harvest. The farmer, in preparing for a 30 per cent increase of winter wheat acreage in the face of the shortage in agricultural labor, has prevented the free marketing of many commodities and in addition to these difficulties there exists through the country, owing to the large coal and munitions shipments, a considerable car shortage.

Meets Big Problems.

"Resulting from these causes there have been periodic shortages in one commodity after another, in one locality in the United States after another, and a large part of the energies of the food administrations has been absorbed in securing a distribution and a redistribution of existing supplies in such a manner as to keep the country generally supplied with foodstuffs and but for the cooperation of the railroads in one emergency after another we should have had local famines in one commodity after another in a great many sections.

"Furthermore the authority of the food administration does not extend over combinations of growers and producers at one end of the chain, nor does it extend over the great majority of retailers at the other end. The distant chain lying between, that is, the warehouse, wholesalers, commission men and manufacturers of prime commodities has required a great deal of study and development for its proper regulation, and these regulations are now coming into force."

Birds Build Bowers.

Australian bower birds construct galleries under hanging branches, which they adorn with highly-colored feathers, rags, shells, bones, etc. These bowers are used for mating in the breeding season.

Demonstrational Meetings on Cow Diseases

This picture is of one of the 20 meetings held recently on farms in Snohomish county for demonstrational work in the control of diseases affecting the dairy cow.

Dr. J. W. Kalkus from the state college of Washington veterinary department had charge of the demonstration work, in which he explained how to treat the udder for chronic and acute garget by the hot-pack-massage method for the acute, and the boric acid solution for the chronic type; how to remove warts, stop leaky teats, remedy hard milkers and treat milk fever.

In many cases Dr. Kalkus assisted individual farmers by outlining disinfection methods for the treatment of contagious abortion, which is one of the worst diseases among our dairy cattle.

He reported that there is no known positive cure for red water at the present time and advised in all cases that the animal be immediately fattended and sold for beef, as the disease does not injure the meat for food.

The arrangements for these meetings were made by the county agent and through the Snohomish county agricultural council, which is an organization composed of one representative from each farmers' organization in the county.

The farms visited were those of A. W. Everton, Edmonds; Hunter Bros., Cedar Valley; J. D. Kalanquin, Twin Valley; Thomas Bowen, Snohomish; Gilbert Jones, Machias; Chris Nelson, Granite Falls; Carl Westlund, Getchell; R. B. Messenger, Sunnyside; S. Shoultes, Marysville; S. Hanson, Lakewood; K. O. Rod, Arlington; F. O. Coe, Trafton; Ole Larson, Silvana; John Lee, Norman; Frank Peterson, Cedarhome.

Field of Oats and Vetch.

The above picture of a field of oats and vetch was taken on the Alderson farm, located one and a half miles south of Ferndale, on the Nooksack river. The soil is very sandy and until Mr. Alderson bought the place about four years ago was considered almost too poor to cultivate, but by the persistent efforts of its present owner and the use of much fertilizer in the form of barnyard manure, the result is almost unbelievable. The J. C. Peterson home is in the background. Mr. Peterson is another farmer of the sort that is a credit to the community in which he lives.

Liberty Wheat and Liberty Bacon

Are as Important in the War as Liberty Bonds or Liberty Ships

Liberty wheat and Liberty bacon and Liberty sugar are just as much needed as Liberty bonds. Money can not buy more wheat or more bacon or more sugar than the world produces. In some respects it is well that the two campaigns of the Liberty loan and of food conservation should blend the one into the other.

Of wheat Europe normally produces 591 million bushels, thus requiring a normal importation of

383,000,000 bushels.

The probable wheat production of Europe for this year, 1917, is put at 394 million bushels, which is a shortage from normal of

197,000,000 bushels.

Adding the shortage of 197 million bushels to the normal import requirements of 381 million bushels will give a total wheat import demand of Europe of

578,000,000 bushels.

How shall this be met? Mainly from two sources.

1. By European retrenchment in the use of wheat.

2. By importation, chiefly from the United States and Canada.

Chiefly through substitution of other cereals in her war bread Europe may be able to cut down her consumption of wheat 25 per cent or 241,000,000 bushels. This leaves a needed importation of 337,000,000 bushels.

The latest estimate of the wheat crop of the United States this year is 660,000,000 bushels; home consumption, 495,000,000 bushels; seed requirements, 87,000,000 bushels; leaving a surplus of

78,000,000 bushels.

Add to this an estimated Canadian surplus of 120,000,000 bushels and it gives a surplus from North America of

198,000,000 bushels.

Again, taking this North American surplus of 198,000,000 bushels from 337,000,000 bushels needed by Europe leaves

139,000,000 bushels.

To help meet this war demand of 139,000,000 bushels, Herbert Hoover, United States food administrator, asks that one pound of wheat per person be saved weekly, which will give an additional surplus of

117,000,000 bushels

for export and only leave 22,000,000 bushels to be supplied from more distant markets in order to make up the amount required by the allies.

Other Cereals.

In the other cereals used in Europe, mostly for animal feed, the import necessities of the allies on normal consumption basis are about 674 million bushels against the North American surplus of 950 million bushels.

In this connection it is interesting to note that wheat consumption of Europe, 974 million bushels, is 44 per cent of the total consumption of cereal, 2,214,000,000 bushels; that of oats, Europe consumes 683 million bushels, or 31 per cent of

(Continued on page eight.)

SHOULD FEED STRAW.

Farmers Tell Facts Concerning It.

The farmer as a business man must increase his operations to the point of conserving the farm by-products because they promise a rich return. There is no excuse for the $103,000,000 annual loss through the wasting of straws and corn stover, not to mention the value of shattered grain that vanishes in the long stubble.

In answer to an inquiry sent out by The Washington Farmer, as to the extent that the shortage of feed for stock can be supplied by straw, many replies have been received:

To the Editor of The Washington Farmer: There is a scant supply of straw as fed in this country. It is worth from $1 to $3 per load. There is none baled here, it is all loose.
T. W. McCORD, Wilbur, Wash.

To the Editor of The Washington Farmer: Feed is very scarce around here and farmers are stacking their straw for winter feed of their stock. Any one who has more wheat straw than he needs for his own use can find a ready market at $10 per ton loose.
D. A. LENOCKER, Schragg, Wash.

To the Editor of The Washington Farmer: There is but very little straw to sell. There is just about one-fourth as much as is needed to supply the demand. The price per ton will be about $5 loose.
W. J. BLANCHETT, Quincy, Wash.

To the Editor of The Washington Farmer: I believe that from what I hear over the country that to a large extent the shortage of feed for stock can be supplied by feeding straw, especially oats, barley and fortyfold varieties. There is a big demand for baled straw and last winter the price was good, but I can not say exactly how much. A. G. COX, Palouse, Wash.

To the Editor of The Washington Farmer: Our crop of straw is very short this season and will all be fed up to our local stock. There is no straw offered for sale either baled or loose. I think, speaking of the straw situation, that our people will have just about enough for their own use. There has never been any straw baled in this locality.
GEORGE M'DONALD, Coulee City, Wash.

To the Editor of The Washington Farmer: Will say that wheat straw in this locality would be used for feed with the bunch grass to constitute all the feed that is needed for stock. As a general thing it would constitute two-thirds of the feed. We can not get wheat straw or any other grain straws in any quantity, what is selling is sold for $10 a ton loose. This is wheat straw, bluestem.
CHARLES E. KLINE, Burke, Wash.

To the Editor of The Washington Farmer: I am glad to know you are interested in the feeding of straw. I regard wheat straw as fully one-half ration for stock. In this locality, this year, a great deal of the wheat straw was green in color, but dry before there was any grain to amount to anything, especially the bluestem. There was quite a demand for straw last year at $2 per load, none baled. It will be from $3 to $5 per load this year and possibly more. I think there could be a great deal of valuable information given out on the feeding of straw.
J. H. SMITH, Ephrata, Wash.

To the Editor of The Washington Farmer: You failed to state what you mean under feed—grain or hay or both. As a rule every farmer in this district uses and needs 75 per cent of his straw to winter his stock. A certain amount is or has been used in the past for road improvement. None has been baled or shipped so far. Not much sale for it either, except from farmer to farmer and occasionally to team owners in the small towns. However this year the farmers will save all straw as they will need it all to winter stock and use it to some extent next year for spring feed in connection with either barley or oats for their work horses.
D. W. KREHBEIL, Lind, Wash.

Holy Land's Only River.

Jordan, the one river of the Holy Land, has a course of little more than 200 miles from the roots of Anti-Lebanon to the head of the Dead sea. Not a single city ever crowned the banks of this river.

HOOVER PROGRAM IN A NUTSHELL

One Wheatless Meal a Day

Breakfast as an example: Serve either

Oatmeal
Corn Cakes
Buckwheat
Fried Corn Mush

* * *

Beef, Pork or Mutton Once a Day

For the other meals substitute:

Fish, Poultry
Eggs, Milk
Cream, Cheese

and eat vegetables more freely.

* * *

Eat Sparingly of Butter and Sugar

THE REASON: Our allies and our own soldier boys must have meats, wheat, fats and sugar to win the war.

There is a world scarcity of these foods.

Whitman County Fair

A big crowd was on hand at the Whitman county fair at Colfax last week. The chief features were the booths containing the exhibits of the boys and girls' clubs. There were 250 exhibitors, ranging in age from 7 to 17 years. Every pen for chickens and rabbits was filled. State Commissioner of Agriculture E. F. Benson was present and made a stirring address.

Featuring the live stock division were 16 Percheron, Clydesdale and shire horses, including the grand champion exhibit at the Interstate fair at Spokane and owned by M. E. Metz of Colfax. They were judged by 16 University of Idaho students and later by the stock judging class of the Washington State college.

Among the visitors was Mrs. Josephine Preston, state superintendent of public instruction.

Truth of Food Situation in France

"I Would Rather Have Our Bread at the Front Than Your Bread in Paris"

ARTICLE II.

By FRED B. PITNEY

How many times I have heard soldiers on leave from the front say, "I would rather have our bread at the front than your bread here in Paris." The same thing was true of coffee. Soldiers would say, "What do you call this stuff? We get real coffee at the front."

At the rear the civilians drank a compound from chicory, for the coffee supply was short, while the real coffee was reserved for the army. In like manner, the soldiers get a purer wheat flour than do the civilians. The wheat supply being so much curtailed two measures have been necessary to try to increase the amount of flour.

A law has been passed requiring the mixture of 30 per cent of other grains with wheat in making flour, while another law raised the percentage of extraction permitted in the manufacture of flour. Before the war this percentage was 70; it has been raised successively to 74, 77, 80 and 85. Seventy-seven is the extreme limit of nutritive extraction. After that the flour becomes permeated with particles indigestible for human beings.

The result of mixing grains and high extraction has been a flour that is often not only unpalatable but indigestible and it has caused not a little sickness, particularly gastric troubles among the children. Adults frequently throw away the soft inside of the bread and eat only the hard-baked crust. Very often I have found this "war bread" an unpleasant dark brown in color, with a soggy, glutinous inside. It is no one's fault. It is the best that can be done under the circumstances.

Shortage of All Cereals.

Another problem enters with the authorization to mix other grains with wheat in making flour. It is the shortage of the other grains. For it is not only wheat that is short in France, but all cereals. We can have recourse once more to the official figures.

The annual consumption of barley in France before the war equaled approximately 1,250,000 tons, of which about 15 per cent was imported. The production has fallen off to such an extent that nearly one-third of the barley had to be imported last year. This year, owing to special reasons, the production will be slightly higher, but there will still be a deficit far above the normal. Furthermore, the deficit in barley must be considered not only in relation to the normal consumption but with regard to the fact that it must be used very largely to supplement and replace wheat.

With rye the normal consumption was about the same as for barley, with imports of about 8 per cent of the requirements. In 1915 the production was about 400,000 tons under the normal consumption and in 1916 it was about 350,000 tons under the consumption, while in both of those years there were practically no imports. Thus there was less rye than was needed and rye could only help out wheat by reducing still further the amount given to its normal uses.

The annual consumption of corn averaged 1,150,000 tons, about one-half being imported. The proportion of imports in 1916 had risen to two-thirds.

The annual consumption of oats before the war was 5,500,000 tons, of which 500,000 tons were imported. In 1916 the imports rose to over 1,000,000 tons and the stock was still short 500,000 tons.

Agricultural Labor Shortage.

When one travels over France one speedily learns the reason for the shortage in the grain crops. It is because there is not the labor to do the farm work. Cultivation has to be left to the old men, the women and the children. All others have been taken for the armies and the defense of the country.

In crossing and recrossing the French agricultural regions it has been a continual source of wonder to me how the few workers in the fields have

(Continued on page twenty.)

Free Shipments of Breeding Stock

Sweeping Order Put Into Effect by Canadian Government

What the live stock associations of the Pacific northwest have been trying unsuccessfully for years to secure—a reduced freight rate on breeding cattle and sheep—the Canadian government has granted its live stock interests by a stroke of the pen.

The Canadian order goes far beyond that. It launches a remarkable cooperative plan to check the depletion of live stock and is based on an agreement between the Canadian department of agriculture and the railroads. It comprises:

Fifty per cent rebate of the freight rate on carload shipments of feeding cattle from Winnipeg to country points in the eastern provinces.

Free shipments of carloads of breeding sheep and lambs from Toronto and Montreal to the west.

In a statement describing the plan, Martin Burrell, the minister of agriculture, says:

"The Canadian railways have agreed to issue a special tariff in connection with the transportation of car loads of breeding cattle and of breeding sheep. Under this tariff the railways will rebate 25 per cent of the regular freight rate, while the minister, on behalf of the government, has agreed to pay the remaining 75 per cent. The tariff will be applicable in both eastern and western Canada, but not between eastern and western Canada in connection with the return of car loads of breeding stock from the central stock yards to country points.

'The shipper will be required to make a declaration that he is a bona fide farmer, and that the stock so returned is for his own use or that of his neighbors and is for breeding purposes only.

"In view of the fact that feed conditions in eastern Canada are so satisfactory, and the demand for feeding cattle so general, the minister has agreed to pay 50 per cent of the freight rate in connection with the shipment of car loads of feeding cattle from the Winnipeg stock yards consigned to country points in the eastern provinces.

"An arrangement has been effected between the department and the Canadian railways as a result of which carloads of breeding sheep and lambs from the Toronto and Montreal stock yards will be shipped to western Canada freight free.

"The car-lot policy which has been operating in western Canada for the last year will be continued. Under its conditions bona fide farmers or their agents desiring to obtain car loads of feeding and breeding cattle or sheep at the three western stock yards will be entitled to collect from the department their reasonable personal and traveling expenses incurred in connection with the journey between their homes and the yards.

We commend this liberal action of the Canadian government to those narrow critics who are making the untrue and ridiculous assertion that the government of the United States is making a pet and favorite of the American farmer. For 20 years it has been the consistent policy of the Canadian government to foster agriculture and encourage the live stock industry, and it was that liberal policy that drew thousands of American farmers across the line into Canada.

Make All Cut Thistles

To the Editor of The Washington Farmer: I would like to say just a few words about Canadian thistles. It seems as if we have an awfully one-sided and unjust law on Canadian thistles. The law compels the farmer to cut his thistles, or the county can cut them and charge it on the taxes, but the timberman and logged-off land speculator are not obliged to cut theirs.

It is a heart-sickening sight to see some of the farms and our river bottoms, also some of our roads, and as our county officials see the unjustness of the law they do not compel the farmer to cut. If the farmer is shiftless and doesn't cut his he gives his neighbor work for years to come, for one seed makes a good-sized patch. In this community there is hardly a 40-acre tract that has not a patch of thistles.

I think that every farm society and grange should take up the matter with their representative and have that law rectified, so that the timberman and the logged-off land speculator be compelled to cut thistles before this country is completely ruined for agricultural purposes. Many people do not realize what a noxious weed the Canadian thistle is. I hope that you will help us fight this pest and get just laws for the farmers.

The Teachers' Cottage Solves Problems

By CARL J. MENZE, Ferndale, Wash.

Many rural school boards are noting the practicability of building teachers' cottages near the school homes so that the teachers will have no trouble in finding suitable boarding places and so the district can have all school affairs and school property under the

constant supervision of the teachers. It is usually difficult for teachers to find vacant houses in the rural districts. Teachers' cottages, therefore, are very attractive to teachers with families and will often keep a good teacher in the district from year to year. They also help make the schoolhouses the center of all social and community affairs, thus becoming a continuously operative plan for better citizenship.

In Washington state, at the present time, there are 144 teachers' cottages that serve as the homes for teachers during the school term and sometimes the entire year. There are also a considerable number under construction and will be ready for the school term this year. These cottages, from the one-room lean-to, for one teacher, costing about $50, to the large ones containing several rooms and for several teachers, are usually supplied with the furniture by the school districts, the teachers supplying the necessary bedding, dishes, carpets and what other supplies they think they will need.

The photographs shown here are of two Whatcom county cottages. That at the left is the North Star cottage built to accommodate two teachers. That at the right is the Grand View cottage for one teacher.

Approaching $5,000,000 in Loans

Land Bank Is Doing Big Business for Northwest Farms

Before Christmas bells ring, the federal farm loan bank of Spokane will have loaned to the farmers of the four northwestern states more than $5,000,000 at five per cent interest.

This is the statement of President D. G. O'Shea, who announces that the loans already are nearly $3,500,000. Loans are now averaging more than $100,000 a week, and the bank is rushing its working force to close up the loans asked by the more than 10,000 farmers already members of loan associations.

Train Farmers

Boys and Girls Must Be Prepared

"The trained farmer is going to run the earth or the city fellow will run it and you will be his renters," Professor Frank O. Kreager of Washington State college told boys and girls assembled at the Washington State fair at North Yakima this year. He was addressing more than 200 county champions of industrial work performed by Washington members of the Achievement Club of America and sent to the fair as a reward for their proficiency.

"Your only hope of earning a farm is to train yourself in efficiency," continued Professor Kreager. "Things are different now than in former years. Many farmers have placed themselves in comfortable circumstances because the land they settled on years ago has advanced in value so fast they couldn't help make money. The land was so fertile that almost any kind of farm would produce sufficient to take care of the then small population.

"Some people scoff at the idea of training men and women to be better farmers. We wouldn't be establishing military training camps over the length and breadth of this land if we would enter the war with Germany with the hope of winning it without trained men. Alexander the Great knew the value of trained soldiers and attributed his succes to the fact that his men knew exactly what they were to do and how they were to do it when they got into action.

"Training counts for just as much in the producing army of which you are an important part as it does in Uncle Sam's big fighting force. Some folks say they had rather have experience than training. Experience is fine—it matures and rounds us out—but there is plenty of room to learn by experience after you have had the best training in the world. Make your producing army just as efficient as you hope our army in France will be."

Form Purchasing Association.

To the Editor of The Washington Farmer: There is a movement started among the various granges around Ferndale to form a purchasing association for the purpose of reducing the high cost of living. A local merchant is to act as purchasing agent and only members of the grange can have the privilege of ordering through this association. It is the opinion of leaders in this movement that a great saving can be affected in the purchasing of staple groceries and feed.

Shoes With Turned Down Cuffs.

A patent has been granted for men's shoes with cuffs turned down at the top to enable them to be pulled on easily.

Attributes His Success on His Farm in the Palouse Country to This Ten-Mule Team

The above is a picture of R. W. McKown's 10-mule team, to which he attributes his success as a farmer. Mr. McKown's farm also demands a gasoline engine for heavy work and a light one to run the washer, etc., in the house. Mr. McKown brought from the Dayton country, his former home, a large combined harvester. Finding it satisfactory on the Palouse hills, he last year bought a new one, like the old, and this year has cut over 700 acres.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

The Draft and Farm Labor

At a recent meeting of the Spokane county council of defense, Mrs. F. A. Noteware, member for women's work and long an active worker in the grange, brought up a problem of vital and growing interest to farmers—the drain on farm labor by the draft.

George Hingston, another member of the grange, said that the last youth on his prairie was working for him, and he, too, would soon have to go under the draft.

After discussion the county council advised that Mrs. Noteware and Mr. Hingston take up this question with their Pomona grange and have a committee appointed to confer with W. W. Tolman, chairman of the district exemption board for this region.

This problem is engaging widespread interest. In New Jersey permission to use the draft machinery to mobilize for farm work such men in the remainder of New Jersey's quota as wish temporary employment pending the preparation of cantonments to receive them has been asked of Provost Marshal General Crowder, at Washington, by Governor Edge. There are about 8000 yet to be called into service, but the governor has been informed that quarters at Camp Dix will not be ready to receive them all for some time.

"Many men selected for that section of the chosen army scheduled to leave for camp October 3 have given up their positions," Governor Edge said. "For them to remain idle a month or more is not only a personal hardship in many cases, for of course while idle most of them are receiving no pay, but it is also an appalling waste of man power, so essential just now to the country and its industries. The farmer is short of help. His work is as vital to the prosecution of the war as the mobilization of troops. Why not, therefore, create the opportunity for these men to volunteer service on the farm at the usual wage, benefiting themselves, the farmer and the country?"

Waste in Manure

While we are studying the subject of waste, we come across some things which open our eyes to losses which have been going on for years, unnecessarily.

One of these is the waste of manure values. The assistant secretary of agriculture has estimated that there is an annual loss of manure amounting in value to more than a billion dollars. Such a sum is almost beyond comprehension, but we all know that much is wasted on even the best regulated farms which might be turned to good account and increase yields of crops.

In many sections not more than 15% of the manure is saved and returned to the soil. Even in the dairying sections, where its value is appreciated and it is used generally, the loss is reported to be at least 25%.

It takes some work to save manure, but it is cheaper than buying fertilizer at market prices. Wherever it is available it should be saved carefully and put back into the soil.

Buy a Bond and Beat the Kaiser

If everybody waited for others to buy the Liberty bonds, they would never be sold. If everybody bought at once just what he could afford, the entire amount would be subscribed.

Too many have waited on the other fellow. The campaign is almost over. There is but a little time left for those who have delayed to get their names on the record against the kaiser and his violation of human right and decency.

The government must have the money necessary to carry on the war to a successful conclusion. The United States is in the war, and honor and civilization demand that it be prosecuted with power and vigor until the world is indeed "made safe for democracy." There can be no half-way course. There can be no stopping until the kaiser is thoroughly beaten and until kaiserism is wiped forever from the face of the earth.

The assessed valuation of the property in the United States is stupendous—not less than $300,000,000,000. The money asked for this Liberty bond issue is $5,000,000,000, a gigantic sum in itself, but only 1 2-3 per cent of the total valuation. The national debt is large, but small compared to the larger figures. Hence, the Liberty loan is merely a borrowing of $5,000,000,000 on a valuation some 60 times the loan. Private money-lending concerns will lend half the face value on clear property. Uncle Sam is asking the people of the United States for a loan of one-sixtieth of the unencumbered property value of the United States. What could be safer? Where could a better investment be made? Four per cent interest; practically nontaxable; absolutely safe; patriotic; convertible almost as readily as greenbacks. The man with $50 of idle money will make no mistake if he buys with it a $50 Liberty bond. The man with $50 that he can reasonably withdraw from his business for a while will make no mistake if he withdraw it and buy a bond. If he can multiply it by two or 10 or 100, so much the better.

The Basis of Profit

It is a common thing in town to hear people intimate that the farmer is getting rich. They do not think seriously when they say so. Because prices have advanced for farm products they conclude that more profit comes to the man who produces.

And yet these same people would be indignant if they were charged with undue gain because they draw larger salaries than they did a few years ago. They realize that it costs more to live nowadays.

And the same is true of the farmer. These are not normal times. The crops that bring a larger price cost much more to grow and harvest. Farm laborers demand and get higher wages than they ever got before, and even at that, there is a scarcity. The cost of seed, the cost of feed, the cost of farm machinery, the cost of operation, all have gone up fully as much in proportion as the farm produce.

Let us estimate profits, whether they be of the farmer or the city merchant, on the basis of cost, and we will come near to knowing something about them.

Help the Boys

Some claim that the understanding of live stock has to be born in one. However, we imagine that everybody has the powers unformed and some develop them, but most do not. Everybody can learn something of profitable farm animals, and the sooner they begin, the more they have to learn. Boyhod is the period when these things are learned most rapidly.

Take the boy out with you and point out to him the desirable and undesirable points of the live stock. Call attention to this or that fault, this or that merit.

It is surprising how quickly he will grow interested and grasp the points of value. The ten-year-old boy will be found old enough to catch the idea and make logical comparisons.

A Valuable Year

Isn't it surprising, when you come to think of it, how much we have learned this year?

We have learned something about how to save foods. We have not learned it all, but we have started in earnest, and when we start in earnest we accomplish something.

We have learned something about how to economize on labor, and that is a great lesson and worth much money to us in these times of scarcity of help.

We have learned something of how to get bigger yields off the same amount of ground, and we have learned that it pays to do it.

"It is an ill wind that blows nobody good," and even war has its lessons of worth.

Washington Gleanings

Charles Alexander of Oakesdale recently shipped a car of 69 head of hogs and three steers to Spokane and received for the lot a check for $2828. His hogs brought 18 cents per pound.

John Romaine sold 1300 acres to Ben Dickinson at $100 an acre recently. The farm is about eight miles north of Dayton and has been the home of Mr. Romaine and family for 35 years.

Patrick Hughes, a pioneer farmer of Walla Walla county, has bought from Matt Ennis, 1889 acres just north of Walla Walla for a price reported to be around $275,000, or more than $145 an acre.

Grain men have been shipping daily from Rosalia about 40,000 bushels, which is going to the Coast. Most of the grain is going on consignment and will be subject to federal weights and grades.

Nearly 500 dairymen and breeders of registered stock attended the sale of Carnation and Hazelwood registered Holsteins at Kent recently. Most of the animals went to practical men to build up herds.

E. F. Benson, state commissioner of agriculture, has outlined in a letter to be read before the national convention at Washington, D. C., his plan for enlisting the school children of the state in the food cultivation campaign.

Sixteen thousand acres of land in Kittitas county, which was withdrawn from homestead entry in 1905 in connection with government plans for the Kittitas reclamation project, have been restored. Only 3120 acres, however, are open to entry.

Instruction in sugar beet culture will be made a feature of the program at the sixth annual farmers' institute, to be held at North Yakima late in January, according to W. S. Thronber, director of the extension service for Washington State college.

The Thurston County Dairy and Farm Products association, which has a contract with Camp Lewis to supply farm products used at the camp, is worried about the lack of farmers coming into the association. So far only half enough men have signed up.

According to estimates, 70 per cent of the apple crop of the Wenatchee valley has been sold. Of the 7000 cars, which is the estimate for this year's crop, about 5000 cars have been contracted for. The amount of money represented thus far in the purchases is $3,627,500.

What Others Say

Journal, Kent: It costs no more to feed, house and care for a good cow than it does a poor one.

Tribune, Pullman: It is a sad fact that farm life is not as enjoyable as it should be on account of the reluctance of farmers to spend a few thousand dollars to make life worth while.

East Washingtonian, Pomeroy: This is the time in which to prepare for winter. Some years cold weather begins in the early part of November. Put the farm machinery under cover, get the barns and other outbuildings in shape for winter use.

Herald, Concrete: The shortage in the supply of the iron and steel, which this country must have in increasing amounts if the war is to be won, has developed a new source of income for the farmer. The farmer who turns in his junk while the present prices prevail is likely not only to make a clear profit over the cost of hauling and freight, but through increasing the iron and steel supply, he is contributing to the successful prosecution of the war.

Working Under Heavy Stubble or Straw

By George Severance, Pullman, Wash.

The injurious results so frequently experienced from working under heavy stubble or straw results from making no effort to break down the straw or stubble and partially incorporate into the soil before plowing under. We, therefore, practice and advocate fall discing prior to plowing. A great mass of untouched stubble or straw plowed under in May, when it is thoroughly dry produces the best possible conditions for drying out the furrow and the soil underneath. I believe that in the dry regions it is a good plan to top-dress the wheat very lightly with straw, applying the straw perhaps in early winter to catch and hold any snow, and to be beaten down and softened by same.

The State Fair Talks to Me

I Will Tell You Some of the Things It Told Me

By Granville Lowther.

Everything we see or hear ought to furnish some lesson and enlarge our fund of knowledge. The state fair is no exception.

I learned that automobile races will attract much larger crowds than horse races. This is a steam and lightning age and people like speed. If an automobile will make a given distance in less than half the time a horse can make it, people like the machine.

I learned that the freezing process is being resorted to for the preservation of certain foods, especially fruits, because of the high price of cans. It is said by food experts that foods can be kept more perfectly and at less expense by the freezing process than by canning.

I learned that a farmer out of touch with city life where electric lights are not available from the central power plants can for $500 install electric motors, with all necessary machinery, and not only light the home, but pump water, wash, churn and many other things not requiring more than half a horsepower. This will give to the farmer a waterworks system if he desires it and many other modern conveniences.

I learned that for $38 you can buy an attachment to your automobile that will run at the rate of six to 12 horsepower, and that by this means the automobile motor will do the work of a motor that will ordinarily cost more than $100 in sawing wood, running machinery about the farm, etc.

I learned that the children are being taught now, as never before, in the department of home economics, and the next generation of women will be better cooks and housekeepers than their mothers have been.

I learned that the state food department is vigorously prosecuting a firm in Seattle for selling old, rotten, canned salmon and other canned foods that are actually full of poisonous bacteria and fit only for fertilizers.

I learned that the old belief that corn could not be successfully grown in this state has been proven false. In fact, I have known that for several years, but have never seen it so fully demonstrated as it has been this year.

Well, I learned a good many things, but what is the use of telling all you know? If we told all we know about ourselves I presume our neighbors would not speak to us; but if they knew all the causes everything would be excused.

Hairy Vetch

Is Well Adapted to Timber Lands

By J. R. SHINN, County Agriculturist.

One crop that demands a great deal of attention especially in the northern section of Spokane county on lighter soils is hairy vetch. This crop has done remarkably well during the last year and wherever it has been tried, the farmers are very enthusiastic over it. I would not recommend it for the richer wheat lands of the Palouse country, but is remarkably adapted to timber lands and sandy soils. This crop is like peas, in that it needs to be inoculated, and for this purpose, soil from about the roots of peas which have grown successfully in the garden, may be used to inoculate vetch.

Inoculating Vetch.

First of all, the seed is moistened and then the soil is dusted over the moistened seed until each seed is coated with dirt. After this, it is drilled into the ground usually with wheat or rye, using 10 to 15 pounds of vetch seed per acre with the usual amount of grain. This variety of vetch is seeded in the fall, though early spring seeding has given good results in some instances.

Potato Crop Diseased.

The potato harvest this season has been more or less of a disappointment especially to those parties who failed to treat their seed. As a result of lack of treatment with corrosive sublimate there is more or less common scab and rhizoctonia or little potato in most fields.

Another disease that is quite common is fusarium wilt. The last two diseases mentioned are apparent in the fields and may be located by the appearance of the dead vines which mature far in advance of the general crop. These kinds of potaoes should be marketed at once and above all things, not saved for seed. It would be a paying thing for most potato growers to dig their seed at this time and taking only the late growing, healthy vines to furnish their seed for next season's crop. In some instances, these may have second growth, but the good potatoes of healthy hills should be kept even though few have made second growth.

Seed for Irrigated Sections.

Some of our growers have some excellent Netted Gem seed which are in demand throughout the irrigated potato growing sections, and they have been encouraged to harvest these potatoes for seed purposes, selecting only the disease-free plants for furnishing such seed stock.

Carrier Pigeons.

French scientists believe that carrier pigeons are influenced by magnetism and that, with the spread of wireless telegraphy much less dependence can be placed in them.

Would Chop and Soak Hay.

To the Editor: In the issue of September 20th, E. L. Potter writes an article: "Shall We Chop Hay?" My answer is yes, chop the hay and some more. Soak the hay in a tank using a molasses liquid. By so doing one can double the value of his hay. A valuable feed can be made for the dairyman by cutting and soaking the straw mixed with a light grain ration.

Trouble With Separators.

During the months of August and September O. N. Hoppes, in charge of the Junction City cow testing association, has made tests of the cream separators on the farms on the members and finds that some of the separators are not doing efficient work.

Mr. Hoppes states that an efficient separator should not leave more than three-one hundredths of 1 per cent butterfat in the milk. If there is a higher per cent there is direct loss to the owners.

Five separators were found in the association, composed of 18 members, that left over eight-one hundredths of 1 per cent butterfat in the skim milk. When the test was as high as 110 one-hundredths it meant a loss of one pound of butterfat in every 1000 pounds of milk. On some of the farms this would mean a loss of a pound or more of butter fat a day.

This work seemed to interest the members a great deal. Three have purchased new separators after learning the results of the test on their machines.

Mr. Hoppes states that in practically every instance the largest losses occurred from old machines or those of the cheaper makes.

One of the separators doing the best work was the one owned by Mr. Holcomb of Junction City. This machine is three years old and has separated the milk from 20 to 30 cows continually during this period.

Raise Your Calves on

Blatchford's Calf Meal

and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.

Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

Test 519 Cows During Month.

According to the report of Will W Henry, official tester of the Stillaguamish (Wash.) Cow Testing association, there were 519 cows tested during the month of September. The average pounds of milk per cow was 609.3 pounds; average pounds of butterfat, 28.12 pounds; average cost of feed, $4.16.

The three herds with the highest average butterfat production are being fed an allowance of "mill feed" to supplement the pasture. At this time of the year it is hard to keep the herd production up even though they may have good pasture, says Mr. Henry. It is a significant fact that the men who are feeding a reasonable allowance of concentartes have the highest herd production, and at the same time are making a greater profit above the cost of feed, than those men who are not feeding.

The highest average herd production for the month was that of W. G. Grimm, 27 cows averaged 40.73 pounds of butterfat. There were eight cows in the 50-pound class. Four of these belong to W. G. Grimm, one owned by M. Linkquist, one by Max Eitzenberger, one by John Ness, and one by C. Olsen.

Two unprofitable cows were sold for beef during the month.

In Tillamook County.

Seven hundred and thirty-eight cows were on test in the Tillamook (Ore.) Cow Testing association for the month of August. Of this number 112 produced over 40 pounds butterfat and 44 qualified for the honor roll of 45-pound cows.

The high herd fat average for the month is held by Cary and O'Brien with four cows producing an average of 798.25 pounds milk and 44.33 pounds fat. The highest milk average goes to Charles Kunze with a 965.24 pounds average for 34 cows. The lowest herd made an average of 499.9 pounds milk and 22.68 pounds fat.

The high cow for the month is a grand Guernsey owned by Mike Abplanalp, producing 1596 pounds milk containing 68.65 pounds fat.

Liberty Wheat-Bacon

(Continued from page four.)

the total cereals, while the 200 million bushels of corn consumed is only 12 per cent of the cereals.

During the last three years of war there has been a greatly increased demand for meat food in Europe. The men in the armies, the men engaged in the shops and the millions of women forced to physical labor need meat twice daily when before the war meat twice a week was a luxury. Even before the war there was a growing world demand for meat products; the meat supply not keeping pace with the growing population.

The exports of animal products and fats of the United States jumped from 500,000,000 pounds before the war to 1,500,000,000 pounds in 1916-17.

The food animals of the allies have decreased

33,000,000 head

since the war began. Not only is there a decrease in the actual numbers of food animals in Europe, but there has been a noticeable decrease in the average weight and the annual output of dairy products per animal.

One of the big causes for the decrease in the European meat output has been the lessened feed supply caused by making soldiers of the farmers, as well as by decreased imports of feed caused by the shortage in shipping.

All European countries have reduced the consumption of meat and clothing among the nonwar workers to the point that would seem impossible to the American people. Despite this the war has increased the actual meat, fat, wool and leather consumption in the allied countries.

The world shortage of meat and dairy products, animal fats, industrial fats, wool and hides, bids fair to reach far into the future.

Butter and Milk.

The decreasing herds and the lack of fodder mean a steady falling off in the dairy products of our allies. They have been asking for larger and larger exports from us. Last year we sent them three times as much butter and almost ten times as much condensed milk as we used to send them before the war. Yet we must not only keep up to this level, but do still better.

As to Sugar.

Before the war France, Italy and Belgium produced as much sugar as they used, while England drew most of its supply from what are now enemy countries. France and Italy are producing less than they need, while England is cut off from the source of 70 per cent of her usual imports. These three allied countries must now draw 1,500,000 tons more of sugar than they did before the war from the same sources from which we draw our supplies. We must divide with them. We can do it by economizing. The usual American consumption per person is just double that of France.

Let Us Remember.

Let us remember that every flag that flies opposite the German one is by proxy the American flag, and that the armies fighting in our defense under these flags can not be maintained through this winter unless there is food enough for them and for their women and children at home. There can only be food enough if America provides it. And America can only provide it by the personal service and patriotic cooperation of all of us.

The small daily service in substitution can be done by all; the saving in waste by the majority, and the lessening of food consumed by many. This individual daily service in 20,000,000 kitchens and on 20,000,000 tables multiplied by 100,000,000, which is the sum of all of us, will make that total quantity which is the solution of the problem.

Compact Folding Table.

There are 10 joints in a New York inventor's table which can be folded more compactly than most such devices.

Alfalfa Experiments

Even F. Benz, the potato king of the Yakima valley, is not so carried away with his farm specialty that he altogether forgets all-around farming. For instance, he writes the Farmer, in response to an inquiry that he had 70 acres of irrigated alfalfa this year, yielding about four tons per acre. He adds that he does not use alfalfa for pasture, but finds it good feed for horses, cattle, dairy cows, hogs, sheep and poultry. There has been no increase in alfalfa acreage in his vicinity. He adds that inoculation is not necessary in his section for the successful growing of alfalfa.

"Alfalfa grows like a weed for us and we think it is fine," writes Jessie B. Grey of Adna, Lewis county. "We raise three acres of alfalfa that is not under irrigation. We pasture the third crop. We think alfalfa great feed for dairy cows, but have not fed it to other stock.

Mrs. L. Chappell of Winona, Whitman county, tells of her experience with alfalfa: "I have 25 acres of alfalfa, 13 acres is an old bed. It did well this year. It is good along the river bank. This piece is sub-irrigated and is 15 years old. In 1916 it was disked thoroughly. Last spring there was nothing done to it. We disked once around and it looked so near dead we quit. My new bed of 12 acres we disked and ruined it. Got one short crop and some fall feed. Will have to reseed in the spring. It hurts it to pasture it very close in the fall. I can work my horses hard on alfalfa alone and keep them fat and slick. My dairy cows do better on alfaufa than anything I have for them and I never buy millfeed while the alfalfa lasts. My hogs enjoy it equally as well, never have a sick hog when so fed. Brood sows may be wintered cheaply. My chickens lay all winter and enjoy a bucket of alfalfa leaves ever morning."

Wahkiakum Testing Association.

In his September report R. M. Turner finds that 13 cows in the Wahkiakum, Wash., association, produced over 50 pounds of butterfat for the month. Faith, the 3-year-old grade Jersey in the William Dawson herd, again leads the association with a butterfat yield of 61.6 pounds. J. R. Burch had the high herd with an average butterfat yield per cow of 40.3 pounds.

Whidby Island Report.

In the Whidby Island (Washington) Cow Testing association during the month of September there were 242 cows tested, averaging 462 pounds of milk and 23.36 pounds of butterfat. The average cost of food was $3.12.

Veterinary

Dr. S. B. Nelson

Cow Holds Up Milk—I have a cow that is in the habit of nursing herself. Is there a cure for this? I also have some cows that hold up about helf of their milk.

N. H. B., Rupert, Idaho.

It is most difficult to prevent a cow from self-nursing. There are many things recommended, but they all of them fail in some cases. I was told about the following a short time ago, and that may be of value:

The owner had a bull ring flattened on the lower side, and over this flat surface of the bull ring he had a piece of heavy tin folded. The tin was approximately 4 by 6 inches large, with a little extra edge to go over the flat side of the bull ring. Now he put in the ring, just as if he was going to ring a bull, and then put the tin over and folded it so as to form a cover over the mouth which would hang from the nose down over the mouth, and which she could not flop up to try and nurse herself. He said that in this case after he had tried many others this stopped the trouble.

I would be of the opinion that your cows hold up their milk because of nervousness. I would suggest to you that before you milk the cows you wash the udder with hot water. Wash them gently for a minute or so and then gently rub them dry and begin to milk, milking fairly rapidly, but not with much action in the arm or pulling of the teats if possible. This washing with hot water will tend to allay the nervous condition and make the cow forget she is being milked. You see the reason the cow holds up the milk is because she becomes self-conscious and takes control over the nerves which control the size of the blood vessels in the udder.

Milk Fever—What is the cause of milk fever in dairy stock? Is it caused by milking too soon after calving? SUBSCRIBER, Oreana, Idaho.

The specific cause of milk fever in milch cows is not known. It is found, however, that certain treatments tend to prevent it. It is always found in heavy milkers. It has been recommended that a heavy milker should not be milked for 12 to 24 hours, and then not milked dry. For several years I have recommended that for two weeks prior to calving the cow should be fed only the driest of feed, and not very much of that. To keep her from becoming constipated she should be given from a quarter to a half a pound of Epsom salts daily. The Epsom salts should be given in a quart of water. Immediately after calving the food can be gradually changed so as to become laxative in character, and after the first day or two she can be put on to a moderately full feed and gradually be brought up to her complete standard of feeding. This system of treatment has given good results in many cases where the cows were formerly affected with milk fever.

Warts on Head and Neck—What can be done to cure warts on a calf's head and neck?—F. S. P., Bremer, Wash.

Apply castor oil to the warts morning and evening. Keeping the air away from them in this way frequently causes the wart to disappear.

Back to the Bible.

I even I, am he that comforteth you. Who art thou that thou shouldst be afraid of a man that shall die, and of the son of man which shall be made as grass?—Is. 51:12.

He that hath no rule over his own spirit is like a city that is broken down and without walls.—Proverbs, 25:28.

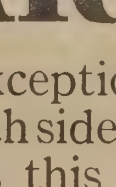
Retained Afterbirths

Cows can be made to clean easily without using force

When cows do not clean properly after calving, it indicates a germ infection which is likely to run through the entire herd and result in abortion and barrenness.

Our Government and other authorities assert that retained after-birth, premature calving, sterility and calf scours are all the result of infection by the abortion germ, and retained after-birth is one of the first symptoms.

The after-birth should be removed at once without force and the cow treated with a powerful antiseptic to prevent her becoming an aborter or sterile. Authorities state that while there is no absolute cure for abortion and sterility, nevertheless the infection can be controlled by prompt treatment and the animal saved for successful breeding.



B-K is scientifically correct for this work. Used as a douche for the uterus, it quickly brings the after-birth, dissolves the slimy albuminous matter, kills the germs, stops discharges and controls the infection. B-K does not cause straining, but is soothing and heals the tissues.

Other germicides such as carbolic acid, cresol, Lugol's solution, iodine, etc., tend to irritate, do not dissolve the slimy albumins, but tend to coagulate or thicken them, thereby preventing destruction of the germs and cleansing of the tissues.

B-K is convenient. Just add water as directed, and you have your treatment for calves, bulls and cows and also your disinfectant for general use.

B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased five hundred per cent in three years. A well known breeder of registered stock says:

Clean and clear as water

Awarded Gold Medal Pan.-Pac. Expo.

"B-K is of great value in douching cows which do not clean readily after calving. Have never known it to fail to bring all things right before the fourth day."

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted everywhere.

Write us for more evidence from users and for our bulletin No. 52, "Contagious Abortion."

Sugar Beets for Fowls

To the Editor: Can you advise me whether or not sugar beets will make good winter feed for chickens and, if so, how to preserve them and prepare them for feeding? O. J. C.
Outlook, Wash.

Sugar beets are a very good green or succulent feed for chickens. I have frequently fed them. They may be hung up where the fowls can pick them at will. A good plan is to stick them on a nail on the wall. At first they should be cut in two and the fowls will then sooner learn to eat them. When they once learn to eat them it will not be necessary to cut them. It is not necessary to cook them nor to cut them up fine, though it might pay for two or three days to do this in order to get them started. Fowls are a little shy of new dishes and need training. If given all the fresh sugar beets they will eat they will need no other green food. It will be noticed if they have no other green feed nor yellow corn that the eggs they lay will have pale colored yolks. If the eggs should be too pale, and a little alfalfa, kale, cabbage or other green stuff. Sugar beets may be preserved in pits or cellars, the same as other vegetables. J. D.

To Exterminate Mites

To the Editor: Will you please tell me what to do to clear my henhouse of chicken mites? G. E. M.
Union, Ore.

If the house is badly infested and mites are found on the walls as well as perches and nests, spray the house thoroughly twice with coal oil or strong kerosene emulsion, the second time a week or ten days after the first, and paint the roost perches with Kreso dip and coal oil, one part of the former to three of coal oil. This may be put on with a paint brush. All sides of the perch should be thoroughly treated. Crude petroleum or creosote may also be used. The painting and spraying should be done in the morning, so as to give the paint a chance to dry before the fowls go to roost at night. J. D.

Hens Get Lame.

To the Editor: Can you tell me what is the matter with my hens? They seem to be in the best of health, but all at once they get lame in their legs. About two weeks of this and they die. What gives hens liver trouble and how can you tell when they have it? How does tuberculosis affect hens and how could one tell when they had it? E. H. H.
New Meadows, Idaho.

Lameness in chickens is sometimes a symptom of tuberculosis, but they are sometimes lame from other causes. Usually they lose flesh, but not always. A surer way to tell if it is tuberculosis is to dissect one of the fowls and examine the liver especially. It is frequently enlarged and nearly always shows yellowish spots on it. The intestines very often are infected. Many small growths will be seen on the intestines varying in size from a pinhead to a peo and often larger. These are the growths caused by the tubercle bacilli, germs that can only be seen with the aid of a microscope. But the symptoms are unmistakable.

There is no known cure for the disease, and if the flock is badly infected the quickest way to get rid of the disease is to kill off all the fowls and start new on fresh ground with healthy fowls. J. D.

Poultryman and Patriotism.

The poultry products in the United States are about large enough to pay for the support of a million soldiers, but the soldiers can not live on money; they must have bread. They need bread more than money. The poultry keepers have it in their power to furnish the allies millions of bushels of wheat without turning a furrow or doing any labor. All that they need to do is to study a little—to use the head a little. By studying rations and food values they will be able to feed their fowls as profitably as though they continue to feed millions of bushels of wheat. Poultry keepers have a great opportunity to show patriotism. Feed the fowls corn, oats and barley and save the wheat. It can be done, and should be done. From fifty to a hundred millions of bushels of wheat would be available for bread-making if poultry keepers would do this. In Oregon, Washington and Idaho, two or three millions of bushels could be saved if the poultry keepers would eliminate wheat from the rations. With bran and shorts and middlings, and corn and oats and barley the wheat is not essential. J. D.

Get Together.

Poultry keepers should get together in every community and buy feed by the ton or carload. If necessary they can import corn from the corn states by the carload. But by getting together and buying in quantity they should be able to get satisfactory prices from the responsible grain dealers. The new corn crop will be coming in before very long, and plans should now be made to get it at the right price. J. D.

Sidelights

He Gets It Both Ways.

The Bachelor—A man must have a lot of trouble keeping a wife properly gowned these days!

The Married One—Not nearly as much as he'd have it he didn't.—Life.

Had to Obey Orders.

An old colored uncle was found by the preacher prowling in his barnyard late one night.

"Uncle Calhoun," said the preacher, sternly, "it can't be good for your rheumatism to be prowling round here in tht rain and cold."

"Doctor's orders, sah," the old man answered.

"Doctor's orders?" said the preacher. "Did he tell you to go prowling round all night?"

"No, sah, not exactly, sah," said Uncle Cal; "but he done ordered me chicken broth."—Sacramento Bee.

Sight and Unseen.

Ebenezer Holcombe had a 1200-pound hog, which he had exhibited in a tent at the fairs for three years, charging 10 cents admission.

One day a traveling man who was passing through the town in which Mr. Holcombe lived called at the house and asked if he might see the hog of which he had heard so much. Ebenezer proudly led the way to the hoghouse, but at the door he turned.

"Cost you 10 cents," he drawled.

The visitor took a dime from his pocket, passed it to the farmer and turned back.

"Why, you ain't seen the prize hog!" called Ebenezer.

"Yes, I have," retorted the traveling man. "I've seen him," and continued his walk back to the country store.—Harper's Magazine.

Proof.

It was the rush hour in one of those quick lunch places where you help yourself and use the arm of your chair as a table. A man called for a piece of pie, and chose a chair; then, remembering that he wanted coffee, he dashed over to the service counter. When he returned with his coffee his chair was occupied by another hurry-up diner.

"Excuse me," said the first man, "but that is my chair.'

"How do you know it is your chair?" demanded the ococupant, in a surly fone.

"Because I can prove it," stated the first man.

"How can you prove it?" asked the occupant.

"By your trousers," was the reply. "You are sitting on my pipe."—Pickings.

IN THE ORCHARD

Write to the Editor

GRANVILLE LOWTHER
Editorial Contributor

The Fruit Packers

There has been so much said and written recently about the conflict between the employer and employe that I concluded to make some personal investigations and determine if I could what are some of the real causes for dissatisfaction on the part of the wage worker and of complaint on the part of the employer. I visited a number of orchards, but in this article can only give the experience of one orchardist who employs about 30 persons, divided into two groups, under two superintendents in two different orchards.

I first talked with the employer and told him what I wanted. He gave me all the information available, and began by saying: "We have some old pickers and packers who have been with us for years; they are reliable; we like them, and can always depend upon them. The trouble begins when we undertake to make up the remainder of our crews from persons we do not know. This year there have been an unusual number of families seeking employment as a whole or group, and one would not work unless all could be employed. A man and his wife and perhaps two or three children want to work together. There is generally one or more in the group that could be employed profitably, but generally women are not adapted to fruit picking. Especially is this true where the trees are large, and long, heavy ladders have to be moved from one tree to another, in order to reach the topmost limbs. Children are not good pickers; they tire to easily and work by spurts. In one case we have done well in employing a man and his wife, for the man is a fair worker and his wife is a dandy."

"You mean a peach," I suggested. "Is not the word dandy rather too masculine for a woman?"

"Yes," said he, "but the word peach is too low in the order of nature, if you insist on being technical about it."

"I do not insist," I said, "but I am pleased to have you go on with your story."

"Well," said he, "in another case, I employed a man, his wife and daughter. They are all good, have a home over on the west side, a little tract of land mostly in berries; but their fruit is all harvested before our fruit season comes on.

"I have one man employed who has a homestead and who wants to make money enough to make some improvements on his land. Men of that class are generally reliable because they have some incentive besides temporary daily needs. They are building for the future. The men you can not trust, as a rule, are those without families, without homes, no fixed purposes either to marry, acquire property or save money. They will work a day or two if they have not money enough to pay for the next meal, then they will do some mean trick to damage you about as much as their work was worth and skip out. Yesterday morning I took one man out in my machine, set him to work at 7 o'clock in the morning on a contract to pay him three dollars a day if he made good and if he made good and stayed with me through the season I would give him 25 cents a day extra; making three dollars and a quarter per day for the season. Just before noon I went out and he was up in the top of the tree shaking the apples off onto the ground. I gave him a check for one dollar and forty cents, expressed my appreciation of him in language that would not do to print and told him to get off the place and do it quickly."

"There are this year an unusual number of persons with tents and small camping outfits. We always encourage that, giving them good places for pitching their tents, help them in other ways and often furnish them with extra equipment. These persons generally have the saving habit and will do better than the average of those who room in town or who carry their beds on their backs."

"Do you not think," I said, "that those rooming in town get better accommodations than those who live in tents?"

"No," he said, "and they pay too high for the poor accommodations they do get. Besides when they get into town, they meet up with a lot of professional loafers and 'I won't workers' and get the loafing habit and the microbe of discontent."

"Last week," continued our informant, I put an ad in the paper for fruit pickers. In response to that ad I had 18 calls over the phone. Nearly all of the 18 had to have all the conditions explained, of course, and of the number seven said they would come and go to work. Of the seven who promised, only two showed up and one of them was no good, so I let him go at the end of the day. However, the other man is a good worker and it paid to advertise in order to get him. My wife is of a contrary opinion, for she had to answer most of the phone calls, and spent most of the day at it."

"Have you had much trouble with the I. W. W.s lately?" I asked. "No; at the beginning of the season it looked as if we would have trouble, but the United States troops and a few arrests have had a salutary effect so they they can not in a large way work their program."

"Yesterday evening," continued my informant, "four men called up and wanted work. I engaged them over the phone, they were to meet me at a certain point in town, where I was to take them in my machine to the orchard for work. This morning not one of them was present at the time and place. You see under the circumstances how difficult it is to keep a packing crew going? The packers, of course, are working by the box, making good money and are irritated if they are not kept supplied. The sorters are working by the day, and their time goes on whether they work or not, so they are not fretting. Had it not been that I anticipated trouble this year and built a storage house with capacity for about four carloads, I would be all balled up, but I had more pickers than I needed for a few days and had several hundred boxes ahead."

Such are some of the woes of the employer. Later I want to treat the other side of the question, and tell some of the difficulties under which the wage worker labors. G. L.

no limitation of ground

Whatever the condition of the soil, the YUBA Ball Tread Tractor is the master.

Here's the tough adobe land requiring deep plowing to turn up for the air to penetrate and disintegrate. The strength of your best teams is worn out, and the soil is not plowed deep enough.

The powerful YUBA forces its way through it like a tug boat hauling a great ship to sea. It is built for this hard job and does its work successfully.

One man and a YUBA does the work of several men and a lot of horses—and does it better.

Have you soft, sandy soil, where the broad tread of the YUBA will not sink—where the time is valuable and one man could cultivate forty acres a day?

Have you soil where horses sink deep and make slow progress—where the evenly balanced weight of the YUBA Ball Tread would not pack the ground—where the perfect mechanism, the accurate machining, and the high-grade materials used in the construction will save break-downs and stopping for repairs?

U. S. Transport Sunk

First Sea Disaster for This Country

This country's first sea disaster in her war with Germany was recorded last week when a torpedo sent the U. S. transport Antilles to the bottom. The tragedy was comparatively insignificant when viewed alongside the great disasters of the war, however. Approximately 70 men were killed. The vessel was returning from a trip to Europe, where she had delivered a cargo of soldiers, it is understood. The war department gave out the statement of the loss of the ship as soon as it was officially reported, keeping faith thereby with the people in its promise when the war began that disaster to any American interests would be published.

Survivors of the sinking report that neither the submarine nor the torpedo were seen by the persons aboard, but that the explosion was so terrific that the vessel sank within five minutes.

Germany Sinks 11 Ships.

Report has been made of the sinking of 11 ships in a merchant squadron in the European waters by German war vessels. Two British convoying vessels and nine freighters were included in the list of losses. The vessels were Scandinavian, but carrying allied commerce. England lost some 135 men in her convoys, and it is thought lives were lost on the merchant ships also.

Increased Postage.

All postoffices throughout the country have been notified by the postal department at Washington that on November 2 the new postal rates under the war tax bill will go into effect. On and after that day it will take one cent more per ounce or fraction of an ounce to carry first class mail matter. That is, a letter will require 3 cents and a postal card 2 cents. Letters weighing two ounces will require 6 cents, where heretofore they have cost only 4 cents. On parcel post matter an additional cent will be charged on every package that has heretofore required 25 cents postage or fraction of 25 cents postage.

Day of Prayer Proclaimed.

President Wilson has issued a proclamation setting aside next Sunday, October 28, as a day for prayer throughout the entire nation for the success of this country and her allies in war. The proclamation is issued at the request of congress, made in a resolution just before adjournment two weeks ago.

Patriotic Day.

Yesterday, October 24, was a day that will go down in the history of the United States as one of its great patriotic days. It was Liberty day, so proclaimed some time ago by President Wilson for the purpose of arousing patriotism in favor of the great second Liberty loan. The occasion was generally observed throughout the country, parades, speeches and subscribing for Liberty bonds marking the day in thousands of small and largs towns and cities.

Shipyards Strike Over.

After nearly a month's absence from work, owing to their strike, the workers in the shipyards of Seattle and Portland have returned to work and are now busy turning out ships to handle the unusually heavy sea traffic of the war.

What Food Costs.

A comparison of food costs of the principal cities of the United States made public by the health department shows that the cheapest wholesome dietary for a family of five consisting of man, wife and three children, costs $9.89 a week in Chicago, which is more than any other city in the country. The same standard dietary costs $9.67 a week in New York city, $9.25 in New Orleans, $9.14 in Boston and $9.12 in San Francisco. The average for 24 cities and towns in the United States was $9.43.

Roosevelt Blind?

According to a newspaper report, Theodore Roosevelt has the sight of only one eye. The former president is quoted as having told a group of newspaper reporters that while he was president several years ago, he was having a friendly boxing bout in the White House gymnasium when his opponent landed a right swing on his left eye. "The punch broke some of the blood vessels, and I have not seen from that eye since," Colonel Roosevelt is quoted as saying.

Dry and Cold.

An unusual fall condition prevails throughout the greater part of North America. Reports of the weather bureau indicate that there is a general lack of rain, and that temperatures have in many districts fallen quite low. In the northwest, many districts are suffering for lack of rain to give the fall grain a start, and low temperatures have done some damage to late crops that are still unharvested. Generally, however, the fall has been ideal for harvesting.

Will Report to Congress.

The committee appointed by congress just before adjournment to investigate the charges of treasonable actions on the part of Senator La Follette of Wisconsin will make no report of their findings until congress reconvenes in December. The investigation may occupy most of the time before the assembling of the senators and representatives. Senator La Follette has been granted the privilege of appearing before the committee to defend himself, and W. J. Bryan, former secretary of state, is one of the leading witnesses against him.

German Navy Disturbed.

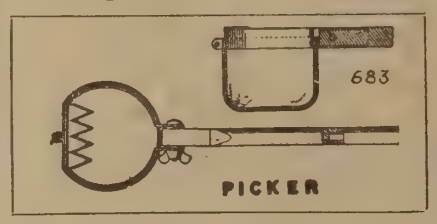
Censored reports of the mutinies in the German and Austrian navies continue to reach the public, giving foundation for the belief that a situation little short of serious exists. According to statements that appear to have reliable sources, thousands of the men of the two navies have revolted, charging inhuman treatment by officers, together with bad food. It is believed in some quarters that the German attack in the gulf of Riga is inspired partially by the hope of the German leaders that the discontent can be wiped out by giving the navy something to do except lie idly by guarding ports. Heretofore the only opportunity naval men have had to participate in the war in an active way was through the submarines, and many of them disliked this class of fighting, it seems.

Increase Freight Rates?

Eastern railroads are preparing to place before the interstate commerce commission a program to provide general relief from what they claim to be serious financial difficulties. Executives of the roads so notified the commission when they appeared in connection with proposed increased rates on a long list of commodities not included in the raise granted in the 15 per cent rate advance case last June.

What form the railroads' program will take was not disclosed, although it was broadly intimated that the commission would be asked to authorize a general rate advance.

Fitzsimmons Is Dead.

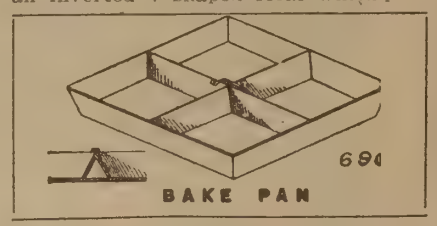


Bob Fitzsimmons, one time champion heavyweight pugilist of the world, is dead. Pneumonia took his life at Chicago Sunday, after a hard fight put up by the former champion for five days. Fitzsimmons had been on the vaudeville stage for some time, but more recently had joined his wife in an evangelistic campaign, having declared himself a reformed man.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

Fruit Picker.



The frame and jaws of this picker are made of stout wire and the pouch of netting or cloth. It is used to gath-

er the fruit from the high branches. A handy boy could make it, and use it.

Crusts on All Sides.

The partitions of this bake pan have an inverted V-shaped form which permits the heat to reach the inner edges of the dough and produce loaves with crusts on all sides.

Potato Field Offers of U. S. Bureau of Markets at North Yakima, Wash.

Robert L. Ringer of the bureau of markets, United States department of Agriculture, has been in Aroostook county, Maine, the great potato growing section of that state, during the last summer, in the work of organizing potato market information. Mr. Ringer will take up this work for the Pacific northwest, with headquarters at North Yakima. On his way from the east, The Washington Farmer was glad to obtain from him the following information:

The United States bureau of markets will open a field office at North Yakima, Wash., October 29 for distributing information on the potato crop to all growers and shippers of the Pacific northwest. It will issue a daily bulletin, giving such information as the prices being paid the growers in Idaho, Colorado, Minnesota, Wisconsin, Michigan and Maine, together with the wholesale prices in the large cities of the northwest and middle west. This information will be coupled with other data on the shipment and destination of cars, to enable the shippers of this section to know where they can market their goods to the best advantage.

Similar work is being done in other parts of the country, supplying growers of the various perishable products with the daily news they need.

This information is for free distribution to any who will apply for it.

To secure this bulletin fill out the application below and mail to the Bureau of Markets, North Yakima, Wash.

BUREAU OF MARKETS:

Please send me the daily bulletin on the potato markets.

Jerseys Are Sold

Mommouth Man Sells Forty-Six

The dispersion sale of C. P. Hembree's Jerseys from Monmouth, Ore., at Orland, Cal., October 10, was a decided success. The 46 head averaged $164.50. Imported Brilliant Spray, the cow that was grand champion at the California state fair this fall, was bought by Dr. W. H. Hand of Orland for $735. Her yearling daughter went to the same man for $270. Rochelle's Noble Duke, the grand champion bull at the California fair, was sold to W. B. Morteci of Petaluma for $335. Noble Peer's Jewel, a daughter of Noble Peer, a fine show cow, went to Mrs. Forteni of Orland for $450—next to the top price. Imported Fontaine's Golden Lily brough $400, Charles A. Whittesette of Orland being the buyer. Mr. Whittesette also got Glorious Jaunette for $290, and Mrs. Forteni, Croyden's Estelle Fox, for $285. Trill's Buttercup went to A. Standifer of Orland for $260; and Clover Blossom's Noble Boy went to George A. McDermott of Maxwell for $205.

Many of Mr. Hembree's friends advised him against taking a chance on the sale so far from home, but the California people had seen his cattle, knew of their winnings, wanted Jerseys and he feels well satisfied.

H. A.

Milk Situation

Reviewing the milk situation in New York, the Rural New Yorker says:

Last week we got word a few moments before going to press that the milk dealers had surrendered and agreed to league prices and terms. Later developments show some confusion. The dealers assert that they made no contract and no agreement. They say they accepted the ultimatum to pay the prices for the present for the amount of milk they can sell, and that they will refuse to accept any excess or surplus of their immediate needs. They have shut down over 100 plants.

The complaints of consumers and the complaints in the press have called the attention of the district attorney of New York and the attorney general of the state to the matters. Dealers have entered complaints and indictments are threatened by the district attorney. The mayor of the city has also named a committee to investigate. Four investigations in all are promised, and the officers of the league are likely to spend most of their time for a while responding to subpenaes of investigators. The fact that dealers have been in close combination for years seems to have escaped official attention, but they promptly discovered the farm organization as soon as it was able to do any effective service for members.

Good Field Methods

To the Editor of The Washington Farmer: What is the most profitable cow feed that can be grown on spring-plowed sod in an orchard, that will also be most profitable to the orchard? I have thought of soy beans, if they are good. I wish to know when and how to plant and cultivate them, and also how to harvest them; whether to let them ripen and thresh and grind, or feed green, or make hay.

What seeds should I sow and how much to improve an old pasture where there is mostly alsike clover, some red clover and a little timothy? Would harrowing with a spike-tooth (not adjustable) harrow after sowing be good?

Will plow some oat stubble and seed in grass. What grain is best to sow with it for hay? And how many pounds of the grain to an acre, when a good stand of the grass is wanted?

Would you think it profitable to sow carrots very early and harvest them early enough to grow another crop of carrots for soiling? M. I. H.

Stanwood, Wash.

The above questions have been answered by E. G. Schafer, professor of farm crops, Washington State college as follows:

A legume crop planted in an orchard would be more valuable for soil improvement than some other crop. The soy bean however is a warm weather crop and does not do well in Washington, except at some of the lower altitudes. It is not resistant to frost and does not thrive where the nights are cool. When soy beans are planted in the same location that corn is used the soy beans are usually planted after the corn is planted and make their best development during the warm part of the season. They may be planted in rows three to three and one-half feet apart, drilled in a row.

Soy beans may be left in the field until they are mature, in which case they can be harvested with a bean harvester, or with a mower. They may then be threshed and used for feed. In this case the straw would be practically useless as a feed. Soy beans may also be cut green, when the pods are well formed, but when the seed is in the dough stage they may be cured as hay and fed in this manner.

In general, field peas make a much better annual legume crop for Washington and the northwest. They are adapted for growing where the climate is comparatively cool and should be planted as early in the spring as it is possible to get upon the land. They are not injured by frost except at the time of blooming. They may be planted with the ordinary grain drill at the rate of 60 or 90 pounds per acre. They may be utilized as hay or hogged off. The proper time of harvesting for hay is when the pods are well formed and when the seed is in the dough stage. The crop may also be harvested for seed. The seed of field peas makes excellent feed for live stock. The straw may be utilized as feed for sheep to an advantage.

There are four general methods of improving pasture land. First is by cultivation; second, by reseeding; third, by fertilizing, and fourth, by mowing in case of weeds being present. It is often more desirable to seed down a new field for pasture, after which the old pasture may be plowed up and used for some other crop. If it is desirable to retain the old pasture, cultivation with a disk early in the spring may be desirable. I do not believe a spike-tooth cultivator would have much beneficial effect. If the stand of grass, clover, timothy, etc., is poor the vacant places should be disked thoroughly and reseeded. In many cases it has not been profitable to reseed old pastures. This is especially true where they have become infested with weeds.

Whether or not to seed a nurse crop depends largely upon the condition of the soil and amount of moisture available. When there is plenty of moisture a larger yield may be obtained the first year with little detrimental effect on the grass crop. It is advisable, however, to seed the nurse crop lightly, 20-30 pounds generally being sufficient for oats or barley. Barley is one of the best crops to use as a nurse crop as it matures earlier than wheat or oats. It is often desirable to cut a nurse crop for hay rather than let it mature seed. If the barley is used it should be beardless variety.

Carrots are fairly resistant to cool weather and can be planted quite early. However, they usually require a fairly long season to mature. I do not believe it would be feasible to attempt to grow a second crop the same year on land which is planted to carrots.

Roads Good 365 Days a year mean more to the farmer now than ever

Barberton-Greenwich Road, 1½ mile west of Lodi, Ohio, in Medina County. Built by Elyria Construction Co., Elyria, Ohio.

FARMERS living on concrete paved roads have no fear that bumper crops will fail to bring them prosperity. They can market every day of the year in all kinds of weather. Concrete roads are 365-day-a-year-roads. The difference between mud roads and concrete roads is the difference between crops rotting on the farm and crops on the way to the world's markets when prices and demand are best.

Railroads have more than they can do now.

Concrete roads and motor trucks make the farmer largely independent of the railroad. Now, more than ever before, will the farmer value good roads if he has them, and regret their absence if without them.

Be sure you know what a concrete road is.

Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable, rigid and unyielding. Concrete is the material used in building concrete dams, factories, bridges, and big engineering works like the Panama Canal requiring great solidity and strength.

CONCRETE ROADS
Their Advantages
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Concrete roads are not costly to build. They are cheap to maintain. Write for a free copy of Bulletin 136. You, Mr. Taxpayer-Farmer, can have the kind of roads you demand. You will demand concrete roads when when you read this.

THE GOODS YOU SEE ADVERTISED IN THESE COLUMNS ARE RELIABLE

We accept advertising only from firms or individuals whose goods we are convinced are exactly as represented. In writing advertisers please mention this paper.

COMING

IN THE NOVEMBER FIRST ISSUE of this paper we shall give our subscribers interesting surveys by recognized authorities on the live stock breeding situation in the Pacific northwest, and constructive suggestions for live stock breeders and organizations in our own and adjoining states. The issue will be filled with live stock information of practical value to all producers.

A great many of the most prominent and successful live stock men of the Pacific Northwest will use this issue to offer surplus stock they have for sale. Our November 1st issue will therefore prove a very valuable buying guide for all subscribers who are intending to make the right start with live stock of the best blood and type. It will be a decidedly worth while number to keep in some handy place where you can refer to it, because, in a way, it will serve as a directory of reliable live stock breeders in our own section of the country.

Subscribers will find this big live stock number a particularly interesting one in many ways. Watch for it, read it, and then keep it in some convenient place for reference.

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale, the trader of Flambeau, a frontier on the Yukon, has known for years that some day civilization would come and he anticipates it with a strange dread. Lieutenant Burrell, a Kentuckian, with all the Kentuckian's ideas of birth and blood, is sent to this post by the United States government to preserve order. The day he arrives, Necia, Gale's daughter, returns from a mission where she has been studying under Father Barnum. Burrell is surprised to find a girl of her refinement in this country. As they are talking together, a squaw and two gurgling halfbreed children appear. Burrell speaks of them contemptuously and Necia informs him that the children are her little brother and sister, and the squaw is her mother. The next day Poleon Doret, a Frenchman, returns from Dawson, and on the same boat, Runnion, a desperado. In attempting to make Runnion leave Flambeau, Burrell is shot by him and only the ready wit of Poleon saves the lieutenant's life. Poleon brings with him from Dawson an evening gown for Necia. As she, arrayed in this unaccustomed finery, is waiting for him to come to inspect his gift, Meade Burrell happens in. The ease and naturalness with which the girl wears the dress and the extreme fairness of her skin amazes the lieutenant. Necia shows him a ring, inscribed "From Dan to Merridy," which she has always worn on a chain around her neck. She also confesses to a feeling that she, Necia, should be called Merridy. Later Burrell asks Gale if this isn't his second marriage, to which Gale gives the startling reply that he has never been married.

CHAPTER IV.

The Soldier Finds an Untrodden Valley.

During the weeks that followed Meade Burrell saw much of Necia. At first he had leaned on the excuse that he wanted to study the curious freak of heredity she presented; but that wore out quickly, and he let himself drift, content with the pleasure of her company and happy in the music of her laughter. Her quick wit and keen humor delighted him, and the mystery of her dark eyes seemed to hold the poetry and beauty of all the red races that lay behind her on the maternal side. At times he thought of her as he had seen her that morning in the dance-girl's dress, and remembered the purity of neck and breast it had displayed, but he attributed that to the same prank of heritage that had endowed her with other traits alien to her mother's race.

He had experienced a profound sense of pity for her upon learning her father's relation to Alluna, but this also largely vanished when he found that the girl was entirely oblivious to its significance. He had tried her in many subtle ways, and found that she regarded the matter innocently, as customary, and therefore in the light of an accepted convention; nor did she seem to see anything in her blood or station to render her inferior to other women. She questioned him tirelessly about his sister, and he was glad of this, for it placed no constraint between them. So that, as he explored her many quaint beliefs and pagan superstitions the delight of being with her grew, and he ceased to reason whither it might lead him.

As for her, each day brought a keener delight. She unfolded before the Kentuckian like some beautiful woodland flower, and through innumerable, unnoticed familiarities took him into her innermost confidence, sharing with him those girlish hopes and beliefs and aspirations she had never voiced till now.

A month of this went by, and then Runnion returned. He came on an upgoing steamer which panted in for a rest from its thousand-mile climb, and for breath to continue its fight against the never-tiring sweep of waters. The manner of his coming was bold, for he stood fairly upon the ship's deck, staring at the growing picture of the town, as he had watched it recede a month before, and his smile was evil now, as it had been then. With him was a stranger. When the boat was at rest Runnion sauntered down the gang-plank and up to the Lieutenant, who stood above the landing-place, and who noted that the scar, close up against his hat-band, was scarce healed. He accosted the officer with an insolent assurance.

"Well, I'm back again, you see, and I'm back to stay."

"Very well, Runnion; did you bring an outfit with you?" The young man addressed him civilly, although he felt that the fellow's presence was a menace and would lead to trouble.

"Yes, and I'm pretty fat besides." He shook a well-laden gold-sack at the officer. "I reckon I can rustle thirteen dollars a month most anywhere, if I'm left alone."

"What do you want in this place, anyhow?" demanded Burrell, curiously.

"None of your damned business," the man answered, grinning.

"Be sure it isn't," retorted the lieutenant, "because it would please me right down to the ground if it were. I'd like to get you."

"I'm glad we understand each other," Runnion said, and turned to oversee the unloading of his freight, falling into conversation with the stranger, who had been surveying the town without leaving the boat. Evidently this man had a voice in Runnion's affairs, for he not only gave him instructions, but bossed the crew who handled his merchandise, and Meade Burrell concluded that he must be some incoming tenderfoot who had grub-staked the desperado to prospect in the hills back of Flambeau. As the two came up past him he saw that he was mistaken—this man was no more of a tenderfoot than Runnion; on the contrary, he had the bearing of one to whom new countries are old, who had trod the edge of things all his life. There was a hint of the meat-eating animal about him; his nose was keen and hawklike, his walk and movements those of the predatory beast, and as he passed by, Burrell observed that his eyes were of a peculiar cruelty that went well with his thin lips. He was older by far than Runnion, but, while the latter was mean-visaged and swaggering, the stranger's manner was noticeable for its repression.

Impelled by an irresistable desire to learn something about the man, the Lieutenant loitered after Runnion and his companion, and entered the store in time to see the latter greet "No Creek" Lee, the prospector, who had come into town for more food. Both men spoke with quiet restraint.

"Nine years since I saw you, Stark," said the miner. "Where you bound?"

"The diggings," replied Stark, as Lee addressed the stranger.

"Mining now?"

"No, same old thing, but I'm grubstaking a few men, as usual. One of them stays here. I may open a house in Dawson if the camp is as good as they say it is."

"This here's a good place for you."

Stark laughed noiselessly and without mirth. "Fine! There must be a hundred people living here."

"Never mind, you take it from me," said the miner, positively, "and get in now on the quiet. There's something doing." His one sharp eye detected the Lieutenant close by, so he drew his friend aside and began talking to him earnestly and with such evident effect as to alter Stark's plans on the moment; for when Runnion entered the store shortly Stark spoke to him quickly, following which they both hurried back to the steamer and saw to the unloading of much additional freight and baggage. From the volume and variety of this merchandise, it was evident that Mr. Stark would in no wise be a burden to the community.

Burrell was not sufficiently versed in the ways of mining-camps to know exactly what this abrupt change of policy meant, but that there was something in the air he knew from the mysterious manner of "No Creek" Lee and from the suppressed excitement of Doret and the trader. His curiosity got the better of him finally, and he fell back into talk with Lee, inquiring about the stranger by way of an opening.

"That's Ben Stark. I knew him back in the Cassiar country," said Lee.

"Is he a mining man?"

"Well, summat. He's made and lost a bank-roll that a greyhound couldn't leap over in the mining business, but it ain't his reg'lar graft. He run one of the biggest places in the Northwest for years."

"Saloon, eh?"

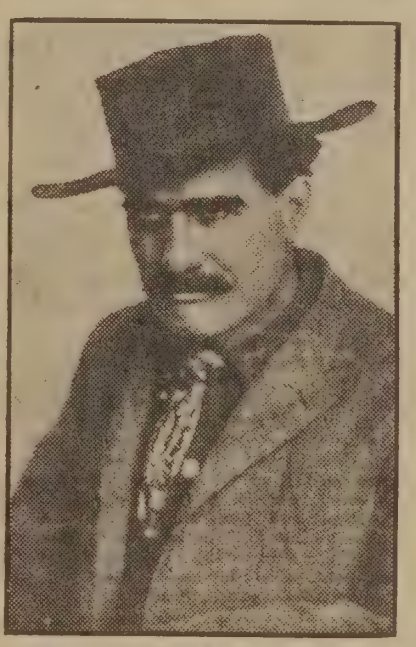
"Saloon and variety house—seven bartenders, that's all. He's the feller that killed the gold-commissioner. Of course, that put him on the hike again."

"How do you mean?"

"Well, he had a record as long as a sick man's drug bill before he went into that country, and when he put the commissioner away them Canadian officials went after him like they was killin' snakes, and it cost him all he had made to get clear. If it had happened across the line, the coroner's jury would have freed him, 'cause the commissioner was drunk and started the row; but it happened right in Stark's saloon, and you know Canucks is stronger than vitriol for law and order. Not bein' his first offence, it went hard with him."

"He looks like a killer," said Burrell.

"Yes, but he ain't the common kind. He always lets the other man begin, and therefore he ain't never done time."



"Come, now," argued the Lieutenant, "if it were the other man who invariably shot first, Stark would have been killed long ago."

"I don't care what would have happened, it ain't happened, and he's got notches on his gun till it looks like a cub bear had chawed it. If you was a Western man you'd know what they say about him. 'The bullet ain't been run to kill him.' That's the sayin'. You needn't grin, there's many a better man than you believes it.'

"Who is it that the bullet hasn't been run to kill?" said the trader's deep voice behind them. He had finished with his duties and now sauntered forward.

"Ben Stark," said Lee, turning. "You know him, John?"

"No, I never saw him, but I know

Runnion.

who he is—used to hear of him in the Coeur d'Alenes."

"That's him I was talking to," said the miner. "He's an old friend of mine, and he's going to locate here."

Burrell thought he saw Lee wink at the trader, but he was not sure, for at that moment the man of whom they were speaking reentered. Lee introduced him, and the three men shook hands. While the soldier fell into easy conversation with the new-comer, Gale gazed at him narrowly, studying him as he studied all men who came as strangers. As he was doing so Alluna entered, followed by Johnny and Molly. She had come for sugar, and asked for it in her native tongue. Upon her exit Stark broke off talking to the Lieutenant and turned to the trader.

"Your squaw, Mr. Gale?"

The old man nodded.

"Pah-Ute, eh?"

"Yes. Why, do you savvy the talk?"

"Some. I lived in California once."

"Where?" The question came like a shot.

"Oh, here and there; I followed the Mother Lode for a spell."

"I don't recall the name," said the trader, after a bit.

"Possibly. Where were you located?"

"I never lit on any one place long enough to call it home."

It seemed to Burrell that both men were sparring cautiously in an indirect, impersonal manner.

"Those your kids, too, eh?" Stark continued.

"Yes, and I got another one besides—older. A girl."

"She's a 'pip,' too," said "No Creek" Lee fervently. "She's plum beautiful."

"All of them halfbreeds?" questioned Stark.

"Sure." The trader's answer was short, and when the other showed no intention of pressing the subject further he sauntered away; but no sooner was he out of hearing than Stark said: "Humph!! They're all alike."

"Who?"

"Squawmen."

"This one ain't," Lee declared. "He's different; ain't he, lieutenant?"

"He certainly is," agreed Burrell. This was the first criticism he had heard of Necia's father, and although Stark volunteered no argument it was plain that his opinion remained unaffected.

The old man went through the store at the rear and straightway sought Alluna. Speaking to her with unwonted severity in the Pah-Ute language, he said:

"I have told you never to use your native tongue before strangers. That man in the store understands."

"I only asked for sugar to cook the berries with," she replied.

"True, but another time you might say more, therefore the less you speak it the better. He is the kind who sees much and talks little. Address me in siwash or in English unless we are alone."

"I do not like that man," said the woman. "His eyes are bad, like a fish eagle's, and he has no heart."

Suddenly she dropped her work and came close up to him. "Can be he the one?"

"I don't know. Stark is not the name, but he might have changed it; he had reasons enough."

"Who is this man Stark?"

"I don't know that, either. I used to hear of him when I was in British Columbia."

"But surely you must know if he is the same—she must have told you how he looked—others must have told you——"

Gale shook his head. "Very little. I could not ask her, and others knew him so well they never doubted that I had seen him; but this much I do know, he was dark——"

"This man is dark——"

"——and his spirit was like that of a mad horse——"

"This mans temper is black——"

"——and his eyes were cruel."

"This man has evil eyes."

"He lacked five years of my age," said the trader.

"This man is 40 years old. It must be he," said the squaw.

Even Necia would have marveled had she heard this revelation of her father's age, for his hair and brows were grizzled and his face had the look of a man of 60, while only those who knew him well, like Doret, were aware of his great strength and the endurance that belied his appearance.

"We will send Necia down to the mission tonight and let Father Barnum keep her there till this man goes," said the squaw after some deliberation.

"No, she must stay here," Gale replied, with decision. "The man has come here to live, so it won't do any good to send her away, and, after all, what is to be will be. But she must never be seen in that dance girl's dress again, at least, not till I learn more about this Stark. It makes no difference whether this one is the man or not; he will come and I shall know him. For a year I have felt that the time was growing short, and now I know it."

"No, no!" Alluna cried; "we have no strangers here. No white men except the soldiers and this one have come in a year. This is but a little trading post."

"It was yesterday, but it isn't today. Lee has made a strike—like the one George Carmack made on the Klondike. He came to tell me and Poleon, and we are going back with him tonight, but you must say nothing or it will start a stampede."

"Other men will come—a great many of them?" interrogated Alluna, fearfully, ignoring utterly the momentous news.

"Yes, Flambeau will be another Dawson if this find is what Lee thinks it is. I stayed away from the Upper country because I knew crowds of men would come from the states, and I feared that he might be among them; but it's no use hiding any longer, there's no other place for us to go. If Lee has got a mine I'll have the one next to it, for we will be the first ones on the ground. What happens after that won't matter much, you four will be provided for. We are to leave in an hour, one at a time, to avoid comment."

"But why did this man stop here?"

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Horse Serum the Latest Treatment for Severe Burns

Dr. R...

Fourteen years devoted to researches, experimental work and observations upon burns ought to be almost enough to learn something about their treatment. As a matter of fact, most discoveries are made after plans and indefatigable effort, seldom by sudden and unexpected accidents, as generally suppose.

Dr. Eward Percy Robinson of New York is the investigator and surgeon who proposes a new remedy for burns. In a recent issue of the Annals of Surgery he explains how he used the serum from horses, the same as that employed in antitoxin treatments, the treatment of bleeders, of hemorrhages of the new-born, after operations and for loss of blood generally, whether from oozing surfaces of wounds or from large veins.

"For some 14 years," says Dr. Robinson, "I have been interested in special lines of work depending on the artificial stimulation of cell proliferation. My success lies in including growth of cellular tissues in cases of atrophy due to the imperfect nutrition, and long suggested the possibility of promoting through analogous processes the repair of tissues destroyed by burns due to fire, hot water or traumatism. In a practice limited to narrowly specialized lines no opportunity occurred for a practical application of these notions until a recent accident to a relative presented conditions difficult or even impossible of treatment by ordinary methods.

"The patient, a woman 45 years old, severely scalded herself with boiling water. The surface area of devitalized skin exceeded one-third of the entire surface of the body. The burns were about equally of first and second degree in extent.

"Within a half hour of the accident the patient was taken to a hospital, where first a temporary dressing of carron oil was applied. On the following day the burns were dressed with an antiseptic ointment. An acute nephritis developed within 24 hours after the accident, but rapidly subsided.

Reasons for Experiments.

"With so extensive a loss of skin it was evidently impossible to bring about satisfactory new skin through skin grafting, owing to the insurmountable difficulty of obtaining a sufficient number of persons willing to part with the large area of skin necessary. Then there had to be taken into account what failures of grafts to take might be expected in treating vast second degree burns, some of which were 10 inches in diameter.

"While I had always believed from my long experience in artificially promoting tissue growth that burns could be successfully treated without skin grafting by supply the cells surviving on the wound's edges nourishment calculated to accelerate proliferation, the opportunity to try out my ideas found me not altogether prepared as to what cell food would produce most satisfactry results.

"Horse serum, heretofore employed in haemophilia, post-operative hemorrhage, etc., and as an application to the oozing surfaces of wounds, occurred to my mind as a possible resort. However, a search for information in current medical literature where this serum could be obtained afforded no light regarding its availability as a local application in cases of burns. So the experiment had to be made without supporting precedents.

Some Extraordinary Results.

"The tests of the horse serum were first made on the 10th day after admission to the hospital, and several large burns of the second degree were selected. Two of these were six to eight inches in length. Normal horse serum containing a small percentage of tricresol was sprayed on the marginal skin fabric, and the parts thus treated were covered with rubber tissue.

"At this point it may not be out of place to mention that with tubes containing only enough serum for a single application, the tricresol acting as a preservative may be safely omitted, thus preventing a certain amount of painful smarting during the spraying process and possibly accelerating cell proliferation.

"The repetition of this treatment several times a day for 10 days resulted in a complete recovery without complications, such as the formation of pus or of proud flesh. The marginal cells thus threw out new cells, not condemned to die of starvation in the devitalized areas, but nurtured by the plasma obtained from animal blood. Instead of requiring four or five months of treatment, as is usual in grafting operations, the patient was discharged from the hospital in 21 days after admission."

"The Barrier" By REX BEACH

(Continued from preceding page.)

insisted the woman. "Why did he not stay on the steamboat and go to Dawson?"

"He's a friend of Lee's. He is going with us." Then he added, almost in a whisper. "Before we returin I shall know."

Alluna seized his arm. "Promise to come back, John! Promise that you will come back even if this should be the man."

"I promise. Don't worry, little woman; I'm not ready for a reckoning yet."

He gave her certain instructions about the store, charging her in particular to observe the utmost secrecy regarding the strike, else she might precipitate a premature excitement which would go far towards ruining his and Poleon's chances. All of which she noted; then, as he turned away, she laid her hand on his arm and said:

"If you do not know him he will not know you. Is it not so?"

"Yes."

"Then the rest is easy—"

But he only shook his head doubtfully and answered, "Perhaps—I am not sure," and went inside, where he made up a light pack of bacon, flour and tea, a pail or two, a coffee pot and a frying pan, which he rolled inside a robe of rabbit skin and bound about in turn with a light tarpaulin. It did not weight 30 pounds in all. Selecting a new pair of water boots he stuffed dry grass inside them, oiled up his six-shooter, then slipped out the back way, and in five minutes was hidden in the thickets. Half an hour later, having completed a detour of the town, he struck the trail to the interior, where he found Polton Doret, equipped in a similar manner, resting beside a stream, singing the songs of his people.

When Burrell returned to his quarters he tried to mitigate the feeling of lonesomeness that oppressed him by tackling his neglected correspondence. Somehow, today, the sense of his isolation had come over him stronger than ever. His rank forbade any intimacy with his miserable handful of men, who had already fallen into the monotony of routine, while every friendly overture he made toward the citizens of Flambeau was met with distrust and coldness, his stripes of office seeming to erect a barrier and induce an ostracism stronger and more complete than if they had been emblems of the penitentiary. He began to resent it keenly. Even Doret and the trader seemed to share the general feeling, hence the thought of the long, lonesome winter approaching reduced the lieutenant to a state of black despondency, deepened by the knowledge that he now had an open enemy in camp in the person of Runnion. Then, too, he had taken a morbid dislike to the new man, Stark. So that, all in all, the youth felt he had good reason to be in the dumps this afternoon. There was nothing desirable in this place—everything undesirable—except Necia. Her presence in Flambeau went far towards making his humdrum existence bearable, but of late he had found himself dwelling with growing seriousness on the unhappy circumstances of her birth, and had almost made up his mind that it would be wise not to see her any more. The tempting vision of her in the ball-dress remained vividly in his imagination, causing him hours of sweet torment. There was a sparkle, a fineness, a gentleness about her that seemed to make the few women he had known well dull and commonplace, and even his sister, whom till now he had held as the perfection of all things feminine, suffered by comparison with this maiden of the frontier.

He was steeped in this sweet, grave melancholy, when a knock came at his door, and he arose to find Necia herself there, excited and radiant. She came in without sign of embarrassment or slightest consciousness of the possible impropriety of her act.

"The most wonderful thing has happened," she began at once, when she found they were alone. "You'll faint for joy."

"What is it?"

"Nobody knows except father and Poleon and the two new men——"

"What is it?"

"I teased the news out of mother, and then came right here."

He laughed. "But what—may I ask——"

"Lee has made a strike—a wonderful strike—richer than the Klondike."

"So? The old man's luck has changed. I'm right glad of that," said the soldier.

"I came as fast as I could, because tomorrow everybody will know about it, and it will be too late."

"Too late for what?"

"For us to get in on it, of course. Oh, but won't there be a stampede! Why, all the people bound for Dawson on the next boat will pile off here, then the news will go upriver and downriver, and thousands of others will come pouring in from everywhere, and this will be a city. Then we will stake our town lots and sell them for ever so much money, and go around with our noses in the air, and they will say to each other:

"'Who is that beautiful lady with the fine clothes?' and somebody will answer:

"'Why, that is Miss Necia Gale, the mine owner. And then you will come along, and they will say:

"'That is Lieutenant Burrell, the millionaire, and—'"

"Hold on! hold on!" said the soldier, stopping her breathless patter. "Tell me all about this."

"Well, 'No Creek' came in this morning to tell dad and Poleon. Then the boat arrived with an old friend of Lee's, a Mr. Stark, so Lee told him, too, and now they've all gone back to his creek to stake more claims. They slipped away quietly to prevent suspicion, but I knew there was something up from the way Poleon acted, so I made Alluna tell me all about it. They haven't more than two hours start of us, and we can overtake them easily."

"We! Why, we are not going?"

"Yes, we are," she insisted, impatiently—"you and I. That's why I came, so you can get a mine for yourself and be a rich man, and you can help me get one. I know the way. Hurry up!"

"No," said he, in as firm a tone as he could command. "In the first place, these men don't like me, and they don't want me to share in this."

"What do you care?"

"In the second place, I'm not a miner. I don't know how to proceed."

"Never mind; I do. I've heard nothing but mining all my life."

"In the third place, I don't think I have the right, for I'm a soldier. I'm working for Uncle Sam, and I don't believe I ought to take up mining claims. I'm not sure there is anything to prevent it, but neither am I sure it would be quite the square thing—are you?"

"Why, of course, it's all right," said Necia; her eager face clouding with the look of a hurt child. "If you don't do it, somebody else will."

But the Lieutenant shook his head. "Maybe I'm foolish, but I can't see my way clear, much as I would like to."

"Oh, dear! Oh, dear!" she exclaimed, brokenly. "I do so want to go. I want you to be rich, and I want to be rich myself. I want to be a fine lady, and go outside and live like other girls. It's—the only chance—I ever had—and I'll never have another. Oh, it means so much to me; it means life, future, everything! Why, it means heaven to a girl like me!" Her eyes were wet with the sudden dashing of her hopes, and her chin quivered in a sweet, girlish way that made the youth almost surrender on the instant. But she turned to the window and gazed out over the river, continuing, after a moment's pause: "Please don't—mind me—but you can't understand what a difference this would make to me."

"We couldn't possibly overtake them if we tried," he said, as if willing to treat with his conscience.

"No, but we could beat them in. I

(Continued on page twenty-four.)

Truth About Food Situation in France

(Continued from page four.)

been able to produce the crops they have achieved. One sees plows with the handles held by women and the horses led by small boys, women stooping among the long rows of corn, cultivating the ground, groups of women slowly crossing the fields, creeping on their knees, painfully tending the newly-planted crops. Occasionally one sees a white bearded patriarch among the women. I should say that the proportion is roughly one man to six women. This, however, is by no means an official figure. It is only my own rough guess. There is no wonder that with this tremendous shortage in labor fields are left bare, while those that can be cultivated produce less than the normal amount per acre. What would our western farmers think of turning the land in the spring with long-bladed hoes? Yet I have seen this very thing being done in many parts of France because of the dearth of agricultural machinery.

Farm Implement Shortage.

Most of the farm implements of France before the war were of American make. One saw the American mark on the plows, harrows, the rakes and reapers and binders and threshers all over France. Since the war much of this machinery has deteriorated sadly and a great part of it is entirely unfit for use, because there are not the mechanics to keep it in repair, and there has not been the importation of new machines and parts to replace the old and worn-out pieces.

France is a country at war, very really and terribly at war. The invader is on her soil. Her mines and furnaces and factories are in German hands. Her richest manufacturing provinces are held by the enemy. Her men must go to the trenches to defend their country and drive back the hordes from across the Rhine. And those men of the armies must be fed and have the means to fight. Above all, they must have arms and munitions, big guns and shells.

Resources Have Suffered.

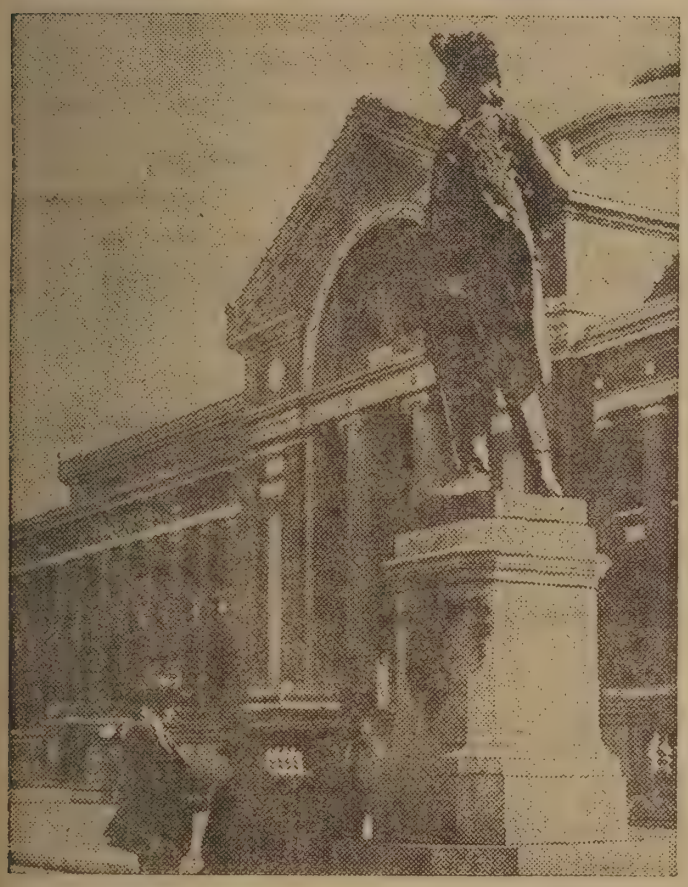
Every thought of France for three long years of a bloody and sacrificial war has been given to "les braves" at the front. Little has remained for the civilians at the rear, who have borne their trials in stoic calm for the sake of the soldiers in the trenches. And in those years the resources of France have suffered, especially the farm resources, for imports have had to be directed to the army. The steel brought in has been for shells, the machinery to make more shells and guns. The plowshare has been beaten into a sword, while the reaper has rotted idle in the fields with only the hands of women and children to tend it.

Now, France needs grain. She must have grain to make bread both for soldiers and civilians. And only America can supply it. The burden of victory lies as heavily on our western farmers as on the soldiers on the battle fields of France.

In his third and last article, which will appear in the Farmer next week, Mr. Pitney points out that the French people are very much like Americans to the extent that they prize their independence and resent efforts of the government to dictate methods of eating and living. They have also been liberal in feeding refugees without thought of their own future welfare. Hence they now face a dire shortage which official figures clearly prove. Farmers in America have a wonderful opportunity in helping to restore the agriculture of France by furnishing live stock, both now and after the war.

All the World's a Stage, and All the Men and Women Merely Players

Trying to Put a Little Fight in Them



In their recent flight before the oncoming German forces, much of the retreating was done when the Russian soldiers were in no immediate danger. They turned their backs on the foe deliberately and in a panic. The above picture is a photograph of a lone British officer's vain efforts to stem the tide of disaster by checking the retreat of transports.

Keep Dry Feet in the Front Line

L. E. Harris, an employe in the census office of Washington, D. C., has offered to the United States government a new style of shoe to keep feet dry in the trenches. The shoe is light and watertight. Mr. Harris uses these shoes to work about his garden.

This Is Potato Week

Three purposes will be accomplished by a nation-wide potato week in which every one will make a special effort to eat potatoes during the week from October 22 to 27, according to the United States department of agriculture. The first of these purposes is to encourage the eating of the tubers, because at that time it is expected that potatoes will be the most available and economical starchy food; the second is to save wheat during this period; and the third is to encourage the general use of potatoes as a wheat substitute by the American householder.

POTATO DISH FOR EACH DAY.

It is said that potatoes may be cooked in more ways than any other vegetable, and a score or more varieties are within the knowledge of any good hotel chef. Seven ways—one for each day in the week, beginning with Monday's, Tuesday's and Wednesday's dinners, through Thursday's lunch, Friday's dinner, Saturday's lunch and Sunday's supper—are here given.

Stuffed potatoes: (Monday.) Cut baked potatoes in half, remove the pulp, mash it, add enough milk for the usual consistency of mashed potatoes, and season with butter, salt and pepper. Fill the baked skins with this mixture, dot the tops with butter and bake for eight or 10 minutes in a hot oven. To vary this add to the mashed potatoes, before the skins are filled, any one of the following: Beaten white of egg (1 egg to 3 medium-sized potatoes); grated cheese (1-2 cupful to 3 medium-sized potatoes); chopped meat (1-2 cupful to 3 medium-sized potatoes); chopped parsley (1 tablespoonful to 3 medium-sized potatoes).

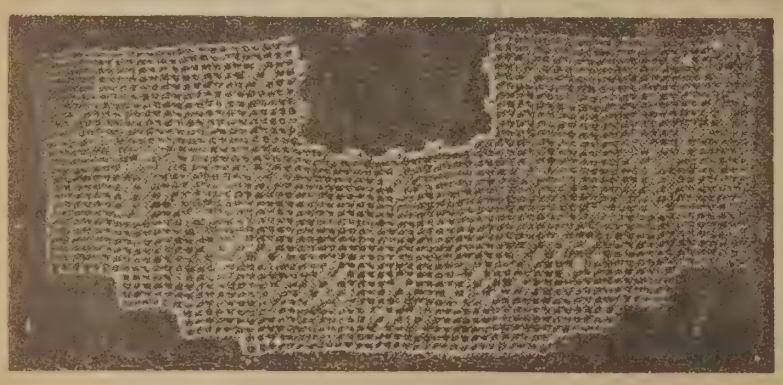
Scalloped potatoes: (Tuesday.) Use raw, thinly sliced potatoes in layers, each layer to be sprinkled with flour, butter, pepper, salt; lastly, pour in just enough milk to be seen through the top layer, and then bake for about an hour, or until the potatoes are tender. This may be varied by adding, in layers, hard-boiled egg, sliced; grated cheese, or minced ham.

Boiled potatoes: (Wednesday.) Select potatoes of uniform size; wash them with a brush, and plunge them into boiling salted water (1 teaspoonful salt to 1 quart water). Cook them with the cover of kettle ajar, until tender, from 20 to 30 minutes. Drain the potatoes; remove the skins; dress the potatoes with butter if desired, and serve them immediately. If it is necessary for the potatoes to stand a few minutes before being served, cover them with a cloth, not a lid, in order that the steam as it condenses may be absorbed by the cloth and not returned to the potatoes to make them soggy. This is the reason for serving potatoes in an uncovered dish. The potatoes may be sprinkled with chopped parsley.

Potato Salad: (Thursday—from Wednesday's left-overs.) Six cold boiled potatoes, four tablespoonfuls salad oil or melted butter, two tablespoonfuls vinegar, one-half tablespoonful salt, cayenne pepper, two tablespoonfuls chopped parsley, few drops onion juice.

Cut the potatoes in one-half inch cubes. Make a dressing by mixing thoroughly the other ingredients. Pour this dressing over the potatoes, and allow them to stand for 15 minutes. Drain off any dressing that may not have been absorbed by the potatoes. Garnish the salad with sprigs of parsley and serve with cream dressing or mayonnaise. To the salad may be added any of the following: One cupful chopped celery, two cucumbers, chopped; or two hard-boiled eggs, chopped or, as a garnish, sliced.

Mashed Potatoes: (Friday.) Thoroughly mash cooked potatoes. Add four tablespoons of hot milk, one tablespoonful of butter, and a little salt and pepper, to each pint of potatoes. Beat the mixture with a fork until light and pile it lightly in a hot serving dish.



Potato Soup: (Saturday, from Friday's leftovers.) Two cupfuls hot riced or mashed potatoes, one quart milk, two slices onion, three tablespoonfuls butter, two tablespoonfuls flour, one and a half teaspoonfuls salt, celery salt, pepper, cayenne, one teaspoonful chopped parsley.

Scald the milk with the onion; remove the onion, add the milk slowly to the potatoes. Melt the butter; add to it the dry ingredients; stir the mixture until it is well blended. Add this to the liquid mixture, stirring constantly, and boil the soup for one minute.

Potato biscuit: (Sunday, from Friday's or Saturday's leftovers.) One cupful mashed potatoes, 1 cupful flour, four teaspoonfuls baking powder, half teaspoonful salt, one tablespoonful butter, one tablespoonful lard, milk about half cupful.

Sift the dry ingredients. Add these to the potatoes, mixing with a knife. Work the fat into this mixture lightly, a soft dough. Toss the dough onto a floured board, pat and roll it lightly to one-half inch in thickness. Cut it into shapes with a biscuit cutter. Place the biscuits on greased pans and bake 12 to 15 minutes in a hot oven.

YOKE FOR INFANT'S DRESS.

Filet cluster of forget-me-nots.

Use one ball No. 60 Cordonnet. If you use a finer sized cotton the yoke will be smaller; if a coarser size, the yoke will be larger; 25 mesh.

Follow pattern to 7th row, add 4 mesh.

At end of 13th row add 2 mesh. Continue following pattern until opposite side is reached, then leave off 2 mesh and so on to end of design. Finish off lower with dc.

For neck, 10 dc., 4 t. Continue around neck, being careful not to pull the corners.

In filet crochet always remember to ch. 5 at the end of row and that in one block (or solid mesh) there are always 4 t., in two there are 7, and in three there are 10.

Sew this yoke into garment and trim sleeves with the edging below:

Filet Crochet Edge for Infant's Dress.

Use same size thread as for infant's dress yoke; 48 mesh.

1st Row—1 block, 7 mesh, 1 block, 7 mesh, repeat until you have 7 blocks.

2d Row—Ch. 3 block over block, 5 m., 1 b., 1 m., 1 b., 5 m., repeat to end, turn.

3d Row—1 b., dc., in 3 m., ch. 5, sk. 1 m., dc. in 2 m., and 1 b., 1 b. dc. over b. and 2 m., ch 5, repeat to end.

maximum Nutrition
minimum cost

That's the cry of the world today. The food that qualifies is the food for every home.

Drink a cup of Ghirardelli's Ground Chocolate every day in place of more expensive foods. Ghirardelli's Ground Chocolate is made of pure cocoa and sugar, the two great nutrimental foods, and blended in the right proportions to insure its distinctive taste-appeal, its easy assimilation and unusual nourishment. A tablespoonful, 1c. worth, with milk added, makes a cup—a true conservation food beverage.

Ghirardelli's
Ground Chocolate

Comes in ½-lb., 1-lb. and 3-lb. sealed cans.

BE SURE TO GIVE NUMBER AND SIZE.

Cans Her Sausage.

In fall when we kill hogs I always fry sausage in cakes just the size we use on the table, put them in glass jars, cover with melted lard, screw up tight, and it is ready for use at any time, says a writer in Farm and Fireside. I have kept it this way as long as a year. There has always been one drawback—it takes so much lard to cover the cakes, and while it was never entirely lost, it was never so nice to use again. Last year I tried a new scheme. I used only the grease that fried out of the cakes as they were cooking, two or three tablespoonfuls to each jar of sausage; after screwing tight I turned the jar upside down to cool. Of course, the jar was perfectly air-tight when the lard cooled and my sausage kept perfectly. I left the jars standing on the tops, as in the warm weather the lard might melt away, and the sausage would spoil.

Buy a Liberty Bond!

Bondage--- or Bonds?

IT RESTS WITH YOU.

The farms of Belgium only three years ago productively tilled by a happy, peace-loving people, are today utterly ruined by the war-ridden madness of the kaiser.

The farms of America, today yielding their bounteous harvests, may tomorrow feel the iron hand of Germany.

The farmers of America are willing to do their part in freeing the world from bondage.

Today they can help most by subscribing every cent possible to

Liberty Bonds

The Safest investment ever offered.

Payment guaranteed by your government, they bear 4 per cent interest, and can be paid for on easy terms.

Ask your banker for full information, or write this store.

10-Rib Reasons

And how do we account for the added warmth—the greater elasticity and longer wear of 10-rib Mayo Underwear?

10 ribs to the inch instead of 8 gives back the answer.

10-rib knitting must mean a closer weave. And it's plain common sense to see that a closer-knit fabric is bound to be a warmer fabric.

10-rib knitting makes the Mayo fabric a more elastic fabric! 10-rib knitting means greater freedom in your every body movement.

10 rib knitting of Mayo yarn means added durability. For Mayo yarn is stronger. Defies washboard rub and wringer strain.

More proof? Buy Mayo Underwear and get pleasant proof of these and other 10-rib superiorities.

Mayo

Greeting From President

To the School Children of the United States:

The president of the United States is also president of the American Red Cross. It is from these offices joined in one that I write you a card of greeting at this time when so many of you are beginning the school year.

The American Red Cross has just prepared a junior membership with school activities, in which every pupil in the United States can find a chance to serve our country. The school is the natural center of your life. Through it you can best work in the great cause of freedom to which we have all pledged ourselves.

Our Junior Red Cross will bring to you opportunities of service to your community and to other communities all over the world, and guide your service with high and religious ideals. It will teach you how to save in order that suffering children elsewhere may have a chance to live. It will teach you how to prepare some of the supplies which wounded soldiers and homeless families lack.

It will send to you through the Red Cross bulletins the thrilling stories of relief and rescue. And, best of all, more perfectly than through any of your other school lessons, you will learn by doing these kinds things, under your teachers' directions. to be future good citizens of this great country which we all love.

And I commend to all school teachers in the country the simple plan which the American Red Cross has worked out to provide for your cooperation, knowing as I do that school children will give their best service under the direct guidance and instruction of their teacher. Is not this perhaps the chance for which you have been looking to give your time and efforts in some measure to meet our national needs?

WOODROW WILSON, President.

My Dear Boys and Girls:

Please take this message from our president to your teacher and schoolmates. I know that you will all be glad to help raise money for this noble cause. Write me your plans, and we will exchange them in our Corner, and perhaps many will have suggestions to offer. I shall look forward with pleasure to your interest in this work. Your loving AUNT NELLIE.

The Best Twin to Be Found.

Dear Aunt Nellie: I hope that all the children are as interested in the letters as I am. I am going to write to you for the first time and see if I can join the Corner. Can I? If I can I will be very glad. I am very light in complexion and short. For my twin I think I have the very best one there ever could be found. And she goes to the very same school as I do. Her name is Elvera Peterson. She is just four days older than I am. Her birthday is on the 22d of October and mine is on the 26th. But if I have any more I would very much like to hear from him or her. I am 12 years of age. Now I will describe our school. It contains two rooms and there are 35 children. I am in the eighth grade, but I have only five subjects to study. They are geography, history, grammar, arithmetitc and civil government. They all seem so hard. I like my teacher so well that if I pass this year I wish she would teach me when I go to high school. I go to Mount Vernon to Sunday school, about three miles from our place. Now I will describe the scenery around here. There are hills in sight everywhere and farms all over, with a town ever so far in the distance. There is a railroad running about a quarter of a mile away from our house. There is a river about a mile away named the Skagit river. I will tell you what I do. I wash and wipe dishes, sweep the floor, carry in wood, pump water at the house, dust the furniture, make cake, put the cows in the barn in the evening and feed them, pump water for them, and numerous other small things, so that I always have something to do. I take music lessons on Saturdays. I am in the third grade of music. We have an organ. Now I must tell you about my vacation. Part of the summer I watched the cows and went visiting and then I went to Belleville to stay for a while at one of my friend's house, whose name is Adelia Westlund. We had great fun, especially going in swimming in a large ditch by their place. One day my friend's mother went to town and she and I, my sister and her sister had to get dinner for four men. My friend's mother told us how we should prepare the food and then we forgot how to cook tomatoes and had to go and ask the neighbors. I have also been to Seattle this summer and had great fun. We went visiting every day. I have also been to the fair, which all school children attended, or nearly all. They had exhibits of all kinds there. We all went and took our grandmother with us. I love to read the letters you write in the Farmer and hope that all children will try to obey and follow them. The one you wrote on laughing was a very good one. I have noticed so many people and children laugh when they should not. I guess this will be all I can tell for this time. I will write again.—Elsa Mattson, R. R. 5, Box 32, Mount Vernon, Wash. (Yes, Elsa, you may be a cousin and we are glad to have you in the Corner. Aunt Nellie wants it to be bigger and better and letters like yours make it so. What a busy, happy girl you must be. Write again and ofter.)

Kept Busy Saying "Hello."

Dear Aunt Nellie: This is the first time I have written to the Corner and I enjoy reading the letters very much. The Corner is growing a little. I have just been reading what you have said about laughing. I would like to see my letter in print, too. I live on a 17-acre farm three miles below Mt. Vernon. We have nine cows and about 25 chickens. I feed them every night. We have two black horses and we also have four cats. One cat is with me almost all the time. Her name is Tutsie and she is all gray. We have a dog. His name is Major. He got run over by a car this summer. One Sunday my mothers' cousin took out his motorcycle, and Major happened to follow him, and a Ford car came and ran over him. His left hind leg got bruised, and mama gave him two lumps of sugar, but he did not eat them, and she also gave him a piece of cake, but he did not eat it. The chickens did, though. We have also got a Ford. We got it the 26th of September this year. We have gone about 86 miles with it. My father is the only one that can drive it. I go to Lincoln school. I am in the seventh grade. My teacher's name is Mrs. Carl Anderson. She lives on the Pacific highway, too. I am 11 years old and will be 12 January the 15th. Have I a twin? If I have I wish she or he would write to me. I have not taken very many music lessons yet, but I will. I have been taking music lessons from my school teacher, but I guess I will take lessons from Miss Loveless in Mt. Vernon. I have two sisters whose names are Elsa and Edna. Elsa is the oldest, then Edna. It is soon time to cut the corn. We have about three acres of corn this year. We have a silo. We got it about three years ago and this will be the fourth year. We have had Alfred Johnson fill it all these three times, and I suppose we will have him fill it this time, too. We were to the county fair Friday and I saw a lot of friends that I knew. All the time I had to keep on saying "Hello," "Hello," "Hello." We went there about 10 and came home at 4 o'clock.—Elna Mattson, R. F. D. No. 5, Box 32, Mt. Vernon, Wash.

A Family of Seven Kittens.

Dear Aunt Nellie: I have never written to the Children's Corner. I am 10 years old and will be 11 January 20. I live on a 40-acre farm and we have seven kittens. They are always right under our feet when we go downstairs. They made my brother fall down. He had a bucket of water and spilled it all over himself. My sister has two cats and my brother has two and I have three. My sister Fyrne has one with a pink nose, with a black spot on it. They all are very pretty cats. Our mother cat has had one other bunch of cats before these. There were five before and seven this time. They are very funny colors. Maybe my sister will take my picture with her kodak and I will send you my picture. I hope some girls my age will write me a letter.—Helen Schoenberg, Prosser, Wash.

Eugenia Likes Outdoor Life.

Dear Aunt Nellie: I have been reading the Children's Corner. I have never written before. I would like to join and be a cousin. We take The Farmer. I am 12 years old and in the sixth grade. I go to a country school. There are three grades in my room, fourth, fifth and sixth. There are 36 pupils in my room. I like outdoor life. I like to dance, play football, baseball, basket ball and tennis. I am going to tell you how I look. I have dark brown hair and blue eyes. I am tall. I weight 85 pounds.—Eugenia Huggins, Box 64, Bremerton, Wash.

Will Go to High School Next.

Dear Aunt Nellie: This is the second letter I have written to the Corner. I am in the eighth grade this year. My teacher's name is Leone Robertson. She is very good. I hope I pass the eighth grade because next year I want to go to high school. My birthday is August 25. I am 13 years old. Have I a twin? I have one twin, but she has not written to me lately. Her name is Louise Lemon.—Ellen Purcell, Pomeroy, Wash.

Glad to Hear From Joyce Again.

Dear Aunt Nellie: I think I will write a few lines to say I am still alive. We aren't going to have any school next week because it is the teachers' institute. Today we cleaned the schoolhouse and yard. We washed the windows and picked up the boards in the yard. The teacher got a football for us.—Joyce Hatch, Route 2, Goldendale, Wash.

THE BARRIER

(Continued from page twenty.)

know where Lee is working, for I went up last winter with Constantine and his dog team, over a short cut by way of Black Bear creek. We took it coming back, and I could find it again, but Lee doesn't know that route, so he will follow the summer trail, which is 15 miles farther. You see, his creek makes a great bend to the southward, and heads back towards the river, so by crossing the divide at the source of Black Bear you drop into it a few miles above his cabin."

While she made this appeal Burrell fought with himself. There were reasons why he longed to take this trip, more than he had longed for anything since boyhood. These men of Blambeau had disregarded him, and insisted on treating him with contemptuous distrust, despite his repeated friendly overtures; wherefore he was hungry to beat them at their own game, hungry to thrust himself ahead of them and compel them to reckon with him as an equal, preferring a state of open enmity, if necessary, to this condition of indifferent toleration. Moreover, he knew that Necia was coveted by half of them, and if he spent a night in the woods alone with her it would stir them up a bit, he fancied. By heaven! That would make them sit up and notice him! But then—it might work a wrong upon her; and yet, would it? He was not so sure that it would. She had come to him; she was old enough to know her mind, and she was but a half-breed girl, after all, who doubtless was not so simple as she seemed. Other men had no such scruples in this or any other land, and yet the young man hesitated until, encouraged by his silence, the girl came forward and spoke again, implsively:

"Don't be silly, Mr. Burrell. Come!

She took him by the edges of his coat and drew him to her coaxingly. It may have been partly the spirit of revolt that had been growing in him all day, or it may have been wholly the sense of her there beside him, warm and pleading, but something caused a great wave to surge up through his veins, caused him to take her in his arms, fiercely kissing her upturned face again and again, crying softly, deep down in his throat:

"Yes! Yes! Yes! You little witch! I'll go anywhere with you! Anywhere! Anywhere!" The impulse was blind and ungovernable, and it grew as his lips met hers, while, strangely enough, she made no resistance, yielding herself quietly, till he found her arms would softly about his neck and her face nestling close to his. Neither of them knew how long they stood thus blended together, but soon he grew conscious of the beating of her heart against his breast, as she lay there like a little fluttering bird, and felt the throbbing of his own heart swaying him. Her arms, her lips, and her whole body clung to his in a sweet surrender, and yet there was nothing immodest or unmaidenly about it, for his strength and ardor had lifted her and drawn her to him as on the sweep of a great wave.

She drew her face free and hid it against his neck, breathing softly and with shy timidity, as if the sound of the words she whispered half frightened her.

"I love you. I love you, Meade."

It may happen that a man will spend months in friendly and charming intimacy with a woman and never feel the violence or tenderness of passion till there comes a psychic moment or a physical touch that suddenly enwraps them like a flame. So it was with Burrell. The sweet burden of this girl in his arms, the sense of her yielding lips, the warmth of her caressing hands, momentarily unleashed a leaping pack of mad desires, and it was she who finally drew herself away to remind him smilingly that he was wasting time.

"My lips will be here when those mines are worked out," she said. "No, no'" and she held him off as he came toward her again, insisting that if they were going they must be off at once, and that he could have no more kisses for the present. "But, of course, it is a long trip, and we will have to sit down now and then to rest," she added shyly; at which he vowed that he was far from strong, and could not walk but a little way at a time, yet even so, he declared, the trail would be too short, even though it led to Canada.

"Then get your pack made up," she ordered, "for we must be well up towards the head of Black Bear Creek before it grows dark enough to camp."

Swiftly he made his preparations; a madness was upon him now, and he took no pains to check or analyze the reasons for his decision. The thought of her loveliness in his arms once more, far up among the perfumed wooded heights, as the silent darkness stole upon them, stirred in him such a fret to be gone that it was like a fever. He slipped away to the barracks with instructions for his corporal but was back again in a moment. Finally he took up his burden of blanket and food, then said to her:

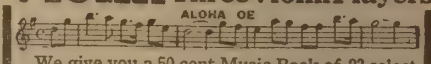
"Well, are you ready, little one?"

"Yes, Meade," she answered, simply.

"And you are sure you won't regret it?"

"Not while you love me."

He kissed her again before they stepped out on the river trail that wound along the bank.



Two hours later they paused where the foaming waters of Black Bear Creek rioted down across a gravelled bar and into the silent, sweeping river, standing at the entrance to a wooded, grass-grown valley, with rolling hills and domes displayed at its head, while back of them lay the town, six miles away, its low, squat buildings tiny and toylike, but distinctly silhouetted against the evening sky.

"Is it not time to rest?" said the soldier, laughingly, yet with a look of yearning in his misty eyes as he took the girlish figure in his arms. But she only smiled up at him and, releasing his hold, led the way into the forest.

He turned for a moment and shook his first at the village and those in it, laughing loudly as if from the feel of the blood that leaped within him. Then he joined his companion, and, hand-in-hand, they left the broad reaches of the greater stream behind them and plunged into the untrodden valley.

(To Be Continued.)

Violin Music for Names of Three Violin Players

We give you a 50 cent Music Book of 23 select pieces for Violin in easy arrangement, printed on fine paper. Send us names and addresses of three violin players. We want every violin player to have our musical magazine, "The Musicians' Mouthpiece." Easy orchestra Books and Music. Strings for all instruments, etc. **Enclose 10c for mailing this Music Book.**

News for Breeders

The development association of Michigan, Minnesota and Wisconsin has offered to the sheepmen of the middle west 3,000,000 acres of free range in those states as an aid to the sheep industry. No charge will be made except the taxes on the land, under the present plan.

J. M. Dickson & Son of Shedd, Ore., report the sale of five heifer calves, two going to B. W. Powers & Sons of Palouse, Wash., and three to J. J. Van Kleek of Beaverton, Ore. Both these gentlemen came to Ashburn Farm and made personal selections, which they intend to use in founding a Register of Merit herd of their own. Both are cow testing association members and are realizing the value of good blood. The Messrs. Dickson report numerous other inquiries for heifers.

Breeding of Hogs.

A lot of informative matter is given in a pamphlet for free distribution, published by the National Duroc-Jersey Record association at Peria, Ill. Enthusiasts of the red animal will readily assert that the pamphlet is rightly named "Duroc-Jersey Hogs Are Profitable."

To show that the book is by no means given t othe laudation of the single breed, we make the following extract.

Fortunately the breeding of hogs can be readily and quickly enlarged by any enterprising farmer. Expensive buildings are not necessary. One does not need to make extensive purchases. In the space of a very few years one can increase his herd by breeding; at the same time he grows into an understanding of the larger business which safeguards its operation. It does not require plunging nor borrowed capital, but gradual growth. It is said one profits in a business according to the size of the business and the size of the business depends entirely upon the man who is conducting it. The man with a small farm can enlarge his business without buying more land; he can add to his business a herd of good hogs, arrange his cropping system accordingly, and it is with little or no difference that he can double his business without changing his acreage. This system calls for a good plan of management. This big business on a small farm is economical since it requires but a small fixed capital in land. It does, however, call for more head work than a little business on a big farm. Eventually it leads to increased profits, to a better farm, to a modern home, and to remodeled equipment in the way of barns and outbuildings. This reward in the way of a better home through the use of better blood is something in the nature of a reward for the man who appreciates the use of better blood.

Consignments to Lewiston Show.

Among those making consignments to the Hereford sale at the Northwest Live Stock show at Lewiston, Idaho, November 12, are the following:

Henry Thiessen, Sweetwater, Idaho; A. B. Cook, Townsend, Mont.; George Chandler, Baker, Ore.; J. D. Miles, Livingston, Mont.; Platt Bros., Genesee, Idaho: A. O. Huntley, Cuprum, Idaho; Hastings & Hover, Phillipsburg, Mont.; L. L. Young, Nampa, Idaho; John Mortenson, Burley, Idaho.

Central Oregon Association.

An organization that may mean much to the breeders of central Oregon was given birth at a meeting in the parlor of the Prineville Hotel, Prineville, Ore., Oct. 3, when the Central Oregon Pure Bred Stock association was organized. The prime object is to issue a catalogue giving the names and addresses of all members and the breed of stock they are raising. Other matters of interest to the breeders will be considered from time to time. There was a good attendance and much interest was shown. A number of breeders who could not be present sent word they were heartily in with the project and would join. There are 44 breeders of pure bred stock of various kinds in Crook county and the two counties that have lately been detached from it and it is believed everyone will come into the association.

The following oficers were elected: President, M. R. Biggs, Shorthorns, Prineville; vice-president, Henry McCall, Jerseys and Holsteins, Prineville; secretary-treasurer, R. A. Ward, county agriculturist, Redmond; directors, S. S. Stearns, Herefords, Prineville; G. H. Berkley, sheep, Hay Creek; John Kemmling, Jerseys, Prineville; E. C. Park, Jerseys, Redmond; Sam Woods, hogs and Percherons, Redmond; C. W. Elkins, sheep, Prineville. H. A.

Fame-Making Holsteins.

The world's record heifer, Glen Alax Queen de Kol is doing nicely in her new home at the Hollywood farm in western Washington. This is the animal for which the reported price of $18,000 was paid at the Worcester sale last June. There are at the Hollywood farm also three daughters of the noted sire Sir Vreman Hengerveld, who has more 30-pound daughters to his credit than any other sire of the Holstein breed. The young sire, Judge Segis, son of King Segis, is also on this farm, who, though at the head of a small herd has to his credit now, at the age of 6 years, 25 A. R. O. daughters. One of these daughters produced, at the age of 1 year 11 months, over 21 pounds of butterfat in seven days and then came back within 11 months, and produced 28.55 pounds of butter in seven days. He also bas a 33-pound daughter.

Hollywood farm has been in business for seven years and has sold very few females, as they have been keeping them to build up their own herd. Having reached the maximum, hereafter, they will sell females, as well as males, holding a sale at Portland, Ore., November 23.

National Hereford Association.

Dr. T. F. DeWitte of Parshall,, Col., was elected president of the National Hereford Breeders' association at the meeting to succeed W. A. Dallmeyer. H. O. Mexley was elected vice president. The following directors whose terms expired were reelected: W. A. Dallmeyer of Jefferson City, Cyrus A. Tow of Norway, Iowa, A. B. Cook of Helena, Mont. The directors were authorized to appropriate $60,000 for Hereford prizes for state fairs and national Hereford shows this year. Records for the last year show 70,292 animals registered and 70,369 transferred, the first time in the history of the organization that the transfers have exceeded the records. The increase in registers for the year was 10,999 and of transfers 18,418. The organization gained 1300 members in the year, bringing the total up to 8000.

Powerful Locomotives.

A Swiss railroad has installed electric locomotives powerful enough to haul 340-ton trains up steep grades.

A. B. WINTER, 1515 Hewit Ave., Everett, Wash.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Oct. 22.—A decided upshoot which took place in corn prices today resulted largely from the fact that the amount of corn on hand in Chicago had been reduced to the smallest total in many years. The market closed strong, 1 to 2 1-2c net higher, with December $1.16 3-4@1.16 7-8 and May $1.10 1-8@1.10 1-4 to $1.10 1-4@1.10 3-8. Oats advanced 1-4@3-8c to 1-2c and provisions 20c to $1.50. Oats derived strength almost wholly from the bulge in the corn market.

Cash Quotations.

CHICAGO, Oct. 22.—Corn—No. 2 yellow, $1.99@2; No. 3 yellow, $1.98@1.99; No. 4 yellow, nominal.

Oats—No. 3 white, 60@60⅝c; standard, 60¼@61c.

Rye—No. 2, $1.81@1.82.

Barley, $1.15@1.37.

Timothy, $6@8.50; clover, $18@24.

CHICAGO, Oct. 20.—Butter—Easy; creamery, 38@42c.

Live Stock Quotations.

At Omaha.

OMAHA, Oct. 22.—Hogs—Receipts, 2100; steady. Heavy, $15.60@15.90; mixed, $15.65@15.85; light, $15.80@16; pigs, $13@15; bulk of sales, $15.65@15.85.

Cattle—Receipts, 12,500; steady to strong. Native steers, $9@16; cows and heifers, $6.50@9; western steers, $8.50@13; Texas steers, $7.50@10.50; cows and heifers, $6@8.50; canners, $5@6; stockers and feeders, $6.50@11.50; calves, $9.50@12.50; bulls, stags, etc., $5.50@7.50.

Sheep—Receipts, 2300; slow to 25 cents lower. Yearlings, $12@13; wethers, $11@12; ewes, $9.50@10.50; lambs, $16.50@17.25.

At Chicago.

CHICAGO, Oct. 22.—Hogs—Receipts, 28,000; weak, 15 to 20 cents under Saturday's average. Bulk, $14.80@16.15; light, $14.30@16.15; mixed, $14.60@16.60; heavy, $14.50@16.55; rough, $14.50@14.80; pigs, $10.25@14.

Cattle—Receipts, 24,000; firm. Native steers, $6.85@17; western steers, $5.90@13.65; stockers and feeders, $6@11.40; cows and heifers, $4.75@11.80; calves, $9@16.

Sheep — Receipts, 37,000; weak. Wethers, $8.80@12.75; ewes, $8.10@11.50; lambs, $12.50@17.75.

At Salt Lake.

SALT LAKE CITY, Oct. 18.—Cattle—Receipts, fair; market, somewhat higher and good demand for fat steers, also for canners and bulls. Choice steers, $9@9.50; good steers, $7.75@8.75; fair steers, $6@7.50; choice cows and heavy heifers, $6.75@7.50; fair to good cows and heifers, $5.75@6.50; cutters, $5@6.25; canners, $4@5; grass bulls, $6@7; veal calves, $9@11.

Hogs—While hog run still continues only fair and considerably below packers' demands, market has followed eastern markets in declining. Choice fat hogs, 175 to 225 pounds, $17@17.50; mixed hogs, 160 pounds and up, $16.75@17.25.

Sheep—Past week has seen heaviest sheep run in history of yards and considerable breeder and feeder stock changed hands. Market, 25c lower than last week on top lambs. Good choice lambs, $15.75@16.25; ewes, $8.25@9.25; wethers, $10@10.50; yearlings, $10.50@11.50.

At Portland.

PORTLAND, Ore., Oct. 22.—Cattle steady; receipts, 1653. Best beef steers, $9.50@10.25; good beef steers, $8@9.25; best beef cows, $7.25@8; ordinary to good cows, $4@8; best heifers, $7@8; bulls, $4@6.75; calves, $7@9.50; stocker and feeder steers, $4@7.25.

Hogs—Market 50 cents lower; receipts, 2352. Prime light, $15.85@16; prime heavy, $15.75@15.85; pigs, $14@14.50.

Sheep—Market 50 cents higher; receipts, 1580. Western lambs, $14@14.50; valley lambs, $13.50@14; yearlings, $12.50@13; wethers, $12.25@13; ewes, $8.50@10.50.

Spokane Stock Yards Monday.

Hogs—Receipts, 22; weak to lower. Prime light, $15.90@16; prime heavy, $15.75@16; pigs, $14@15.25; stockers and feeders, $11@13; bulk of sales, $16.

Cattle—Receipts, 42; market steady. Best beef steers, $8.50@9; good steers, $7@7.75; best beef cows, $6.50@7.25; good cows, $5.25@6.25; common cows, $3@5; best heifers, $6.50@7.25; bulls, $5@6.25; calves, $6.50@8; stocker and feeder steers, $5@7.25.

Sheep — Receipts, 1200; market steady. Prime lambs, $13.25@14; good lambs, $12@12.50; prime yearlings, $11.50@12.50; prime wethers, $11.25@12.25; best muttons ewes, $8.50@10.

Portland Wheat.

PORTLAND, Ore., Oct. 20. — The wheat movement to this part is again increasing. Last week Portland received 510,900 bushels as compared with 192,400 bushels in the same week last year. For the season to date receipts have been 2,545,400 bushels, or within 89,700 bushels of the quantity received on this date last year. Arrivals are being handled better and there is less talk now of congestion at the mills.

The mill feed market is strong with a keen spot demand. The output is growing, but is not yet up to requirements, and it is hard to say when the promised reduction in prices will take place.

There was but little trading during the week in oats or barley and prices at the close were about steady.

Seattle Market.

SEATTLE, Oct. 20.—Seattle jobbers who have gone into the potato situation from the growers' standpoint have discovered that farmers are not refusing to sell so much from the position of waiting higher futures as because of a shortage of labor. Working the best they can without sufficient help, these farmers are pitting their spuds, to run them when a better opportunity presents itself.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed upon a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 55@57c per dozen; pullets, 42c dozen.

Poultry—Live hens, fat, over 4 lbs., 21c per lb.; 4 lbs. and under, 16@19c; old roosters, 12c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 12c per lb.; springs, live, 21c per lb.

Butterfat—54c per lb.; dairy butter, 35c.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16c per lb.; heavy, 12@13c per lb.

Hides—Salted, 17c per lb.; flint-dry hides, 27c per lb.; salt kip, 18c per lb.; green hides, 14c per lb.; green calf, 25c per lb.; dry calf (under 6 lbs.), 27c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 1c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Portland Market.

PORTLAND, Ore., Oct. 20.—Butter was easy at the end of the week, following reports of slumps at San Francisco and Elgin. The country creamery situation has not improved, as the city creameries still refuse to buy the make of the outside plants. A part of the surplus is being worked off at the municipal store, but there is no shipping outlet as yet for the remainder.

There is a good shipping demand for potatoes, but the car shortage tends to restrict the movement. Shippers are paying $1.25@1.50 at country points. The jobbing market on the street is slow at $1.50@1.75. Onions continue firm, with association sellers asking $2.35.

Grain dealers and bag men are interested in the report from the east that the food administration intends to regulate and fix prices on burlap, sisal, binder twine and that line of goods.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $49; brewing, $50; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 50@52c per dozen; candled, 55@60c.

Poultry — Hens, 16@19c; ducks, 18@20c; turkeys, live, 20@22c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 46c.

Cheese — Tillamook triplets, 26c; Young Americas, 27c.

Dressed meats — Veal, 15 1-2@16c; pork, 21@21 1-2c.

Hops — 1916, 20@24c; 1917 crop, 35c.

Potatoes—New, 1½@1¾c per lb.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans — California small white, 14 1-2c; large white, 14 1-4c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes — New local potatoes, $1.75@2 cwt; sweet potatoes, $3.50 cwt.

Apples—Large eating apples, $1.25 box; cooking apples, $1.50 box; Delicious, $1.75@2.50; Red Macintosh, $1.50@1.75 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 33c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

The Wool Market.

BOSTON, Oct. 19.—The Commercial Bulletin will say tomorrow:

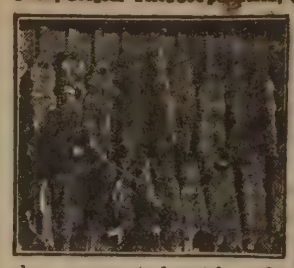
"Less business was accomplished in the wool market this week than for several weeks, although there appeared to be a better interest. Prices were very firm and medium wools a bit stronger.

"The committee on wool supply of the council of national defense, which will handle the 200,000 bales promised for government use from Australia, will not receive offerings from the American trade after October 27.

"Manufacturers are well engaged, machinery occupation on October 1 being slightly better than the month before."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine 9 months, $1.55@1.60.



California—Northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Oregon—Eastern No 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65.

Territory—Fine staple, $1.80@1.82; half blood combing, $1.70@1.75; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled—Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Not a Square Deal

Cheaper Wheat and Less Bread

T. Hanson, Massachusetts commissioner of weights and measures, must be a man of unusual moral courage. The New England Master Bakers' association held their annual convention at Springfield, last week, and put Mr. Hanson on the program for an address. He addressed them all right, but gave them a line of talk they were not expecting. He told them they were not giving the public a square deal; that while the price of wheat had been lowered by the government, the consumer was getting less bread for his money than he got three months ago.

Government investigations confirm the charge. Reports on bread prices made by consumers to the United States Food administration from 52 points in all sections of the country for the four weeks ending September 22, show a wide difference for the same size loaf and emphasize the need for bread standardization.

In Pleasantville, N. J., for the week ending September 1, a 16-ounce loaf of bread was selling for 6 cents. This was the lowest price record reported for the United States. For the same week a 16-ounce loaf was reported selling for 15 cents in Rock Falls, Ill., Eastport, Me., Red Bank, N. C., Miami, Okla., Gallitzin, Pa., Nashville, Tenn., Laramie, Wyo., and Newport, Conn. But the high price record went to Paragould, Ark., where, in the week ending September 8, 20 cents was being charged for a 16-ounce loaf.

In Eagle Pass, Texas, a 16-ounce loaf sold for 7 1-2 cents. It sold for 8 cents in Lansing, Mich., Houston, Texas, and Chippewa Falls, Wis., and for 15 cents in Grinnell, Iowa, West Point, Miss., and Lowell, Mass.

A 14-ounce loaf sold for 6 cents in Lock Haven, Pa., and Nashville, Tenn., for 7 cents in Winfield, Kan., Grafton, W. Va., Evansville, Ind., and Ann Arbor, Mich.; for 10 cents in Jefferson, Iowa; West Point, Miss., and Corvallis, Ore.; and for 15 cents in Paragould, Ark., Ridgewood, N. J., and Abington, Mass.

A 12-ounce loaf sold for 5 cents in Rock Falls, Ill., Brownsville, Texas, and Douglas, Ariz.; for 6 cents in Santa Monica, Cal., Annapolis, Md., Westminster, Md., Camden, N. J., and Renovo, Pa.; for 10 cents in Paragould, Ark., Ridgewood, N. J., Gloversville, N. Y., Lock Haven, Pa., Herrin, Ill., Peru, Ind., Monongahela, Pa., and Nashville, Tenn.; and for 12 cents in Laramie, Wyo.

Unfortunately and unjustly the farmers suffer for the sins of those bakers who are charging excessive prices for bread. When the consumers in the cities complain, the bakers have a habit of blaming the farmer. The farmers, they tell the wage-earners in the great cities, are a greedy lot, rolling in wealth and merciless on the poor bakers and consumers, and that thought takes root in millions of ignorant minds.

It is to Mr. Hoover's credit that he is doing all he can to combat that falsehood and fix the blame where it ought to rest. Reliable figures like those above tell the whole story and prove absolutely that it is the middlemen and the bakers who are responsible for the high price of bread, and not the farmers who grow the wheat and sell it at the government-fixed price.

Producers Raise Milk Price.

Nearly 75 members of the Inland Empire Dairy association met at Spokane October 13 and advanced the wholesale price of milk to distributors at approximately 30 cents a gallon, compared with the former price of 24 cents a gallon, the rise to take effect November 1. It is probable the price of milk will be based on the estimated standard of hundredweight instead of by the gallon. The association levied an assessment of 10 cents of milk-producing cows each month to defray expenses.

The standard of milk test will be continued at 3.6 per cent and per hundred will be added to the regular scale for each one-tenth of 1 per cent above the standard test figure, and the same amount deducted for milk dropping below the test.

Texas Women's Regiment.

A regiment of 1500 women in Texas and Oklahoma formed for service in France has been offered the war department. The majority are young women whose husbands are in the national army and the national guard. While doubting the war department will accept women or fighting forces like the Russian battalion of death, the Texas women suggest they could do scouting or guard work or guard prison camps.

APPLE PIE CONTEST.

For Domestic Science Students.

Domestic science students are encouraged to enter the apple pie contest arranged for the National Apple show, to be held in Spokane November 19-24.

Any student who has begun a course in domestic science at any high school, college, university, extension school or normal school in the Inland Empire may enter this contest. The territory embraced is all of Washington, Oregon, Idaho and Montana. No entrance fee is required. Each pie must be made under the supervision of the instructor in domestic science at the institution and a certified slip with the teacher's name attached must accompany each entry in the contest. The pies must be made from fresh apples.

All of the pies must be delivered by 12 o'clock noon, November 24. Judging will commence at 3 p. m. on that date. A first prize of $5, a second of $3 and a third of $2 is offered.

Helen Howe, superintendent of the women's department of the National Apple show, will have personal supervision of the apple pie contest.

Male Wasps Not Hardy.

There isn't a male wasp in existence when winter ends. Late the preceding fall the wasps mate. The coming cold weather kills every worker and male, while Mrs. Wasp hies herself to a convenient place and hibernates, ready to come forth in the spring and lay eggs to replenish the race.

Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

Five Books Free

DO YOU want to save money on your stump blasting? Do you want to get the stumps out cleaner—split them up better—and cut down the quantity of powder required? Our Stump book, "Better Stump Removing," tells and shows how to do it.

OR do you want your fruit trees to grow faster, yield sooner and bear bigger crops. Our Tree book, "Better Orchard Tillage," shows how you can secure these results by blasting when planting.

IF you want to save fertilizer and grow bigger crops, send for our Crop book, "Better Farm Tillage." It tells how blasting will make the subsoil mellow several feet deep and release new plant food for your crops.

ARE there rocks on your farm? Our folder, "Better Boulder Breaking," shows how a few minutes' work will get them out of your way forever.

DOES your farm need draining? Our Ditch book shows how to blast clean, smooth ditches of any size—the easiest, quickest way of making them.

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

Here are some of the reasons why you should insist upon Giant Farm Powders for all farm blasting.

1. They are made especially to suit Western farm conditions, by a Western company with 50 years' experience.
2. They are the *genuine* Giant Powders—the product of the manufacturers who originated the name. The fact that other explosives are often called "giant powders" indicates the high quality of the genuine.
3. They go further than ordinary dynamites. They exert their strength over a wide area, cracking, splitting and heaving out stumps, roots and all, rather than shattering and throwing them high in the air.
4. They will not freeze at ordinary temperatures, standing 32° for days without requiring thawing.
5. They are being used by thousands of farmers, scores of whom state that the Giant brands "give better results"—"save money"—"have wider breaking power"—"shoot the roots"—and "are always uniform in strength and action."

There are two of the Giant Farm Powders: Giant Stumping Powder, for wet work, and Eureka Stumping Powder, for dry work. Eureka costs less and many careful blasters use it for wet work, too.

Ask Your Dealer

Your local dealer probably has Eureka and Giant Stumping Powders and other Giant blasting supplies. If he does not have them, write us. We will see that you are supplied promptly through the local dealer with whom you prefer to trade, through a dealer in a nearby town who has a magazine, or direct from our nearest distributing point.

The Giant Powder Co. Hom Office **San Francisco**
CONSOLIDATED *"Everything for Blasting"* ESTABLISHED 1866
Branch Offices: Seattle, Spokane, Portland, Salt Lake City, Denver

Make This Test

Get a 25 or 50 pound case of either of the Giant Farm Powders. Get at the same time a case of any other dynamite or stumping powder.

Blast with each. Keep track of the quantities used. Figure the cost. You will find—as farmers everywhere have found—that the Giant Farm Powders save farmers time, work and money.

To make it easy for you to secure Giant Farm Powders we print a trial order form in the coupon at the right. Fill it out and we will have our nearest distributor supply you with a trial case at the lowest market price.

Mail the coupon below or a post card and get one or all of the Giant books. You will find them valuable. They contain illustrations of the most economical ways of doing farm work with Giant Farm Powders.

Meat One of the Greatest Needs

Hoover Pleads for More Fats and Promises Profit to Producer

In his latest talk with the American people Herbert Hoover, national food commissioner, says that his studies of the present situation, both in Europe and in the United States, lead him at once to say that he regards the problem of food animals with even more concern than the problem of grain foods. Why?

Because Europe finds it takes more shipping to import feed for food animals than it does to import equal amounts of animal products themselves;

Because the production of fodder grains in Europe displaces to a considerable extent their possible production of bread grains;

Because the diversion of millions of men from production to war and the decrease in fertilizers all contribute to a reduction in the production of animal foods throughout the world.

Mr. Hoover concludes:

"Altogether from the viewpoint of our allies who observe the constant shortening of shipping, their most likely policy is to eat their animals and thus have room to produce more bread grains at home and to increase their imports of meat products from abroad. By so doing, they can make better use of their shipping facilities.

"We need to increase every type of our principal food animals—our cattle, our hogs and our sheep.

"The American farmers as a whole are in a position to do this, because the United States has one of the largest corn crops in its history. It also has abundant crops of oats, barley, kaffir corn, soy beans, velvet beans, cottonseed and peanut meal and will have a larger supply of mill feed than normal.

"If we aggregate all of the feeding stuffs and if we subtract the amount of fodder grains which we can expect to export we will reach the astounding fact that we have today about 1,000,000,000 bushels of feeds more than last year. This is an increase of nearly 25 per cent—for which we have no corresponding number of animals to feed. Therefore, if the farmers, taking the country as a whole, are to find markets for feed it must be to a great extent to an increase in the production of animals.

"Our sheep have been diminishing steadily since the war began.

"We produced in 1916 only 35 per cent of the wool that we used. In providing uniforms for millions and millions of men the world is using more wool than ever before in its history. We have never seen such a price of wool as exists today. There is practically famine

VON HEIM WINIFRED COLANTHA
No. 329334. Born April 8, 1915.
29.625 lbs. butter from 444.5 lbs. milk., av. fat 5.33 (7 days).
117.806 lbs. butter from 1925.3 lbs. milk. av. fat 4.89 (30 days).
World's Record Junior 2-Year-Old—June, 1917.

VON HEIM HERD
HOLSTEIN-FRIESIANS

The Von Heim herd ranks among the first in the country in the three essentials—conformity to type, blue blooded ancestry and high productivity. Every individual sire and dam has been chosen on his or her merits. The blood of champions flows through the veins of every animal on the place, while our herd sire is out of the world's champion long distance heifer, Finderne Mutual Fayne, who, as a junior 2-year-old, produced over 1200 lbs. of butter in 1 year, a world's record, with almost 37 lbs. of butter in 7 days as a 3-year-old. Sired by King Valdessa, son of the first 40-lb. cow, Valdessa Scott 2d, who has 5 A. R. O. daughters, one over 38 lbs. It has been frequently stated by live stock authorities that there is not a better bred bull in the country than Finderne Mutual Fayne Valdessa.

A Herd Backed by Pedigree and Performance

Blood lines are not the only thing considered at Lodge Von Heim. Having secured the finest breeding stock to be obtained in America, every precaution has been taken to keep the herd up to the maximum of rugged vitality. Never for a moment are the requirements for skilful handling and scientific management forgotten.

We have for sale a few exceptionally well bred young bulls, also a few females. Priced for quick sale far below their real value. Pedigrees, photos and other information very cheerfully given. Write

Problem of Saving the Live Stock

Must Use Feeds That Have Been Largely Wasted in Former Years

By E. J. IDDINGS

Even though one may naturally incline to live stock production, it requires foresight, skill and courage to turn into animal flesh grains and forages at the prices that prevail today.

Live stock conservation is one of the present-day perplexing problems of the nation. From the Atlantic to the Pacific and from the Canadian border to the Gulf, the permanency of our flocks and herds is a question of anxious moment. The call of the nation is for grains. Not only does the farmer desire to produce these as a patriotic duty, but the high prices that have prevailed for months loom large as compared with the conservative profits that have been made in the last years from live stock breeding and feeding operations.

The farmers of the east and middle west are in a state of uncertainty and this is true to an even greater degree in the west. Here we have had less experience with some kinds of live stock, especially hogs, and we have had less experience in the fleshing of swine, lambs and steers for market. Furthermore, we are much further removed from the great central markets and are not close by any means, to the Inland and Coast markets of the west. We, on the whole then, know comparatively more about selling farm products for cash and less about disposing of the same through highly finished animals.

There are many other factors to be considered. There was great loss of live stock in the intermountain region last winter and feed supplies in many districts were almost entirely exhausted. Although grain rose rapidly in price, about a year after the beginning of the war, hog prices remained low until almost a year later. Feed is scarce in some sections and the stockman does not feel that he can take the risk of going long distances and paying high prices for alfalfa and other feeds. In some districts pasture has been short for weeks. Those who own live stock would gladly buy hay to supplement the little pasture that remains, but those who hold the hay, in many cases, either do not care to sell or hold for prices that seem somewhat out of proportion measured with the prices that prevail for live stock.

What is the result then of all the influences mentioned above? These results are only what might naturally be expected. The live stock man is planning to reduce and hold over a comparatively small herd. In some districts where cattle pasture is gone, the cattle are being sent to market, even if thin. Those who are without considerable experience and are timid let the live stock go at a moderate price only and plan to join the ranks of those who are growing grain and hay for sale at the remunerative prices that now prevail.

The whole movement, therefore, becomes an unhealthy one and one that will throw out of balance, the farming system of the nation.

Horses are being sold that will be badly needed for work in the spring.

Thousands of cattle are going to market that are in far from marketable condition. In one week recently at Kansas City over one hundred thousand head of cattle were received, which breaks all American records.

(Continued on page twenty-eight.)

Why Eat Less Wheat?

Grain Figures Talk Much Louder Than Words

Statistics just issued by the United States department of agriculture emphasize the importance of the Hoover program for conservation of wheat. The department closely estimates this year's yield at 659,797,000 bushels.

If the United States should consume wheat this year as freely as in normal times and under normal prices, practically all of the yield would be needed at home for bread and seed. But consumption last year was about 10 per cent below normal, and the department calculates that consumption the coming year will also be at least 10 per cent under normal.

Taking this reduced basis, it estimates that we shall have only 77,696,000 bushels to send to our allies, unless the people, through the Hoover campaign, can be induced to eat less wheat than they ate last year. But our allies are in pressing need of three or four times 77,000,000 bushels.

The following table shows the important part the Pacific northwest will play in feeding the allies across the sea:

	Total Requirements.	Production.	Surplus.
Mont.	5,494,000	17,963,000	12,469,000
Idaho	3,446,000	13,844,000	10,398,000
Wash.	11,261,000	29,218,000	17,957,000
Ore.	6,256,000	12,963,000	6,707,000
	26,457,000	73,988,000	47,531,000

The four states of Montana, Idaho, Washington and Oregon are counted upon to provide 47,000,000 bushels of the 77,000,000 bushels theoretically available for export this year.

Several great regions of the United States grow less wheat than they require for their own needs. For example, the north Atlantic states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey and Pennsylvania grew this year only 34,635,000 bushels, but will need 145,169,000 bushels—a deficiency of more than 110,000,000 bushels.

The south Atlantic states have a deficiency of 10,472,000 bushels.

The big surplus comes from the group of states comprising Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska and Kansas. These seven states will produce this year 280,350,000 bushels, and will have 170,416,000 bushels of surplus.

The far western group of states, comprising Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon and California, have an estimated yield of 109,739,000 bushels, and a surplus of 50,803,000.

Sign the Pledge

All Can Enlist for War This Week

The most far-reaching food saving campagn in the world's history is on in the United States this week and every home in every state is urged to play a part.

Under the leadership of the national food administration a campagn is under way in every community, village, town and city to have every family sign the pledge to save wheat, meat, fats and sugar in order that the soldiers in France or soon to be there may have enough staple food to maintan them in physical condition to carry on the trench warfare.

The pledge is a promise to eat one wheatless meal a day, to eat beef, mutton or pork not more than once a day and to use as little butter, lard, other animal fats and sugar as possible consistent with maintaning good health and reasonable comfort.

Sign of the Liberty Food Campaign—See to it that this is seen hanging in the front window of your home.

Every family that signs this pledge will be given a membership card in the national food administration, which they are asked to hang in the window as a reminder to neighbors who have not signed. Already hundreds of thousands of homes have signed the pledge, but it is hoped this week to complete the signing by enrolling all of the 20,000,000 homes in America.

Twenty million loaves of wheat bread saved daily through a wheatless meal is nearly 20,000,000 pounds, or 10,000 tons of bread saved. In a year this would amount to 3,650,000 tons, a saving that would practically insure bread for the soldiers. Like savings of meat, fats and sugar will assure the winning of the war.

Land Bank Frowns on Big Salaries

Some Loan Associations Too Liberal With Their Money

President D. G. D'Shea announces that the Spokane branch of the federal farm loan bank has denied a few local loan associations their charters until such time as they would reduce the compensation of their officers, or some of them, to amounts that were more reasonable.

The central loan bank conducts its business of organization and operation at an expense not to exceed one-half of one per cent of the total money handled. Upon this basis the bank pays 4 1-2 per cent interest on its bonds and charges 5 per cent interest on its loans to the farmers, leaving the one-half per cent for costs of doing business.

But the charters of some of the local associations provide that the secretary-treasurer alone shall receive a compensation of one per cent of the money handled. This means that if such association borrowed $100,000 the secretary-treasurer would receive a compensation of $1000, and that the general expenses of organization and operation would have still to be paid. What these latter expenses amount to would depend largely upon the business methods followed, but should they reach an additional one per cent it would make the borrower pay the equivalent of 7 per cent interest on his money, instead of the 5 per cent which the government intended he should pay.

"Such compensation to officers of the local loan associations is not reasonable," says President O'Shea. "The bank will not approve charters that allow so much, for it would be simply destroying much of the benefit that the bank is intended to bring to the farmers who borrow money."

A New Regulation.

Announcement has been made of a new ruling by the land bank board at Washington, D. C. Under the ruling a farmer and his wife may each borrow as much as $10,000 if each owns enough farm property in his or her own name to justify a loan of that amount. Heretofore a man and wife were allowed no more than $10,000 regardless of the separate ownership of their property.

In all cases, however, the separate ownership must be bonafide. Transfers of property merely for the purpose of obtaning the double loan will not be tolerated by the farm loan bank.

Creamery Plant Burns.

L. M. Lampson, agriculturist of Benton county, reports that the plant of the Prosser cooperative creamery, which the agricultural office assisted in organizing was destroyed by fire this week. The plant did not belong to the farmers' cooperative organization. However, the burning of the plant practically broke up the organization, because the farmers were only organized sufficiently well to lease and operate the plant.

Finishing Hogs on Hooverized Basis

Barley, Corn or Field Peas Require a Supplementary Protein Feed

By WILLIAM HISLOP

State College of Washington

A few days ago I was greatly interested in a published interview given by the manager of the Spokane branch of Carsten's Packing company. This interview stated that, owing to the great scarcity of fat hogs in the northwest, it would be necessary for his company to ship hog products from Missouri river points for consumption in this territory.

In other words, we are retrogressing instead of progressing, from a swine producing standpoint. However, we must accept the situation as it is and try to make amends for our misgivings in the wholesale disposal of our breeding stock. What hogs there are left must be sent to market in a highly finished condition. Each feeder should attempt to market as many pounds of pork and lard on four feet as is compatible with economy. In other words, no hogs should be marketed today that weigh less than 200 pounds and possess a high degree of finish and quality.

Within the last few weeks every stockyard in the northwest has experienced a very strong call for feeder pigs. A feeder is usually a pig weighing from 80 to 125 pounds. These pigs are now gleaning our stubblefields, particularly in the wheat growing sections. In our corn growing valleys they are either hogging-off corn or barley or are gleaning the stray ears of corn remaining after husking. In this way they develop a strong framework of bone, ample lean meat tissues and a capacious, vigorous digestive tract, all of which lead up to the final fattening period in the dry lot.

Usually a stubble hog will gain 25 pounds in 40 to 50 days. This is a cheap gain and makes up for the more expensive gains that are to be made later on when in the feed lot proper. When pigs come off the stubblefields they are usually in a thrifty condition. Generally speaking, it takes about 60 to 75 days on full feed to produce the desired finish. During that time a good thrifty hog will gain from 90 to 100 pounds of live weight. Fattening is best accomplished by restricting the exercise, reducing the allowance of bulky feed, and supplying the maximum amount of palatable, starchy, carbonaceous feeds, properly supplemented with protein rich feeds, which balance the ration. At the present time it is distinctly inadvisable to use wheat for fattening hogs. Wheat can be used to better advantage for other purposes. Furthermore, barley is almost as efficient as wheat, and with the big corn crop that is now assured there is no excuse for feeding wheat.

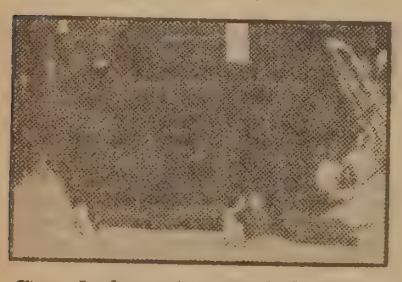
Our experiments here with feeding barley as compared with wheat have shown barley to be about 90 per cent as efficient as wheat, when both were fed in the ground form and properly supplemented with 60 per cent digested tankage. At the present time we are finishing a load of spring barrows that now weigh 185 pounds. Since being placed in the fattening pen they have been receiving a ration of nine parts by weight of rolled barley and one part by weight of tankage. In addition, they have received skimmed milk once daily to the extent of about five pounds per head. Their 100 pounds of gain have been made on 485 pounds of rolled barley and tankage combined.

The early part of the fattening period was spent in hogging off a field of barley. During the grazing period they stretched out wonderfully and were in excellent position to make dry lot gains. They have also received a mineral mixture which has helped to keep them rid of worms and assisted in the development of strong bone, which is so essential to economical pork making. Their quarters have been dry, well bedded and well watered. In addition, they have been self fed; in other words, they have chosen the amount which they wanted, and were able to get it at all times. When pigs weigh more than 125 pounds it is more economical to use the self-feeder than it is to hand feed them. If they weigh less than that then the hand-fed method seems to be the better.

These pigs will be marketed at an early date. They should dress from 83 to 85 per cent, because they will carry a high finish, be devoid of wrinkles and seams, and be strictly grain fed, as compared with grass fed hogs, which are so common at the present moment. They now run in age from 5 1-2 months to 6 months. I question if wheat would have made those hogs marketable at an earlier date or at a less cost.

Another excellent crop for the finishing of hogs at the present moment is Canada field peas. The seconds of the pea crop were fed to a carload of hogs at the state college during the winter of 1916. They were compared with barley, and both feeds were supplemented with tankage. The Canada field pea lot made the cheaper, the greater and the more rapid gain, and the finished product was pronounced by Mr. Stanton of Spokane to be superior.

At the present time no farmer can afford to feed barley, corn or field peas unless he uses a supplementary protein-rich feed. These grains are all too deficient in proteins and mineral matter to be in themselves balanced feeds. Hence the need for tankage or skimmed milk. Soy bean meal and linseed oil meal have been used as protein supplements to these grains for fattening hogs, but have not proved nearly so efficient. The hogs tire of the latter and soon begin to go back instead of forward. Some farmers prefer to feed whole grain to fattening pigs. Ear corn is pronounced by many central western experiment stations as the most economical form in which to feed it. They say that the hogs should do the work of grinding, and they are correct. However, they admit that when hogs weigh more than 175 pounds that it is more economical to grind the feed. In the case of barley, Canada field peas or wheat they should be ground for the most efficient gain.



In conclusion, I wish to say that the best method of Hooverizing in connection with fattening pigs at this moment is to supply the proper feed in the proper proportion, provide dry, warm, roomy, well-watered quarters, and carry the hogs until they weigh at least 200 pounds and carry a smooth, even covering of fat.

New York Dairy Producers' League

Organized to Save Themselves from Bankruptcy and Industrial Destruction

We seriously doubt if the district attorney at New York will uncover any evidence that would justify a jury convicting the leaders of the Dairymen's league in that and adjacent states.

When asked if he thought there were any chance of the Dairymen's league being indicted as a result of the milk investigation, R. D. Cooper, president of that organization said:

"I do not know just what evidence has been furnished Mr. Swann or who has presented it. Possibly he has received some complaints from members of the Milk Dealers' Conference board. In case we are indicted, I do not think there would be any evidence of a nature to convict presented."

Mr. Cooper also stated that he wanted to correct a statement he had seen in some of the papers to the effect that the league controlled 90 per cent of the milk produced in New York state. He said there were 1,351,572 cows in the state, of which 436,033, or 32 per cent, were owned by members of his organization.

The truth is that the dairymen organized to save themselves from bankruptcy and the industry from destruction. In the broader aspects of the problem they have rendered genuine service to the public by saving the industry from such impairment as would have led to a disastrous milk famine.

When President Cooper was before the mayor's investigating committee the other day he testified with apparent frankness and seemingly tried to conceal nothing from the public.

Mr. Cooper said that for his services he received $5200 a year and expenses, while the secretary received $3000 and expenses, and the treasurer $2000 and expenses. The members of the executive committee, he added, received $10 a day while sitting.

Mr. Cooper said the capital stock of the league was 40,000 shares of a par value of $2.50 and that the shares are divided into one-tenth shares at a value of 25 cents.

These one-tenth shares are the mipimum that can be owned. And an actual milk producer with one cow can own one of them, but not more. If he owns 10 cows he can buy a whole share of the stock, and so on, the quantity he may own being based on one share for every 10 cows owned.

The farmers owning shares or part shares in the league agreed to have the league act as agent in marketing milk and to pay into the treasury of the league one cent for each 100 pounds of milk sold.

He said the capital stock of the league has been oversubscribed and that there are on hand applications for about 13,000 shares, representing owners of 130,000 cows, from farmers whose number he did not know.

The manner in which the higher price was reached was then explained by Mr. Cooper. He said that, in addition to the suggestions of various members, the basis for the raise was figures furnished by Professor George F. Warren of the New York State Agricultural college at Ithaca.

The professor estimated that the cost of producing 6000 pounds of raw milk was the combined cost of the following items: One ton of grain, four tons of ensilage, one ton of hay, 165 hours of labor, together with the addition of 25 per cent of the whole for overhead charges.

The mayor's committee then called Professor Warren before it, and he promptly corroborated President Cooper's statement. That the farms whose average cost of producing milk formed the basis of the figures he presented to President Cooper were managed better than the usual run of farms, and, in fact, represented the only farms making any profit on the sale of milk, even at the present price, was the substance of his testimony.

The mayor's committee also questioned George W. Bush, chief organizer of the Dairymen's league, and from his testimony the New York Sun prints a table showing what happened when the farmers' prices were advanced after September, 1916:

Month.	Wholesale.	Retail.
October, 1916	4.46	10
December, 1916	4.67	11
July, 1917	4.46	11½
August, 1917	5.42	12½
October, 1917	6.59	14

It is therefore seen that while the producer got an increase of a little more than 2 cents a quart between October, 1916, and October, 1917, the consumer is made to pay an increase of 4 cents.

The practice of passing along the increase demanded by the producers, and also adding an additional increase for themselves seems widespread on the part of the distributors of the United States.

When the milk producers were paid around 5 cents a quart a year or so ago the Spokane distributors sold the bottled product at 10 cents. They received, therefore, 5 cents a quart for their work of handling the product.

"If milk goes up to 30 cents a gallon to the producer, how much will you distributors charge?" asked a member of the joint committee representing the three interested parties in conference Saturday—the producers, the distributors and the consumers.

"Fifteen cents a quart," replied the manager of the Pine Creek company, and other distributors seemed tacitly to assent. On that basis the distributors would receive 7½ cents a quart for their service, an increase of 50 per cent over the toll taken a year or so ago.

The question before the Spokane joint committee and the public here is whether the distributors are justified in asking so large an increase.

Back to the Bible.

Behold, how good and how pleasant it is for brethren to dwell together in unity!—Ps. 133:1.

The life is more than meat, and the body more than raiment.—Luke 12:23.

Must Cut Out Cancer of Uncleanness

Social Evil Is Grave Menace to the Nation's Military Efficiency

"Today as never before American manhood must be clean. We must have fitness! America stands in need of every ounce of strength. We must cut out the cancer if we would live."

"Sir William Coler places these infectious diseases at the top as a menace in war and in peace. The time has come to realize that this subtlest foe of humanity must be conquered, and it can not be conquered by denying its existence, saying it is a necessary evil or applying palliatives. It is deadlier than smallpox or cancer or tuberculosis. A Canadian authority says: 'Its ravages today are more terrible for Britain and Canada than Vimy ridge, the Somme and Lens.'

"The remedy? There is but one—continuance. It must be preached in the home, in the school, in the marts of trade, in the pulpit and in military camps and among shipmates afloat. The eradication of the evil effects must be thorough, but the teacher who will be heard and heeded when the teachings of all others will fall on deaf ears is the word of authority from the medical profession."

In this manner, dealing frankly and boldly with the social evil as a menace to the nation's military efficiency, Secretary Daniels of the navy, in an address at Chicago before the Clinical Congress of Surgeons of North America, appealed to the medical profession "to end the false double standard that decreases military effectiveness." The profession, he declared, must share its part of the blame for the "unpardonable prudery that endured a festering evil rather than have it exposed and eradicated."

"There is not an army in the field whose effectiveness is not reduced by reason of immoral disease," said Secre-

(Continued on page forty-two.)

The Pacific International

Promise of Breaking All Records in Cattle

"We look for the largest stock show we have had in some lines," said L. R. Medee, secretary of the seventh annual Pacific international live stock exposition. "We open Monday, November 19, and run for the week. Our entries close on November 9 for breeding classes and November 19 for fat classes. This rule will be strictly adhered to this year as in the past.

"I do not know what we are going to have in hogs this year. So far we have no line on what we shall have. I imagine it may be light in some breeds. Sheep I look to be light. Of course, I can not tell, and they may come in in larger quantities than I expect.

"But when it comes to horses we look for a big show. Half a dozen of the best breeders of the northwest are going to be on hand and we look for the best draft and heavy horse classes we have ever had.

"But when it comes to cattle we are going to break all previous records. We are going to have a Shorthorn show that will beat anything ever held here or anywhere in the northwest. We look for about 300 animals. The Royal at Kansas City, one of the big Shorthorn shows, had no such numbers. And as far as quality is concerned, we know what we are going to get—the cream of the finest herds of the northwest.

"Such men as Frank Brown, A. D. Dunn, Day & Rothrock, Alex Chalmers, McCroskey & Son, J. B. Cornett and other well known breeders are coming with the best quality they have ever had."

The Shorthorn show and sale indeed promises to be a remarkable Shorthorn occasion. One excellent judge of the red, the white and the roan, says that the stuff to be shown here will be of high quality, and that the winners here would make the Chicago international pay attention. The Shorthorns draw down $6250 in prize money.

The twelfth consignment sale of Shorthorns at the show is also attracting a great deal of attention, as many of the animals on exhibit will be offered at this sale. A. D. Dunn is consigning all his show herd with the single exception of one bull, and Frank Brown is disposing of many animals which are of the very highest quality he has produced. A. Chalmers, one of the constructive Shorthorn breeders, has made a large consignment for the Portland show. Day & Rothrock, J. B. Cornett and that famous old Shorthorn man, W. O. Minor, will have some fine stuff in the ring. Joe Turner of Myers Falls has consigned some strong stuff. H. M. Elberg, who now has the Gibson Estate Shorthorns of Woodland, Cal., is one of the heavy consignors of splendid stuff. Among others who have consigned are E. F. Anderson & Son, Albany, Ore.; Schmidt Bros., Oregon City, Ore.; Chiles & Anceny, Helena, Mont.; H. L. Somers, Bozeman, Mont.; W. J. Townley, Union, Ore.; G. W. De Lay, Hot Lake, Ore.; Hawkins & Son, Hollister, Cal.; Alexander & Kellogg, Suisan, Cal.; Corruthers farm, Mayfield, Cal.; George Bertrand, Olequa, Wash.; T. T. Miller, Los Angeles; H. G. Keyt, Perrydale, Ore.; Dick Kiger, Corvallis, Ore.; Thomas Harrison, Glen Ellen, Cal.; W. B. Ayer, Carlton, Ore.; Alec Morrison, Valley, Wash.; the O. A. C., W. S. C., Idaho university and University of California; A. M. Haraden, Calton, Ore.; Perry Smith, Namhill, Ore., and E. H. Halloway, Albany, Ore.

The Herefords are going to stage one of their best shows, too. The consigners to the sale of Herefords, who will all show, are as follows: A. B. Cook, Townsend, Mont.; Henry Thiessen, Sweetwater, Idaho; George Chandler & Son, Baker, Ore.; W. P. Emery, Macleay, Ore.; J. D. Miles, Livingston, Mont.; W. O. Huntley, Ontario, Ore.; L. L. Young, Nampa, Idaho, and four agricultural colleges of Oregon, Washington, Idaho and California. Prizes aggregating $3000 will be offered for Herefords.

The Angus cattle are not to be left behind, either. Congden & Battles of Yakima, George Dickson of Prineville, E. H. Eagleson of Boise and the W. S. C. and U. of I. will be represented—one of the best Angus shows staged.

The Holstein show will be very large, too, and a big sale will be held. A fine Guernsey show is promised, too, but Jerseys will be light.

It is likely that nearly if not quite a thousand head of cattle will be at the great North Portland show.

Percherons in Northwest

Favorable Climate, Good Water, Best of Feed

By WAYNE DINSMORE,
Secretary Percheron Society of America.

Washington, Oregon and Idaho, the trinity of states in the extreme northwestern part of the United States, have never adequately measured up to their opportunities in horse production. There is every reason why this territory should be producing a large surplus of the best class of horses. Climatic conditions are favorable; good water is available; the range grasses are particularly adapted to the growth of draft horses, and alfalfa hay and good grains are available in every section. A better combination can not be found.

Yet, despite these facts, the 1910 census of the United States shows that in that year Idaho had only 197,772 horses, of which 22,449 were yearlings; Washington had 280,572 horses, of which 27,272 were yearlings; Oregon had 271,708 horses, of which 30,154 were yearlings. Mules are almost negligible, as there were only 4036 mules in Idaho, of which 237 were yearlings; Washington had 12,185 mules, of which 563 were yearlings; and Oregon had 9927 head, of which 437 were yearlings. In the seven years since elapsed there has been but very slight increase in the number of horses and mules in these three states, the latest figures showing approximately 850,000 head for the three states, while the three states have a combined area of 245,797 square miles. To put the matter in another way, there are only a little over three horses per square mile for these three states.

What Kind of Horses Should Be Raised?

Automobiles and light delivery trucks have displaced nearly all driving and delivery horses. There is no longer a general market for surplus horses under 1200 pounds weight. Those that will not do for military work sell very low, ranging from $65 to $115, and are hard to dispose of at that. Horses from 1200 to 1500 pounds are still used to a very limited extent in the cities, and are a popular kind for use on farms. They also have a wide outlet for artillery purposes, but the supply of these, especially those under 1400 pounds, is more than equal to the demand.

Draft horses, however, if over 1600 pounds, in working flesh, give every promise of holding present prices, with the probability of some advances.

The supply of heavy horses is limited. The best informed men estimate that of our 21,000,000 head, less than a million are real draft horses, weighing over 1600 pounds.

Sixty-eight per cent of 277 selected correspondents of the Percheron Society of America reporting from all parts of the United States report very few surplus horses good enough for sale for war or other purposes, on hand in their localities. Horses ranging from 1000 to 1200 pounds are reported to be selling from $90 to $125 average; horses from 1200 to 1500 pounds at from $140 to $175 average; and horses over 1500 pounds at from $200 to $250 average.

One reason why so few heavy draft

(Continued on page seventeen.)

Liberty Bonds Win

People Subscribe for Five Billion

The second Liberty loan has been greatly oversubscribed, according to figures at this writing. The subscriptions have reached $5,000,000,000, it is estimated by the treasury officials, and it is likewise estimated that between 8,000,000 and 10,000,000 people have taken bonds ranging in size from $50 to $100,000. While hundreds of thousands of the common people took bonds of the lower denominations many banks and business firms throughout the country took large bonds totaling in some instances as much as a million dollars.

The minimum hoped for by the government in the subscription for the second Liberty loan was $3,000,000,000. This amount was passed toward the last of the week and Friday and Saturday saw additional subscriptions come into the banks all over the country in such a flood that clerks and registrars were swamped with the duty of receiving them.

In the northwest every state exceeded the minimum subscriptions required of it. Idaho was allotted $9,000,000 and raised about $10,500,000. Montana's minimum was to be $15,000,000; it subscribed for more than $20,000,000. Oregon was asked for $18,000,000 and gave $25,000,000. Washington was called upon for $32,000,000 and incomplete figures indicate that she subscribed for about $40,000,000.

Death of C. B. Kegley, Grange Master

C. B. Kegley, master of the Washington state grange for the last 13 consecutive years and appraiser for the Spokane Federal Farm Loan bank since last May, died of pneumonia

C. B. Kegley.

Monday, October 29, at the Deaconess hospital in Spokane. He was ill one week and was admitted to the hospital last Saturday.

He was born in Ames, Iowa, 62 years ago and came to the Palouse in 1891. He lived for a time at Pullman and then removed to Palouse, where he made his home until his appointment to the position with the federal farm loan bank, when he purchased a home at E510 Twenty-third avenue.

During all of his residence in Washington he was a leader in the affairs of the state grange and was elected year after year its delegate to the national conventions of the organization.

He was an enthusiastic Roosevelt man and was prominent in the councils of the progressive party. For many years he attended sessions of the state legislature, where he worked for measures indorsed by the grange and of interest to farmers.

He is survived by his widow, two daughters, Mrs. H. E. Richter of Spokane and Mrs. L. G. Gilder of Harvard, Idaho; a son, L. E. Kegley of Palouse; two sisters in Colorado, a brother in Olympia and four brothers in the east.

On account of the great variation in local climatic conditions, moisture, soil, etc., it is up to the readers of The Washington Farmer always to remember that methods which prove successful in one locality may not work out in others. It is our aim to gather the experiences of farmers in every section of this state and pass these experiences on to our readers, that they may try out or adopt such as may be applicable to their locality and conditions.

Don't Misjudge Your Neighbor

There is no room in America for any un-American citizen at the present time, be he native born or naturalized. Wherever such is found, he should be suppressed—lawfully, but vigorously. But every one should be careful not to misjudge.

With many there is a tendency today to look with at least some degree of suspicion on American citizens of German birth. This is not unnatural, but it is a case where great care should be exercised that injustice be not done.

It is a natural and commendable thing for the former citizen of Germany to carry in his heart a partiality for the land that gave him being. It was a commendable thing for him to require full evidence before he was convinced that his fatherland had disgraced civilization. It is this same spirit of steadfastness and loyalty that has made, and still makes, the former German a valuable and dependable citizen of America.

Occasionally, the United States citizen of German birth is found on the side of Germany in this world conflict. He should be rigorously suppressed But a thousand times more rigorously should the native American be condemned when found upholding, directly or indirectly, the hands of the kaiser.

Just as the whole American race is not to be looked upon with suspicion because a few traitors manifest themselves occasionally, just so should confidence be felt toward that great mass of honest, thrifty citizens who came to this country from the fatherland and became loyal Americans.

To Go the Whole Hog

This is our live stock edition. We believe it contains many features not only of interest, but of permanent value.

It is not necessarily the longest item that will be of most value to you. Perhaps a single sentence or a single paragraph will far more than pay you for searching through the whole edition. In order that many live stock breeders, and that many farmers interested in one branch or another of live stock production may find something of special interest each for himself, it is necessary to publish much information along various live stock lines and let each one pick out what is of peculiar value to himself.

There is a live stock phrase that is essentially apropriate in these days—"to go the whole hog." If you have decided upon the Red Duroc swine as your specialty, go the whole hog on that breed. Do everything you can to make a success of it; neglect no little part; put your whole soul into it. In just the same way, if you are a Holstein or a Jersey, or a Guernsey, or an Ayrshire dairy breed producer. No need to diminish any of your enthusiasm if you are a producer of the milking Shorthorns or the Red Polls. The same thought appeals to any and every branch of live stock production.

The phrase books say that "to go the whole hog" is an American expression meaning unmixed democratical principles. It is used in England to signify a "thorough-goer" of any kind. In Virginia the dealer asks the retail butcher if "he means to go the whole hog, or to take on a certain joint," and he regulates the price accordingly.

It is certainly a time in the history of the world when America should go the whole hog. America must go the whole hog in producing munitions, in furnishing millions of men for the army, in furnishing millions of pounds of meat and millions of bushels of wheat.

Surely to go the whole hog is timely now, and it is peculiarly timely for the live stock breeder who may well look to the future when there will necessarily be a pressing demand along the lines of live stock production the world over.

Age at Which to Market Pigs

J. E. R. writes: "About how old should a hog be when he weighs 200 pounds? Does it pay to crowd them as fast as you can?"

By crowding pigs can be made to weight 200 pounds at six months. Of course individuals can be made larger than this, but entire lots handled for pork require crowding to reach market weight at this age. Ordinarily seven months is about the right age.

The most economical results are almost always obtained by crowding pigs from the time they are born until after they are weaned and then again from the time they weigh 100 pounds until they are fat. Before weaning the gains are made so cheaply that it pays to put on as much weight as possible at that time. During fattening the feed can not be skimped or the pigs will not be fat at 200 pounds and it does not pay to carry them much beyond that weight.

Between weaning and fattening, however, is a period when under many conditions the pigs can be grown most profitably on rations containing a good deal of pasture and other cheap feeds and less grain. The amount of grain needed depends upon the amount and quality of these cheaper feeds available.

It practically never pays to give a pig no grain at all. It is also not practical to skimp the grain where the pig is getting nothing else; that is, the only reason for a light grain ration at any time is to induce the pigs to eat more of some cheaper feed.

Saving Scrub Calves

One thing is always calculated to rouse the unthinking to a high pitch of indignation, and that is that the farmers send their calves to the butcher.

It is the very place to send some calves. What the object in keeping scrub calves is is hard to figure out. They will not produce more butterfat than their dams; they will not pay a profit at maturity.

The sooner the scrubs go to the block, the better. What we are hoping for, however, is a realization of the possibility of improving the herd by the use of good sires. No farmer will sell calves that are going to make him money. But to pass laws to forbid the slaughter of calves, no matter what kind of calves they may be, would be as destructive as forbidding the thinning of fruit in the orchard.

Show and Production

In the breed magazines we are surprised to see long articles on the relative merits of show type and producing type. We can not understand the shortsighted policy which would stick to a show type which is not fixed by production.

No breed of animals can have wide popularity unless it has production; it is beautiful only through those marks which distinguish it as a producer. The hog whose body is full where meat is highest in price is beautiful in that particular. The beef cow has beauty where the same conformation on a dairy animal would be faulty and ugly.

The sooner we get down to the basis of production as a standard, the faster the purebred animals will be taken by the public and the more firmly fixed will breeds become.

Washington Gleanings

A total of 42,714 pounds of blackberries were picked near Toledo and shipped this season. The pickers received $1597.50 for their work.

According to the government's bureau of crop estimates, Washington's apple crop will exceed that of last year by more than half a million bushels.

F. E. DeSellem, horticultural inspector, estimates that the Yakima valley will lose 1000 cars of apples this year as a result of the work of the codling moth.

The value of the prune crop in Clarke county is estimated will exceed $500,000. Some of the growers received as high as 10 cents a pound for the fruit this year.

Sixty carloads of sheep have been shipped from Pateros this year and 133 cars have been ordered for that point within 20 days for sheep and cattle shipments.

That Grant county will harvest a crop of approximately 150 acres of apples and that much of the crop is unsold is the report of District Horticulturist P. S. Darlington.

The board of regents of the state college has recommended the Prosser district as the site for the irrigation experiment station recommended by the last legislature.

P. D. Smith of Okanogan has sold his Mineral Hill ranch to P. F. Munsell of Alderdale, Wash., for $29,000. It consists of 370 acres, of which 90 acres are in irrigated alfalfa.

Arrangements have been made by County Agent A. B. Nystrom of Lewis county to establish an experimental farm on a part of R. R. Somerville's land near the Southwest Washington fairgrounds, Chehalis.

F. Benz, president of the Potato Growers' association of the Yakima valley, recently stated that Yakima valley potatoes were finding a ready sale at $30 to $35 per ton f. o. b. Toppenish, as the result of the demand on the part of eastern and southern buyers.

Plans are being formulated by County Agriculturist A. B. Nystrom of Lewis county to hold a farmers' institute at Winlock November 5, 6 and 7. The programs will include prominent speakers, and the agricultural and live stock work will be given special attention.

Yakima reservation sugar beets have established a new world's record for tonnage yield, according to the official reports which the harvesters made to Manager T. R. Horne of the Utah-Idaho Sugar company. Thirty tons of sugar beets to the acre are being harvested at several places, whereas 25 tons is considered a record yield in any other beet-growing district.

What Others Say

East Washingtonian, Pomeroy: It now looks as if the fertile lands here will be cropped every year instead of every second year as heretofore, and that, too, without detracting from the fertility of the soil or lessening the production of grain.

Republic, North Yakima: Successful corn growing is but one contribution to Yakima prosperity, but an important one; it is an example of the transformation of the district during the last five or six years from a one-crop country to one of diversified crops and interests.

Tribune, Snohomish: The government declares that the ending of the present war will not bring to an end the demand for pork at present fancy prices; on the contrary it is expected that the demand for our pork abroad will be so great that it will be impossible for the American farmer to meet it.

Journal, Kent: The demand for gasoline, coal oil and fuel oil has become so insistent and these products bring such fancy prices, that any method of turning the waste products of the farm or mill into the best and safest motor fuel and lighting liquid known to science, should now be received and gladly acted upon. Why not give this cause a boost?

THE HOME OF THE CELEBRATED YAKIMA HERD

PURE BRED ABERDEEN-ANGUS REGISTERED CATTLE

IN THE FAMOUS VALLEY OF THE YAKIMA

THE Yakima herd of pure-bred Aberdeen-Angus is the largest herd west of the Missouri river, and one of the foremost in America from standpoint of breeding. Representatives of the YAKIMA HERD won more FIRST PRIZES at the 1916 International Live Stock Exposition, Chicago, than those of any individual breeder, and were awarded the honor of the

World's Championship Herd. Aberdeen-Angus Best Utility Breed

A review of the awards at the 1916 International Live Stock Exposition, Chicago, the supreme test of all beef breeds, shows that wherever the Aberdeen-Angus breed was pitted against the other breeds it won more prizes that ALL OTHER BREEDS COMBINED. In addition to this remarkable record the Aberdeen-Angus won Grand Championship honors at Ft. Worth, Texas, 1916, the greatest Fat Stock Show of the Southwest, and Grand Championship honors at Northwest Live Stock Show, Lewiston, Idaho. At the 1917 Western Live Stock Show, Denver, Colo., Aberdeen Angus feeders won Grand Champion honors in feeder competition with all breeds, selling for the record price of $14.50 per cwt.

MERAMAN OF TIERRA ALTA,
First prize 2-year-old bull at Iowa State fair, 1917.

Records Show Superiority

In the range of sales at the Chicago International prices paid for Aberdeen-Angus topped those of competing breeds, establishing records unapproached by any other breeds

Summary of 1916 Fat Carload Lot Prices.

10 loads Aberdeen-Angus steers averaged	$18.58
10 loads Shorthorn steers avrgd.	15.93
10 loads Hereford steers, avrgd..	15.75

The Aberdeen-Angus sold for an average of $2.65 per cwt. more than the Shorthorns and $2.83 more than the Herefords.

Comparative Average Prices Fat Carload Lots at Auction.

	1916.	1900-1916 (15 yrs.)
Aberdeen-Angus	$16.73	$9.34
Shorthorn	15.73	8.73
Hereford	14.94	8.38

For 15 years the Aberdeen-Angus have made an average of 96 cents per cwt. more than the Herefords and 61 cents more than the Shorthorns.

THE NORTHWEST'S GREATEST BREED

IN selecting a breed of the most general utility to benefit the farmers of the northwest, J. J. Hill, the great empire builder, as far back as 1883, chose the Aberdeen-Angus over all other breeds. By nature and environment the Aberdeen-Angus is best adapted to the northwest and records established by this breed in this section of the country are unapproached by any other breed. Never before in the history of the breed in America has there been such a great activity in the trade over such a wide territory, due in part at least to the phenomenal records made at the Chicago International during the last 15 years.

GRAND CHAMPION FAT CARLOAD LOT AWARDS.

Year.	Breed.	Per Cwt.
1916	Aberdeen-Angus	$28.00
1913	Aberdeen-Angus	13.25
1912	Aberdeen-Angus	14.00
1911	Aberdeen-Angus	15.75

A. B. NYSTROM, Editorial Contributor

Buhl Association.

Although there are a number of fresh cows in nearly every herd in the Buhl, Idaho, Pioneer Cow-Testing association, only 378 cows have been on test for the full month of September, five less than in August, according to the report of R. E. Snell, official tester. These cows produced 242,612 pounds of milk testing 3.8 per cent, or 9548.1 pounds of fat, giving association averages of 641.8 pounds of milk and 25.02 pounds of fat, the latter being 3.5 pounds lower than for September of 1916. Not enough cows freshened in August to bring about the increase in association averages, which should soon occur.

Only six of the 26 herds belonging to the association in September have averages of over 30 pounds of fat, but 14 have averages above the association average of 25.02 pounds. Thirty-one cows produced over 40 pounds of fat each for the month, 19 over 45 pounds.

H. H. Stiyer's herd of purebred Holsteins is the honor herd for the month with an average of 32.58 pounds fat, H. H. Payne's herd again being second with 32.20 pounds.

A. A. Stauffacher's grade Holstein Blondie, fresh August 24, is the high cow for the month, with a production of 1947 pounds milk and 64.2 pounds fat. H. H. Stiyer's Alban Mercedes Calmia De Kol is second with 62.4 pounds fat, and his Baroness Homestead II. is third with 62.1 pounds in 24 days.

Eleven cows have been sold for beef in the last month, and D. D. Doll has disposed of his mixed herd of 20 cows.

Drying Off the Cow.

Two of the essentials in reducing the milk flow are: milking less frequently and supplying less feed, says a bulletin of the Illinois experiment station. If the feed supply is decreased and the cow is milked as usual, since the act of milking is a stimulus to milk secretion, she will draw upon the surplus energy stored in her body in order to produce a normal amount of milk. Therefore, if the feed is reduced the milkings should be less frequent. When cows are giving a large amount of milk the drying-off process may be begun by leaving part of the milk in the udder at the regular milking period. After a few days one of the daily milkings may be omitted entirely. As the milk flow decreases, the milking may be done once in two days and then once in three days until the amount has been reduced to three or four pounds daily, when the cow need not be milked further. It is important that the drying-off process take place gradually in order to prevent injury to the udder.

Fifty-Pound Cows.

There were 331 cows in the Jefferson county (Wash.) association tested during the month of September, averaging 560 pounds of milk and 23.15 pounds of butterfat, according to the report of Ralph Erskine, tester. The average cost of feed was $5.90.

The following gives the names and records of the cows in the association having produced more than 50 pounds of butterfat for the month:

Glendale Creamery's "Chiquena" produced 1377 pounds of 5.2 per cent milk or 71.40 pounds of butterfat; Glendale Creamery company's "Brooketta" producer 1107 pounds of 4.8 per cent milk or 53.13 pounds of butterfat; Ed Nailor's "Rose III" produced 1044 pounds of 4.8 per cent milk or 50.11 pounds of butterfat; Sam Irwin's "No. 34" produced 1140 pounds of 5.3 per cent milk or 60.42 pounds of butterfat.

The Ayrshire

Logical Way to Choose a Breed

By PAUL E. TRIEM.

What is the logical way in which to choose a breed of cattle for a particular farm?

"Choose the one you like best," is the common advice. "Every breed is good if you handle it right, and you are more apt to do this with the type you fancy."

Sounds convincing, doesn't it? But now listen to the other side of the case, as advanced by J. W. Clise, the Ayrshire man of Seattle.

"If you will follow any given breed back to its home across the sea," says Mr. Clise, "you will find it living there under conditions of climate, food and handling which, in the course of generations, have made it just what it is.

"The Ayrshire cow is a Scottish product, and it is easy to trace now in her conformation and characteristics indications of the forces which have molded her, generation after generation. In the first place, you will find that for uniformity to type the Ayrshire is not excelled. In my stable, for instance, I can show you something which probably no other breed can equal—look down the line of cows, and you will find there back lines as level and uniform as anything can be. There are great individual difference between one Jersey and another, and between one Holstein and the cow of the same breed in the next stall, but the Ayrshire runs true to type. In addition to this matter of uniform appearance, she is a uniform producer; years before our modern system of testing was heard of, the Scotch breeders were bringing their national thrift to bear upon their herds, with the result that the cow that ate too much and produced too little was butchered. Today productivity at the milk pail is a fixed characteristic. And this Ayrshire milk averages 4 per cent butterfat, which the experts tell us is the ideal in this respect.

"Here, then, is the way I sum up the

Willomoor Mayflower, belonging to J. W. Clise, Redmond, Wash.

case for the Ayrshire—and remember I am an Ayrshire man only because extensive and patient investigation into the merits of all the dairy breeds has convinced me these Scotch cattle are the best in the world for our conditions. The Ayrshire cow is hardy, a good rustler, she produces more milk of a high quality in proportion to her consumption of feed than any of her competitors, she runs true to type, and her udder is compact and carried well up, thus fitting her to graze in safety on our brush pastures."

All of which brings us back to our starting point: before choosing a breed of cattle for your farm, take time to learn the fixed characteristics of each breed. And in doing this, you will be greatly aided if you can familiarize yourself with the environmental influences, back in Europe, which in the course of generations of breeding have produced these characteristics.

Beans From Brazil.

It is officially stated that the exports of beans from Brazil to the United States and allied countries of Europe will this year exceed 12,000,000 bags of 60 kilos each (app. 132 lbs.).

CARNATION HOLSTEINS WIN SILVER CUP

At the Oregon state fair, Salem, 1917, our Carnation Bull, Matador Segis Walker Delma, not only won first prize, but won the silver cup presented by the "Oregon Farmer" for the best Holstein bull, bred by exhibitor, over 1 year and under 2 years of age.

This was only one of the many prizes won by the 11 prize Holstein bulls, and 19 prize Holstein cows in the show string of Carnation stock farms, which took the majority of first prizes at Chehalis, Spokane, North Yakima, Puyallup, Western Washington fair, and the Oregon State fair. Most of the animals were bred and raised on the Carnation Stock farm in the Snoqualmie valley, King county, near Seattle.

Cup Given by Oregon Farmer for Best Bred Holstein Bull, Over 1 and Under 2 Years.

SILVER CUPS, Blue Ribbons and Milk Records Prove the Quality of CARNATION HOLSTEINS

Study the Pedigrees of Carnation Herd Sires

The pedigrees of the Carnation herd sires are pretty hard to equal on the Pacific coast. Only a short description can be given in this limited space

Johanna McKinley Segis—The son of the famous King Segis and the 40-lb. dam. His own dam made world's butter record for all periods of time from 31 days to 120 days. He now has 48 ARO daughters. One of his sons sired the first 30-lb. 2-year-old. One of his brothers sired the only 50-lb. cow in the world.

Matador Segis Walker—Grandson of the famous King Segis, through King Segis 10th and Matador Twisk Minnette 4th with 33.54 lbs butter at 4 years. "Matador" has a good record on the show circuit, and his son, Matador Segis Walker 6th, won first prize at all the fairs where exhibited.

BULLS
From Good Cows

If you are in the market for bulls of any age, you should see the Carnation Holstein Bulls before purchasing. On account of having the largest herd of registered Holsteins in the northwest your selection could be made with greater accuracy. Prices from $100 up.

Carnation Stock Farms

Visitors Invited — Correspondence Solicited.
CARNATION STOCK FARMS.
1192 Stuart Bldg., Seattle.

"Health Guaranty"

Breeders should remember, in buying new stock for their herds, that health is most important. Tuberculosis has been entirely weeded out at the Carnation Stock Farm, on account of contract with the U. S. Bureau of Animal Industry for regular inspection of all animals. Health certificate with each animal sold.

Raising the Dairy Calf

Big Problem Where Whole Milk Is Marketed

By M. O. MAUGHAN,
Division of Dairying, Washington State College.

The farmer must determine some method of feeding that will be cheap enough to induce him to keep all the heifer calves which are born, unless he knows some definite reason why such an animal should be discarded. While it has been possible in many cases to buy calves when grown and about to calve or to buy young cows in milk this will not be so easy to do in the future, and when such animals are found one can rest assured that he will have to pay a price high enough to pay the other breeder for doing the feeding while the animals were but calves.

One method on the dairy farm which sells whole milk is to feed but a small quantity each day of whole milk, making the ration consist of as much grain and hay as the young calves will consume. Calves should be given free access to a good grain combination at all times until they begin to consume more than three to four pounds per day each. When milk costs $3 per 100 pounds one pound of protein costs 75c from this source. By feeding grain, protein can be supplied at a much reduced figure. For example, linseed oil meal at $3.50 per 100 pounds would cost but 11c per pound protein. A good grain ration for the calf is one consisting of the following:

Corn meal, 2 parts by weight.
Ground oats, 2 parts by weight.
Linseed oil meal, 1 part by weight.

This grain should be fed immediately after the milk is consumed. The calves should be locked in stanchions when fed their milk so as to avoid the sucking of each others ears and other parts of the body immediately after finishing drinking their milk.

Milk substitutes have, in some instances, proved fairly successful.

A home made calf meal was prepared by the Indiana experiment station and given careful trials and proved to be fairly successful, and one which is worthy of mention. It consisted of equal parts by weight of the following:

Hominy feed.
Linseed oil meal.
Red dog flour.
Dried blood.

These were mixed with 7 parts of water and fed as a meal. The calves were started on whole milk, and when one week old the calf meal was added in small amounts and the milk was gradually decreased until at the end of five weeks the animals were receiving 18-20 ounces per head per day of meal and no milk. They were fed this until 6 months of age, at which time they were receiving 24 ounces of meal each per day. Besides receiving this meal the calves had access to ground oats and corn, equal parts, and a fine quality of alfalfa hay, together with some silage when 3 to 4 months old. The calves made good gains and looked thrifty.

Start the calf off on whole milk from some of the low-testing cows, and gradually substitute a home made calf meal if the various feeds can be obtained.

Provide plenty of grain and hay at all times. Silage can be provided after 3 to 4 months old.

At all times watch the young, growing calf carefully and avoid indigestion or scours, as it is generally called. Extreme care should be exercised in keeping the calf buckets and all other utensils from which their feed comes in a perfectly clean condition.

If it is found undesirable to feed a home made calf meal invest in a good separator, separate some whole milk and save the cream and use it to some advantage if possible, probably the making of farm butter.

King of the Pontiacs

Here is the opportunity to get some of this, greatest of all, Holstein blood. We will accept a few approved cows for service by our new herd bull,

KING PONTIAC SEGIS OF BROOKSIDE, 195818

Sired by King of the Pontiacs, Dam Queen Segis of Brookside, a 27-pound Daughter of Old Pontiac Clothile De Kol 2nd, with record of 37.21 lbs. butter in 7 days. The grandest old cow of the breed. He is also grandson of Prince Segis Korndyke, the sire of high priced bulls, and out of A. & G. Inka McKinley, the dam of King Segis.

There is more 30-pound cows and high priced sires in the breeding of this young bull than any other Holstein bull in the Pacific northwest. Write for illustrated pedigree and terms.

Also Breeders of Milking Shorthorns

With milk records behind them. One or two high class bull calves for sale. Backed up with large milk production.

A. V. Bradrick & Son

HOLLYWOOD FARM

will offer fresh heifers with ARO records and of exceptional breeding, and two young sires with yearly records on both sides, all to be had at your price. Can you afford to pass this opportunity up? Money-makers from the start

Remember the Date, November 23

Food Situation in France

Meat, Meat, and Again Meat, Is Pressing Need

By FRED B. PITNEY

ARTICLE III.

France must have more meat. Her herds are disappearing rapidly. Soon they will have to be reconstructed entirely. Meat, meat, and again meat is a pressing need for France.

The French army requires 36,000 tons of meat a month, or 432,000 tons a year, 1,428,000 tons for her civilian population and another 356,000 tons for some millions of Belgians and French refugees, making a total of 2,000,000 tons of meat demanded by France.

As compared with her meat animals at the beginning of the war, the cattle of France are cut down more than 20 per cent, hogs 50 per cent and sheep 37 per cent. Cattle feed is short in France, and cattle poor and under weight. A total of approximately 2,500,000 cattle, sheep and hogs from the French herds was seized by Germany in the invaded provinces.

England undertook to supply France with 250,000 tons of meat a year, and this supply was kept up at the rate of about 20,000 tons a month until February of this year, when it was stopped, England having all she could do to feed her own people on reduced rations.

The French government is very bureaucratic, but the French people do not like to be overgoverned. They object seriously to anything that savors to them of meddling in a man's private affairs. For this reason it has become extremely difficult to get a workable income tax law in France. The people immediately rose against the proposal to give the government the right to examine their books and find out if they told the truth about their incomes if they failed to make a return. So a scheme was figured out for taxing a man on seven times his rent if he made no income tax return, or one the government thought too low.

Saying how much or what a man shall eat is also getting pretty close to private affairs, and therefore the French government, knowing intimately the people it has to deal with, is slow—s-l-o-w—in coming to such measures, even in face of the only too evident food shortage in the country. There have been efforts at price fixing, but they have not worked satisfactorily, one reason being that they have not been national, but local. Paris, for example, has tried fixing the price of butter, but it has been found that the result has been to drive butter away from Paris to localities where it could be sold for what the market would pay.

To Try National Price Fixing.

A scheme of national price fixing is to be tried now with beans and potatoes. Both of these crops are far below the requirements of the country. I have seen many days when potatoes could not be bought in Paris, and it was a common thing last winter to have to run half over the city to find a market where green vegetables could be bought. The national price-fixing scheme for beans and potatoes will divide the country into districts, and fix the price for each district, with a penalty for sending either commodity out of the district without permission.

So far, meat has withstood all efforts to control its consumption—there has been no attempt to control its price—and yet it is vitally necessary either to control the consumption of meat in France or to increase the supply. Otherwise, the end of the war will see the country so reduced in its herds that it will take many years to bring them back again to the point where France will be once more self-sustaining.

Supply Must Be Increased.

Of course, the thing to do is to increase the supply. When a country has had its breadstuffs cut down to the extent to which France has suffered the people naturally fall back on meat. One might think they would fall back on vegetables, but the same reasons that have deprived them of grains have deprived them of vegetables. There have not been the hands to cultivate the ground. They could not raise more vegetables than wheat. And they have fallen back on beef, mutton and pork. The herds existed, and they have been eaten up.. The people had to have something to eat.

To what extent the herds have disappeared is shown by the cutting down of the meat ration of the soldiers at the front. At the beginning of the war they were allowed one pound of meat a day. Twenty per cent has now been cut from that allowance. And I will point out again that only dire necessity will countenance reducing the food allowance of soldiers at the front.

Meat Shortage Serious.

Civilians, naturally, were the first to suffer when meat became scarce. The price went soaring. Retail prices to consumers doubled and trebled. The poor cut down in quantity, one understands, and the very poor went without entirely. But those who could pay could have meat if they were willing to give the price.

The time came, however, when there had to be an attempt to control the consumption. The army requires 36,000 tons of meat a month, or 432,000 tons a year. France's herds suffered enormously at the very beginning of the war. A total of approximately 2,500,000 cattle, sheep and hogs from the French herds were seized by Germany in the invaded provinces. Coming immediately on top of this loss France found herself compelled to find food for some millions of Belgian and French refugees. This had to be done at once, and the herds remaining had to be slaughtered without stopping to ask questions about the future. One does not say to a starving man, "What will I do tomorrow if I give you this crust of bread today?"

England, therefore, undertook to supply France with 250,000 tons of meat a year, and this supply was kept up at the rate of about 20,000 tons a month until February of this year. At that time the English supply stopped. England was having then all she could do to feed her own people on reduced rations.

Thus, since February France has had to supply from her own resources 432,000 tons of meat a year to her armies,

CUTTER'S

BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

Individuality Breeding Production

Puget Sound Herd HOLSTEINS

for the year ending May 1, 1917, won more prize money in the long time tests than any other herd in the United States.

Thirty-five yearly records have been made. Eight have made records from 925 to 1176 lbs. butter in 1 year. Twelve have made milk records from 20,572.9 to 31,246.9 lbs. in one year.

Our consignment to the Pacific International sale to be held in Portland November 23 consists of 11 head.

One cow with a yearly butter record of over 1000 lbs.

One three-year-old with a 29-lb. record. She made 572 lbs. butter in a year as a 2-year-old.

One four-year-old with two yearly records.

One well bred son of the noted cow "Cascade Marie."

Five daughters of the proven sire, "Quirinus Cornucopia."

Two daughters of "Chimacum King Korndyke Sadie Vale," Patience, constant watchfulness, accurate record keeping mated to combine the greatest possible production, combined with beauty and form. Such is the Puget Sound herd definition of breeding. But it produces the animal that will deliver the goods into the purchaser's hands.

WM. BISHOP, Prop.

Chimacum, Wash.

1,428,000 tons for the civilian population and another 350,000 tons for refugees, making a total of 2,000,000 tons of meat a year demanded by France.

Herds Depleted.

What are the herds she has to do this with? At the beginning of 1914 her cattle herds comprised 14,737,710 head; sheep 16,131,390 and hogs 7,035,850. By the end of 1914, after five months of war, her cattle were reduced to 12,668,243, her sheep to 14,038,361 and hogs to 5,925,291. Today her cattle herds are cut down more than 20 per cent, while her sheep number no more than 10,000,000 and her hogs 4,000,000—a loss of nearly 50 per cent of her hogs and three-eighths of her sheep on top of the loss of 20 per cent of her cattle.

Cattle feed is short in France and the cattle are poor and underweight. More of them have to be killed in proportion to supply the needed quantity of meat. Milch cows have been killed and the shortage of proper feed has reduced both the quantity and quality of milk. Why, I have seen the time when it has been next to impossible to get milk for my little baby in Paris. I have gone from store to store, begging some one to sell me as little as 2 cents' worth of milk for my baby.

Crying Need for Meat.

The government is trying to conserve the meat supply and save the herds now by limiting the use of meat to one meal a day. The endeavor is made to accomplish this purpose by forbidding the sale of meat after 1 p. m., and ordering the butcher shops closed at that hour, while hotels and restaurants can serve meat only with the noonday meal. But this measure has had little effect on the use of meat, as it serves only against the restaurants. Housekeepers can buy all the meat they want before 1 o'clock, and they do it, as there is no restriction in the amount that can be bought. Moreover, in the restaurants one can eat all the meat one wants at midday, and thus make up for having none at night, and this, also, is the practice.

There is only one real solution of the problem. France must have more meat. Her herds are disappearing rapidly. They are today far below the danger point. Soon they will have to be reconstituted entirely. Meat, meat, meat and again meat is a pressing need for France.

Feed and Maturity

Well Fed and Light Fed Heifers

The Ayrshire quarterly quotes Dr. C. H. Eckles of the Missouri university as saying that well fed heifers usually reach maturity at an earlier age than light fed ones.

His experiments brought out the fact that heavy fed Jerseys became sexually mature 76 days earlier than light fed animals of the same breed, while heavy fed Holsteins matured 112 days earlier than light fed. Further experiments demonstrated that variations in milk-giving qualities were due more to heredity than to feding.

Professor Eckles says that the age at which heifers should be bred depends largely on the breed and the manner in which the individual has been developed. Generally speaking, Jerseys and Gernseys should be bred to freshen at from 24 to 28 months of age, while Holsteins and Ayrshires should be bred to freshen at from 28 to 30 months.

Feeding influences growth and development. The age of first calving seems to influence the deveopment of the milking functions. Early calving retards development while delayed breeding sometimes proved troublesome. A happy medium is suggested. Dr. C. H. Eckles is today the most prominent of our dairy scientists.

South African Corn.

The union house of assembly of South Africa has decided to take over the surplus crop of corn at 14 shillings 3 pence ($3.42) per bag of 200 pounds. This price was considered reasonable in view of quotations in other parts of the world.

World's Wheat Crop.

According to the International Institute of Agriculture, the production of wheat this year in Spain, France, united kingdom, Switzerland, Canada, United States, India, Japan and Algeria is estimated at 208 million quarters, or 3.3 per cent more than the production of these counties in 1916.

Milking Shorthorns

How to Get a Foundation Herd

By A. V. BRADRICK.

We are often asked how to get a start for a foundation herd of milking shorthorns.

Our reply to that is to buy a bull of the very best milking strain you can, and use him on the most likely cows you can obtain of the beef breeds, giving preference to the Bates line of breeding. Heifers or cows from dams with milk records behind them come quite high for the beginner and they are really not to be had. Those that are desirable specimens, or have the right kind of merit individually. To illustrate what I mean by this, will say that I visited every breeder, last April, in Minnesota, Wisconsin and Iowa that had any stock with milk records behind them, two or three herds in Ohio and some in Pennsylvania. I was only able to buy six females, and secured those on account of being able to persuade the breeders that in so doing it would promote the interests of the breed out here in the northwest. I might have bought a few more, but was not looking for the culls of the herd; too expensive to ship so far.

We also attended the sale of L. D. May in Pennsylvania, and might have purchased some good stock there had we not been so timid about prices, but their pace was too swift for us; the 40 head sold, including both bull and heifer calves, for over a $1000 average, so will leave it to you to judge our backwardness as a beginner.

We might add, just as a matter of information, as to how prices run, that we did get our courage up to pay as high as $800 for what we did get, and yet we only got our mouth open once at the May sale. The middle west breeders advised us they were buyers of females and not sellers, and, owing to this situation, we advise breeding up in the manner indicated.

We believe the ideal dual-purpose cow is one that will milk 10,000 to 12,000 pounds. We have seen a number of this kind of cows; have seen them for three generations showing their ability to breed them true to their dual-purpose form. Have seen some fine milk producers, the result of first cross with a good dairy bull on beef-bred cows of only very ordinary milk production themselves. "Missourians" are now beginning to realize that we have a dual-purpose cow and are breeding them so we in Washington had better look around, and if we do, we believe that we will find that this is the best breed of cattle possible for our section of the country, and especially to the man that is close to outside range or does not desire to milk his herd all the time. Take the average farmer with a herd of these kind of cows—he is not at the mercy of the milk distributor, for if he can not obtain a satisfactory price for his milk he can turn his herd into beef production without any sacrifice.

La CONNER FLATS STOCK FARM

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams: butter, 1 year, 1080.82 lbs.; milk, 24,380.3.

J. H. HULBERT

Mt. Vernon, Wash.

THE STATE COLLEGE OF WASHINGTON

IS OFFERING FOR SALE A FEW

DAIRY ANIMALS of MERIT

Combining Both Type and Production

1. Lawn's Palouse Duke—132342
   A Jersey bull of excellent type and carrying good blood lines. His dam as a 4-year-old produced 7474 pounds of milk and 464 pounds of butter. Age 3 years.
2. Marigold's Palouse Prince—153513
   A Jersey bull of excellent lines, long, deep and typy in every respect. His dam, as a 2-year-old, has a record of 5879 pounds of milk and 354 pounds of butter. His sire is the present herd sire at the State College of Washington and one of excellent breeding and type and one of great promise.
3. Several pure bred young bulls of the Ayrshire, Jersey and Holstein breeds.
4. A few pure bred Ayrshire cows with yearly records.

Further information will be sent upon request. Address

Two Profits

Use of Brood Mares on the Farm

A brood mare on the farm is a source of two profits. It is not uncommon to hear of some remarkable mare on a particular farm that, besides doing her share of the farm work, has raised many hundreds of dollars worth of colts. It is seldom that there is more than one such mare mentioned. To obtain the greatest returns, nearly all the work animals maintained on the farm should be mares of this character, says a new farmers' bulletin of the United States department of agriculture.

"Horses always are needed to do farm work," says the bulletin, "and generally they can be raised from farm mares more cheaply than they can be purchased, while the surplus, if of proper breeding and liberally fed on suitable balanced rations, will find ready sale at good prices because they will have the characteristics that suggest the ability to do work satisfactorily and profitably."

It is pointed out that breeding working mares places double duty on them, consequently they must be robust individuals properly conformed, and must be given good care and treatment. With two sources of profit from one animal, farmers can well afford to pay more for such stock, feed it more heavily, and give it special attention. The small farmer is most likely to get the best results from such a plan because he usually works his own teams or is in a position to watch them closely and see that they are not ill treated.

The two outstanding requirements in profitable farm mares are that they be breeders and workers, says the bulletin. Any mare that is not at least of high grade should not be considered. The particular breed or grade would depend largely on local markets. In a locality where there is a local horse market it is generally advisable to breed the prevailing type, since by so doing, sales are more easily made and the services of high-class stallions are practically assured.

The bulletin already mentioned, Farmers' Bulletin 803, entitled, "Horse Breeding Suggestions for Farmers," contains practical information for the breeding and management of mares, also the care and feeding of foals. Special directions are also given for the feeding and management of young horses. This bulletin may be obtained free upon application to the department of agriculture, Washington, D. C., as long as the department's supply lasts.

Shropshire Ram.

Champion Shropshire yearling ram, Oregon State fair, 1917, owned by Frank Brown, Carlton, Ore., and shown and cared for by Frank Brown Jr., shown in the photo.

Medal-Winning Jerseys for 1916.

The Jersey medal awards for the year 1916 showed an increase in the average production of milk and butter fat for the cows on register of merit test.

The average production of 1636 cows and heifers, all ages, is 7931.9 pounds of milk and 427.26 pounds of butter fat, while the average percentage of fat in the 1636 tests was 5.39 per cent. A comparison of these figures with those of the year previous shows an increase of 146 pounds of milk and 11 pounds of butter fat in the production of all Jerseys on test.

The grand championship for the year went to The Seer's Alberta 2d, owned by E. T. Bedford, Greens Farms, Conn. This cow, in addition to qualifying for Class AA by carrying a living calf 185 days of her test, produced 16,872.7 pounds of milk, and 881.66 pounds of butter fat, equivalent to 1037.25 pounds of 85 per cent butter. St. Mawes Poppy, owned by Ed Cary of Carlton, Ore., was designated champion cow of the year, having produced 15,782.4 pounds of milk and 952.28 pounds of butter fat, equal to 1120.32 pounds of 85 per cent butter.

Holsteins

Of Greatest Value After 10 Years

The Holsteins speak for themselves and need no defense from anybody, but one can forgive the Holstein enthusiasts for making comparisons now and then. For instance, Harold McAlister of California declares:

The record of such Holstein cows as Hark and others, up to 19 years of age, show a production at a greater age than has been attained by the cows of any other breed. The average life of a dairy cow is computed to be only seven years, yet Holstein cows have shown a productive capacity of over two and a half times the normal length. Depreciation is one of the greatest losess suffered in dairying and in the case of a $200 cow, it amounts to over $27 per year. Now, when a Holstein cow has aproximately twice the length of profitable production, as compared with other breeds, it will readily be seen that this enormous expense of depreciation is but half for the cows of that breed. This cost is still further reduced, if it is considered that when a Holstein cow becomes too old to be profitable any more, she will bring almost twice the price for beef that a Jersey or Guernsey would. Instead of showing a decline in production after the fifth or sixth year, like most other breeds, the Holstein, according to the Connecticut Experiment station reports, shows an increase in production till past 10 years of age, as proven by the summary of their official records.

	Lbs. Fat.	Lbs. Milk.	Pct. Fat.
10-11 yrs.	15.40	445.2	3.46
9-10 yrs.	14.97	433.2	3.45
8-9 yrs.	15.17	441.6	3.44
7-8 yrs.	14.71	438.2	3.36
6-7 yrs.	15.05	441.9	3.41
5-6 yrs.	14.72	432.7	3.41
4-5 yrs.	13.96	416.5	3.52
3-4 yrs.	12.39	368.6	3.62
2-3 yrs.	9.96	300.9	3.31
1-2 yrs.	8.76	267.3	3.27

Thus, the average Holstein cow does not reach her full capacity, in either milk or butter production, until almost 11 years old.

Not only official records, but the lists of the prize winning animals in the show ring, prove that the average Holstein does not attain her full greatness until at an age at which the average cow of other breeds is fit only for the shambles. The greatest prize winning Holstein cow that, probably, the breed has ever known, Aconeth Lady, did not win her greatest prizes until almost 17 years of age. It is almost invariably the case that the prizes in the mature Holstein classes are won by animals that are past 10 or 12 years old.

Percheron Stallion.

Kroumir, senior and grand champion Percheron stallion, Washington State fair, 1917, owned by A. R. Hunter, Island City, Ore.

National Shorthorn Congress.

The big event in Shorthorn circles will be the national Shorthorn congress show and sale to occur at Chicago the third week in February next. It will embrace the entire country in its scope and is designed to furnish a convenient outlet to breeders of high-class Shorthorns.

The program is arranged to include shows each forenoon and as an added inducement to the exhibitors the American Shorthorn Breeders' association will offer cash prizes approximating $8000. The show entries will be limited to the cattle to be offered in the sales—a fact that will insure to the buyers an offering of outstanding individual strength. In order that the small breeder may have an equal chance with the owners of large herds, the entries will be limited to 15 head from any one breeding establishment.

Herefords.

In the united kingdom the principal districts for the breeding of Herefords are the West Midland counties and the Welsh counties that border onto them. There are also a fair number bred in certain parts of Ireland.

Northwest Live Stock Show

Will Feature Two Great Sales of Cattle

Among the most important features of the Northwest Live Stock show at Lewiston, Idaho, November 8 to 15 inclusive will be the two great sales of cattle that will be conducted, one under the auspices of the American Hereford Cattle Breeders' association, the other by the Pacific Northwest Shorthorn association.

National Secretaries R. J. Kinzer, Kansas City, of the Hereford association; Wayne Dinsmore, Chicago, of the Percheron association, and E. W. Evans, Chicago, of the Duroc-Jersey association, will be in attendance throughout the show and will address the members of the Northwest Live Stock association.

Much interest is being shown in the

Champion Percheron stallion Carsino at the 1917 state fair of Idaho, owned by Walter Borthers of Buhl and Filer, Idaho. This animal also captured some honors at southern Idaho fair at Filer, Idaho, this year.

student and young people's judging contests this year, and there are many entries. Meat saving demonstrations will be conducted for the benefit of women visitors throughout the exhibition by the extension department of the University of Idaho.

As usual, there will be many elaborate parades.

Of even more interest than the show itself will be the addresses that will be delivered by men of national reputation from all over the country, including one by Honorable Gifford Pinchot, chairman of the national food administration's live stock committee. Large delegations are coming from Chicago, Kansas City, Denver, Salt Lake, Portland and Spokane meat distributing interests and stock yards.

The show will be opened with a monster barbecue in honor of the visiting governors of Nevada, Idaho, Oregon, Washington and Montana. One and one third round trip rates have been granted by all railways.

Secretary Paul Clagstone announces that judging from present entries the coming annual show at Lewiston, Idaho, November 8-15 inclusive promises to beat all records for the country west of the Rockies. Entries of Hereford and Shorthorns number over three times as many as at any previous show held in the northwest, and the other departments are proportionally large. In addition to the numerous and extensive buildings which have housed the exhibits in the past, the management has been obliged to rent nine large tents to take care of the increased entries this season.

Hereford exhibitors include the following: Henry Thiessen, Sweetwater, Idaho; George Chandler, Baker, Ore.; A. B. Cook, Townsend, Mont.; J. D. Miles, Livingston, Mont.; A. O. Huntley, Cuprum, Idaho; Hastings & Hover, Phillipsburg, Mont.; L. L. Young, Nampa, Idaho; Platt Brothers, Genesee, Idaho; John Mortenson, Burley, Idaho.

Among Shorthorn exhibitors are: Childs & Anceney, Helena, Mont.; Frank Brown, Carlton, Ore.; James H. McCroskey, Fishtrap, Wash.; Day & Rothrock, Sprague, Wash.; Duncan Dunn, Wapato, Wash.; Harry Summers, Bozeman, Mont.; W. J. Townley, Union, Ore.; William DeLay, Union, Ore.; William Leonard, Pomeroy, Wash.; I. H. Jorgens, Nez Perce, Idaho.

Those showing horses include M. E. Metz, Colfax, Wash.; A. C. Ruby, Portland, Ore.; A. H. Riddell, Addy, Wash.;

ABERDEEN-ANGUS CATTLE

ARE THE PREMIER BEEF BREED OF THE WORLD

Their show record, in direct competition with other breeds, prove their superior merit conclusively.

Record at International Live Stock Exposition, Chicago

Competition open to Pure-Breds, Grades and Cross-Breds.

Out of fifteen possible Grand Championships and fifteen possible reserves, Aberdeen-Angus have won ten Grand Championships and nine reserves.

Out of fifteen possible Grand Championships for Carloads, Aberdeen-Angus have won twelve times.

Out of fifteen possible Grand Championships for Carcass Contest, Aberdeen-Angus have won fourteen times.

The above prizes, together with many other prizes too numerous to mention, which the Aberdeen-Angus have won in direct competition, should convince every one of the superior merits of the breed.

Aberdeen-Angus have also proved their superiority in Feeder Competition at all the leading shows and stock yards of the country by winning Grand Championships and selling at record prices.

Summary of 1916 Fat Carload Prices at International Exposition, Chicago

10 loads of Aberdeen-Angus averaged	$18.58
10 loads of Herefords averaged	15.75
10 loads of Shorthorns averaged	15.93

These figures show that the Aberdeen-Angus sold for an average of $2.65 per hundred pounds more than the Shorthorns and $2.83 more than the Herefords. These figures are practical, because they were obtained where the same number of loads of the best of each breed were assembled. These figures further show very clearly the degree in which the Aberdeen-Angus breed leads all other breeds in establishing top market prices.

For free illustrated literature, including history of the breed, show records in detail, and a list of members of the AMERICAN ABERDEEN-ANGUS BREEDERS' ASSOCIATION, address

CHARLES GRAY, Secretary,
817 Exchange Ave., Union Stock Yards, Chicago, Illinois.

Waikiki Farm Jerseys

"Home of the Pilot Family"

Herd founded in 1912. The largest Jersey herd in the Pacific northwest. Type and production are both considered in our breeding program.

Herd Bulls—Golden Winnie's Count 105989—A line-bred Golden Fern Lad bull, at the head of the herd for five years, has now yielded his place to two of his sons:

Count's Foxy Lad of Waikiki, 142808. (See description under cut.)

Model's Pilot of Waikiki, 152038. Junor champion Spokane, 1917. (See cut and description of dam below.)

COUNT'S FOXY LAD OF WAIKIKI

A grandson of Pilot. Grand Champion bull of the northwest, 1917. His dam, Eminent's Foxy Belle, is now on R. of M. test and in 7 months and 9 days has given 9627 pounds milk, 514.7 pounds butterfat.

PILOT'S MODEL

Champion Senior 2-year-old Jersey of the West. Record with first calf—12,639 pounds milk, 618.2 pounds butterfat. With second calf she has milked 65 pounds per day.

Our Cows Are Making Excellent Register of Merit Records:

	Age: Yrs.	Mos.	Lbs. Milk.	Lbs. Fat.	Days on Test.
Princess Coleman, 292061	6	5	12,873	828.44	365
Fancy Iron Duchess, 290962	4	7	13,643	739.06	365
Pilot's Model, 314765	2	9	12,639	618.29	365
Lady Trilby Du Val, 266605	6	8	11,275	546.54	365

xEminent's Coquette Girl, 300648	6	0	10,671	500.43	286
xEminent's Foxy Belle, 304982	3	11	9,627	514.70	223

xYear's test not completed.

Wren & Greenough, Fenn, Idaho; Follett & Schooler, Genesee, Idaho.; Warren Browning, Moscow, Idaho; Charles Sawyer, Palouse, Wash.; Brown & Mood, Moscow, Idaho; Jacob Busher, Genesee, Idaho; I. H. Lowry, Winchester, Idaho; S. Metz & Sons, Pendleton, Ore.; Julius Giese, Juliaetta, Idaho; H. Rilley, White Sulphur Springs, Mont.

Swine exhibitors include: Silver Birch Farm, Newport, Idaho; Sam Taylor, Palouse, Wash.; Edward Schoel, Suver, Ore.; Wilson Brothers, Greenleaf, Idaho; Hugh Walter, Townsend, Mont.; J. M. Royston, Payette, Idaho; P. L. Sain, Oakesdale, Wash.; B. L. Maricle, Lewiston, Idaho; Robert Nelson, North Yakima, Wash.; Vahlberg & Sons, Caldwell, Idaho; Howard Brothers, Parma, Idaho.

Dairy exhibits will largely exceed those of last year, as will those of sheep.

There will be some fine displays in the carload classes of fat cattle, swine and sheep.

Judges will be as follows: Shorthorn and Aberdeen Angus, H. R. Smith, Chicago Union Stock yards; Herefords, Dr. T. W. DeWitt, Denver, Col.; dairy cattle, C. V. Ellington, Salt Lake City, Utah; horses, C. N. Arnett, Bozeman, Mont.; swine, M. H. Mumford, Urbana, Ill.; sheep, J. E. Nordby, Idaho Agricultural college, Moscow, Idaho, and C. E. Howell, Washington State college, Pullman, Wash. Representatives of the packing houses will judge the fat stock.

Oregon Jack.

Mohawk Chief, first prize 3-year-old and champion jack, Oregon State fair, 1917, owned by F. J. Chalmers, Cornelius, Ore.

Argentine Harvest

Surplus of Wheat, Oats, Linseed

In its issue of October 2 George Broomhall's Corn Trade News says:

The near approach of the Argentine harvest season reminds us that the sun, metaphorically speaking, never sets on the wheat fields which supply Great Britain with her breadstuff; last week we were writing of the concluding stages of the harvest in this country and Canada. In a few weeks we shall be discussing the Australian and shortly afterward the New Zealand, and subsequently the Indian harvest prospects. On Saturday our agent at Buenos Aires cabled that the crop prospects in the Argentine are excellent and that it is anticipated if present conditions are maintained there will be a record yield of wheat and oats. The exportable surplus of wheat may very likely exceed 4,000,000 tons (18,000,000 quarters). This would indeed be a welcome addition to the food supply of the allies, and one is left wondering what effect such a surplus of grain for export will have upon the international grain market next January or even sooner. As we have said before in these reviews, storage accommodation in the Argentine is quite insufficient to take proper care of abundant cereal crops. If next December there should be safely harvested 10,000,000 tons of wheat, oats and linseed, of which 7,000,000 tons will have to seek a market abroad, we may be sure the markets of Buenos Aires and Rosario will be in a seriously congested state. It is true that harvest has not yet commenced even in the earliest districts, nor are the crops absolutely assured, but they are in many districts so far advanced that we may now reasonably hope that the coming harvest will be a bumper one. In the earlier districts wheat cutting should commence in six weeks' time, and the harvest should be finished before the end of December.

Winter Bird Feeding.

In order that birds may be helped safely through the winter, when snow will cover many of their usual sources of food, the bureau of the biological survey of the United States department of agriculture is urging city park officials to make bird feeding an activity in the city pleasure grounds.

Productive Jerseys

BIG caliber, high producing cows are essential to the BIG success attained by a few dairymen and breeders. The man or woman who is contemplating entering this most noble, patriotic and scientific occupation must be reasonably sure that the animals used for a foundation of the future herd are of a producing strain.

The cow testing association and official test work has proven this to our entire satisfaction. Every cow in our herd has been and is being tested showing a herd average production of around 50 pounds fat per cow each month for many succeeding months, setting a pace surpassed by few, if any herd in the northwest. We are making a specialty of THE CARY BREEDING, many of the animals carrying this blood.

Herd sire, Gertie's Poppy's St. Mawes, also several daughters of Foxhall's Fern Lad.

The herd sire is over 50% of the herd from the standpoint of breeding. We are sold down to three bull calves under 6 months of age, including the CHAMPION JUNIOR, state fair 1917.

We are not unreasonable in price.

Mellow Lawn Farm

F. A. DOERFLER, Proprietor.

Marion County. Silverton, Oregon.

A Slice a Day

Our Allies need Wheat.

We Americans have wheat—lots of it.

We can share with our Allies and have sufficient for ourselves if we choose.

If each of us here in the United States chooses to save a single thin slice of bread a day, our Government can send an additional 4000 ton ship, loaded with wheat, to our Allies EACH DAY.

4000 tons is a lot of wheat. It will provide enough flour for more than 9 million people for a day; people who must have it; who are fighting for us across the sea.

Remember too, that SAVE does NOT mean GO WITHOUT. Eat a piece of corn pone or rye bread in place of that SLICE A DAY.

JOIN THE FOOD CONSERVATION ARMY

Swine Decrease in all Countries

Selling a brood sow at this time, according to the United States department of agriculture, is like killing the goose that laid the golden eggs.

When pork is selling at 18 cents or more a pound on the hoof, the hog breeder may be tempted to turn into cash all that he can sell; yet the department points out that the value of a brood sow which will produce such high-priced offspring is proportionately increased and she should be kept as the source of further and future profits.

Since the beginning of the war the number of swine in all countries has decreased and the decrease has been marked in some of the belligerent countries. In France, for example, in the three years just before January 1, 1917, the number of swine decreased 38.12 per cent; during 1915 the number in Germany decreased 31.47 per cent.

Breeding stocks are being depleted, and the department says that the situation is already critical and threatens to become very serious if the country continues to be drained of its meats. Hogs furnish meat more quickly and cheaply than other stock can; the meat shortage, therefore, can most readily be met by swine production.

Coal Production.

Coal production records were smashed in 1916, when the output was around 597,500,000 tons, compared with 570,000,000 tons, the previous high record established in 1913. The quantity of bituminous coal mined was 509,000,000 tons, an increase compared with 1915 of 66,500,000 tons, or 15 per cent.

Silver Cliff Jerseys

HIGH REGISTER OF MERIT RECORDS.
Home of the

Grand Champion Cow

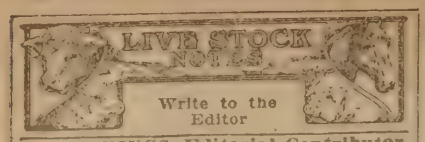
Oregon State Fair, 1917.

Chief Engineer's Viola, Grand Champion Jersey Cow, Oregon State Fair, 1917

SOME OF OUR RECORDS ARE AS FOLLOWS:

CHIEF ENGINEER'S VIOLA, a double granddaughter of Golden Glow's Chief, 8,559.9 pounds milk and 571.4 pounds butter, as a 3-year-old. This is the grand champion cow above.

PEER'S PEARL OF SILVER CLIFF, 7,468.7 pounds milk and 541.1 pounds of butter, as a 2-year-old.



PRINCESS NANCY V. 2d will finish November 5 with over 11,000 pounds milk and 565 pounds butter.

FOXHALL'S FERN LAD, our herd bull, has four Register of Merit daughters, one a 2-year-old with over 600 pounds butter.

A few Choice Young Bulls from Register of Merit dams.

Will also sell a few Register of Merit Cows.

Boar Management

Deserves the Best of Attention

The management of the boar is a very important part in the raising of strong, healthy pigs, and one which is sometimes neglected, says Farmers' Bulletin 874 of the department of agriculture. He should be the most valuable animal in the whole herd, and as such deserves the best of attention. The boar should be purchased from a breeder of purebred hogs when between 8 months and 1 year of age. Many breeders, however, purchase a boar when a weanling pig, but to be successful in this choice requires a wide experience and sound judgment. Aged boars which have proved their worth can sometimes be purchased at a reasonable price. It is much safer for an inexperienced breeder to buy an old, active boar than a young untried boar. If possible, the farmer should visit the herd where the boar was raised and note the conditions under which he was bred. At any rate, it is always possible to obtain from the breeder notes on the health and the kind and amount of feeds used, so as to serve as an index to his subsequent treatment.

Upon arriving at the farm the boar should be unloaded as soon as possible and placed in quarantine to guard against the introduction of disease into the herd. If he is lousy it is well to treat this condition at once. His feed should be a continuation of that to which he has been accustomed, feeding rather lightly the first few days until he recovers from the strain of shipping and becomes accustomed to his new surroundings. If it is not feasible to continue feeding as previously indicated, the change to a more convenient ration should be made very gradually in order not to disturb the appetite or health of the animal. As a rule, a pig 8 to 12 months old will be in proper breeding condition when received unless he has been very heavily overfed. In purchasing an older boar, particularly one which has been in the show circuit, it is often necessary to reduce his condition before attempting to breed. With some animals the breeding power is permanently impaired by too high condition at some time in their life. The boar should be well fed, but not fat, as a too-high condition makes him inactive, a slow breeder, and a rather uncertain sire.

Value of Bran

Is Cheapest Feed on the Market

By E. L. Potter.

Relatively speaking, bran is today the cheapest feed on the market, and its use will, doubtless, broaden materially if the present scale of prices continues for any length of time. Bran is a popular feed, and, on this account, commonly so high priced that the best feeders try to avoid its use as much as possible. This year, however, conditions are reversed, and economical feeding demands as much use of bran as possible. On the basis of the actual nutrients contained bran is worth approximately 75 per cent as much as wheat, barley or corn. The price is now only about 60 per cent of that of the cheapest of these grains, so the economy of its use is apparent.

Bran contains more fiber than the common cereals, and this, combined with less total nutrients, makes it a bulky feed, but little adapted to fattening stock, and of especially small value for fattening pigs. On the other hand, bulky feeds of this nature are very safe and seldom cause colic or other digestive disorders. Even unskilled feeders will seldom hurt a horse or cow with bran, whereas corn and barley must be handled with care, while wheat for horses or cows is exceedingly dangerous unless properly fed.

Bran contains a large quantity of certain phosphorous compounds which have a mild laxative effect. This effect is somewhat increased by soaking the bran in hot water before feeding.

Bran also contains more protein than the cereals and may be used to balance up a ration that is deficient in this nutrient.

With these points in mind, it will not be difficult to determine where bran can be used advantageously.

Dairy cows do their best on a grain ration that is not too bulky, that is rather high in protein, and that is somewhat laxative in its effect. Bran meets these requirements exactly, and, in addition, there is nothing that a cow likes better than bran.

Breeding ewes that must be fed a little grain during the winter do well on bran, especially on a mixture of bran and oats. We usually like a mixture of two parts oats to one part bran, but this winter the proportions may be reversel. Bran alone is also good.

Brood sows that are merely being carried through the winter will do their very best on bran. Pig experts have always liked bran for this purpose, but have seldom been able to get it at a price that will justify its use. For fattening hogs bran is too bulky, and shorts or middlings are better for this purpose, and even they should be mixed with barley or corn.

Limited amounts of bran are always used by the best horse feeders. The usual method of feeding is to use just enough bran with the oats to keep the bowels in condition. Now the feeders are going a little beyond this, and are using just as much bran as they can without making the horses' bowels too loose. Growing colts, brood mares and idle horses can be fed almost exclusively on bran.

Veterinary

Dr. S. B. Nelson

Feeding Wild Hay—Do you consider wild hay a safe or good winter feed for horses? There are two varieties of rushes, one the smooth, small rush, the other the jointed feathery variety, and also considerable wild carrot in a part of it, along with the fine and large leafed grasses. One horse fed this hay has a very rough and dry looking coat, his appetite is good and he seems perfectly well, but does not put on flesh. He fell off fully 100 pounds this summer while on pasture. I am feeding plenty of hay, grain and carrots.

D. D. B., Metaline Falls, Wash.

I would judge from your letter that your horse is possibly getting, or has gotten, quite a large quantity of the rush. The rushes in large amounts are sometimes poisonous to horses, causing a considerable intestinal disturbance, resulting oftentimes in inflammation. I would suggest for you to stop feeding hay that contains large quantities of the rushes. Otherwise I believe that wild hay is a splendid hay to feed to horses. Supposing that you try changing the feed of your horse and giving him one-half ounce of Fowler's solution of arsenic on his grain ration morning and evening for two to four weeks.

PURCHASE PERCHERONS

Because Percherons Pay

Percherons constitute two-thirds of all the pure-bred draft horses in the United States. 68 per cent of all the pure bred draft stallions in ten leading horse-producing states are Percherons.

The chief reason for such overwhelming popularity is that the get of Percheron stallions, whether out of large or small mares, are compact, shapely, durable, salable horses, whether large or of medium size.

Half blood or three-quarter blood horses out of western mares make the finest artillery horses in the world. British officers, prejudiced against the breed, testify that they have an overwhelming advantage over any other horses the British army has been able to buy throughout the world for artillery service.

There is no general market for small horses weighing under 1200 pounds. Reports from 277 selected correspondents show that those horses weighing under 1200 pounds range in price from $90 to $125; those from 1200 to 1500 pounds range in price from $140 to $175; and horses over 1500 pounds range from $200 to $250. Two crosses or three crosses of Percheron blood will put your horses out of the $125 class and make them worth $200 to $250 apiece.

Of the 21,000,000 horses on farms and ranches in the United States less than 1,000,000 are horses that will weigh over 1600 pounds.

Sheep Get Results

Farm Flock Shows Record of Profit

How a small flock of sheep on the grain farm can be made profitable is illustrated by the experience of August Reinbold and Andrew Reinbold in eastern Washington, near Davenport.

Two years ago they bought a flock of 105 grade ewes, later buying a pure-bred ram. They turned them onto their grain land, of which they have about a section. The result of the last year is interesting.

Having disposed of seven head of the ewes, the other 98 were bred and produced 99 lambs, of which 57 were ewes. About half of these ewe lambs were recently sold for $10 each, and the others kept, though they had many opportunities to sell them. The 42 wether lambs were recently sold at the Spokane Union stock yards at 14 cents a pound, averaging about 93 pounds each. The mothers last spring sheared an average of 10 1-2 pounds of wool, which sold at a little better than 50 cents a pound.

The approximate income, then, for the year was:

Ewe lambs	$ 570
Wether lambs	546
Wool	515
Total	$1631

The owners estimate the cost of feed for the year at not to exceed $100, as little feed was actually given the sheep. They were pastured on summerfallow, stubble and a small pine land pasture.

The ewes were originally purchased at a cost of $5.25 each, but would of course cost a great deal more than that at this time.

Out of the profit from the sheep experiment, which was entirely new to the Reinbold brothers, they have fenced their farm sheep tight. They built their fence out of woven wire, with one barbed wire below and two above, thus protecting their sheep from coyotes or other predatory animals.

Shorthorn Cow.

Percherons in Norhwest

(Continued from page five.)

horses are raised in this territory is found in a shortage of pure bred draft stallions. Records compiled by the Percheron Society of America show that in Idaho there is but one pure bred draft stallion to each 545 horses owned in the state; that in Washington there is but one to very 631 horses owned in the state; and that in Oregon there is but one pure bred draft stallion to every 519 horses owned in the state. The correct proportion where any considerable number of good draft horses are to be raised should be approximately as in Iowa, where there is one pure bred draft stallion to every 295 horses owned within the state. Where the number of pure bred draft stallions is low in proportion to the total number of horses, many farmers or ranchmen are unable to breed to the right kind of sires, and this handicaps horse production by making it impossible for the average man to breed to a really first class sire.

Rapid Increases.

Encouragement is to be found in the fact that the breeding of pure bred Percheron horses is rapidly increasing in Oregon, Washington and Idaho. The records of the Percheron Society of America disclose that in the fiscal year

First prize Percheron mare and foal at Iowa State college.

ending October 31, 1916, a total of 48 Percherons were registered by breeders in the state of Washington; 56 Percherons by breeders in the state of Oregon; and 68 by breeders in the state of Idaho., Inasmuch as no published statement has ever been issued relative to the breeders in these three states, a complete list of the breeders, showing the number registered by each during the year ending October 31, 1916, is given as follows:

The marked difference in prices paid for small horses as compared with the prices paid for good grade draft horses weighing 1600 pounds or over will undoubtedly accelerate the breeding of draft horses in these states. Horses weighing over 1500 pounds, if sound and right are bringing approximately $100 per head more than those under 1200 pounds, and are averaging $225 or better.

The annual meeting of the stockholders of the Percheron Society of America will be held at 8 p. m., Monday, December 3, 1917, in the Florentine room, Congress hotel, Chicago, Ill. We hope you will be present in person. Percheron judging at the International Exposition begins the following morning. There will be an extremely strong show.

ABSORBINE
TRADE MARK REG. U.S. PAT. OFF.

will reduce inflamed, swollen Joints, Sprains, Bruises, Soft Bunches; Heals Boils, Poll Evil, Quittor, Fistula and infected sores quickly as it is a positive antiseptic and germicide. Colfax Blue Ribbon Stud

Colfax, Washington

36 HEAD

Imported and American Bred

Percheron, Shire, Belgian and Clydesdale Stallions and Mares

From **yearlings** up to **5-year-old**, ton horses with **veterinary** certificates for health and soundness.

In **Percherons** we have the strains of the great **Etudiant, Brilliant** and **Besigue** blood.

In Shires we have the blood of the Great Conqueror XIX., Cottered Prince, Buscot Rival and the celebrated Dewstow Forest King II. In point of bulk, burly masculinity and prepotency, wealth and strength of muscle, great bone, length of stride, unending endurance and unflinching courage, the Shire has no equal.

CLYDESDALES ARE UNIVERSALLY REFERRED TO AS THE GLASSY CLYDESDALES. By reason of their uniform conformation, which is not equaled in any other draft breed; their **easy,** graceful action at either the walk or trotting gait, and their **superior draft power,** united with their **matchless refinement,** are regarded by discriminating judges as representing the nobility of the **equine drafter.**

Hopes Pride, who has never met defeat in his 2 and 3 year old form and having been **champion** of the **Illinois** and **Iowa state** fairs and **champion** of the breed at the **Panama Pacific.**

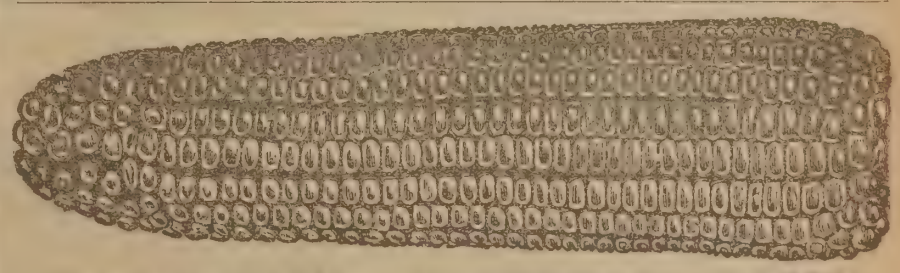
His stable mate, **Victor Favorite,** who, in his turn, has been **first** and **champion,** and declared by his admirers to be the **greatest** living exponent of his breed together with a stable full of the blood of **Scotland's greatest sire BARON'S PRIDE.**

BELGIANS—I have some very good Belgians that I can supply any one wanting that breed.

The present high prices of **draft horses** are sure to continue. The demand for this class of stock far exceeds the supply. **The market demands draft horses.**

No class of stock can be produced by you, of such **handsome profits as the draft horse.** You ought to get this profit and you can do so, without additional cost or labor—the way we sell them.

Provide yourself and neighborhood with a big draft stallion and the results will be marvelous.



Liberal Terms and Prices That Defy Competition

If you or your community needs a stallion, write to us your wants or better still, call and see us.

U. S. Men in Trenches

American Soldiers Begin Real Fighting

Official announcement has been made by the war department that at least a part of the American army detachment now in Europe has begun actual trench warfare against the German armies. The American soldiers marched into the first trenches, took their place beside the French soldiers and exchanged actual shots with the soldiers of the kaiser. The action is looked upon as but a final lesson in the great war game before the Americans throw their strength unreservedly into the battles alongside their allies.

How many Americans are in France has never been revealed by the war department. Neither has any plan of the campaign against German positions been remotely suggested. Only one definite statement has been made by the war department, and that is that all disasters or losses of life among the American soldiers would be reported to the press of this country, so that the relatives and friends of soldiers who have crossed the Atlantic need never fear that losses have occurred, but been kept secret. That the American soldiers can not take part in the war without losses of life is a fact to which the American people are necessarily resigned and lists of injuries are likely to be reported as soon as unrestricted participation in the fighting is begun.

Classify Registered Men.

Though no official announcement has been made by the war department, an official classification of the 10,000,000 men registered under the selective draft law has become public, showing every man the order in which he is liable to call into the service. The classes will be called in the order of their number. The classifications are as follows:

Class 1.

1—Single men without dependent relatives.
2—Married man (or widower with children), who habitually fails to support his family.
3—Married man dependent on wife for support.
4—Married man (or widower with children) not usefully engaged, family supported by income independent of his labor.
5—Man not included in any other description in this or other classes.
6—Unskilled laborer.

Class 2.

1—Married man or father of motherless children, usefully engaged, but family has sufficient income apart from his daily labor to afford reasonably adequate support during his absence.
2—Married man, no children, wife can support herself decently and without hardship.
3—Skilled industrial laborer engaged in necessary industrial enterprise.
4—Skilled farm laborer engaged in necessary agricultural enterprise.

Class 3.

1—Man with foster children dependent on daily labor for support.
2—Man with aged, infirm or invalid parents or grandparents dependent on daily labor for support.
3—Man with brothers or sisters incompetent to support themselves, dependent on daily labor for support.
4—County or municipal officer.
5—Fireman or policeman.
6—Necessary artificers or workmen in arsenals, armories and navy yards.
7—Necessary custom house clerks.
8—Persons necessary in transmission of mails.
9—Necessary employes in service of the United States.
10—Highly specialized administrative experts.
11—Technical or mechanical experts in industrial enterprise.
12—Highly specialized agricultural expert in agricultural bureau of state or nation.
13—Assistant or associate manager of necessary industrial enterprise.
14—Assistant or associate manager of necessary agricultural enterprise.

Class 4.

1—Married man with wife (and) or children (or widower with children) dependent on daily labor for support and no other reasonably adequate support available.
2—Mariners in sea service of merchants or citizens in United States.
3—Heads of necessary industrial enterprises.
4—Heads of necessary agricultural enterprises.

Class 5.

1—Officers of states or the United States.
2—Regularly or duly ordained ministers.
3—Students of divinity.
4—Persons in military or naval service.
5—Aliens.
6—Allen enemies.
7—Persons morally unfit.
8—Persons physically, permanently or mentally unfit.
9—Licensed pilots.

Get Wheat From Canada.

The national food administration has announced a plan for the importation of hard wheat from Canada to be used in American mills for the manufacture of flour. James F. Bell, chairman of the milling division of the food administration, issued a formal statement on the subject, of which the following is a part:

"The amount of hard wheat thus to be supplied will materially relieve the shortage of hard wheat and enable mills in the eastern and central states to increase their flour output materially.

"This arrangement will remove whatever apprehension has existed in regard to the inability of mills to supply sufficient hard wheat flour for winter consumption in the eastern section of the country. It makes liquid supplies of hard wheat in the United States, which should enable the present restrictions on the grinding of this kind of wheat to be greatly relieved.

"It is to be understood that these supplies of wheat do not, in any way, augment the amount of grain available in the United States, where there is ample to meet all requirements, since the food administration undertakes in return to export to the allies in the form of flour an equivalent of all Canadian wheat shipped to the United States for grinding in American mills. The arrangement will, however, operate greatly to relieve the present demand, which is principally for flour of the hard wheat variety."

Warn Against Vandalism.

State officials and state food commissioners have been warned by Herbert Hoover, national food commissioner, of what he believes to be well organized plots for the destruction of live stock and grain throughout the United States. The plots are understood to be of German origin and stronger guards for stock yards and grain storage houses are urged. Mr. Hoover's message in part reads:

"I am informed of a widespread conspiracy on the part of the enemy to destroy animals in stockyards and grain supplies. In view of the tremendous loss of food sustained by the recent fire in the Kansas City stockyards, I urge that you get in touch immediately with all stock yards commanies in the state.

"Emphasize the vital importance of largely augmented watch service and other fire protection. I also believe the governors of all states should have the principal stock yards patrolled by trustworthy home guards. This warning also applies to grain elevators. The serious loss of wheat in the recent Brooklyn fire must not occur again."

Threaten Exchanges.

Food Commissioner Hoover has threatened alleged speculators in corn, oats and other grains that President Wilson will close the exchanges altogether if such speculators attempt to profiteer or influence the market for these grains. So far the administration has not placed rigid regulations on the marketing of corn and oats, but only on wheat.

Increased Postage.

Tomorrow, November 2, the new postage regulations under the new war revenue bill become effective. All letters mailed on or after November 2 will require at least 3 cents to carry them. The regulations provide that first-class mail shall require 1 cent per ounce or fraction of an ounce more postage than is now required, and that parcel post matter shall require 1 cent more on every package where the postage is now 25 cents. Postal cards will require 2 cents where they have required only 1 cent in the past.

Brazil Declares War.

Brazil has joined the allies in their war against Germany. She is the eighteenth nation to formerly declare war on Germany. The Brazilian lower house of congress voted 149 to one for the declaration of war. The senate voted unanimously.

Germany Not Weakening.

Dr. W. T. Foster, president of Reed college, Portland, Ore., has just returned from Europe, where he went as a representative of the Red Cross. Dr. Foster declares that Germany is not weakening; that her citizenry is not rebelling; that she is not starved or near-starved; that she is putting forth every effort to deceive the population as to American strength and activity, but is not anywhere near exhaustion, and can fight on until such time as this country and its allies have force enough to crush her.

Finance Live Stock

Special Line of Banking Needed

While the federal farm loan bank has done much for the farming industry of the northwest, including the live stock business, and will continue to do with increasing effectiveness, there yet remains much to be done before the financing of the live stock industry is developed to the point that it should be. The help given by the land bank is indirect only, since short time loans are impossible under the farm loan act. But short time loans are greatly needed by the stock producer.

Take the country over, there is a noticeable tendency toward the improvement of live stock financing. This is observed especially in the action of the government reserve banking system, which has recently classed loans on live stock and general agricultural development as more advantageous to banks than any other class of loans.

Local banks have in a number of instances also taken special action looking toward better financing of the live stock industry. One such action is that taken by the Exchange National bank of Spokane, which has organized and has in operation the Spokane Cattle Loan company, of which William Huntley is president, Edwin T. Coman is vice president, O. M. Green is acting secretary, and W. H. Kaye is treasurer. These officers, together with E. E. Flood and C. E. McBroom, compose the board of directors. "The company is capitalized for $100,000, and operates by rediscounting notes with other banks given by cattle and sheep men, secured by their flocks and herds throughout the northwest," says Mr. Flood. "The banks are able to rediscount with the federal reserve bank such notes taken for a time less than six months.

"The company loans money to sheep men to enlarge their flocks or to buy hay or pasture to carry him over until such time as his wool can be sold on the market, which is usually six months from the present date. If the sheep man shows a successful season, and the individual is warranted, the loan is again taken for another six months, until the sheep man may dispose of his lambs.

"With the cattle man it is the policy of the company to loan money at the same rate, eight per cent, for a term of six months or less upon such cattle as the stockman anticipates putting in the feed lot in the fall to sell upon the spring market, and in turn renew the loan upon such cattle as may be turned on pasture to be marketed in the fall.

"With a member bank's endorsement the federal reserve bank through any of its branches will advance funds or credit at the rate of 4 1-2 per cent per annum for paper bearing not longer than six months maturity or 4 per cent on notes maturing within 90 days. To many this margin may seem a large one, yet it must be understood that the company in most cases disposes of this paper on a 6 per cent basis to the banks through the northwest allowing 2 per cent to the company for operation, expenses and loses.

"At the present time the outlook is such that the company may loan upon stock steers or cows with safety on account of the shortage of live stock generally through the world. It is not the policy however, of the company to loan to the speculator who has little or no responsibility, or loan to the man who is a novice in the business, unless he may have such collateral as to warrant the loan. However, in many instances where an experienced stockman has the feed and pasture the company loans the full price of the cattle."

Clydesdale Stallion.

A blue ribbon champion Clyde, owned by M. E. Metz of Colfax. This animal will be at the Lewiston show.

Another Illustration.

Another illustration of the interest banks are taking in the development of the live stock industry is that of the Bank of Commerce of Oregon City, Ore. Under the direction of John R. Humphries, it now appears in the role of developing the dairy industry in that country. The bank has set aside $11,000 for the purpose of purchasing 35 head of Guernsey cows, to be distributed to the farmers surrounding Oregon City. Professor Westover of Corvallis, and Dr. J. T. Whaley, have been secured to make a trip into the Guernsey center of Wisconsin.

Mr. Humphries is following the plan proposed by the department of agriculture, and is offering these animals at a special rate of 6 per cent. Farmers will draw by lot for their cow. The Clackamas County Guernsey club, with Mr. Retchie as president, has already been organized for the purpose of taking over the animals.

THREE GOOD REASONS FOR BUYING A VELIE TRUCK

1. The Velie is made by a firm that thoroughly understands the requirements of truck service, especially the requirements of the farm.
2. The Velie costs as little as a good truck can be sold for.
3. The Velie has a four-speed, internal sliding gear drive—a strong, sturdy frame and just about every feature you can ask for in a truck for doing its work readily, certainly, cheaply and for many a long year of steady, dependable service.

Think what Velie's long years of manufacturing experience mean to you. Think what a reputation untarnished throughout all this time means to your future satisfaction and profit. Think what an establishment with resources as solid as the Rock of Gibraltar means to you as long as your motor truck continues to do its daily tasks. A mile of Velie factory and an organization world wide in its scope of endeavor is behind the Velie guarantee of service and satisfaction.

"THE NAME INSURES THE QUALITY"

Send for special Velie facts before you buy any other truck.

Producing Cheap Feed

Inland Empire as a Stock Raising District

By J. R. SHINN.

I am becoming thoroughly convinced that the Inland Empire is bound to be one of the large stock raising districts of the country. The reasons for my belief in this future for our country out here is the fact that we are learning to produce cheaper feed each season on our farms. Back in the middle west corn constitutes the grain ration for all stock feeding and if we as a country must compete with the middle-west farmers in the stock producing business we must use a grain comparable with corn not only in results secured, but also in the yields which we get from the land. It goes without saying that from the experience of our farmers we must not look to corn as the grain for this purpose.

Regardless of our great interest in corn as a grain there are so many sections in which this crop can not be grown at a profit, at least with the present varieties which we have in this country that I do not believe it will ever become universally used as a grain crop. We have found, in Spokane county, at least, that there is another crop which can be grown as successfully as the corn crop of the middle west. This crop is peas.

The practice of feeding peas to stock is coming into common use more and more each season. It is remarkable to observe the results that have been secured with this class of feed. The farmer who has grown his pigs on peas needs to rely on some such feed as ground barley to finish them in good shape, and this latter crop is one that is coming into favor more and more. It has been found that barley is more profitable than oats on the ranches in the Inland Empire. It is a feed that can be relied upon to put the finish to all kinds of live stock the same as corn in the middle west. The more experience that we have in using peas and barley as a grain ration for our stock the greater we find that we must depend upon them in the future.

No stock country was ever developed without the using of pasture or crops that would replace pasture. In the dairy, beef or sheep business it becomes primarily essential that we provide this class of feed in the Inland Empire before these classes of live stock can be profitable. Two different sources for this pasture problem have been worked out in Spokane county. First of all, our farmers are using the silo more and more. They have found by experience that small grains such as wheat, oats, oats and peas, and barley when properly handled make excellent silage. Moreover, some of our farmers are working out definite combinations with sweet clover and the small grains as a silage crop which seem to be very promising. The use of these crops have therefore opened up an enormous field for the future development of the cattle and sheep business in the Inland Empire.

Shorthorn and Jersey cattle pasturing on sweet clover on the farm of T. E. Woodward, near Duncan, Spokane county.

The second factor which enters into the field as an aid in the pasture proposition is the sweet clover crop. This crop has proven itself of great merit not only because of the abundance of pasture produced by it, but also because of its persistence during the dry season. No other crop in Spokane county will remain green throughout July, August and September. Furthermore, it has been demonstrated that when sweet clover is used for pasture very little danger from bloat has been experienced.

The legume hay problem, of course, remains to be satisfied before profitable results may be experienced from this country as a stock raising section. Each year it has been found that more clover fields are being added to our farms. Oats and peas are used to an advantage as a hay crop, and upon these the farmers in the Inland Empire will largely depend for their future crops. Furthermore, as a by-product of the pea growing industry that is becoming so thoroughly established here, we are finding that the pea threshings or pea straw make excellent roughage for stock cattle and sheep during the winter months. If small grain silage and pea threshins are used we can confidently depend upon such to provide cheap and excellent feed for cattle and sheep. Of course in many places alfalfa is proving very successful as a hay crop.

In conclusion, it is because the Inland Empire can grow cheap grain rations, can provide excellent silage, has found a persistent pasture crop, and can produce cheap roughage in the shape of legume hay that I believe that this section is bound to be one of the large stock raising districts of the country.

CHOICE STOCK RANCH

320 acres deeded land, and 5-year lease on 160 acres state land, which produces about 100 tons of wild hay. 130 acres of bottom land in timothy and clover, in excellent condition, well ditched and tiled, practically new seeding. 80 acres fine bench land, which has been slashed and burned and would be ready for the plow with little more work. 4-room house, large barn, hay barn in meadow, other outbuildings. Lots of adjoining open range. 40 head cattle, 3 teams fine work horses, saddle pony, enough hay for winter, and $1200 worth of implements and machinery go with the place. Within 50 miles of Spokane. Price, $15,500. $7500 cash. We have just inspected this place, and if you want a real stock ranch you should see this one.

Increase of Cattle Receipts

Falling Off in Hogs and Sheep at Stock Yards

A record of receipts of cattle, hogs and sheep at the stockyards of the country shows that there has been an increase in the number of cattle that have come to market in the first eight months of 1917, as compared with receipts for a similar period of 1916. Receipts of hogs and sheep show a decrease for the same period.

Shipments for the month of August in both years reflect a like tendency. Figures gathered by the bureau of markets, United States department of agriculture, from the 46 principal stockyard cities show that 1,705,812 cattle were received in August, 1917, as against 1,527,069 in the same month a year ago. The August shipments of hogs, on the other hand, were only 1,717,655 head for this year, while they were 2,593,537 last year. Equivalent figures for sheep were 1,453,176 and 1,864,815. For the first seven months of each of the two years the figures were as follows, the 1917 receipts being given first in each case: Cattle, 10,679,987 and 8,191,618; hogs, 22,532,927, and 24,408,981; sheep, 7,980,539 and 8,535,535.

Causes of Cattle Increase.

Officials of the bureau of markets say that a number of causes have a bearing on the increase in the receipts of cattle and decrease for hogs and sheep. The increase in cattle shipments is in part due to an effort to market the animals because of the high prices that have been obtained for them coupled with the greatly increased prices of feeds, and the several drouths that have prevailed in the southwestern section. Some dairy animals have undoubtedly come to market from these causes, coupled with a desire on the part of dairymen to keep only high-producing stock and to get rid of cattle that will not be profitable as milk producers.

Last year an unusually large number of hogs and sheep came to market in response to high prices, and the receipts at the stockyards so far this year are believed to represent rather a return to the normal movement than a distinct falling off in the supply.

Shifts in Hog Receipts.

In the north central part of the country the receipts of hogs at most of the packing centers have shown no falling off, and in some cases an increase. Ohio points, and some in Indiana, Illinois and Iowa, show slight increases in hog movements, but many of the larger centers, such as Chicago, Kansas City and St. Paul, show decreases almost everywhere, but a few places in the far west, notably Denver, and in the southwest, especially in Texas, have shown decided increases. These increases, therefore, represent range-raised rather than farm-raised sheep.

Breeder's Quandary

Serious Problem Confronts Him

A prominent Jersey breeder, who has requested the withholding of his name, has brought up the serious problem which confronts not only himself, but practically every breeder in the state. He said:

"The breeder has spent many years in gathering a foundation herd, not for production alone, but for the supplying of others with the best stock that he is capable of producing. He has done it because he loves his work; it is his contribution to the wealth of the country; he does not spend years of study and hard work in the face of loss merely to make money, but because he believes his share of knowledge may be used by others for the good of all. I know of no class of men more public spirited in their views.

"Today he is met by a condition which has never existed before and which is dangerous not only to himself but to the entire country. I breed dairy cows, but the same thing in some phase stands before the breeder of any purebred live stock. The wages of foremen, milkers—of all the people he hires—have gone up. In my own case it has doubled in some instances, and may go higher—probably will. And at the new figures, it is difficult to keep my men. Some of them enlist; some of them are lured away by the high wages paid in other occupations. Others are subject to draft and may be taken. Add to this the high prices for feed, some of them almost prohibitive.

"These things mean first the culling of herds. This is wise in many instances, particularly among the men who have not purebred live stock and who are producing merely for the market. With the skilled breeder there are not many culls. The entire herds are kept for some economic reason. Where can we cull? Can we operate without a profit? Nobody can for any great length of time. And what follows? Why, the dispersion of herds on which the dairyman, in my particular line, depends for filling in his herds. These are the animals he looks to to increase production while he weeds out his lower producers.

"How can he lower cost and increase production without the breeder of producing stock? What is the breeder to do? Is he to send his herd to the butcher's? They are of no great value as beef, but they are valuable for the production of milk and milk products.

"Possibly we can dispose of our animals, here a few, there a few, and so our labor of years will not be lost altogether. Still it seems to me that men who have proved themselves capable of developing such animals should be encouraged to keep on, for from the experts we depend on for still better animals, and we can not produce better ones without these foundations which we have developed so carefully.

"The federal government is doing its best, but some times it seems that they overlook these things. This is not a thing for the present alone, but for the future. I believe that expert help should be retained on the breeding farms and that their services there will be far greater than on the firing line, and that here they should be recognized as doing a patriotic work not second to any.

"This is something you newspaper men should tell about, for we have reached a place where irreparable loss may be done in a very short time—a loss that can not be made good and damage which will take many years to repair. The breeder's work is not the work of one life even, but of many lives, all patiently striving for types which shall produce a maximum of milk, or meat at the lowest cost. The destruction of this work will be a blow to us as a nation."

N. W. CAIRNS,
LIVE STOCK AUCTIONEER.
Pullman, Wash.

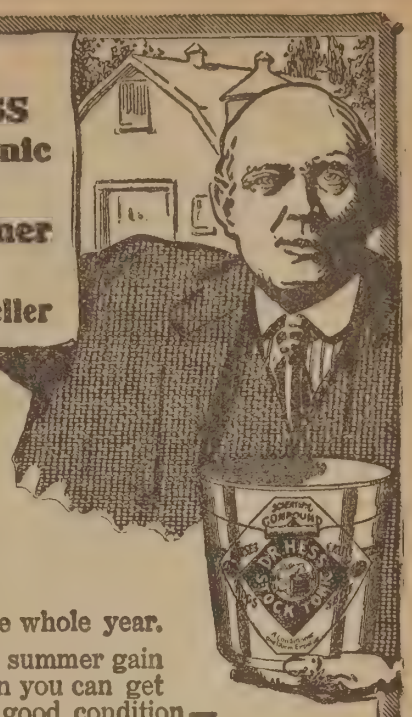
Australian Wheat Price.

The commonwealth governments of Australia, in connection with the various state governments, have guaranteed 96 cents per bushel f. o. b., as a minimum price to farmers for the next two years. Commenting on this, a correspondent of Broomhall's writes that he is sorry they did not make it a little larger for the farmers because with the increased cost for labor and material wheat growing in Australia now is not profitable unless they get $1.08 or $1.20 per bushel f. o. b. Sidney. Machinery which before the war cost $200 or $250 now costs $350 or $400. Bags are dearer and everything connected with the industry has gone up and especially labor.

Outsells Great Britain.

The United States in 1916 for the first time outsold Great Britain in competition for Argentine foreign trade. The totals for each country were close to $45,000,000, according to Uncle Sam's figures.

Belgian's Potato Dole.



The German authorities have seized the Belgian potato crop, and fixed a daily ration of 190 grammes (6.7 ounces) per head for the people.

Remarkable Record

Made by Oregon Holstein Cow

By HORACE ADDIS.

The most remarkable record made by a Holstein cow in Oregon is not in the Willamette valley, as might be supposed, nor in any of our developed dairy regions. It is in the Des Chutes valley, and, to be more specific, is in the Crooked river bottom, on the farm of Henry McCall, midway between Prineville and Redmond.

Florence Idella Sharp, the remarkable cow shown herewith, recently completed a year's record on Mr. McCall's place of 24,667.4 pounds of milk and 821.4 pounds of fat, or 1026.77 pounds of butter. She freshened for this test at exactly four years, so this is a junior four-year-old record. She has now been fresh 16 months, her grain ration has been cut down to four pounds a day, yet she produced 52 pounds of fat in September. Florence has no ancestry close up with any remarkable records, yet she goes back 10 times to DeKol II. and has Rosa Bonheur and several other notable animals in her pedigree.

There are a number of very creditable seven-day records made in Oregon, but I am not cognizant of any other year's official records. I only know of two larger year's records in the northwest. Both of these were made by the William Bishop Holsteins at Chimacum, Wash., and I am not sure about one of them being larger, though it is over 1000 pounds of butter. Florence was not specially fitted and is capable of a still greater record.

Another year's record on Mr. McCall's place was made by Fairview Pearl Johanna Korndyke, beginning at three years and five months. She produced over 20,450 pounds of milk and about 640 pounds of fat, or 800 pounds of butter.

Florence Idella Sharp.

Miss DeKol Pieterje Sharp, a daughter of Florence Idella Sharp, began at two years and one day old and produced 542 pounds of butter. She is on test again, and looks good for 20,000 pounds of milk and close to 800 pounds of butter. She is 500 pounds of milk ahead of her first month's production last year.

Mr. McCall gives each of his Holsteins a seven-day record because the Holstein rules require it, but he does not care for them and makes no special effort for large ones. He puts all his cows on yearly test whether their production is large or small.

While Mr. McCall is a Holstein fancier he also owns a very fine little herd of Jerseys, the foundation of both herds having been sent to him by his father-in-law, Tom Lawson. The Jerseys are of the blood of Champion Flying Fox and Figgis Fox and of Martha's Duke, the latter by Spermfield's Owl and out of Mertha's Duchess, a good register of merit cow.

Mr. McCall's Jerseys are all show stock, but he also has some very fair official records, one by a heifer bred on the place. The largest was made by Mertha's Belle as a junior 3-year-old. She produced 13,283 pounds of milk and 756.35 pounds of butter.

Mr. McCall has a very fine farm of over 500 acres in the rich Crooked river bottom. He grows great crops of alfalfa and grain and will grow corn. He has no silo and the above records have all been made without silage. But the alfalfa in that region is of exceptionally fine quality and a great "milk maker." In addition to dairying and hog raising Mr. McCall feeds beef steers, and as market prospects look good to him will feed several carloads this winter.

Mr. McCall is a son-in-law of the redoubtable Tom Lawson or "frenzied finance" fame. He is also the son of ex-Congressman McCall of Massachusetts, one of the state's financiers and most prominent politicians. His family connections are considerable of a handicap, as people expect to find him aristocratic and exclusive. But nothing could be farther from the facts. He has the true western spirit and takes a deep interest in all the civic affairs of Prineville and affairs in general of the county. He is president of the Interstate Fair association at Prineville and devotes much time to it. He is a member of the Prineville baseball team that won the championship in central Oregon the last summer. He puts all his energy into the games and plays good ball. In the $25,000 residence on his farm Mr. McCall and his family live in democratic simplicity. There is probably in Portland no residence more conveniently arranged nor with more complete modern appointments. Mrs. McCall is very fond of kodaking. She has a small kodak with the finest of lenses, and with it has taken photos of the place as it was, in sagebrush, only six years ago, and of its development through various stages. The beautiful picture of Florence Idella Sharp was taken by Mrs. McCall. Mr. McCall's dairy barn is one of the best in the state, and he has other good improvements, fine horses and other stock.

Mr. McCall will soon sell off all his Jerseys and devote his efforts to developing a great producing herd of Holsteins. He has started right by giving them full year official records. He is young, ambitious and has capital, and I predict that the McCall ranch will yet make the Des Chutes valley famous and have a prominent part in making Holstein history in the northwest.

Purebred Sires

Figured With Pencil and Paper

There are perhaps some cases where the value of the purebred sire is overlooked because time has not been taken with pencil and paper to figure the real value, says N. C. Jamison of the Washington State college. An example of this has been brought to our attention. A dairyman, with a herd of 30 cows, had used purebred sires for several years, but began to use grade sires when increased local demand for purebred animals caused the price of purebred bulls to advance $50 or so. He defended the practice by saying that the daughters of the grade sire produced within seven or eight pounds per day as much as did those of the purebred and it therefore did not pay to put $50 to $100 additional into a better-bred animal. Evidently he had not stopped to figure. At seven pounds per day, in 300 days the daughters of the purebred sire would produce 2100 pounds more milk per head than would the daughters of the grade animal. This amount of milk, valued at $1.75 per hundred, the price he receives, would be worth $36.75, from which deduct $20 for possible increased cost of feeding the larger producer and we have left a net profit per year of $16.75 in favor of the daughter of the purebred. From the 30 cows at least eight heifers are saved per year or in three years, the life of the bull, 24 of his daughters would be saved. The amount lost, then, in one year's production of these 24 daughters, due to using a grade sire, would be $402, or for six lactation periods for each, the amount lost would be $2412.

PEA STRAW INNOCENT.

Experts Find It Valuable as Feed.

Reports from the pea growing district of northern Idaho recently that cattle were dying as a result of being fed on pea straw have been carefully investigated by experts with the following results:

Very few cattle were sick.

Those that were sick were sick because of improper feeding, and not because of any harmful nature of the pea straw.

The investigation was made by Harry E. Luce of the University of Idaho, and S. B. Nelson of the State college of Washington, both expert veterinarians. Dr. Nelson made the following statement following the inquiry:

"We found the stories about the sick and dead animals greatly exaggerated. We found only two cases of illness. One of the animals became ill from being suddenly changed to a full diet of pea straw. In the other case the animal was given more of the feed than it coud digest. We have concluded that the straw is not directly responsible for reported trouble, but rather the method of feeding.

"We would suggest that this valuable by-product feed be used in moderation in connection with alfalfa, silage of any kind and roots. The animals should be given a considerable amount of salt in order that they will drink a sufficient amount of water."

Fruit Stains.

To remove fruit stains stretch the fabric over the mouth of a basin and pour boiling water on the stain.

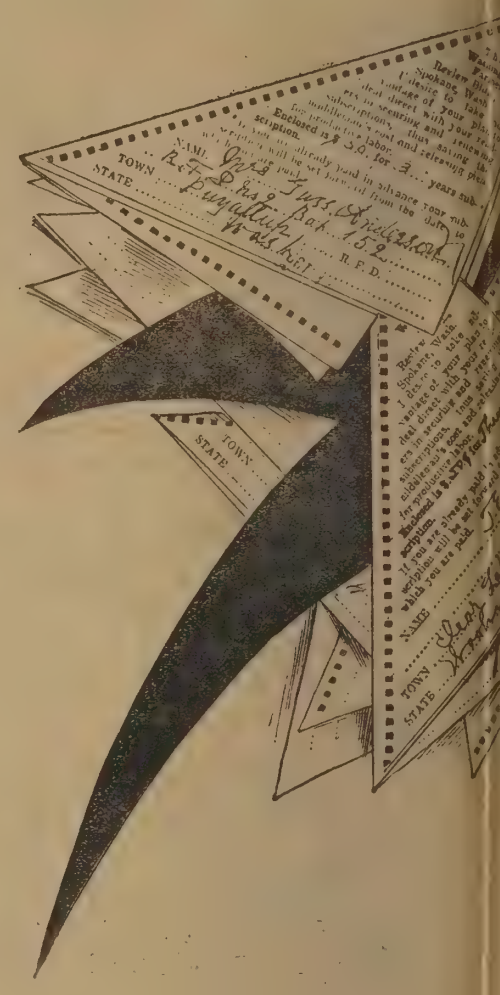
UNLUCKY LOOIE HAS A LITTLE LUCK AT LAST



FARMERS END

Scores of Coupons Pouring in From All Parts of the State Prove That Readers Are Loyally Supporting New System for Securing Subscriptions---Cost of the Middlemen Is Eliminated and Our Friends Are Given Benefit of Dollars Saved

Our request that readers send in their subscriptions to this paper direct and thus save the labor and cost of agents has met with a strong response from loyal subscribers in all parts of the state. Every mail has brought a new flood of coupons.

Hundreds of readers have shown that they are squarely back of us in our war emergency inate our force of agents and thus release men for productive labor in the fields, orchards, and factories.

As explained before, THE WASHINGTON FARMER under normal conditions employs of agents in securing new subscriptions and renewing old ones.

The war has brought on a labor shortage—as every one of our readers knows full well; an ment has urged every one to release as many men as possible for productive labor.

By dealing direct with subscribers instead of through agents we can dispense with the sm men needed to visit every farm, ranch and remote homestead throughout the length an Washington.

The only question is will every subscriber do his part? We felt sure they would and the already received strengthens us in this conviction.

In order to make the new arrangement a success, every send in his or her subscription without urging and without have made it easy for every one to act by adopting a schedu signed to give our readers the benefit of every dollar saved ing the middleman.

We earnestly urge every one of our big family of readers already sent in his order to do so at once.

MUGGSY RESCUES A SMALL BOY FROM A WATERY GRAVE

PUP GETS BOOT A DISHONORABLE DISCHARGE

Hereford Features

British Committee Named Them

As to the features that are looked for in the modern typical Herefords, the following report of a sub-committee of the English Hereford Herd Bood society, appointed to draw up a "standard of merit" for the breed, which was submitted and adopted at a meeting of the council in 1904, will be of interest. The report was drawn up by J. W. Smith, A. P. Turner and W. E. Britten. The following is the report:

"We find it impossible to establish a standard of merit for Hereford cattle indicated by points, as breeders differ so much in the value they attach to certain features of the breed. For instance, a bull breeder would place a very high value upon the head of the sire he intended to use in his herd, while a man who wished to raise steers for market would make that point a secondary consideration. It is a common saying that 'beef does not grow on the horns,' yet a breeder who aims to produce fine breeding-stock would fail in his purpose if he neglected to place full value upon the shape and color of the horns."

The committee, however, gave the following description:

"The bull should have a moderately short head, broad forehead, and horns nearly resembling the color of wax, springing straight out from the side of the forehead and slightly drooping —those with black tips or turning upwards are not regarded with favor. The eye should be full and prominent; the nose should be broad and clear—a black nose is objectionable; the body should be massive and cylindrical, on short legs, the outline straight, chest full and deep, shoulder sloping, but lying well open at the top between the blades; neck thick and reaching from the head to the shoulders; ribs well spring; flank deep; buttocks broad and well let down to the hocks; the tail neatly set and evenly filled between the settings of the tail and the hip bones, which should not be prominent; the whole carcase should be evenly covered with soft curly hair of a red color, but the face, top of neck, and underparts of the body should be white.

"The same description would apply to the cow, excepting that she should be grown upon more feminine and refined lines, the head and neck being less massive, and the eyes should show a quiet disposition. The Hereford cow, under the system of management usually pursued in Herefordshire, on the North American ranch, and on the South American estancia—that is, allowing each cow to raise her own calf, both running together in the pastures—does not develop the milking properties, but there are many instances of Hereford cows brought up to the pail making excellent dairy cattle, the milk being very rich.

"The Hereford is essentially a beef breed, and reaches maturity at an earlier age and at less cost than any other breed. The steers readily fatten at 2 years old on grass alone, and in the summer months they command the top price in the London market."

A Promising Jersey

John Kemmling of Prineville, Ore., who was the principal exhibitor of Jerseys at the interstate fair at Prineville last January, purchased two very fine heifers from Ed Cary, both by Rosaire Olga Lad. One of them, shown above, now has a fine heifer calf by Susie's St. Mawes, which Mr. Kemmling has named St. Mawes Cary. This heifer milks heavily and tests about 5.5

in the Oregon Cow Testing association. She was made grand champion Jersey at the fair.

Before he purchased purebred Jerseys Mr. Kemmling had a good grade herd with La Creole's Bank, a son of Souci King and an Eminent dam, purchased from W. O. Morrow, at its head. The bull has thrown a universally good lot of heifers. One has produced 426 pounds of fat, or 501 pounds of butter, as a 3-yeyar-old; another 349 pounds of fat as a 2-year-old, and other heavy milkers. Mr. Kemmling now has Pedro's Gray Fox Duke, a very handsome young bull he purchased from Henry McCall of Prineville, who has some of the famous Jersey herd of Thomas Lawson. With such a start, he is well on the waf of successful breeding.

Mr. Kemmling's principal feed in winter is alfalfa hay. Last winter he fed, in addition, a mixture of two parts oats to one part wheat, chopped. In summer he uses a mixed pasture and alfalfa hay. Mr. Kemmling came to Crook county 14 years ago. He has been dairying most of the time, finds it profitable and expects to see more of it. He owns a farm of 520 acres, about 50 of which is irrigated. He expects to put up a silo next season and fill it with oats and peas. H. A.

Beef Cattle

Figures on Cost of Production

In the winter of 1913-14 a committee of well known investigators, familiar with agricultural conditions, was appointed by the secretary of agriculture to consider the economics of the meat situation. The investigations were conducted during the summer of 1914 and the conclusions presented therefore apply primarily to conditions in 1914 compared with conditions prior to 1914.

One of the reports made as to results of this investigation contains a summary of the cost of production of beef cattle in the 11 western range states of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington and Wyoming.

In arriving at cost of production, market value was charged for all feeds used, and a liberal charge was allowed for cost of handling the stock, in order to take care of the items of cost for money invested in land, water, improvement, and equipment used in connection with the production of live stock.

Liberal charges were allowed also for bull service, depreciation of cows, loss of cows at market value, and other natural losses. A charge for taxes at the average rate for the state was included.

On this basis the cost arrived at for the production of yearlings in Arizona from average figures given is $19.45, and from data furnished by one large outfit, $15.43; for California, $27.51; for Colorado, $30.47; for Idaho, $31.37; for Montana, $32.89 in the main feeding sections and $26.40 in the range section of eastern Montana; for Nevada, $31.25; for New Mexico, $18.30; for Oregon, $31.13; for Utah, $31.46 in the feeding sections and $19.08 for the range section of southern Utah; for Washington, $33.45; for Wyoming, $31.88, average figures, and from special figures furnished by one large outfit, $25.75.

The cost arrived at for the production of a 2-year-old in Arizona is $25.25 from average figures and $20.30 from special data furnished by one large outfit; for California, $40; for Colorado, $43.31; for Idaho, $45.12; for Montana, $47.90, from average figures, and $35.10 for the range section in eastern Montana; for Nevada, $44.46; for New Mexico, $25.85; for Oregon, $45.70; for Utah, $44.68 for the feeding sections, $24.35 for southern Utah; for Washington, $50,54; for Wyoming, average $46.18, and from a special report of a large outfit, $35.29.

These figures may appear too high, but it should be remembered that they include reasonable profit on farm or ranch products used, reasonable compensation to the owner for looking after his stock, and liberal allowance for loss, depreciation, bull service and taxes. The net balance between cost of production and sale price represents net interest-profit on money invested in the breeding stock. Granting that the costs given are conservatively high, it is believed that for sections of the west where winter feeding is practiced the man who contemplates substituting live stock for other forms of agriculture should figure on a cost of approximately $30 for the production of a good yearling and $45 for the production of a good long 2-year-old—this cost to include labor, market value of feeds, taxes, loss, bull service and any depreciation of breeding stock. In sections of these same states where only a part of the stock is fed in winter the cost of producing a yearling may be set at approximately $25, and of a 2-year-old at $35. In the range sections of the southwest the cost of producing a yearling may be set at $15 to $19, varying greatly with the number of calves per 100 cows, and the cost of producing a long 2-year-old at about $20 to $25.

The average weight given for a 2-year-old steer in the feeding section is 960 pounds. At $45 as the cost of production, the cost per pound is about 4.6 cents. For Arizona and New Mexico the average weight of a 2-year-old steer is given as 775 pounds. At $25 for production the cost per pound is a little over 3.2 cents. For the southwest, hazard due to the exceptional loss in time of prolonged drouth is not fully covered in the above costs.

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch
Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castilian Lady 26628 made 603.3 lbs. fat (718.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.
C. E. LONG, Buhl, Idaho.

Two Choice Bull Calves
From cows with official records of 914 and 663 lbs. butter in a year. Prices in proportion to production and quality.
ED CARY. P. O. Carlton, Oregon. Station, Lafayette, Ore.

724 Pounds Butter
and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.
J. B. STUMP & SON, Monmouth, Ore.

1120 Pounds of Butter in a Year
by St. Mawes Poppy is the sixth highest official record of a Jersey cow in the world. She is dam of my herd bull, and his first heifers in milk are heavy producers. Write for prices on young bulls by him out of register of merit dams.
F. E. LYNN. Perrydale, Ore.

Every Cow a Record
Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.
LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys
Young bull out of dam on official test making good record. Sire a grandson of Golden Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.
HENRY STEWART, Prop., Albany, Ore.

Wynoochee Home Farm
Home of
The Gold Medal Jerseys.
Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.
JOHN H. TAYLOR, Montesano, Wash. Box 426.

MAPLE LAWN PLACE, ALBANY, ORE., Home of
Register of Merit Jersey Cattle.
Herd headed by a double grandson of Spermfield Owl—"Moose o' Fernwood" No. 137024, whose dam has an official record of 916 lbs. butter.
We are offering young stock from this rich butter inheritance whose dams are now on official test.
ROBT. L. BURKHART, Albany, Oregon.

Waikiki Farm
Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.
IRA P. WHITNEY, Manager.
ROUTE 7, SPOKANE, WASH.

Look Up My Winnings on Jerseys
at Oregon State Fair. Junior championship and other prizes; only five shown. For nine months my herd has had highest record in Marion County Cow Testing Ass'n. Lowest records since June, 479 lbs. butter as senior yearling in 10 months. Other two lowest, over 600 as 2-year-olds.
F. A. DOERFLER, Silverton, Ore.

$100 to $250
Young Jersey bulls, ready for service, sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Some out of Register of Merit dams, priced according to quality of dam.
M. H. JONES, Perrydale, Ore.

Register of Merit Jerseys
A few REGISTER of MERIT cows and their offspring FOR SALE.
H. T. THIESSEN & SON,
Milwaukie, Ore.

Bull From Gold Medal Dam
Out of Brown Bessie Alphena's Gem, 827 lbs. butter in year. Sire, Engineer's Bluster, whose dam, Mabel's Bluster, once held world's record for 3-year-old production. His first daughter on test, in this herd, beginning under 2 years old, will make over 500 lbs. butter. Other bulls from Register of Merit dams.
N. H. SMITH, R. D. 2, Oregon City, Ore.

ASHBURN FARM
Register of Merit Jerseys
In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.
J. M. DICKSON & SON, Shedd, Ore.

Oak Ridge Jersey Farm
Register of Merit Cattle
Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address
RILEY E. HULBURT, Albany, Ore.

Ashwood Farm Jerseys
FOR SALE—BULL CALVES; sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.
McARTHUR & STAUFF, Rickreall, Ore.

The Problem of Saving the Live Stock

(Continued from page three.)

Dairy cows are being sold for slaughter that will be much needed by the nation before the conclusion of the war.

The hog has become an unfamiliar object in many sections of the west.

Fortunately, due largely to highly satisfactory prices, mutton and wool production have so far suffered little from the forces mentioned above.

The heavy cattle movement means plentiful beef in the coolers and low proces to the producers.

One of these days it will mean excessively high prices for both producer and consumer.

The fact that reserve supplies of animal food products have been piling up in the packing houses and storage centers, in spite of a world-wide call for American food products, clearly indicates an abnormal rush of live stock to market. The figures comparing storage holdings on September 1, 1917, and on the same date a year ago are as follows:

	Per Cent Increase
Frozen beef	73.3
Cured beef	61.5
Lamb and mutton	8.6
Frozen pork	5
Dry salt pork	4.3
Lard	9.2

The view prevailed in some quarters that live stock herds have been increasing and that the present liberal marketing is only the process of releasing a surplus. The most accurate figures that can be obtained indicate the reverse. Horses have shown a slight increase in numbers in recent years, but this increase is far from commensurate with the increase in population. The same is true of dairy cattle. The beef cattle supply of America has fallen from 51,000,000 head in 1907 to a little more than 40,000,000 in 1915, a decrease of one-fifth in eight years. While the American farm and range flocks of sheep have increased from 22,000,000 head in 1850 to 51,000,000 head in 1910, this number has fallen to 48,000,000 for 1917. The per capita supply of sheep, with a comparatively increasing demand for and popularity of mutton, has fallen from .93 head per capita in 1850 to less than one-half sheep per capita today.

The census figures and the statistical experts have not been able to keep pace with the sensational changes in hog growing. In parts of the northwest there is only now and then a few pigs, where were large herds three years ago. The bureau of statistics estimates a loss of 60 per cent of our swine during the last year. One large irrigation district it is shown has but one-third the swine today as compared with a year ago. Thousands of men have quit the business entirely, due in a large part, to the reasons cited above. Reports from the great swine producing centers of the corn belt indicate a similar movement, but one less radical in its extent and influence on the industry as a whole. The manager of a large western packing house stated publicly a few days ago that the hog killing department of his plant was running at 10 per cent capacity only.

All of this indicates a live stock problem of serious proportion, especially in the west. It does not necessarily spell disaster, but certainly does mean serious concern.

Coupled with the American situation is the live stock status of continental Europe and Great Britain. Any one at all familiar with events on the continent must know that the live stock herds are fast disappearing. First, because of wastage of horses and usage of cattle, sheep and swine, and second, because the shortage of fodder necessitates the use of live stock as an alternative to their starvation and resulting total loss as a resource to the nations at war. One live stock man of experience and high standing asserts that the decrease of live stock in Europe is as follows: Sheep, 54,000,000; cattle, 38,000,000, and swine 32,000,000. In other words, to supply the European void would take, approximately speaking, two-thirds of the swine and practically all the beef cattle and sheep of America.

It is our purpose not to dwell at length on the problem and its serious aspect, but to first show that the problem is with us and is serious, and then to suggest means and ways of improvement. The first has been comparatively easy. The latter duty is now in hand.

Cash Crop Basis.

The first duty, in a constructive way, is to recall to those who are fast going to a cash crop basis that this has not been, is not now, and can never be the permanently successful system of agriculture for the northwest.

It is only a policy of good judgment, therefore, to retain as much of our foundation herds as possible. Furthermore, one who has watched the fluctuation of live stock prices must know that those who pass through this period and are able to come into the spring and summer with productive herds, in all probability will be well rewarded financially.

It is only natural that following this period of high feed prices and disposal of live stock, will come an era of lower feed prices and highly remunerative prices for farm animals.

There must be sold this year, as in former years, a certain surplus from our flocks and herds. In choosing this live stock for sale there should be an effort to retain in the herd, uniformly thrifty animals of excellent individuality. There are many who, due to the feed situation, may need to dispose of more than usual quota. Here again the elimination should be such that the herds the less in numbers are of higher standard than before. In the dairy herds the reduction and elimination may be made to result in the sale of unprofitable cows and the herd may yet yield as much net profit as before.

There has never been a better time than the present to turn entirely to the purebred male and to get rid of scrub and grade stallions, bulls, boars and rams.

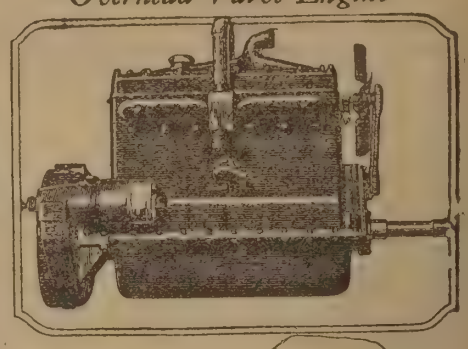
Grade and scrub sires are all too common. It is estimated by an official of the Minnesota Stallion Registration Board that Minnesota farmers annually lose $700,000 by the use of grade stallions. The grade and scrub sires of all kinds result in loss and are to be avoided in normal times. At this time, when the best possible returns must be had from pastures, hays, grains and live stock, grade and scrub herd headers should be entirely eliminated.

The feed supply must be increased this year by use of feeds that have, in former years, been largely wasted.

A dairyman in one of our irrigated districts reports that his cows take readily to bean straw and that he was surprised to find how high is the feeding value of this material, which is frequently wasted. In districts where large acreages of peas have been grown this year, use is already being made of the straw. Where the peas were not allowed to get entirely ripe before cutting, this straw makes an excellent feed.

In past years, hundreds of tons of oat straw have been burned. It should be utilized this year for feed. In the sugar beet producing districts this straw can be cut and mixed with cut alfalfa and molasses. The mixture becomes not only a valuable feed in maintaining the breeding herd, but is effective in fleshing live stock, especially steers for market.

Beet pulp, roots and silage should be used as never before. When succulent feeds are used in winter, breeding animals are retained in better thrift and expensive concentrates and much roughage that is not costly, can be saved for other purposes.



The various crops, such as hay, pea straw, bean straw, and fodders of all kinds should be gotten under shelter even if necessary to materially reduce the bulk by baling. Some of this material may be stored in the silo and made into succulent winter feed. In the Mississippi valley states, corn fodder has been taken dry from the shock and after chopping and moistening has been made into valuable silage. On the university farm at Moscow, Idaho, this fall, a silo has been filled with a mixture of dry pea straw and green corn. The pea straw and corn were fed into the cutter at the same time with water added to make a moist mixture of

(Continued on page forty-four.)

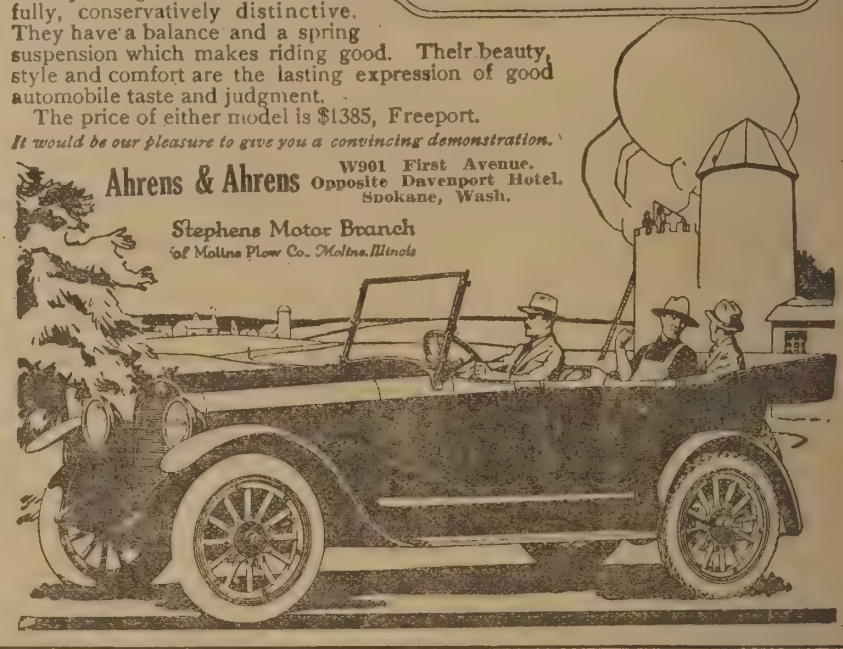
STEPHENS *Salient Six*

With the Perfected Overhead-Valve Engine

BEAUTIFUL—ECONOMICAL

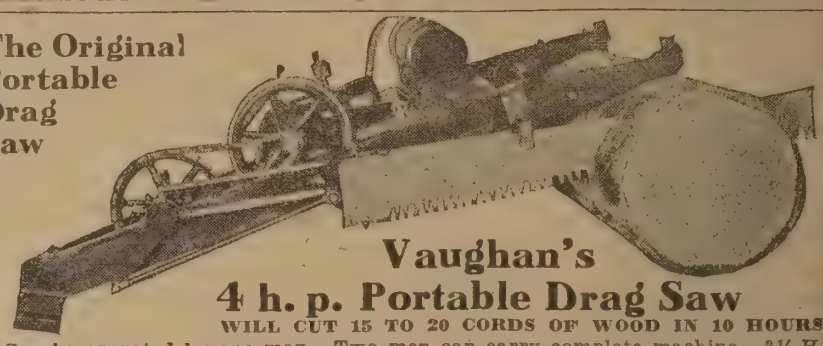
The Stephens Salient Six engine is an energy conserver.

Its manifold in the cylinder head surrounded by heat; its large valves; its perfect combustion chamber; in fact, its really phenomenal ability to handle very low-grade fuel, particularly distinguish the Stephens Salient Six.



The body designs of the Stephens five-passenger touring car and three-passenger roadster are beautifully, conservatively distinctive. They have a balance and a spring suspension which makes riding good. Their beauty, style and comfort are the lasting expression of good automobile taste and judgment.

The price of either model is $1385, Freeport.



It would be our pleasure to give you a convincing demonstration.

Commnuity Cooperation

A Word as to Big Stores and Little Stores

Did you ever check up your home town merchant on the price of something you were half inclined to buy somewhere else?

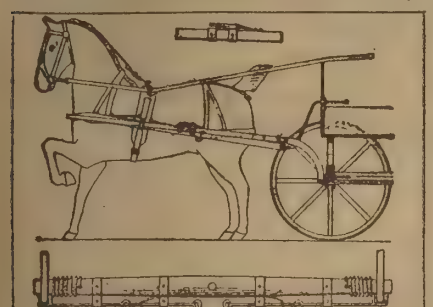
The writer has, and quite frequently it pays. This past summer I talked with a friend on this subject and I'm going to pass on his experience.

He wanted to buy some wire fencing for a couple of lots he was fixing up for a summer home on a lake front. He went to a nearby city (where he lives) and went to one of the largest hardware stores which sells fencing. He stated the amount and kind he wished and asked for the price. The quotation was given him along with the assurance that he was being given the wholesale price. It seemed a bit high to him and he took the matter under consideration. A few days later he happened to be in a small town near the lake and, dropping into the little hardware and implement store of the place, asked for a figure on the same kind and amount of fencing.

The merchant didn't have it in stock but said he would get a figure and phone it over to my friend's lake cottage. In a couple of days the phone message came through. The quotation on the fencing was $34, delivered on the very lots at the lake where it was to be used. The "wholesale" quotation was $56, delivered at the railroad office in the city.

But the nub of the story is this: The country merchant who sold this fencing and delivered it at the lake had ordered it of the same store in the city where the $56 "wholesale" price had been quoted. The small town merchant paid the freight from the city, paid for delivery by auto express to the lake and still sold the fencing for $22 less than my friend could have bought it at the big city store.

Give your home town storekeeper a chance. Trade with him. The more trade a small town merchant has the bigger orders he can place. And the more advantageously he can buy, the more cheaply can he sell to you and your neighbors. You gain, he gains, better stocks of merchandise are available, the town improves—and incidentally you are helping enhance the value of your own place by adding to it the advantage of "being near a good town."



C. V. R.

Inventions

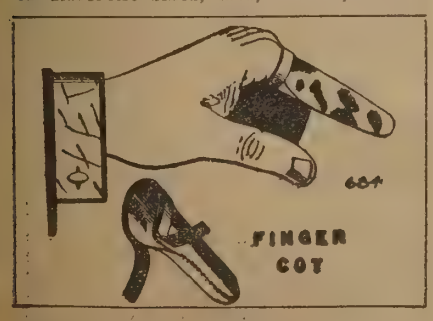
Releases a Runaway Horse.

When the driver of this carriage pulls the handle inside the dashboard he raises the end levers on the whiffletree and the coiled springs release the traces. The horse then pulls clear easily because the shaft pockets are large and the breeching strap is held by spring clips.



Sack Filler and Grain Pickler.

When this scoop is used as a sack filler, the bag is attached to the discharge end and filled in the usual way; when it is used as a grain pickler, the discharge end is fitted with a sieve and the scoop, filled with grain, is dipped into the solution and drained.

Finger Cot.

The new points about this cot are, first, that it is left unsewed near the top so that it can be fitted to fingers of different sizes, and, second, it has a strip of adhesive plaster around the top which holds it securely to the finger. Make a few for future use, and pack them with oiled paper between the tapes.

Fall Plowing

Western Washington Conditions

To have a well-prepared seed bed for most crops is very important. That means the soil should be in good physical condition, says E. B. Stookey, agronomist at the Western Washington Experiment station. Fall plowing opens up the soil so the air and water can get in, thus making it more friable, and gives the organic matter a chance to rot and become available for next year's crop. The plowing may be deeper in the fall than in the spring, because the raw soil that is turned to the surface will be in good condition by spring after the air and water have acted on it during the winter and there is not the danger from drying out. The physical condition is not only improved but the plant food is made more readily available and the moisture capacity is increased. Taken altogether, fall plowing upland soil is very desirable, unless it is so situated that there is considerable washing. Early seeding is desirable from two standpoints, namely, a larger yield is secured and the crop matures at a time when it can be properly saved. Early seeding is so essential that every reasonable effort should be made to put the land in shape so it can be seeded early.

British Rifle Boer War Product.

The British rifle is the outcome of the South African war. It holds 10 cartridges and is sighted from 200 to 2800 yards.

One Man Alone Pulls Biggest STUMPS

Kirstin

A Kirstin One-Man Stump Puller instantly gives you a GIANT'S POWER—makes you master of any stump! Many Kirstin owners pull stubbornest stumps in 4 to 10 minutes!—AS CHEAP as 5 CENTS per stump! $50 and Up

Just a few pounds on the handle means tons on the stump. When stump starts, throw machine into high speed and out comes the biggest stump, roots and all. Positively no other machine like it. Has special, patented features. Recommended by leading Agricultural Schools and Forestry Bureaus.

Why have stumps when you can now pull them so easily, quickly and cheaply?

Amazing Offer To prove these claims, we will ship you any size or style Kirstin on THIRTY DAYS' FREE TRIAL—not one penny in advance. Return it if not pleased. If pleased pay low price in small monthly payments. Kirstin Pullers as low as $50 One-man style or HORSE POWER—all sizes Three year guarantee with each machine

Write! Don't endure stumps any longer. Send postal now for most valuable Stump Puller Book ever published—pictures—prices—terms—letters from Kirstin users and all about our Special Agent's Proposition—all Free Write!

More Than Half a Carload of Wheat and Flour Hauled at One Time!

That is the accomplishment pictured above. Forget about railroad car shortage; get your products to market quickly and at trifling cost. DOUBLE AND TRIPLE THE CAPACITY of your motor truck. SAVE TIME, LABOR COST, and obtain THE FULL POWER OUT OF YOUR FUEL by using a

Universal Trailer

Which can be coupled to *any* Standard Motor Truck

The Universal Trailer has Twin Bunks, which carry the load in balance upon the axle independent of the reach. This trailer is guided through the reach to the axle, perfectly braced so there is no side stress. Pulls directly from the axle.

The springs and suspension permit limited movement of frame and load independent of axle to take care of obstructions and holes.

Built in several sizes by

PACIFIC CAR AND FOUNDRY CO.

Alaska Bldg., Seattle, U. S. A.

Universal Trailer can be backed up without uncoupling within short radius.

Leaves only 5% of load on steering wheels of truck and thus you can haul a great deal larger load with same power.

This trailer is indispensable for hauling grain, flour, hay, wool, hops, cattle, sheep, milk, fruits and all sorts of heavy products.

Write at once for further details. Clip this coupon.

Good Things Coming

The season for reading and study is at hand and we are endeavoring to give readers of this paper just the kind of articles and features which will mean a maximum of interest, helpfulness and wholesome entertainment. Below are mentioned a few of the things you can look forward to:

Community Organization

An informative article will be printed soon on how community organization has helped out the apple harvest situation in the Wenatchee district, notwithstanding the fact that Wenatchee has contributed hundreds of men to the national army. The team and wagon join the cayuse of yesterday, while the lighter and heavier motor truck takes its place in hauling the fruit to market.

Artificial Light for the Hens

The profits of an artificial lighting system for the poultry house explained by Mr. and Mrs. George R. Shoup of the western experiment station, who are among the first users of this device. This article will be printed soon and will be of especial interest right now when the price of eggs is steadily advancing.

The Quack Grass Danger

Those who have come from the farms of the middle west are familiar with the stubborn fight—and often the losing fight—which has been made against quack grass. An article has been prepared pointing out the dangers of the spread of this pest in the Northwest and sounding a rallying cry for cooperation in stamping it out.. Coming in an early issue.

Our Special Departments

Our department editors are keyed up to a high pitch to secure the most helpful matter they can find. These departments provide space for an exchange of ideas and experiences among those who are actually making their living from orchards, dairies, stock ranches and general farms.

Features for Entire Family

Everybody enjoys a good story. Every housewife likes to experiment with the tested recipes. In every home there is a demand for patterns of attractive clothes. In the future, as in the past, you will find that the "Farmer" brings you a generous store of good fiction, recipes, household hints and designs for patterns.

This Is More Than a State Farm Paper—It Is a Publication Which Aims to Give Every Member of the Family Something Interesting and Worth While to Read

Meat One of World's Greatest Needs

Hoover Pleads for More Fats to Meet Growing Demands

(Continued from page one.)

in wool at the present moment.

"The pork problem is one of deepest concern.

"The human body must have a certain amount of daily intake of fat. Whether this fat is by means of dairy products, by vegetable oil or by pork products is a secondary question in these war days.

"Increased production in pork fats can be made much more rapidly than increased production of dairy products and on a much wider scale.

"An increase in pork fats also can be made more rapidly than an increase in vegetable fats.

"Europeans have always relied to a considerable degree upon the United States for pork products, and if they slaughtered the larger portion of their hogs they could still not supply their demands for fats.

Hence, Mr. Hoover adds:

"It appears to me, therefore, that we must concentrate on the increased production of hogs if we are to answer the world's craving for fats.

"I realize that under certain conditions a lack of confidence in the stability of market prices may act as a deterrent. And further that this may sometimes come from a failure to glimpse an opportunity before one.

"I therefore wish to make this positive statement: That, so far as the United States food administration is able, through its influence on the purchase of pork and its products for exportation, it will do all within its power to see that prices of pork are maintained in a ratio to feed prices that will cover not only costs of production, but proper remuneration to the producer.

"By a system of license control of manufactures and distributors the food administration will further help the producers. This system will tend toward the abolition of speculation, the punishment of profiteering, and the assurance that the consumer receives the product at a fair ratio of the producer's price, and that, vice versa, the producer receives a fair interpretation of the consumer's payment. All of these measures, I believe, offer a new hope for agriculture.

"While we give these important assurances, I do not believe that they are, in fact, necessary in the stimulation of our production to that point which is now fundamentally necessary for our national preservation.

"The American farmer has too often demonstrated his courage and resolution in national service to admit any charge that democracy breeds a materialism that requires money guarantees to secure his patriotism. He wants a square deal in giving his services, and, with every power we have, we intend to see that he gets it.

"From two and a half years of contact with the German army I have come out of this horror with the complete conviction that autocracy is a political faith and a system that directly endangers and jeopardizes the future of our race—that threatens our very independence. It has, however, been able to command a complete inspiration of devotion and self-sacrifice in its people to the interest of their nation. The German farmer, in the name of the fatherland, supports a nation two-thirds as large as ours and threatens to subject the world from an area as large as Texas.

"I am convinced that we will find this same devotion a direct reply to the German farmer—by the voluntary service of the American producer. This is democracy, and will be its answer to autocracy.

"There is a human side to all of this. I have spent two and a half years in Europe in intimate contact with the backwash of war. During this time I have been faced with the responsibility of furnishing daily the food of 7,000,000 women and children among a population of 10,000,000, and the food of these is today solely assured by the American farmer.

"During this time, however, the gradual diversion and destruction of men and ships amongst our other allies from the support of another 100,000,000 women and children has thrown them wholly a state of the dependency upon the American farmer for their daily food. Their husbands, brothers, and fathers are defending our liberty as surely as our own boys in France.

"The production of more fats is today a critical necessity for the preservation of these people and the maintenance of their constancy in the war. Every pound of fat is as sure of service as every bullet, and every hog is of greater value to the winning of this war than a shell.

"My vision of war is not of an academic problem to be solved by discussion and guaranties of profits; to me it is a vision of brave, dying men and suffering women and children for service on whose behalf the greater exertion of the American farmer comes as a direct necessity and a direct plea. The American farmer who sees war as I see it needs no inducement and no inspiration but the thought that every spade full of earth turned and every animal reared is lessening human suffering and guaranteeing the liberty of the world."

An Open Field

By FRANK D. TOMSON.

Any one who has made a study of the fairs and live stock shows of the present season can not fail to note two conspicuous features, one the dominating numbers and the excellence of the Shorthorn entries, and the other the conspicuous winnings of new and hitherto inexperienced breeders.

In spite of high feed costs the entries at the season's shows were well conditioned with very few exceptions and it was a matter of general comment among fair goers that the uniformity and superior merit of the entries particularly among the younger cattle, surpassed former years.

The fact that various new exhibitors entered the contests and claimed a generous share of the prizes added interest to the season's shows. A number of champion awards were captured by young men on cattle of their own breeding, who had never heretofore entered the contests.

The lesson drawn from the awards is this: That ownership or long experience in breeding and showing cattle are not considered in the placing of the awards. It is a matter of the fittest. Judges may err in their conclusions, but the boy from the back woods township has an equal chance with the veteran from the best known breeding establishment in the country, provided the individuals the two lead into the ring compare in individual merit.

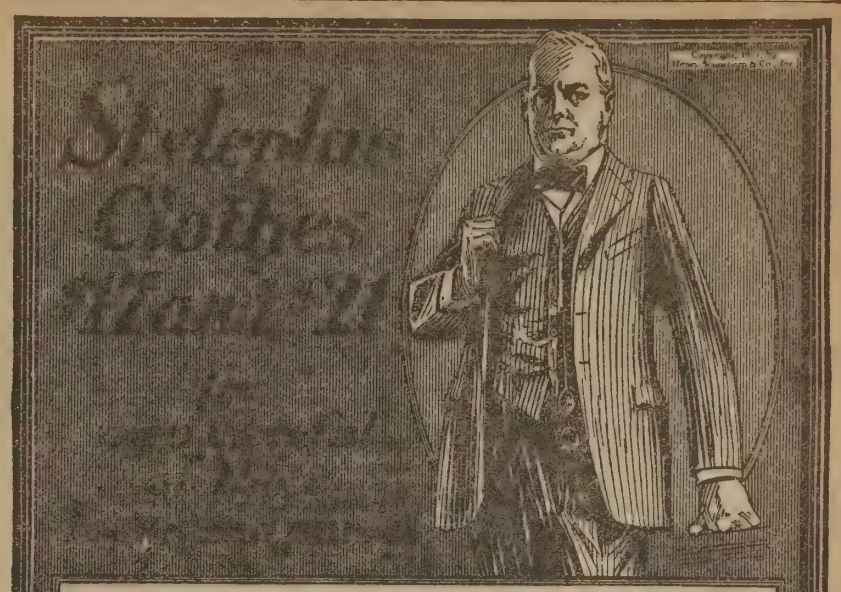
It is an open field and many a man has risen from comparative obscurity into an acquaintance country-wide in its scope because he was able to produce animals of a standard that claimed expert recognition in the show rings.

Hog Nets Owner $66

By E. L. SACHTLER.

That there is money in raising hogs is evidenced by the check for $731.06 which Everett E. Edmonds of Ridgefield, received recently for a truck load of hogs which he disposed of at the North Portland stock yards. There were 16 hogs in the load, weighing 4039 pounds, the price being $18.10 a hundred weight. The hogs were of the Chester White breed, and less than a year old. One hog brought the raiser $66. Mr. Edmonds is an ex-school teacher.

Live Stock Future of Klickitat.



In a recent trip to attend the county fair at Goldendale, R. A. Blanchard, agriculturist of the Live Stock State bank of North Portland was much impressed by the live stock prospects of Klickitat county. "Before live stock can be kept, food must be produced," he said, "and Klickitat valley is on the increase in forage production."

Three years ago there were but 3000 acres in alfalfa, and today there are 10,000 acres with a rapid movement toward 100,000 acres in the near future.

In spite of the dry season, three and one-half tons were produced per acre this year. Records show that about one-eighth of the rural wealth is in live stock, which bids fair to assume will become one-half of the county's total production in but a very few years.

Whitman County Union to Meet.

The Whitman County Farmers' union will meet at Colfax Thursday, November 8, at 10:30 a. m. A. A. Elmore will be present.

We developed the known-price idea in clothes. We concentrate our volume, lower our costs, give exceptional all-wool fabrics, style and tailoring at moderate price. The popularity of Styleplus Clothes throughout the nation has proved the soundness of our method. Even though Uncle Sam has already required 200,000,000 lbs. of wool for the soldiers, we are able to supply the American public with guaranteed all-wool stylish clothes at known moderate prices. Styleplus Clothes $17 (black label) excel at that price. Styleplus Clothes $21 (green label) excel at that price. Style plus all-wool fabrics + perfect fit + expert workmanship + guaranteed wear. Write us (Dept. 8) for free copy of "The Styleplus Book."

ATKINS

SILVER STEEL SAWS

This Drag Saw Runs Faster

The Atkins Drag Saw is designed for fast work. It is made from SILVER STEEL. This steel was formulated by us and is unequalled for edge holding and freedom from constant fitting.

The best drag saw—the famous Atkins—is not expensive. Why try to "get along" with any other kind? An Atkins will quickly pay for itself and pay you a steady profit besides. All good dealers sell Atkins Saws.

Take It Home and Try It At Our Risk

Test an Atkins on your own work at home. Compare it with your old saw. If it doesn't prove a time-and-money saver, your dealer will refund your money. The genuine ALWAYS has our name on the blade.

E. C. Atkins & Co., Inc., Indianapolis
Makers of Silver Steel Saws and Tools

The Famous Atkins Cross-Cut Saw

The Atkins Cross-Cut is *Segment Ground* (Atkins Patent). It tapers from the tooth-edge to the back and from the ends to the middle. Other saws have wide set teeth, but that isn't the same thing. Atkins teeth *cut*, they don't chew. Every stroke brings out a clean, thin ribbon of wood.

HIDES

WOOL, PELTS, MOHAIR, CASCARA BARK

We do the largest consignment business in the northwest. Equally fair treatment on all shipments, large or small. Returns at full market value mailed same day goods are received. Trial shipments wanted and appreciated, but are handled as regular shipments and not at inflated values.

Saving Feed

It Is Poor Policy to Starve Hens

I am told by commission merchants in Portland that the poultry coming to market is thin or poor in flesh this year. In ordinary years the proportion of bones to meat on the average chicken is very large, but this year the percentage of bone is unduly high. This is no doubt a direct result of the high price of feed, which prompts the poultry-keeper to save on the feed. With wheat at two dollars a bushel and patriotism demanding its conservation for human food, with other feed high in like proportion, one can understand the tendency to save the feed.

Saving the feed, however, does not save the profits. Nothing is more certain than that underfeeding loses the profits. A certain amount of feed is necessary to maintain the body. If less than that is fed the fowl will draw upon the food already stored up in the body in the form of fats, flesh, etc., to maintain life. A considerable portion of the feed consumed is used for the purpose of furnishing heat for the body. This is the starches and fats, which are found in all feeds to a greater or less extent. If the fowls do not get enough fats in the feed to furnish the necessary heat the fats already stored in the body are drawn upon. Likewise if they do not get a constant and sufficient supply of protein the supply already in the body is drawn upon to repair the wastage that is continually going on.

Insufficient nourishment, therefore, means a waste of feed. Keep up the feed supply or quit the business.

The same thing happens in the case of egg production. The hen can not lay eggs unless she gets more feed than is necessary just to maintain her body. She takes care of her body first. After that she is willing to lay eggs to care for the body of the human. A hen will lose 25 per cent of her weight in a very few days if starved. There will be no eggs laid so long as the starving continues.

There is no saving so wasteful as underfeeding.

There is another point that poultrymen should bear in mind when underfeeding. That is, the sending to market of poultry poor in flesh reduces consumption and as the demand is decreased prices fall. Nothing will keep up prices better than to see that no poultry is sent to market that is not in good condition. If this were done, if every chicken exposed for sale in the markets were in prime condition, the demand for chicken meat would soon be doubled. No farmer thinks of sending a steer to market that has not been fattened. And a chicken can be fattened in two weeks, while it requires months to fatten a steer. It is not necessary to feed high priced wheat. Bran, shorts, middlings, corn, barley and oats will fatten them. We will discuss fattening rations later. Let us have a little better quality in the chickens that are sent to market. J. D.

Feather Test for Laying.

If the culling of the old hens has not been completed, it should be done now. The importance of the feather test, or the molting test, has already been mentioned in these columns. Without a knowledge of the fact that the late molters are the best layers the farmer or poultryman is very likely to keep the nice looking hens with a new coat of feathers and discard those with the old, ragged, soiled plumage. The hen that has not yet completed the molt and that shows considerably the worse for wear is the one that has continued to lay late and that will continue to lay well in the following year. If you want good layers, kill off the nice, slick hens with a new coat of feathers and yellow legs and keep those that have continued to lay late and are more or less ragged in appearance. The hen that lays late into the fall and is not in a hurry to adopt the new fall styles is the hen that has laid well throughout the year and will be a good layer next year. J. D.

Hens Get Lame.

To the Editor: Will you please tell me what is the trouble and the remedy for my chickens? They are Barred Rocks. Quite often a hen which looks perfectly well will get lame in one leg. Will hop around and usually begin to droop after a week or 10 days and finally die. They are well fed and the house is kept clean.
SUBSCRIBER.

Roy, Idaho.

Lameness may result from several causes. As one of the symptoms of tuberculosis it has already been mentioned in articles on this disease in The Farmer. If you will make a post-mortem examination you will usually find, if the disease is tuberculosis, that the liver is covered with yellowish spots and the intestines covered with tubercles. If lameness is accompanied with these symptoms you may know that the flock is infected. The fowl also loses flesh and becomes very thin before death, though this is not always the case. If you are unable to identify the disease, it would be well to send one of the fowls to your state experiment station. J. D.

To Save Cattle

From Drouth-Stricken Texas

Trainloads of cattle are being shipped from the drought-stricken portions of Texas to other points in the south just as fast as railroad facilities will permit, according to a statement of the bureau of animal industry, United States department of agriculture, which has been working to relieve the situation of the Texas cattlemen.

Since July 1 there have been moved from Texas to points in the southeastern states more than 13,000 head of cattle, and the department expects that by the end of September fully 25,000 head will be so moved. This movement was made necessary because of the drouth and other conditions in certain parts of Texas, which threatened the loss of valuable breeding stock. Most of the cattle now being moved are females; practically all were bought outright by farmers and land owners in the new territory. The expense of the work of supervising shipments of these cattle, to the end of September, will not exceed $4000, which makes the cost incurred by the department for moving the cattle only about 30 cents a head.

The Motor Car

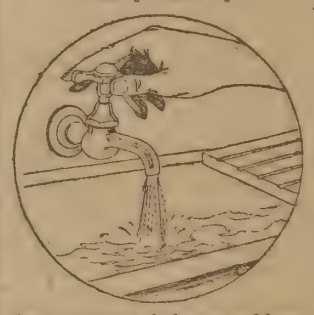
On the Farm

Growth in Motor Cars.

From the October number of the Northwestern Motorist we take some very interesting figures concerning the rapid increase in the number of motor cars in the Pacific northwest during the last seven years. Below is the table of comparative figures showing increase in the number of cars in Washington, Oregon and Idaho.

Year	Wash.	Ore.	Idaho.
1910	6,013	5,061	
1911	10,316	8,428	
1912	14,482	10,165	
1913		13,957	2,094
1914	30,254	16,347	3,346
1915	46,000	23,585	7,074
1916	70,032	33,917	13,000
1917	90,114	45,000	25,000

In the articles from which we quote, Captain I. M. Howell, secretary of state of Washington, speaking of the increase of motor cars in Washington, points out that after the new state registration law became effective in 1915 registrations took a big jump upward. There were 30,254 cars registered in 1914; in 1915 there were 46,000. The year 1916 showed 70,032 cars in Washington, while up to September 21, 1917, registrations had climbed to 90,114, which, Mr. Howell points out, "indicates a probable total registration in Washington of 100,000 cars for the present year."



Oregon, on an estimated population of 800,000, has a car for every 18 persons. Ben W. Oclott, secretary of state of Oregon, in giving the above figure adds: "If the same ratio of increase in registration continues in the next few years that has prevailed in the past, Oregon, by 1920, will have a car for every 10 people."

In Idaho no registration records were kept prior to 1913. In the four years since then registrations have climbed rapidly from 2094 automobiles that were registered in 1913 to 25,000 up to October of this year—an increase of nearly 6000 cars a year for the last four years. The state of Idaho, in conjunction with its various counties, has arranged to supply the state highway commission of Idaho with $5,000,000 to be expended on the building and maintenance of good roads in Idaho during the next two years. W. F. Dougherty, secretary of state of Idaho, says: "We find that with the building of state highways automobile sales are increasing by leaps and bounds."

Western Electric
Farm Light and Power Plant

For easier work and more butter fat, drive your separator by electricity.

Running water in house and barn is easily possible with electricity.

Don't be a slave to the tub. The Western Electric way is quick and easy.

makes farm work easier

It's the pesky little chores that waste your time and energy. But somebody has got to do them, and reliable help of every kind is scarce. What's the answer?

ELECTRICITY

An electric motor will turn your grindstone, feed cutter, fanning mill, churn and your separator; and will furnish your barn and your house with a supply of running water. An electric motor will clean the house, wash the clothes and keep the home cool during hot spells.

Electricity will do all this in addition to lighting your place with the safest, cleanest, brightest light that's made.

Intelligent farmers are buying Western Electric plants because they are backed by 40 years of electrical experience.

Make your whole outfit a Western Electric—the plant itself, the lamps, motors, pump, cream separator, washing machine, vacuum cleaner, electric iron—in fact, everything electrical for the farm and the home.

IN THE ORCHARD

Write to the Editor

GRANVILLE LOWTHER
Editorial Contributor

Orchard Values

I am often asked what it costs to grow an orchard and, when grown, how much it adds to the value of land.

The questions are separate and the answers must, therefore, be separate.

First, the Cost of Growing an Orchard.

I will not include the cost of clearing, leveling and otherwise preparing land, for this is so varied under the different conditions and the cost for orchard is not much different from what it would be to grow any other farm crop.

Cost of trees would vary with the number of trees per acre, but in general I would say that $15 to $20 per acre would cover the cost of trees.

Setting trees would cost from $7 to $10 per acre.

Loss of trees planted vary with the conditions and the manner of setting them. Several years ago we planted 80 acres to 3500 trees and only lost 33 out of the whole number. Again, we planted 20 acres and lost 3 per cent. I have known orchards planted where 25 per cent of the trees died, but that was because they were not properly watered.

Put the cost of trees at $20 per acre and the cost of setting at 10 per acre and you have a maximum cost of $30 per acre.

Then to prune, cultivate and irrigate young trees until they come into bearing will cost generally $25 per acre per annum. This for six years will cost $150 per acre. If then we add the cost of trees we have $180 per acre. During that six years there is a loss of interest on an investment from which there is no income, unless there is "cropping between the trees."

How Much Will It Add to Land Values?

I do not know, because that depends on so many factors.

First, it depends on the man as to how he works his orchard.

Second, it depends on the varieties planted, as to whether they bring the best prices in the markets or the poorest.

Third, it depends on the location as to whether the orchard is situated near a good market center or several miles off the railroad.

Ordinarily I would say that an orchard should yield a good interest on an investment of $600 per acre, and some will do much better. I have known orchards to yield a good interest on an investment of $2000 per acre, but it will not do that in a period of years, say a 10-year average.

G. L.

Income Tax and Bookkeeping.

For years there has been considerable agitation at our horticultural conventions and through the press, urging our fruit growers to keep books. The importance of it is acknowledged by every one, but the difficulties are so great and the process so involved that the average fruit grower finds it too great a task and neglects it. It is so much easier to do as did the young married woman whose husband gave her a check book, an account book and agreed to give her $100 per month with which to pay all family expenses. The rest of his income they were to put into a home, and both he and she were to keep a strict account of expenditures. She took the check for $100, and entered on one page of her book, "Received of husband, $100." At the beginning of the next month she wrote on the opposite page of her book, "Spent it all." Now that is the easiest way to keep books, and the way many farmers keep them. However, a new law is passed and every one who is married and has an income, I mean a net income, of over $2000 must pay 2 per cent. As the income grows larger the percentage increases and the statement of income must be made under oath. That means that the farmers must keep books. It will, in many cases, be difficult and annoying and the figures reached more or less inaccurate, but the discipline will be helpful.

G. L.

Corn Silage

Compared With Alfalfa as Feed

By S. E. PRICE, Professor Animal Husbandry, Idaho Technical Institute, Pocatello.

A patron writes in, asking: Would it pay to buy average corn silage at $5 per ton where first-class alfalfa hay can be bought for an average of $12.50 per ton for feeding lambs? Inference, that the lambs are to be marketed about Christmast time.

According to the average analysis of corn silage and alfalfa hay, the corn silage would furnish energy at the rate of 2.1 cents per therm and the alfalfa hay would furnish it at 1.8 cents per therm; or, when silage costs $5 per ton the alfalfa hay is worth $14.64 a ton, as far as the nutrient values are concerned.

The question arises, Would the silage be needed as a succulent food? If the alfalfa is well cured, no; the hay itself is succulent enough. It would be well, however, to feed some concentrate with the alfalfa. The lambs will be unable to eat enough of such bulky food as hay or silage to properly prepare them for market. Oats would be adding more protein, the requirements of which are amply cared for by the alfalfa. Wheat and corn are out of the question at the present priees. Chopped or rolled barley, then, would be the only present available concentrate in his market. It at $2 per cwt. supplies energy at the rate of 2.1 cents per therm. This is a little higher than the alfalfa, but would be the only means of preparing the lambs for the butchers' market.

Sensational Hereford Sale.

One of the noted Hereford sales of recent years was that of O. Harris & Sons of Harris, Mo., in March, 1916, when the firm sold 61 Herefords from its Model herd for $76,025, establishing the sensational average of $1246. The 28 bulls averaged $1628 and the 33 females $922.

Business Proposition.

A little lad came in the grocery store for a five-cent head of lettuce. The clerk was removing the withered leaves and told the boy they cost 10 cents, whereupon he remarked, "Can't you take off a few leaves and make it five cents?"

Good for Apples---Not for Wheat

Ideal Harvest Conditions Are Aid to Farms This Season, But Make It a Hard Thing to Get Next Season's Crops Under Way.

GRANDVIEW, Yakima County, Wash., Oct. 18.—Weather is the best we have ever had for fall work. The first frost was October 17, but all the farm work is well along with the exception of apple packing. Help is scarce, but if the weather keeps up for two weeks more the great bulk of picking will be done. The weather is not favorable for fall seeding of wheat on dry land. I think that farmers are generally well satisfied, for prices are good. I think there will be seed enough for fall sowing.

E. H. FAULKNER.

Dairying Is Optimistic.

CATHLAMET, Wahkiakum County, Wash., Oct. 17.—The weather conditions in this section this fall have been ideal for the maturing and harvesting of crops. Excessive yields were not found anywhere because of the long drouth. Some farmers are making preparations for next season's crops and are having excellent weather for their work. This fall the farmers have been fortunate in having their pastures yield an abundance of rich grass, and the cows have held up their milk flow very well. Feeds for the winter which have to be shipped in are causing considerable worry on the part of many. The high price of the feed will materially decrease the amount purchased this year over previous years, regardless of the high price of butterfat. Generally we find considerable optimism over the general agricultural outlook as far as dairying is concerned in this locality. A. T. FLAGG.

Will Seed Next Spring.

TWISP, Okanogan County,, Wash. Oct. 22.—The weather has been very favorable for maturing and harvesting most crops, but is too dry where irrigation is not practiced for much preparation for next season's crops. Considering the conditions, most farmers of this section are satisfied with this year's results. Farmers are patiently waiting for rain so they can do some fall plowing and are planning on big crops and high prices for next year. On account of dry weather very little seeding will be done this fall, but seed is available and an increased acreage will be seeded next spring. Apple picking and packing are progressing nicely. Stock men are beginning to bring their cattle in from the summer range and most of them are in good condition. GEORGE LA RUE.

No Scarcity of Seed.

OMAK, Okanogan County, Wash., Oct. 20.—Weather conditions have been very good so far for the harvesting of crops. We have had no rain and it is too dry for plowing and preparing ground. The fruit crop is very good and so far has proven satisfactory. Apples especially have a fine color and are a large per cent extra fancy. The wheat crop was very light. Hay is scarce and is selling at $20 a ton. Conditions so far are not good for next year's crop. The bean crop yielded well. There seems to be no scarcity of seed.

J. O. WOODS.

Farmers Optimistic.

WALLA, WALLA, Walla Walla County, Wash., Oct. 15.—Weather conditions are favorable for maturing and harvesting, but it is too dry to seed wheat although many are now seeding. The farmers are generally satisfied with this year's results, and are optimistic for next year. Wheat shriveled in a good many cases this year. Some will ship in fall wheat for seed.

H. H. BOONE.

Feels Feed Shortage.

COLVILLE, Stevens County, Wash., Oct. 20.—The weather conditions have been very favorable for the maturing and harvesting of crops this season. Lack of rain and the delay of killing frosts have made ideal harvesting conditions. While summerfallowed and cultivated lands have been seeded to fall grains and the stand appears fairly good in most cases, the lack of rain has prevented the plowing and seeding of stubble lands. There has been no trouble in securing seed for this fall crops. The shortage of feeds of all kinds with its attendant high prices tends to discourage some of the live stock breeders. Some feed has been secured from th outside, and most of the live stock men will weather this season in good shape.

A. R. HAHNER.

Many Short of Feed.

CORVALLIS, Benton County, Ore., Oct. 20.—Weather conditions in Benton county have been very favorable for maturing and harvesting most of the fall crops. On account of the nonuniformity in ripening some beans were lost by being frosted, but by far the largest part of the crop has been safely taken care of. Some potatoes are being dug, but most farmers are waiting to give the skins a chance to toughen before the crop is harvested. The ground is too dry at present for easy plowing. Some farmers, however, are busy with disk plows, both horse-drawn and power-operated, preparing the ground for fall seeding Quite a little fall grain is already up and looking fine. Generally speaking, the farmers are none too well pleased with this year's results. Many are short of feed and quite a few barns and silos which ordinarily are full at this season are empty. There is no great shortage of seed for fall planting, although not many of the farmers seem to have seed grain for sale. Nearly every one has saved enough for his own use and neighbors are buying from each other. At recent sales, dairy cows have been bringing a very fair price. Not many animals are being offered for sale and there is a demand for good cows. This would indicate that the farmers are becoming more optimistic over the feed situation and are not all being frightened out of the dairy business. Prospects for next year generally are good. GEORGE W. KABLE.

Scarcity of Good Seed.

GRANTS PASS, Josephine County, Ore., Oct. 20.—Weather conditions this fall are very favorable to the harvesting of corn, beets and last cutting of alfalfa and clover, but unfavorable to preparation of ground for next year's crop. Farmers who have had irrigation this season are well satisfied with crops; those who have not had irrigation have no crops to be satisfied with. Same distinction applies to next year's prospects. Seed that is good is very scarce.

F. R. STEEL.

Wheat Doing Well.

LEWISTOWN, Fergus County, Mont., Oct. 17.—Weather conditions have never been better for the growth of fall wheat than they are at the present time. All of the early sown wheat is coming along in splendid shape and farmers are busily engaged in seeding and preparing land for spring crops. While the crops were not as large as in the years past, with the fair price received conditions are more favorable than was anticipated earlier. Everything points to a record-breaking crop next year, the germinating quality of the same being exceptionally good.

CARL H. PETERSON.

Harvst Was Light.

GREYCLIFF, Sweet Grass County, Mont., Sept. 29.—We are having fine weather now, with a couple of good rains for fall plowing. Threshing is in full swing and will soon be finished. The crops are not large, as lots of it burned out. Even some of the winter wheat acreage will not be as large the coming season because the ground could not be plowed for it. This year's grain crop is only about one-third to one-half in comparison to last year's crop. The grain farmers are in general not satisfied with the yield and price of same, as the running expense is more than one-third larger than last year. Good seed wheat is scarce. Alfalfa hay is selling at from $15 to $20 in the stack and timothy is from $20 to $25.

JOHN FORSTER.

Dry and Hot; Dry and Cold.

AMERICAN FALLS, Power County, Idaho, Oct. 18.—Feed is ample for the stock here this winter. The hay was unusually good and the straw of all kinds is being stacked up for winter use and very little if any will be wasted. Hay is selling for $15 per ton in the stack, but very little is being sold. Straw is being sold at about $2 per ton. None is baled and it is doubtful if it could be baled and transferred to any distance with profit. The wheat farmers rely on straw almost entirely for winter feed. The potato crop is the best ever in the county with a large acreage to harvest. At present wheat will receive more attntion for next year than any other crop, as this crop seems to offer the greatest inducement. The conditions for fall seeding of wheat is the most unfavorable for many years. The last three weeks have been dry and hot while at present it is dry and extremely cold. Seeding is mostly done, but none is up yet.

P. M. MORRIS.

Cattle in Good Condition.

HARVARD, Latah County, Idaho, Oct. 11.—Weather conditions in this locality this fall have been the best in years for maturing and harvesting of all crops. Harvesting with the exception of the potato and root crop is all done and in good shape, though the grain crop is lighter than usual on account of the dry summer. But little fall plowing has been done as yet, there not being enough moisture in the ground. Not much fall wheat will be planted. Fall pastures are excellent, the weather being warm, and with but little frost for this time of the year. Cattle will be in good shape for the winter. nJ. F. JOHNSON.

Next Year Looks Better.

WEIPPE, Clearwater County, Idaho, Oct. 11.—We have had the finest kind of weather for harvesting all our crops this year and the ground is in very good condition for plowing. The price has been good for everything grown on the farms but the crops are very short. Fat cattle are a fair price but stock cattle has no sale; hogs are high. We think we will do better next year. We can get very good seed at a high price, but we don't sow any fall crops.

C. W. SPACE.

Your Country Is Calling For More Products

The most important factor in this war is the raising of record crops and bringing new lands into cultivation. The high prices for all products makes this patriotic appeal also of personal advantage to you. Do your bit.

Your Opportunity to Serve Your Country Is in Stevens County.

Although prices for all products have increased our low prices and easy terms for logged-off lands near Springdale, Washington, have remained the same.

We will be glad to have you examine the property and talk to the neighboring farmers. Drop us a line when you will be at Springdale, Washington, and our man will be at your disposal.

Phoenix Lumber Co.

Dept. D.

Try EDISON'S 1918 AMBEROLA in your home

The New Edison Diamond Amberola—Model 50

NO matter how delightful your home may now be, Mr. Edison's New Diamond Amberola could not fail to make it more so. A Diamond Amberola in your living room would make it the brightest and cheeriest spot in the world for you. It would become a hallowed place where your family and friends would gather together and enjoy with you the gems of the world of music—heart-songs, ballads, hymns, opera, concert, musical comedy, vaudeville—no end of entertainment.

We could tell you that the Amberola reproduces songs so naturally that, when you turn your back and close your eyes, it is difficult to believe that the living artists are not actually in the room. We could write whole pages in an effort to convince you that the New Edison Diamond Amberola is a musical instrument indispensable in your home, but one note of the voice of Anna Case singing "Annie Laurie," or one ripple of music from the bow of Albert Spalding playing "My Old Kentucky Home," would convince you as no printed words ever could.

We could tell you that the New Edison Diamond Amberola has a GENUINE DIAMOND REPRODUCER (no needles to change.) We could tell you that Edison Blue Amberol Records are almost unbreakable and unwearable. We could tell you many other wonderful things about the New Edison Diamond Amberola and Edison Blue Amberol Records, but the Amberola itself can tell you in its own music language far better than we can.

HEAR MR. EDISON'S AMBEROLA BEFORE YOU PURCHASE ANY PHONOGRAPH OR TALKING MACHINE, WHATEVER NAME IT MIGHT HAVE. And when you do hear the Amberola, hear it in your own home right where you would expect to use it after you bought it. Just give it a few days' trial and it will sing and play itself into your heart and your life so that you will never want to part with it even at many times its cost.

SPECIAL FREE TRIAL OFFER

Now, about that free trial? Find in the list below the name of the dealer nearest you. Fill in the coupon at the bottom of this page and sign your name and address on the margin. The dealer will send you the beautiful Amberola Book from which you may select the instrument you prefer. He will also send you the catalog of Blue Amberol Records. Select any 12 records. The dealer will send you the Amberola and records, which you may keep for three days. After three days you may purchase the Amberola and records for cash or on terms which will be arranged by the dealer, or you may notify the dealer that you do not care to purchase and he will take them back without the trial costing you one cent. No red tape! No expense or obligation on your part! Just an out-and-out FREE trial.

No doubt many times you have thought that you would buy, or try, a phonograph "some day." Send the coupon NOW. Make TO-DAY YOUR "SOME DAY."

Write for our beautiful Amberola Book, "A Master Product of a Master Mind." It's FREE

WHAT THE AMBEROLA GIVES YOU

With the Edison Diamond Amberola you may have any kind of music at any time and any place. Think what a priceless possession this is!

Mr. Edison has so perfected the art of phonographic recording that every sound-wave, from the crashing thunder of great military bands to the most delicate wisp of sound from the lightest-toned violin, is caught by his recording instruments and reproduced on Blue Amberol Records. His method of recording is a secret with Mr. Edison and his most trusted associates. That is why no record but an Edison record has all the natural warmth, richness and feeling of the living artist. There is no thin, metallic twang such as you hear from talking machines—nothing but smooth, round, rich and mellow melody. You actually would be astounded to think that anything but a human being could produce such music.

Mr. Edison, placing quality before all else, selects his artists solely on merit. He has the choice of the best vocalists and instrumentalists of the world make records for him. That is why, on Edison Blue Amberol Records, you hear the foremost singers, instrumentalists, bands, orchestras, etc., of the day. As illustrating what you may have when you own an Amberola we have selected at random the following Blue Amberol Records from the extensive Blue Amberol catalog:

HEART-SONGS

Annie Laurie
Ben Bolt
Juanita
Kathleen Mavourneen
Last Rose of Summer
Old Folks at Home

SACRED SELECTIONS

Abide With Me
Beyond the Smiling and the Weeping
Crossing the Bar
Glory Song
I Love to Tell the Story
Dreams of Galilee

BALLADS

Only a Pansy Blossom
Silver Threads Among the Gold
I'll Take You Home Again, Kathleen
Take This Letter to My Mother
Only to See Her Face Again
When You and I Were Young, Maggie

BANDS

America, I Love You
El Capitan and Manhattan Beach Marches
Cavalry Charge
Boston Commandery March
Blue Danube Waltz
Heart of America March
Garden of Roses Waltz
Passing Review—Patrol

PATRIOTIC RECORDS

America, I Love You, March
Dixie
My Country, 'Tis of Thee (America)
We're Tenting To-Night
American Fantasie
Yankee Doodle

MARCHES

Dominion of Canada March

Magazine Department of The Washington Farmer

Another Bunch Grasser

By IDA C. YOUNG, Bend, Ore.

The Bunch Grass Boy has arrived; his tale is extremely interesting; it is also true. I know because I lived within a few miles of his home. His people and his incidents are true to life.

His idea of the dust and the dust-storms is absolutely correct. I presume to this day the farmers start out from their homes with a load of wheat and drive from two to 10 miles into town without being able to see more than an occasional glimpse of their teams all along the way. Four, six and eight horse teams pass each other without recognition, though they may be neighbors. There's only the rattle of the wagons, an occasional glimpse of part of a horse, a wheel or the driver, sometimes only the whip stalk waving aloft in a little rift in the cloud. Usually there is a friendly warning call as "they speak each other in passing." Then darkness again and silence. Ships that pass in the night have nothing on these wheat schooners of the Big Bend country, and the never-ending dust.

The Bunch Grass Bay's tribute to the pioneers is true and worthy. Mrs. Susie Hill certainly understood the science of giving. If the rest of the world understood it as well there would be little loneliness or little poverty. Grandpa Utt is well described as the patriarch of Sunday schools. D. E. Reeves, the first storekeeper in the small wheat station of Hartline; John R. Lewis, the Kirklands, even Bob Pugh, are all faithfully remembered.

Also I have a perfectly clear picture of some of his school days, having been his teacher for three successive terms. I can still see Jimmie Paullus and his smile, the most expansive smile that was ever my good fortune to meet. When Jimmie smiled his ears moved up, his scalp moved forward, and that smile spread and spread until even his freckles were lost to view. One day when I had gone to great pains to develop the idea of spring and well water I thought I had worked up very faithfully to the point of the lesson. Then, turning to Jimmie, I said: "Now, Jimmie, when people settle in a dry country very far from lakes and rivers and streams what will they do for water?" I wasn't long in doubt. Jimmie waited a little, giving his smile time to develop, and answered quite readily, "Haul it."

Tommy East remains clear in my mind because of his twinkling eyes. When anything was on foot I had only to look at Tommy, and while the rest of his face and body were in perfect repose his eyes fairly shouted joy and mirth. I hope he still has that power of enjoyment.

The Bunch Grass Boy himself was the boy whose report card always averaged up in the nineties, especially so in composition work. I wish I could remember what finally became of that portion of the coyote story that he speaks of. It was written on manila wrapping paper, yards and yards of it, and it did give promise of the talent that has since come to light. But somewhere in my travels it has disappeared. I'm sorry, because I think he himself would enjoy going over it again, as well as the rest of us, who knew him then.

His childhood experiences are of interest to me chiefly, I think, because they differed so greatly from my own. Whereas he gives one such a sensation of loneliness in that period of his life, my memories of the corresponding period in my own days are filled with events that fairly seethe with excitement and interest.

In 1883, in June, we drove over the unbroken bunch grass and camped beside a spring some 10 miles distant from the place where Hartline now stands. Only a few weeks went by, and seven other families followed our wagon track and camped beside the same spring. There were the Rusheaus, Anthony and Frank, with their respective families; the Days, with six boys; John Henry Smith, with five children; E. O. Whitney, with two; Mr. and Mrs. F. H. Bosworth, with their grown son, and the McCanns finished the camp. Loneliness was certainly an unknown term to us children, or any one else, all that summer, and though by cold weather all the families had located in the neighborhood and we were alone beside the spring, there was no lack of interest and entertainment.

My brother came home one day with a small yellow pup, not much bigger than a bar of soap. Raising that pup was almost more than the three of us could accomplish, and it took most of our spare time. Then we had the only grindstone and the only organ in eastern Douglas county. Badger mountain, on the western side, had been settled just two months ahead of our settlement, and I believe there was an organ or piano among those settlers, also, I suppose, a grindstone. However, these two articles kept us from lack of company. We lived beside the road that lead to the canyons where grew the firewood for much of eastern Douglas county; people had to grind their axes. News and companionship was freely given in exchange for use of the grindstone. Our little cottage organ was an attraction peculiar to itself. Mother understood just enough of music to make it effective. I wish I had time and space to describe the practice meets that took place about that organ, when people rode distances of 15 miles and more to prepare a program.

These first few years formed a period of beginnings. There were the first regular religious services in Douglas county held by my grandfather, alternately at his home and at ours. There was the establishment of Lincoln postoffice, with F. H. Bosworth as postmaster. The first political election took place the second fall. That fall also saw the formation of school district No. 1. I still have in my possession my enrolment card with the printed statement, "A member of Douglas county's first school. C. C. Ladd, teacher."

The school house was the little log shack of a young bachelor, who was away out on the coast of Oregon somewhere earning enough to supply him with bacon and beans for the winter. What a time we had with our pencils and pens.

There were a row of us along the back of the shack, sitting on a bench. In front of us was a 12-inch board, fastened to stakes driven into the floor. Here we kept our books and paraphernalia. Later, there was a log school house, built with two whole windows on each side, a fairly good floor and large tables, around which the children sat on benches.

It was in this school house that mother did her pioneer teaching. It must have taken some effort to get up, look after breakfast, chickens, milk and butter, and see that we were on our way to school in time; but we all took a hand, and I don't remember that we had any special difficulty in being on time, although there was one occasion when doubts were present.

There was only one horse that morning, the 2-year-old filly Florrie that mother and little sister rode. The little buckskin that brother and I rode was hunting cattle that day with brother, so I was on foot. A yearling colt of Anthony Rusheau's had been hanging about the place and tagged along behind us to school, and when it came time to go home I remembered that I had seen the Rusheau girls ride that colt. They rode anything from a ridge pole to a yearling steer.

However, the colt was fairly gentle. I got close enough to hop on, and rode home, straggling along every which way. We met Dan Paul, an old-time cattleman (afterward senator), and to the time of his death, long years afterward, he never met me without some reference to the time when, as a little girl, I rode the colt without so much as a shoestring to hold on by.

There was another occasion that did not work out so smoothly, though we came home safe. We were all on our way home from school, traveling slowly and peacefully, when, I suppose, something frightened the horses. There was a short period of tremendous activity and confusion, and all four of us found ourselves sitting far apart in the bunch grass, with dinner pails, blankets and wraps sprinkled round, likewise far apart. The two horses stood at a safe distance, heads together, watching us curiously. I don't understand yet why they didn't go away and leave us, but they didn't. We finally caught them, loaded up and came home.

I should add here that we rode without saddles, so it was a simple matter to fall off.

To go back to this period of beginnings, I wish I could tell you of our first Fourth of July celebration; of the first occasion of votes for women, when they rode for 20 or 30 miles to cast their ballots; in the days when Washington was still a territory. I would like to go into details concerning our first surprise parties, Christmas tree and spelling schools; our first and last Indian scare; our experience with prairie fires. And, above all, I should like to impress you with the fact that there is a wonderful amount of pleasure and satisfaction in pioneering. While there is always much absence of the conveniences of a settled country there is also freedom from the cares and corruptions that creep into thickly settled communities. And, in some unexplainable way, there comes to the brave and persistent soul with high ideals and unwavering purpose a fulfilment of the highest and best desires in the wilderness just as much as in the opulent cities, as the Bunch Grass Boy himself has proved.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

"Blepharitis" the Reason Some Eyelids Stick Together

The eyelids are the portieres or curtains of your soul. As your temperament and nature shine forth through the glory of your eyes the expression and character are shaped and influenced more or less by your eyelids. Any deformity or disability which mars the appearance or control of the eyelids exerts an unpleasant effect upon the observer. Indeed, the power of the eyelids is such that you may by them determine what has been taking place.

Dr. Hirshberg

There is an inflammatory condition at the edge of the eyelids called "blepharitis," which is a blood brother to scaly dandruff, or seborrhea, as dermatological pundits like to call it.

Schorrhea, or dandruff, may be the origin of either an oily exudation or a dry, bran-like scurf. The former is called seborrhea oleosa and the latter seborrhea pityriasis from a Greek word, "pityron," which means bran.

In seborrhea, according to Dr. Douglas W. Montgomery of San Francisco, who has devoted some study to that malady, the skin becomes thick, dull and heavy in appearance.

Disorder of Fats.

This disorder really has much to do with the fatty constituents of the skin, and "as the skin is above all things a fatty organ," the significance of any check to its fat production can be appreciated. Beneath the healthy man's skin are "acres" of fat. The waxy "sebaceous" glands manufacture oils, fats and chloesterol, a fatty matter impervious to fermentation or bacterial attack.

If, however, a fermentable fat instead of a nonfermentable one is excreted by the fat and sweat glands, bacteria begin to thrive upon both and various disorders are initiated.

If the edges of the eyelids become mixed up in this condition, the oily excretions of the wax glands of the eyelids—the meibomian glands—in lieu of a lubricant, become hard, brittle and crystal, much like barley sugar.

It is this substance that sticks to the eyelashes and in the morning "gums up" the lids so unpleasantly that they may be stuck together.

Treatment Not Difficult.

Sties, crusts, scales and gummy matter may all become part of the bacterial invasion of the gummed-up in "blepharitis." It is a common ailment of the senile, because of the loss of fat in the tissues of the aged.

The treatment of sties, eyelid seborrhea and various infections of the eyelids is not difficult. The crusts and scales should be washed away with boric acid water. Then apply one part of ammoniated mercury ointment to four parts of white vaseline to the eyelids at night. Eight grains of yellow oxide of mercury to the ounce of vaseline is also used on the margin of the eyelids in this condition.

Sidelights

The Doctor Wasn't Called.

A boy developed a sudden pain about 8:15 Monday morning. His mother, naturally solicitous, asked, "Where do you feel sick, dear?" He considered a moment; then replied, "I feel sick in school."—C. T.

Mixed Up Relationship.

Due to the fact that two brothers married a mother and daughter in Stockton, Cal., one brother became stepfather to his brother. Also, one bride is her daughter's sister-in-law and stepmother to her brother-in-law.—New York Sun.

Unnecessary.

The town council of a small Scotch community met to inspect a site for a new hall. They assembled at a chapel, and as it was a warm day a member suggested that they should leave their coats there.

"Some one can stay behind and watch them," suggested another.

"What for?" demanded a third. "If we are going out together, what need is there for any one to watch the clothes?"—Tit-Bits.

First Aid.

She took a course of first aid to the injured, and, after long and anxiously waiting, the street accident she had earnestly wished for took place.

It was a bicycle accident, the man had broken his leg; she confiscated the walking stick of a passerby and broke it in three pices for splints; she blushingly took off her underskirt for bandages and she was enthusiastically cheered by the crowd. When all was completed she summoned a cab and took her patient to the hospital.

"Who bandaged this limb so creditably?" inquired the surgeon.

"I did," she blushingly replied.

"Well, it is most beautifully done," said the surgeon, "but you have, I see, made one little mistake."

She felt terribly self-conscious.

"You have bandaged the wrong leg," he said quietly.—Baltimore Sun.

Prayer of the Red Cross Nurse.

Dear Lord, if I can smooth a brow,
Or smooth a fevered brain,
Or stanch the life blood of a heart,
I serve and not in vain.

Oh, but my need for help and strength
Is as the need of ten;
I pray thee, pour thy grace on me—
Not for myself, but them!

When sunken eyes look into mine,
They must find courage there;
I must give hope, e'en when my heart
Of hope is stripped and bare.

I know no country, creed or race,
But o'er life's little span,
'Tis mine to steady wounded feet,
To serve thee, Lord—and man

And so I life my hands to thee;
Lord, fill them for my task,
That they may overflow to them—
Lord, this is what I ask.

—Marion Seymour Kirkland, in Everywoman's World.

All the World's a Stage, and All the Men and Women Merely Players

Brought to Earth in France

French Official Photo.

The German machine and its pilot were brought to earth inside the French lines by clever firing on the part of French gunners and their anti-aircraft guns.

Department Store Demonstration

U. S. Food Administration.

The department store food conservation demonstration under the auspices of the women's municipal league of Boston, Mass. Every wide-awake American woman is today looking about for some way in which she may serve her country. In connection with this, Woodrow Wilson says: "In no direction can the women of America so greatly assist as by enlisting in the service of the food administration and cheerfully accepting its direction and advice. By so doing they will increase the surplus of food available for our own army and for export to the allies."

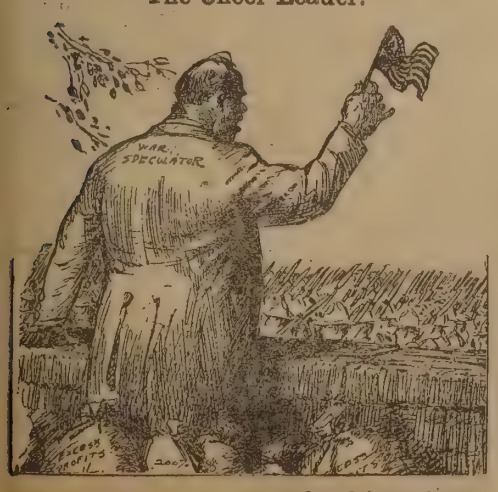
U. S. Men in Trenches Overseas

French Official Photo.

The photo was taken during the progress of a sham battle between French veterans and "Our Boys," who are rapidly learning all that their French instructors can teach them and are eager to get to the front and do their "bit."

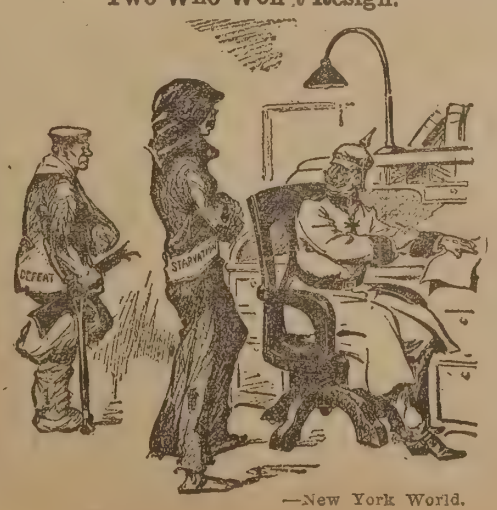
Wins Canning Contest.

U. S. Food Administration.



The above photograph shows Miss Helen Tew of Washington, D. C., who has been awarded check No. 1 for $5 in the nation-wide contest conducted by the national emergency food garden commission for the best canned vegetables grown in war gardens. The picture shows her in the uniform of the United States food administration. The commission, of which Charles Lathrop Pack, the president of the American Forestry association, is the head, is giving $5000 in prizes apportioned to the various states, to promote food conservation, and hundreds of war garden exhibits all over the country are applying for this nation-wide recognition of their work.

Congressman to War.



The above is the photograph of Captain Heintz of Cincinnatti. This Ohioan recently resigned from congress to take active part in Uncle Sam's war on Germany. He is captain in the First Ohio infantry, and is adjutant of the regiment. He is now at Camp Sheridan, Montgomery, Ala., to which post he brought some 900 soldiers. This is the only photograph taken of the popular congressman and officer in military garb and shows him at camp.

The Cheer Leader.

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

SYNOPSIS.

Gale is trader of Flambeau, a frontier on the Yukon. Lieutenant Burrell is sent to this camp to preserve order. The day of his arrival Necia, Gale's daughter, returns from a mission school. As she and Burrell are talking, two halfbreed children and a squaw appear, and Necia, noting the lieutenant's look of disgust, informs him that they are her mother, brother and sister. Poleon Doret, a Frenchman, returns from Dawson, and on the same boat comes Runnion, a desperado. In attempting to make Runnion leave Flambeau, Burrell is shot by him and only the quick hand of Poleon saves him.

As Necia is arrayed in a ball gown, which Poleon brought her from Dawson, Burrell happens in. He is amazed at the ease with which she wears the dress and at the fairness of her skin. She confesses to a feeling that she, Necia, should be called "Merridy."

"No Creek" Lee, a prospector, after years of hard luck, makes a big strike. Runnion returns, and with him Stark, who has come to grubstake the miners and open a saloon. Stark causes Gale and the Squaw Alluna, great uneasiness. The men of the camp leave for Lee's claim, Necia, longing for riches so she may become like other girls, begs Burrell to follow them with her. Burrell knows that Necia is coveted by half the men in the camp and that it would cause a great uproar should he spend a night alone with her in the woods. This would be an easy way to compel them to an open state of enmity, which would be preferable to the indifferent toleration which he has met among them. This together with her entreaties and the confession that she loves him, sweeps aside all discretion and together they start on the journey.

CHAPTER V.

A Story Is Begun.

"It's fonny t'ing how two brown eye
Was changin' everyt'ing—
De cloud she's no more on de sky,
An' winter's jus' lak' spring.
Dey mak' my pack so very light,
De trail, she's not so long—
I'd walk it t'orty mile tonight
For hear her sing wan song.
But now I'm busy mak' fortune
For marry on dat girl,
An' if she's tole me yass, dat's soon,
Bonheur! I'm own de worl'!"

Poleon Doret sang gayly as the trader came towards him through the open grove of birch, for he was happy this afternoon, and, being much of a dreamer this fresh enterprise awoke in him a boyish pleasure. Then Necia had teased him as he came away, and begged him, as was always her custom, to take her with him, no matter whence or whither, so long as there was adventure afoot. Well, it would not be long now before he could say yes, and he would take her on a journey far longer than either of them had yet taken—a journey that would never end. Had not the gods looked with favor, at last, upon his long novitiate, and been pleased with the faith he had kept? Had not this discovery of "No Creek" Lee's been providentially arranged for his own especial benefit? A fool could see that this was a mark of celestial approbation, and none but a fool would question the wisdom of the gods. Had he not watched the girl grow from a slip of 13 and spoken never a word of his love? Had he not served and guarded her with all the gentle chivalry of an olden knight? Of course! And here was his reward, a gift of wealth to crown his service, all for her. Now that she was a woman, and had seen him tried, and knew he was a man, he would bring his burden of prosperity and lay it at her feet, saying:

"Here is another offering, my Necia, and with it go the laughter and the music and the heart of Poleon Doret."

Sacre! It would not take her long to wake up after that! The world was very bright indeed this afternoon, and he burst again into song in company with the voices of the forest people:

"Chante, rossignol, chante:
Toi qui a le coeur gai;
Tu as le coeur a rire
Mai j' l' ai-t-a pleurer.
Il y a longtemps que j' t' aime
Jamais je ne t'oublieral."

"Whew!" said Gale, slipping out of his pack-straps, "the skeeters is bad."

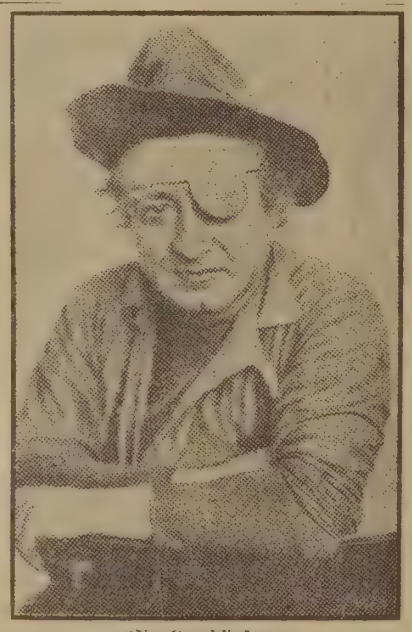
"Sing, little bird, oh, sing away!
You with the voice so light and gay!
Yours is a heart that laughter cheers,
Mine is a heart that's full of tears.
Long have I loved, I love her yet;
Leave her I can, but not forget."

"You bet your gum boots," said Poleon. "Dey're mos' so t'ick as de summer dey kill Johnnie Platt on de Porcupine." Both men wore gauntleted gloves of caribou skin and head harnesses of mosquito netting stretched over globe-like frames of thin steel bands, which they slipped on over their hats after the manner of divers' helmets, for without protection of some kind the insects would have made travel impossible once the Yukon breezes were left behind or once the trail dipped from the high divides where there was no moss.

"Let's see. It was you that found him, wasn't it?" said Gale.

"Sure t'ing! I'm comin' down for grub in my canoe, w'en I see dis feller on de bank, walkin' lak' he's in beeg horry. 'Ba Gar!' I say, 'dere's man goin' so fast he'll meet hese'f comin' home!' Den he turn roun' an' go tearin' back, wavin' hees arms lak' he's callin' me, till he fall down. W'en I paddle close up, I don' know 'im no more dan stranger, an' me an' Johnnie Platt is trap togeder wan winter. W'at you t'ink of dat?"

"I saw a fellow killed that way at Holy Cross," interpolated the trader.



"'Hello,' I say, 'wat's de matter?' An' den I see somet'ink 'bout 'im dat look familiar. Hees face she's all swell' up an' bleedin' lak' raw meat." The Frenchman curled his upper lip back from his teeth and shook his head at the remembrance.

"Jesu, dat's horrible sight! Dem fly is drive 'im crazee. Hees nose an' ears is look lak' holes in beeg red sponge, 'an hees eye are close up tight."

didn't he?"

"Yes. He was good man, too. Some tam' if I ever have bad enemy w'at I like to see catch hell I'm goin' turn 'im loose 'mong dose skeeter-bug."

"Holy mackinaw!" ejaculated Gale. "Who'd ever think of that? Why,

"No Creek" Lee.

that's worse than dropping water on his skull till he goes crazy, like them Chinamen do."

The Frenchman nodded. "It's the wors' t'ing I know. Dat's w'y I lak' to geeve it to my enemy.'

"Imagine fightin' the little devils till they stung you crazy and pizened your eyes shut!"

Gale fell to considering this, while Poleon filled his pipe, and, raising his veil, undertook to smoke. The pests proved too numerous, however, and forced him to give it up.

"Ba gosh! Dey're hongry!"

"It will be all right when we get out of the woods," said the elder man.

"I guess you been purty glad for havin' Necia home again, eh?" ventured the other after a while, unable to avoid any longer the subject uppermost in his mind.

"Yes, I'm glad she's through with her schooling."

"She's gettin' purty beeg gal now."

"That's right."

"By an' by shes' goin' marry on some feller—w'at?"

"I suppose so. She ain't the kind to stay single."

"Ha! Dat's right, too. Mebbe you don' care if she does get marry, eh?'

"Not if she gets a man that will treat her right."

"Wal! Wal! Dere's no trouble 'bout dat," exclaimed Doret, fervently. "No man w'at's livin' could treat her bad. She's too good an' too purty for have bad husban'."

"She is, is she?" Gale turned on him with a strange glare in his eyes. "Them's the kind that get the hedevils. There's something about a good girl that attracts a bad man, particularly if she's pretty; and it goes double, too—the good men get the hellions.

"Necia wouldn't marry no bad man," said Doret, positively.

"No?" said Gale. "Let me tell you what I saw with my own eyes. I knew a girl once that was just as good and pure as Necia, and just as pretty, too—yes, and a thousand times prettier."

"Ho, ho!" laughed Doret, skeptically.

"She was an eastern girl, and she come west where men were different to what she'd been used to. Those were early days, and it was a new country, where a person didn't know much about his neighbor's past and cared less; and, although there were a heap of girls thereabouts, they were the kind you'll always find in such communities, while this one was plumb different. Man! Man! But she was different. She was a woman! Two fellows fell in love with her. One of them lived in the same camp as her, and he was a good man, leastways everybody said he was, but he wasn't wise to all the fancy tricks that pretty women hanker after; and, it being his first affair, he was right down buffaloed at the very thought of her, so he just hung around and slept late so that he might dream about her and feel like he was her equal or that she loved back at him. You know! The other fellow came from a neighboring town, and he wasn't the same kind, for he'd knocked around more, and was a better liar, but he wasn't right. No, sir! He was sure a wrong guy, as it came out, but he was handsome and younger, and the very purity and innocence of the girl drew him, I reckon, being a change from what he had ever mixed up with."

"W'y don' dis good man tak' a shot at him, asked Poleon, hotly.

"First, he didn't realize what was going on, being too tied up with dreaming, I reckon; and, second, neither man didn't know the other by sight, living as they did in different parts; third, he was an ordinary sort of fellow, and hadn't ever had any trouble, man to man, at that time. Anyhow, the girl up and took the bad one."

"W'at does de good man do, eh?"

"Well, he was all tore up about it, but he went away like a sick quail hides out."

"Dat's too bad."

"He heard about them now and then, and what he heard tore him up worse than the other had, for the girl's husband couldn't wear the harness long, and, having taken away what good there was in her, he made up in deviltry for the time he had lost. She stood it pretty well, and never whimpered, even when her eyes were open and she saw what a prize package she had drawn. The fact that she was game enough to stand for him and yet keep herself clean without complaint made the man worse. He tried to break her spirit in a thousand ways, tried to make her the same as he was, tried to make her a bad woman, like the others he had known. It appeared like the one pleasure he got was to torture her."

"W'y don' she quit 'im?" said Doret. "Dat ain' wrong for quit a man lak' him."

"She couldn't quit on account of the kid. They had a youngster. Then, too, she had ideas of her own; so she stood it for three years, living worse than a dog, till she saw it wasn't any use—till she saw that he would make a bad woman of her as sure as he would make one of the kid—till he got rough—"

"No! No! You don' mean dat? No man don' hurt no woman," interjected Doret.

"By God! That's just what I mean," the trader answered, while his face had grown so gray as to match his brows. "He beat her."

Poleon broke into French words that accorded well with the trader's harsh voice.

"The woman sent for the other man after that, for he had been living lonely, loving her all the time, and you'd better believe he went."

"Ha! Dat's fine! Dat's dam' fine!" said the other. "I'll bet dere's hell to pay den—w'at?

"Yes, there was a kind of reckoning.' The old man lapsed into moody silence, the younger one waiting eagerly for him to continue, but there came the sound of voices down the trail, and they looked up.

"Here comes Lee," said Gale.

"W'at happen' den I'm got great interes' 'bout dis woman," insisted Poleon.

"It's a long story, and I just told you this much to show what I said was true about a good girl and a bad man, and to show why I want Necia to get a good one. The sooner it happens the better it will suit me."

Neither man had ever spoken thus openly to the other about Necia before, and although their language was indirect, each knew the other's thought. But there was no time for further talk now, for the others were close upon them. As they came into view, Gale exclaimed:

"Well, if he hasn't brought Runnion along."

"Humph!" grunted Doret. "I don't t'ink much of dat feller. W'at de matter wit' 'No Creek,' anyhow?"

The three new arrivals dropped down upon the moss to rest, for the up-trail was heavy and the air sultry inside the forest. Lee was the first to speak.

"Did you get away without bein' seen?" he asked.

"Sure," answered Gale. "Poleon has been here two hours."

"That's good; I don't want nobody taggin' along.'

"We came right through the town boldly,' announced Stark, "but if they had seen you two they would have suspected something, sure."

Runnion volunteered nothing except oaths at the mosquitoes and at his pack-straps, which were new and cut

him already. As no explanation of his presence was offered, neither the trader nor Doret made any comment then, but it came out later, when the old miner dropped far enough behind the others to render conversation possible.

"You decided to take in another one, eh?" Gale asked Lee.

"It wasn't exactly my doin's," replied the miner. "Stark asked me to let Runnion come 'long, bein' as he had grub-staked him, and he seemed so set on it that I ackeressed. You see, it's the first chance I ever had to pay him back for a favor he done me in the Cassiar country. There's plenty of land to go around."

It was Lee's affair, thought the trader, and he might tell whom he liked, so he said no more, but fell to studying the back of the man next in front, who happened to be Stark, observing every move and trick of him, and, during the frequent pauses, making a point of listening and watching him guardedly.

All through the afternoon the five men wound up the valley, following one another's footsteps, emerging from somber thickets of fir to flounder across wide pastures of "nigger-heads," that wobbled and wriggled and bowed beneath their feet, until at cost of much effort and profanity they gained the firmer footing of the forest. Occasionally they came upon the stream, and found easier going along its gravel bars, till a bend threw them again into the meadows and mesas on either hand. Their course led them far up the big valley to another stream that entered from the right, bearing backward in a great bow toward the Yukon, and always there were dense clouds of mosquitoes above their heads. At one point Stark, hot and irritable, remarked:

"There must be a shorter cut than this, Lee?"

"I reckon there is," the miner replied, "but I've always had a pack to carry, so I chose the level ground ruther than climb the divides."

"S'pose dose people at camp hear 'bout dis strike an' beat us in?" suggested Poleon.

"It wouldn't be easy going for them after they got there," Stark said, sourly. "I, for one, wouldn't stand for it."

"Nor I," agreed Runnion.

"I don't see how you'd help yourself," the trader remarked. "One man's got as good a right as another."

"I guess I'd help myself, all right," Stark laughed, significantly, as did Runnion, who added:

"Lee is entitled to put in anybody he wants on his own discovery, and if anybody tries to get ahead of us there's liable to be trouble."

"I reckon if I don't know no short-cut, nobody else does," Lee remarked, whereupon Doret spoke up reassuringly:

"Dere's no use gettin' scare' lak dat, biccause nobody knows w'ere Lee's creek she's locate' but John an' me, an' dere's nobody w'at knows he mak' de strike but us four."

"Thats right," said Gale; "the only other way across is by Black Bear creek, and there ain't a half dozen men ever been up to the head of that stream, much less over the divide, so I don't allow there's any use to fret ourselves."

They went on their way, traveling leisurely until late evening, when they camped at the mouth of the valley up which the miner's cabin lay. They chose a long gravel bar, that curved like a scimitar, and made down upon its outer tip where the breeze tended to thin the plague of insects. They were all old-stagers in the ways of camplife, so there was no lost motion or bickering as to their respective duties. Their preparations were simple. First they built a circle of smudges out of wet driftwood, and inside this Lee kindled a camp-fire of dry sticks, upon which he cooked, protected by the smoke of the others, while Gale went back to the edge of the forest and felled a dozen small firs, the branches of which he clipped. These Poleon and Runnion bore down to the end of the spit for bedding, while Stark chopped a pile of dry wood for the night. Gale noted that the new man swung an axe with the free dexterity of one to whom its feel was familiar, also that he never made a slip nor dulled it on the gravel of the bar, displaying an all-round completeness anda knack of doing things efficiently that won reluctant approval from the trader despite the unreasoning dislike he had taken to him.

Lee was ready for them by the time they had finished their tasks and, fanned by the breeze that sucked up the stream and lulled by the waters, they ate their scanty supper. Their one-eyed guide had lived so long among mosquitoes and had become so inoculated with their poison that he was in a measure impervious to their sting, hence the insects gathered on his wrinkled, hair-grown hide only to give up in melancholy disgust and fly to other and fuller-blooded feeding grounds. Camp had been made early, at Gale's suggestion, instead of pushing on a few miles farther, as Lee had intended; and now, when the cool evening fell and the draught quickened, it became possible to lay off gloves and headgear, so they sat about the fire, talking, smoking and rubbing their tired feet.

It is at such hours and in the smoke of such fires that men hark backward and bring forth the sacred, time-worn memories they have treasured, to turn them over fondly by the glow of dying embers. It is at such times that men's garrulity asserts itself, for the barriers of caution are let down, as are the gates of remembrance, and it is then that friends and enemies are made, for there are those who can not listen and others who can not understand.

"No Creek" Lee, the one-eyed miner who had made this lucky strike, told in simple words of his long and solitary quest, when ill luck had risen with him at the dawn and misfortune had stalked beside him as he drifted and drank from camp to camp, while the gloom of a settled pessimism soured him, and men began to shun him because of the evil that seemed to follow in his steps.

"I've been rainbow chasin' 40 years," he said, "and never caught nothin' but cramps and epidemics and inflammations. I'm the only miner in Alaska that never made a discovery of gold and never had a creek named after him."

"Is that how you got your name?" asked Runnion.

"It is. I never was no good to myself nor nobody else. I just occupied space. I've been the vermifuge appendix of the body politic; yes, worse'n that—I've been an appendix with a seed in it. I made myself sore and everybody around me, but I'm at the bat now and don't you never let that fact escape you."

"How are you going to spend your money? inquired Stark.

"I'm going to eat it up! I've fed on dried and desiccated and other disastrous and dissatisfactory diets till I'm all shriveled up inside like a dead puffball; now It's me for the big feed and the long drink. I'm goin' to Frisco and get full of wasteful and exorbitant grup of one kind and another, like tomatters and French vicious water."

Poleon Doret laughed with the others; he was bubbling with the spirits of a boy whose life is clean, for whom there are no eyes in the black dark that lies beyond a campfire, and for whom there are no unforgettable faces in its smoke. When Lee fell silent the trader and Stark resumed their talk, which was mainly of California, it seemed to the Frenchman, who also noted that it was his friend who subtly shaped the topics. In time their stories revived his memory of the conversation in the birch grove that morning, and when there occurred a lapse in the talk he said:

Chemicals for Stains

In removing stains chemicals should not be used until water or laundering has been tried for they attack the fibers of the cloth as well as the stain, according to a bulletin issued by the United States department of agriculture, on the removal of stains from Clothing and other textiles.

There are a few common chemicals which are necessary in removing some stains and these should be kept in every household. As some of these chemicals are poisonous they should not be kept in the family medicine cabinet or pantry. Chemicals most commonly used in removing stains are Javelle water, potassium permanganate (solution), oxalic acid, ammonia water, carbon tetrachlorid, French chalk and cream of tartar. With these chemicals should be kept some of the utensils used in applying them; such as a medium-sized bowl, a medicine dropper, a glass rod with rounded ends, several pads of cheese cloth or old muslin, and a small sponge.

If the effect of the stain remover upon the fiber or color is not known try it by applying a little to a sample or to an unexposed portion of the goods. Sometimes it is best to remove the stain even if some of the color is removed also, for the color often may be restored by careful tinting.

Work rapidly when using chemicals to remove stains so as to give them as little time as possible to act on the textile fibers. Stretch the stained portion of the garment over a bowl of clean water and apply the chemical with a medicine dropper. The chemicals may be rinsed out quickly by dipping in the clean water. Another method is to place the stained portion over a pad of folded cloth and apply the chemical with a glass rod. The rinsing or neutralizing always must be thorough.

Save Late Vegetables

By RUTH GIPSON PLOWHEAD.

Many of us have been canning and preserving and pickling, trying to do our "bit," until we wonder what we can save next. Two things which will help out next winter's table are tomato paste and soup mixture. Surplus tomatoes may be washed, boiled with the skins on, until part of the water is evaporated from them. They are then run through a sieve to remove skins and seeds, packed in jars or bottles, and boiled 30 minutes, in boilers, according to the cold pack method. Any odd bottles may be used for canning this tomato paste, for when one does much canning the matter of fruit jars often looms large. If canned in bottles they should be corked and the top of the bottle dipped in melted paraffin. If one cares to make the mixture already seasoned for soup, add one large grated onion, one teaspoonful celery seed, one tablespoonful of sugar, one teaspoonful of salt, pepper and other spices to taste to each quart of pulp, when tomatoes are first put on to boil.

A Good Soup Mixture.

While one may make soup from the winter vegetables, it is not always that we have the variety necessary for a good vegetable soup. Any favorite vegetables may be used, but the following is a good mixture:

One quart chopped onions.
One quart chopped turnips.
One pint chopped carrots.
I quart chopped celery.
One pint cabbage.
One quart string beans.
One quart tender corn.

All these vegetables should be freshly picked, blanched about 10 minutes cold dipped and prepared at once. The mixture may be packed in the jars, boiling water added, and a teaspoonful of salt to each quart, or the soup stock may be poured over the half-filled jar of vegetables. However, if one has the jar of vegetables the stock may be often made in the winter from ends of meat.

This mixture must be boiled according to cold pack method for three hours if boiler is used, and the jars completely submerged in water. It seems to me there is no better way of using the surplus vegetables, especially if there is but a small amount of each variety, so small that it does not pay to store it for winter, or if one has no good storage cellar.

Any family vegetables may be used as a soup mixture. In our family the above vegetables, together with finely diced potatoes, rice and barley make a soup which seems to exactly "hit the spot," especially in cold weather.

Substitutes for Sugar.

Herbert Hoover has sent out a call for the saving of sugar, and many of us are wondering in what manner we may save. Aside from cutting down the amount of candies, and with desserts, there is another thing we may do—substitute. Sorghum, honey or molasses may each be used in cooking, and there are a number of ways that each may be made to take the part of sugar. Either sorghum or molasses may be used in gingerbread. If I use sorghum I put caramel in to give the gingerbread the darker color we are used to. A good recipe for gingerbread is as follows:

A half cup sugar, 1 cup molasses, 1-2 cup melted lard, 1 teaspoonful each of cinnamon, ginger, cloves; teaspoonful soda, dissolved in a cup boiling water; 2 1-2 cups flour, 1-2 teaspoonful salt, 1 well-beaten egg.

Practically each cook has her own recipe for ginger cookies which are very good to put in the dinner pail, and which may be made with no sugar at all. Honey cookies are delicious, many bakers finding them good sellers. A rule for honey cookies found in a "honey book" is:

One cup honey, 1 cup brown sugar, 2 eggs, teaspoonful soda dissolved in 3 tablespoonsful of vinegar, pinch of salt, flour to stiffen. Mix at night and bake in the morning.

Honey candy is good, too. When the youngsters are hungry for candy try boiling honey candy as you would molasses candy until it forms a very hard ball in cold water. It should be pulled and cut in any sized pieces desired.

1936—Girl's dress. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3 1-4 yards of 36-inch material for a 8-year size. Price, 10 cents.

1979—Lady's shirt waist. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2 3-4 yards of 36-inch material for a 36-inch size. Price, 10 cents.

2015—Girl's one-piece dress. Cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 4 1-4 yards of 44-inch material for a 10-year size. Price, 10 cents.

2238—Dress for misses and small women. Cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 6 1-4 yards for skirt and bolero and 2 5-8 yards for the waist, of 24-inch material. The skirt measures about 2 3-8 yards at the foot. Price, 10 cents.

1953-1949—Lady's costume. Waist 1953 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 2 3-4 yards of 44-inch material for a 36-inch size. Skirt 1949 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 will require 4 3-4 yards of 36-inch material. The skirt measures about 3 1-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2229-2228—Dress for business or home wear. Waist 2229 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt 2228 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require 6 7-8 yards of one material, 36 inches wide. The skirt measures 2 1-2 yards at the foot. Two separate patterns, 10 cents for each pattern.

2098—A smart, one-piece model. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3 yards for the guimpe and 5 5-8 yards for the dress, of 36-inch material, for a 36-inch size. The skirt measures about 3 5-8 yards at the foot, with plaits drawn out. Price, 10 cents.

2233—Boy's suit. Cut in 4 sizes: 3, 4, 5 and 6 years. Size 4 requires 2 3-4 yards of 36-inch material. Price, 10 cents.

2227—Lady's dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 5 5-8 yards of 36-inch material. The skirt measures about 2 1-3 yards at the lower edge. Price, 10 cents.

2231—Girl's dress. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 will require 2 3-4 yards of 36-inch material. Price, 10 cents.

2249—A simple coat and cap for the little one. The pattern includes coat and cap. Cut in 4 sizes: 1, 2, 3, and 4 years. Size 2 requires 2 yards of 36-inch material for the coat, and 5-8 yard for the cap. Price, 10 cents.

2013—Lady's apron dress. Cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 5 yards of 36-inch material for a 34-inch size. Price, 10 cents.

BE SURE TO GIVE NUMBER AND SIZE.

Everybody Welcomes Durable-DURHAM Fleece-lined Hosiery

because it keeps out the cold and gives so much comfort and long wear. You can buy it for everybody in the family at 25c a pair. Durable-DURHAM is much heavier than most fleece-lined hosiery selling for 25c.

DURABLE
DURHAM HOSIERY
FOR MEN, WOMEN AND CHILDREN

Made Strongest
Where the Wear is Hardest

—is not only made in fleece-lined. You can buy it for work, play or dress and for all seasons. The heels, soles and toes are strongly reinforced; the legs are full length; the wide elastic top with the anti-run stich can't be pulled off or torn by garters; the smooth, seamless and even feet and toes; sizes are correctly marked, and the way the famous Durham dyes are fast—colors will not fade or turn green from wearing or washing. Quality is uniform throughout. Durable-DURHAM Hosiery is made in all weights for all seasons of the year and sells for 15, 19, 25 and 35 cents. Buy Durable-DURHAM Hosiery for everybody in the family.

Ask your dealer to show you our women's 35c and men's 25c silk-mercerized hosiery with the patented anti-run stitch.

Rainbow Colors, All Mixed Together.

Dear Aunt Nellie: It has been a long time since I wrote to you and the cousins, so I will write a short letter. My subject is Helping the Red Cross. The school at Joyce has a schoolhouse and 17 pupils go to it and one more is to come. We had a Red Cross meeting at the school. We sang songs and read and said pieces. I read the "Star Spangled Banner." Tonight I saw a sunset that was so beautiful that I thought I would mention it. It was all the colors of the rainbow. They were all mixed up so pretty. Thanksgiving is coming soon again. Every Thanksgiving we have a turkey or a young hen fried or if we have a turkey we roast it. We have eight little pigs. We had 12 but four of them died. They are growing so fast they will soon be grown. I am 9 years old. My birthday was August 17. I have six brothers and I am the only girl in the family.—Grace Miller, Joyce, Wash.

Out in the Country With Her Aunt.

Dear Aunt Nellie: This is the first time I have ever written to the Corner I am 11 years of age and in the fifth A grade at school. My teacher's name is Miss Ford, and she is a nice teacher. My home is in Olympia, Wash. I am out in the country with my aunt. Aunt Nellie can you tell me of some little girl who is sick or unhappy, for I will be very pleased to write to her? Our school is going to have a Hallowe'en dialogue. I hope all the children will have a good time on Hallowe'en. The first thing I do when the Farmer comes home is to look at the Children's Corner. If there is any little girl who is lonesome she can write to the Corner or read the letters of the Corner.—Gladys Jacobsen, box 155, Quincy, Wash.

Clara Loves to Ride Horseback.

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner and I hope it will not be the last. I am 13 years old. My birthday is April 23. Have I a twin? If so I would like to hear from her. I live on a 160-acre farm 12 miles from town, but we are going to move to town in a few days. We have six horses, two yearling calves, one cow and a little baby calf. We have 50 chickens and five geese. I have five sisters and three brothers. My oldest sister is 15 years old and my youngest sister is 16 months old. I did have four brothers, but my oldest brother died last winter with the measles. He was 18 years old. His name was Maurice. We all had the measles. I have brown hair and blue eyes. I am five feet high and weigh 90 pounds. I love to ride horseback. My oldest sister takes The Farmer and as soon as the paper comes I turn to the Children's Corner and I enjoy reading the cousins' letter very much. I am trying to see how long a letetr I can write to dear Aunt Nellie. I hope she will like my letter. My uncle, Lorén Hudson, and my oldest sister, Lillian, and I, went to the Spokane fair last fall. We took in two circuses, too. We surely had a fine time. We were gone three weeks.—Clara Belle Walker, R. F. D. No. 2, Box 48, Republic, Wash.

The Work of the Red Cross.

Dear Aunt Nellie: I have been reading the letters in the Children's Corner for a long time and I think them very interesting. This is the first time I have written. I am 10 years old. My birthday was October 5. I am in the fifth grade. Have I a twin? The subject I will write on is The Red Cross. The subject of the Red Cross is more important now than it ever was before, because of the war that is now in progress. The Red Cross workers in France have faced the terrible fire of the Germans with the utmost bravery. They have saved the lives of hundreds of thousands of boys, who, otherwise would have lain on the field to die in the worst pains imaginable—burns from the liquid fire, from holes torn in them by shrapnel shells, and by hunger and starvation. In America real Red Cross work has only begun. Although many American women have lost their lives already in their effort of mercy to the French soldiers, a far greater number may yet lose their lives. With the departing of our soldiers to France, there will be a far greater need of Red Cross workers and of money to buy materials. The people who remain at home should be liberal with their money.—Henry Giles, Sunset, Wash.

Who Is Edith's Twin?

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 11 years old and my birthday is the 12th of September. Have I a twin? If I have I wish she would write to me. I go to school and am in the sixth grade. My teacher's name is Mr. Waldren. I have a little pet kitten. It is black and white. Its name is Spotty. I can crochet and tat. I have read many books, but the best book is "Alice in Wonderland." We have lots of fruit such as apples, pears, prunes and cherries, and a few kinds of berries and vegetables. I have one sister whose name is Agnes. She is 17 years old. Her birthday is the eighth of July. She would be very glad if some one of her age would write to her, too. I have two dolls and a toy kitten. It will meow if you hit it. I help on the farm and do housework. I wash and wipe dishes, sweep the floor and make beds.—Edith Holm, Box 5, Olalla, Wash.

Nellie's Chickens Won First Prize.

Dear Aunt Nellie:— This is the first time I have written to the Children's Corner. I like to read the letters of the Corner. I live on a 12-acre farm. Papa has a chicken ranch. We live two miles north of Marysville. We have two cows. Their names are Queen and Cherry. We have between 1000 and 1500 chickens. I have three sisters. Their names are Hazel, Alice and Ethel. I am 10 years old. My birthday is August 10. I have two brothers. Their names are Lyle and Roy. There was a school fair at Marysville. Hazel took peas, beans, carrots and a bushel of potatoes. Lyle and Roy each took a pumpkin, but they never got a prize. I took two pens of chickens. I got first prize on one pen. The prize was a setting of eggs from Mr. Darling. I ride in a truck to school. My teacher's name is Miss Facklam. I like her very well. I am in the fifth grade. I go to sewing every Friday. I like to go to school. I hope to see my letter printed in the Corner.—Nellie Wade, Marysville, Wash.

Takes the Sheep to Pasture.

Dear Aunt Nellie: My subject is about our farm. We live on a 20-acre irrigated farm. We have a large barn with a round roof. We milk eight cows and their names are Fannie, Lucy, Daisy, Mary, Topsy, Goldie, Rosy and Nellie. I have a pet cat and his name is Tom. We have a dog. His name is Toots. We have three horses and a colt and the colt's name is Babe. We also have 19 sheep. I have two little sisters, Mildred and Gladys. We like to take the sheep to pasture and bring them home at night. Papa is putting his third cutting of hay in the barn. Our school is having vacation now so us girls can have fun watching papa put the hay in the mow.—Frances Johnson, Prosser, Wash.

Soft Purple Clouds in the Evening.

Dear Aunt Nellie: We have a very fine view of the sun as it sets in the evening. Some evenings the clouds are soft purple and then again a dark red, pink, blue and many other colors combined. The dark purple clouds that twist almost half way around the sky look very much like huge fishes. Some evenings I sit out on the porch and watch the clouds form many shapes. It is very interesting to get out your paint box and try to paint the beautiful colors, but it is impossible to get the colors as beautiful as they really are painted by Nature.—Lenore Fox, Route 1, Washougal, Wash.

Margaret Is a New Cousin.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old and am in the sixth grade. We have four cows and two horses. The cows' names are Pansy, Bess, Josey and Brindle. The horses' names are Charley and Al. I hope to see my letter in the Children's Corner.—Margaret King, Matlock, Wash.

THE BARRIER

(Continued from page 39.)

"Say, John, w'at happen' to dat gal we was talkin' 'bout dis mornin'?"

Gale shook his head and turned again to this companion, but the young mans mind was bent on its quest, and he continued:

"Dat was strange tale, for sure."

"What was it?" questioned Runnion.

"John was tell 'bout a feller he knowed w'at marry a good gal jus' to mak' her bad lak' hese'f."

"How's that?" inquired Stark, turning curiously upon the old man; but Gale knocked the ashes from his pipe and replied:

"Oh, it's a long story—happened when I was in Washington state."

Poleon was about to correct him—it was California, he had said—when Gale arose, remarking sleepily that it was time to turn in if they wished to get any rest before the mosquitoes got bad again, then sauntered away from the fire and spread his blanket. The rest followed and made down their beds; then, drawing on gloves and hatnets, and rolling themselves up in their coverings, fell to snoring. All except the trader, who lay for hours on his back staring up at the stars, as if trying to solve some riddle that baffled him.

They awoke early, and in half an hour had eaten, remade their packs, and were ready to resume their march. As they were about to start Gale said:

"I reckon we'd better settle right now who has the choice of locations when we get up yonder. I've been on stampedes where it saved a heap of hard feeling."

"I'm agreeable," said Stark. "Then there won't be any misunderstanding."

The others, being likewise old at the game, acquiesced. They knew that in such cases grave trouble has often occurred when two men have cast eyes on the same claim, and have felt the miner's causeless "hunch" that gold lies here or there, or that the ground one of them covets is wanted by the other.

"I'll hold the straws," said Lee, "and every feller will have an even break." Turning his back on the others he cut four splinters of varying lengths, and, arranging them so that the ends peeped evenly from his big hand he held them out.

"The longest one has the first choice, and so on," he said, presenting them to Gale, who promptly drew the longest of the four. He turned to Doret, but the Frenchman waved him courteously to Stark, and, when both he and Runnion had made their choice Lee handed him the remaining one, which was next in length to that of the trader. Stark and Runnion qualified in the order they drew, the latter cursing his evil luck.

"Never min', ole man," laughed Poleon, "de las' shot she's de sure wan."

They took up their burdens again, and filed towards the narrow valley that stretched away into the hazy distances.

(To Be Continued.)

Must Cut Out Cancer of Uncleanness

(Continued from page five.)

tary Daniels. "The navy suffers likewise, and business halts because venereal diseases destroy the manhood of workmen and fighters. During the last statistical year men of the American navy lost 141,378 days' sickness from a small group of absolutely preventable diseases, or rather diseases contracted by sin.

"In the navy in 1915 there were admitted for treatment for venereal diseases 122 persons in every 1000, and in the army 84 for every 1000, the number in the army having decreased from 145 to the 1000 after passage of an act stopping the pay of all soldiers admitted for treatment for venereal disease. The new navy law stops the pay of men so afflicted and will probably reduce the number to the army ratio.

"In civil life the number is quite as large proportionately as in the military service. It has been printed that Hecht of Vienna stated that at one time the equivalent of three entire Austrian divisions of 60,000 men was under treatment for venereal diseases. Canadian and Australian officers have deplored the ravages of this disease. The latest figures from the British army gave 78,000 cases, and all other countries have also been weakened.

"Young men expect ministers of the gospel to call them to clean living. The preacher seeks to save their souls, and too many youths hardly realize they have a soul. But they know they have bodies, and the doctor is the man to whom they trust the treatment of their bodies. When he preaches continence as the only rule of life to young men and points out the dire penalty for lapses his words have a weight no other admonition possesses.

"You, gentlemen of the medical profession, deal with life and death. You bring the bodies into the world and you close the eyes of the dead. Yours is the ministering function, the intimate touch, and out of such relation you can enjoy an amazing power of suggestion. It is this power that America calls upon you to use. Tell our youths the truth. It is a duty laid upon you, not by the moral law alone, but by the self-preservation that operates in nations as well as individuals. That duty is imperative upon you as never before. If you perform it and your young soldiers and sailors heed your wise council—and many of them will follow your teaching with lasting gratitude—you will contribute more to the winning of the war than manufacturers of shells.

"Continence is no longer a matter of morals, though it must be enforced as the cardinal doctrine of morals. It has come to be seen as having its base in the great law of nature. New truths must take the place of ancient lies. We know now by the testimony of science that there is no foundation for a double standard for the sexes. To preach it is to preach immorality and a lowering of manhood. The lie that has lived so long must be driven out by the truth.

"Only God will ever know the toll in blood and tears that this lie has taken from the heart of the world—the price that the health of the race has been made to pay for its submission to a historic falsehood, young lives ruined, futures cheated of promise, children called upon to suffer for the sins of the fathers, innocent women robbed of the right to happy motherhood and the virility of a nation sapped at its very foundations."

New Cigaret Holder.

A newly invented cigaret holder has an attachment which ejects the burned end of a cigaret without danger of burning the fingers.

Pretty Fur Pieces of Mole Skin

Drying skins on a board, showing the three stages of work on one skin: (1) Four pins are first used, one in each corner; (2) four intermediate pins are then inserted, the skin being slightly stretched; (3) finally eight more pins are tacked in, one between each two of those alreay in place. A light tackhammer will serve for driving the pins.

The best grades of skins are not always dyed and very pretty fur pieces may be made up at home or by a local furrier without any blending, provided one has skins enough from which to make satisfactory selection, says Farmers' bulletin 832 of the United States department of agriculture. From a dozen to 20 skins of the common mole of the northwest coast are sufficient to make an average-sized neckpiece for ladies' wear. Twenty skins will make a muff of average size, and 30 skins a large one. At least double these numbers of skins of eastern moles will be required for the same purpose. The moleskin cloaks displayed in shop windows usually contain 400 to 600 pelts of the European mole, depending upon the length of the garment. Not more than two-thirds as many skins of the Townsend mole would be needed for such cloaks.

His Hunting Story

Had a Desire to Hunt for a Bear

As each hunting season came around a young man by the name of Bob Griggs and I, were sure to have a great desire to try for a bear; October was here in all its autumnal glory, and a little snow to the depth of three inches had fallen during the night, making the tracking good. So the writer called on his friend Bob, who was sure to be ready for anything so exciting as a bear hunt.

There happened to be a young friend staying with Bob (Sam Rigby), so of course he was invited to go along, and he accepted.

Horses driven in, saddled up, and lunch put up, we were off up the grand old Teton canyon; where we were reasonably sure of finding signs of Mr. Bruin.

We were riding along the road not more than two miles above Bob's ranch, when we were surprised at finding the tracks of a good-sized bear where he had crossed the road and the Teton creek. A council of was was held and it was decided to tie horses here and to follow him on foot, as he was headed for the rough country.

Two hours of tracking up the side of the mountain and through a rock strewn basin brought us to where his tracks told us he had gone into a cave. Another council was held and it was decided to set a gun so as to shoot him when he came out, for we could not thing he had gone in for the winter as it was the first snow, and rather too early in the season.

The writer crawled down into the entrance of the cave to see if a suitable place to set the gun could be found, the boys on top having been instructed to haul me back by the heels at a given signal. You may be sure this was done when the bear made a circle of the cave and came so near that a good hold could have been taken in his long brown hair.

With sore knees and elbows, for the rocks over which they dragged me were sharp, I decided, after getting their permission to go down again with gun in hand and execute that "Bar."

With a request that they draw me back with a little more care, I went down again. The opening of the cave was just large enough for a man or a bear to enter on all fours, and being dark inside it was some minutes before his lordship could be located, and then only his eyes could be seen.

After making this known to the boys above, and asking them to be ready to haul me out, I raised the 30-40, took good aim and pulled the trigger. Well I was out on top again in a jiffy. And my clothes looked as though the bear had just finished mauling me. And the boys were almost as white as the snow.

About the first thing that Bob said was, "George, you would make Putnam ashamed of himself."

After going down again and giving him a finishing shot, the question of getting him out was discussed. Having nothing with which to drag him out but our belts, we tied these together around his neck. And then we learned that he was a good sized one for we could not budge it until we had thrown snow under him, and then we had some time in getting him out. He weighed as near as we could judge, about 300 pounds.

We skinned him there, leaving the fat all on the skin, and I tell you it was heavy—all one man could stand up under.

I did not experience any fright until the thing had been done, then wondered how I had gotten up sufficient courage to get into such close quarters with an animal that could have crushed my life out in a few minutes had he felt so disposed.

He was very fat, and we learned that he had been hit near the left eye with the first and in the neck with the second shot.—G. W. Gee of Wyoming in Hunter Trader Trapper.

Trappers' Facts.

First post yourself thoroughly on the local game and trapping laws.

When you buy new traps, it is best to boil them in the bark of a maple or oak tree, to take off the newness and varnish.

The trapper soon learns that all wild animals have a very keen scent, and that the only way to entirely destroy the human scent which may be left on the trap is by making water sets.

Place a few twigs or leaves on the ground for your traps to set on, as these prevent the trap from freezing to the ground.

When covering traps, always use material which is inconspicuous and is commonly found near by. In the woods, for example, use leaves; in the open use grass, and near streams use moss or small water-plants such as cress.—Farm and Fireside.

Christmas Parcels for Soldiers.

The postoffice department urges early shopping and mailing for Christmas.

No date is too early for mailing Christmas parcels marked for Christmas delivery.

Parcels for our soldiers abroad must be mailed not later than November 15 to insure delivery on Christmas morning. Try not to exceed 10 pounds in each parcel for soldiers abroad.

Portugal's Wheat Requirements.

The Portuguese government is in the market for 30,000 tons of wheat for early delivery. It is estimated that the total requirement before the new crop next year will be a minimum of 55,000 tons. The native wheat was below the average yield this year and will not supply the demand later than January 1, 1918.

NEWS FOR BREEDERS

R. A. Ward, county agriculturist of Crook and Des Chutes counties, Oregon, has orders for two carloads of cottonseed cake, nut size. The sheepmen of this region are using it for the first time, but it has been used in the Lakeview region and is recommended by those who use it. Mr. Ward attempted to secure the cake direct from the mills where the cotton is ground, but found prices to be practically the same as at jobbing headquarters at San Francisco or Portland. The cake used is grown in the Imperial valley, California.

On page 28 of The Farmer of October 18 Mr. Ward had an article detailing the advantages of feeding cottonseed cake, especially nut size. He says two ounces of cake, fed with two and a half pounds of hay, is better than five pounds of hay alone. It is a good supplemental feed to early range. But sheep eating the cake must have plenty of water.

Pacific Coast Berkshires.

The First National Swin show was held at Omaha, Neb., the first week in October, 1916, and a great effort was made last year to bring out the best Berkshire herds for the first national show, and that show attracted national attention. Great as it was, the 1917 show far outclassed it, says the Berkshire World.

Last year we had Berkshire herds from Rhode Island to Washington. This year we had herds from Massachusetts to California, and the quality of this year's show was equal, if not superior, to the St. Louis world's fair, although the St. Louis event outnumbered this year's National Swine Show in entries and number of animals exhibited. The judging was done by W. E. Spicer, the St. Louis world's fair judge, and his work speaks for itself. California won grand champion boar and grand champion sow, a record that Frank A. Brush, Santa Rosa, Cal., the owner, has reason to be proud of, and all other Berkshire breeders in California and other Pacific slope states should also rejoice with Mr. Brush.

Is a Prize Winner.

Bismarck, the 7-year-old black Belgian stallion which won first prize at the Yakima Valley Horse Breeders' association fair, recently held at Toppenish.

Prices of Cattle in Holland.

The price of a cow not giving milk and sold for slaughter in Holland is now from $50 to $115; of a calf, for veal, from $18 to $35. A good milch cow sells for about $125. This is a decline of $40 or $50 in comparison with prices a few weeks ago, on account of the scarcity of fodder. There is serious talk of slaughtering or exporting several hundred thousand cattle because of inability to feed them sufficiently.

Bliss, Idaho.

Breaking World's Record.

Viva La France, the Jersey cow shown above, owned by Pickard Brothers, Marion, Ore., on October 20 finished a year's official test as junior 3-year-old, breaking the world's record for Jerseys of that age by about 70 pounds of butter. As her test has just been finished final official figures are not yet obtainable, but the official figures from the American Jersey Cattle club have given up to July, the balance being the estimates of Mr. Pickard and the O. A. C., so the figures below will not vary more than a few pounds, if any.

Viva La France in her year produced 12,744.9 pounds of miuk and 892 pounds of fat, or 1047.05 pounds of butter, computed by the Jersey standard. The former world's record was held by Sopha's Bertha, bred by Hood farm, in Massachusetts, and owned in Maine. Her official record was 14,952.2 pounds of milk and 975.1 pounds of butter.

Viva La France.

Prior to Sophia's Bertha completing this record, less than a year ago, the Jersey junior 3-year-old record was held by an Oregon cow, Goldie's Nehalem Beauty, owned by Clifford Reid, with 882.9 pounds of butter, while St. Mawes Beauty, owned by Ed Carey, was only three pounds behind, with 879.9 pounds of butter. So Vica La France, a daughter of Golden Glow's Chief, has brought the world's record back to Oregon and it is likely now to stay here for some time. H. A.

Drop in Irish Live Stock.

Whatever satisfaction may be derived from the increase in arable cultivations in Ireland, revealed in the abstract of the agricultural statistics for that country, can not be otherwise than largely discounted by the decrease in the numbers of every description of farm live stock as compared with last year, says the London Live Stock Journal. Except in the case of cattle and goats, the whole of the increase shown in the years 1907-16 has been wiped out, while the losses as compared with 1914, the last pre-war year, are extremely heavy in those directions that more particularly affect the annual husbandry of the sister isle.

In the case of cattle we are told that the number of milch cows, including heifers in calf, is 1,591,725, a decrease of 19,972 compared with 1916. As regards other cattle there is a decrease of 994 in calves, of 18,221 in cattle 1 year old and under 2 years, and of 23,788 in cattle (including bulls) 2 years old and upward.

The figures give the situation at a glance and are certainly worth considering:

There is very little in the cropping returns that indicate any reason for the drop in the numbers of live stock.

Looking at the whole situation, so far as it is revealed in these statistics, it looks very much as though the high prices have tempted Irish farmers to sell a larger proportion of their stock than is either justifiable or for the good of the country.

Home-Grown Kale Seed.

Showing the advisability of using home grown seed, E. B. Stookey of the western Washington experiment station, says:

Kale is a standard feed crop for many dairymen and poultrymen of western Washington, yet the crop has not become standardized to the extent that there is any certainty as to what will be grown from commercial kale seed. Out of 146 packages of kale seed of different varieties and from different sources sent to this station by the United States department of agriculture, only one or two were of the thousand-headed kale type and none were as good as the kale being grown here at the station.

Kale seed from selected plants has been produced at this station for the last 10 years. The best plants are saved each year, from which seed is produced the year following. In this way improvement has been made from year to year until at the present time we have a type that produces a high percentage of well-branched plants having broad, succulent leaves.

Hog Cholera Losses.

The federal bureau of animal industry gives some interesting hog cholera figures in a new bulletin (No. 834) entitled "Hog Cholera: Prevention and Treatment." According to this bulletin, our total losses from hog cholera were 6,964,470 in 1913, 6,304,820 in 1914, 5,541,971 in 1915, 4,057,884 in 1916 and 2,959,322 in 1917. Losses are figured in each instance for the year ending March 31, so the 1917 figure applies to a year's time extending from April 1, 1916, to March 31, 1917, and does not cover this summer's losses, which, as is well known, were light. The total number of hogs in the country varies from year to year and losses are better visualized in percentages, which are: 1913, 9.9 per cent; 1914, 10.6 per cent; 1915, 8.5 per cent; 1916, 5.9 per cent; and 1917, 4.3 per cent.

Pure Bred Swine Sale.

The second annual sale of purebred swine will be held at the Pacific International Stock show at North Portland on Tuesday, November 20. R. W. Hogg, who had charge of the sale last year and has again this year, announces that 40 head have been entered for the sale. The consignments are made up of Poland Chinas, Durocs and O. I. C.'s from the best herds in the northwest. Only choice stock of each breed is allowed in the sale and all entries must be satisfactory to a committee appointed to pass on its qualifications, so intending purchasers may go there assured of finding only worthy animals, guaranteed to be as represented. H. A.

The Problem of Saving the Live Stock

(Continued from page twenty-eight.)

three to four parts of pea straw to one part of corn. The corn assists in making a moist mixture that will readily pack and furnishes carbohydrate material that assists in the fermentation process necessary to the development of the mild acid condition which is characteristic of good silage.

The question arises in regard to the grains that should be used this year. Many live stock men are planning to save grain and concentrates by using silage, root crops and alfalfa. Alfalfa may save much grain in wintering hogs.

In some sections figures are at hand indicating the possibility of bringing in Mississippi valley corn to replace a portion of the barley and oats used in former years.

Cottonseed meal, oil meal, soy bean meal and cocoanut meal, nitrogenous concentrates, will be used in some sections to supplement and make more effective some of the forages and fodders mentioned above. Comparative prices of corn, barley, oats, mill feeds, cottonseed meal, soy bean meal, together with information as to relative feeding values of the same will be determining factors in choice of concentrates for feed under northwest conditions. When alfalfa hay, clover or other legumes are used, it is not necessary to look for a highly nitrogenous grain to feed in connection. Even with alfalfa, however, such feeds as oil meal and others in small amounts may effect a saving in the daily cost of feeding.

We need, therefore, to save all the good live stock that is possible. Remember that there is, in all probability, ample profits for him who successfully weathers the present situation; seek to establish higher standards; cut out scrub sires; make greatest possible use of all farm forage; use succulent feeds as far as possible the coming winter; purchase grains and other concentrates on a basis of relative price and feeding value, depending on forage crops fed along with the concentrates.

Will Be Going Some.

If we can both bust up the kaiser and the I. W. W. at the game time we'll have done something.—Detroit Free Press.

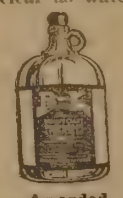
Flush Cows After Calving

Protects Against Abortion and Barrenness

Barrenness or Sterility, like Abortion, Retention of Afterbirth and Premature Birth, is nearly always caused by infection of the reproductive organs by the germs of Contagious Abortion. Unless this infection is promptly overcome by the use of a powerful but safe antiseptic, it may permanently affect the reproductive organs so that the cow will continually fail to stick.

Every time a cow drops a calf—whether alive or dead—by premature birth or aborting, whether the afterbirth is retained or not, her reproductive organs should be flushed out, because that is where the infection is developing.

B-K, the powerful nonpoisonous antiseptic, is scientifically correct for this work. Used as a douche for the uterus, it quickly brings the afterbirth, dissolves the slimy albuminous matter, kills the germs, stops discharges and controls the infection. B-K does not cause straining, but is soothing and heals the tissues.



Other germicides, such as carbolic acid, cresol, Lugol's solution, iodine, etc., tend to irritate, do not dissolve the slimy albumins, but tend to coagulate or thicken them, thereby preventing destruction of the germs and cleansing of the tissues.

The remarkable germ-killing strength of B-K is plainly marked and guaranteed on every package. B-K contains no poison, acid nor oil. It is safe and clean and easy to use. B-K may be used freely in the drinking water.

B-K is convenient. Just add water as directed, and you have your treatment for calves, bulls and cows, and also your disinfectant for general use.

B-K is used so successfully by leading breeders that it is now sold over the entire world and the demand for it has increased 500 per cent in three years. A well-known breeder of registered stock says:

Clean and clear as water.

Awarded Gold Medal Pan.-Pac. Expo.

"I want B-K, for I know it is doing good. Cows that have been barren for more than a year are getting with calf."

B-K is sold by dairy and farm supply houses, druggists, general stores, etc., everywhere. Dealers wanted in every town.

Write us for more evidence from users and for our bulletin No. 52, "Contagious Abortion," and No. 136, "Calf Scours."

Grain and Produce Markets

Chicago Grain.

CHICAGO, Oct. 29.—Persistent rains that appeared to be rendering much corn unfit for food lifted the corn market today, although some temporary weakness resulted from the German invasion of the north Italians plains.

At first corn traders did not seem disposed to attach any market significance to the vicissitudes of the Italian armies. Wet-weather delays to the movement of the new crop formed the initial dominating influence, and brought about a moderate advance of values. Later, however, the fact that the Italian retreat had bearishly affected the New York stock market led to some increase in selling pressure on corn.

Oats merely duplicated the action of corn.

Advances in the hog market, together with enlarged exports of bacon, gave some strength to provisions.

Pacific Northwest Grain.

PORTLAND, Ore., Oct. 29.—Grain futures: November oats, $48.50 bid; feed barley, $49 bid; feed barley, $50.50 bid.

Eastern oats and corn in bulk: Oats, No. 3 white, October, $44 bid; No. 38 clipped white, $45 bid; corn, No. 3 yellow, January, $52 bid; No. 3 mixed, $51 bid; oats, November, No. 3, $44 bid; clipped, $45 bid; corn, February, yellow, $51 bid; mixed, $50 bid.

Sheep—Receipts, 15,000; strong to 25c higher. Yearlings, $11.50@12.85; wethers, $11@12.85; wethers, $11@12; ewes, $9.50@10.50; lambs, $16.50@17.

At Chicago.

CHICAGO, Oct. 29.—Hogs—Receipts 25,000; tomorrow 17,000. Strong, 15c above Saturday's average. Bulk, $15.20@16.60; light, $14.50@16.65; mixed, $14.95@16.75; heavy, $14.85@16.75; rough, $14.90@15.10; pigs, $10.50@14.

Cattle—Receipts, 35,000; weak. Native steers, $6.75@16.90; western steers, $6.20@13.80; stockers and feeders, $6@11.50; cows and heifers, $5@12.10; calves, $8@15.25.

Sheep—Receipts 26,000; steady. Wethers, $8.75@12.75; lambs, $12.25@17.75.

At Salt Lake.

NORTH SALT LAKE, Utah, Oct. 27.—Cattle—Steady. Choice steers, $9@9.50; good steers, $7.75@8.75; choice cows and heifers, $6.75@7.50; fair to good, $5.50@6.50.

Hogs—Higher. Choice fat hogs, $15.50@16; mixed, $15.25@15.75.

Sheep—Steady. Choice fat lambs, $15.75@16.50; yearlings, $10.50@11.50; ewes, $8.25@9.50.

At Portland.

PORTLAND, Ore., Oct. 29.—Cattle—Steers strong; cows 30 to 50c lower, rest steady. Receipts, 1704. Best beef steers, $9.75@10; good beef steers, $7.75@9; best beef cows, $7@7.50; ordinary to good cows, $4@6; best heifers, $7@8; bulls, $4@6.75; calves, $7@9.50; stocker and feeder steers, $4@7.25.

Hogs—Higher; receipts, 2076. Prime light, $15.75@15.85; prime heavy, $15.60@15.75; pigs, $13.50@14; bulk, $15.25@15.50.

Sheep—Steady. Receipts 885. Western lambs, $14@14.50; valley lambs, $13.50@14; yearlings, $12.50@13; wethers, $12@13; ewes, $8.50@10.50.

Spokane Stock Yards, Monday.

Hogs—Receipts 17, market steady. Prime light, $15.10@15.25; prime heavy, $15@15.25; pigs, $13@14.25; stockers and feeders, $11@13; bulk of sales, $15.25.

Cattle—Receipts 154; steady. Best beef steers, $8.50@9; good steers, $7@7.75; best beef cows, $6.75@7.50; good cows, $5.50@6.50; common cows, $3@5; best heifers, $6.75@7.50; bulls, $5@6.75; calves, $6.50@8; stocker and feeder steers, $5@7.25.

Sheep—Receipts 698; steady. Prime lambs, $13.25@14; good lambs, $12@12.50; prime yearlings, $11.50@12.50; prime wethers, $11.25@12.25; best mutton ewes, $8.50@10.

Seattle Market.

SEATTLE, Oct. 27.—The first week of the jumble pack of Jonathan apples on this market since the state grading and municipal weights and measures laws went into effect has been characterized by generous buying on the part of the public. The demand has been so wide that one of the jobbing houses cleaned up practically a car a day for the three last days of the week.

The fruit is in lug boxes, fancy and extra fancy orchard run, and sell at 3 cents per pound. The weights run unevenly and no attempt is made to move the fruit on the box basis. Next week commission houses will start moving the fruit into this market in baskets. Jobbers claim that consumers will save from 25 to 50 cents per box on their apples. In assisting to clean up the surplus of small Jonathans, jobbers are urging growers to ship good fruit, as some of the arrivals this week were disappointing. Consumers have become accustomed to the loose pack without regard to sizes or paper wrapping and it is believed one of the most phenomenal weeks of buying in the history of the city will be on, beginning Monday.

The potato market was thrown off its balance by the embargo issued by the Great Northern against furnishing cars in this state for loading potatoes. The embargo will be bullish in one sense and bearish in another, as it will temporarily shut off the eastern movement, while throwing an oversupply of locals into service. The embargo will not affect the visible supply here, as potatoes from Mt. Vernon can be brought in by boat and from the White river valley by auto truck.

Onions are very firm, with Walla Wallas and Oregons at $3.25@3.50. All growers, according to reports of brokers who are endeavoring to supply an urgent demand, are holding.

The local cranberry market is firm and higher. Prices promise to advance next week to $4.50 per box, due to scarcity. So far the easterns have been no match for the locals, as the outside fruit is short lived.

Local cauliflower and head lettuce are very scarce. There have been no shipments to eastern markets this week. Root vegetables are dull.

There are few operators on Western avenue who believe that the fresh ranch egg market will go any higher. There has been a better demand for pullets, which are arriving plentifully, and for storage stock as offsets to any greater strain on the market for standard sizes. The storage egg market is none too strong, jobbers viewing with some misgivings their large stocks, and the short season in which to clean up. Extreme cold weather would, it is believed, ease the situation and bring a heavier movement.

Butter is firm and the daily creamery make short, wholesalers filling in with storage and the best country creamery offerings that can be obtained. Particular buyers are in the majority and are demanding the city creamery extra pack, while second quality butter is running to a surplus. If buyers would shift their demand to this stock dealers declare that prices would ease considerably. The market, according to demand and supply alone, long ago should have advanced, but the operator who is willing to take the first step to increase prices has not yet come forward.

Poultry prices will remain unchanged for next week. There is a fair demand for turkeys which is being supplied with cooler stock. Dealers are discouraging producers in marketing fresh stock, as the crop is late and development poor.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed up a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 60c per dozen; pullets, 42c dozen.

Poultry—Live hens, fat, over 4 lbs., 20@21c per lb.; 4 lbs. and under, 16@18c; old roosters, 13c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 12c per lb.; springs, live, 21c per lb.

Butterfat—54c per lb.; dairy butte, 35c.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16½c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 27c per lb.; salt kip, 18c per lb.; green hides, 15c per lb.; green calf, 25c per lb.; dry calf (under 6 lbs.), 30c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 26@38c per lb.; salt bulls, 14c per lb.

SELLING PRICES.

Feed—Scratch feed, $78 per ton; all grain chop, $64 per ton; oats, $56 per ton; rolled oats, $57 per ton; wheat, $74 per ton; bran, $32 per ton; shorts, $35 per ton; soy bean meal, $65 per ton; whole corn, $84 ton; cracked corn, $85 per ton; alfalfa meal, $35; chick feed, $80 per ton.

Hay—Eastern Washington timothy, $32 per ton; alfalfa, $27 per ton; double compressed, $35 per ton; wheat hay, $25 per ton; Puget sound, $25 per ton; straw, $12.

Butter—Washington creamery extras, cubes, 48c per lb.; do bricks, 49c per lb.

Eggs—Fresh ranch, 63c per doz.

Potatoes—Puget sound, $38@40 per ton; eastern Washington, $40@45 per ton.

Portland Market.

PORTLAND, Ore., Oct. 29.—The butter market is weak and it is not likely that present print prices can be maintained for more than a few days. Some of the city creameries are already cutting on the quiet. The disturbing factor in the market is the municipal butter store which is selling country creamery at almost cost.

Cheese is tending lower. The demand has been seriously curtailed by the high prices asked and the shipping outlet is not as good as it was. The Coos Bay association reduced its price three-fourths of a cent to 24 cents for triplets on Saturday, and a decline at Tillamook is expected at any time.

Egg receipts are very small and this fact is keeping the market steady at the prevailing high quotations.

Dressed pork has declined in line with the break in live hog prices at the stock yards, but veal continues steady. There has been but little change in poultry prices in the last week.

Only very small lots of wool have been sold since the buying flurry of a month ago. The Portland warehouses are still holding 12,000,000 pounds or more. The prospect of heavy imports from Australia are credited by dealers with having caused the check in trading operations. Prices, however, have not been changed.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $48.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $49.50; brewing, $51; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 52c per dozen; candled, 55@60c.

Poultry — Hens, 17@19c; ducks, 18@20c; turkeys, live, 20@25c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 45c.

Cheese — Tillamook triplets, 26c; Young Americas, 27c.

Dressed meats — Veal, 15 1-2@16c; pork, 18 1-2@19c.

Hops—1916, 17@20c; 1917 crop, 25@27c.

Potatoes—New, 1½@1¾c per lb.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans — California small white, 14 1-2c; large white, 14 1-4c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.75 cwt.; sweet potatoes, $3.75 cwt.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $2.50; Red Macintosh, $1.50@1.75 box; Winter Bananas, $2.25 box; Jonathans, $1.25 box; Wageners, $1.25 box; Rome Beauties, $1.25 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 33c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

Butter and Eggs.

PORTLAND, Ore., Oct. 27.—Butter—Prints, extras, 48@49c; cubes, extras, 45c; prime firsts, 44c; dairy, 32½@34c. Butter fat, Portland delivery, No. 1 sour cream, 51@52c.

SAN FRANCISCO, Oct. 27.—Eggs—Fresh extras, 56c; fresh extra pullets, 47c.

Cheese—New firsts, 23½c.

Seattle Wheat.

SEATTLE, Oct. 27.—Millers this week have been plentifully supplied with wheat, but to prevent congestion at terminals vigorous efforts are being made to induce the grain corporation to modify its rules and hold wheat in the country.

The question has arisen as to how the government will handle the order for 10,000,000 bushels of wheat just released from Washington, Oregon and Idaho for the Minneapolis milling territory. Conceding that eastern hard wheat millers can carry out the suggestion from the food department that more soft wheat be used in the manufacture of hard wheat flour, Puget Sound millers are endeavoring to ascertain where the soft wheat is to come from. Obviously the government can not buy the grain at country stations since seaboard terminals only are recognized in these purchases. The haul of wheat to Minneapolis or Chicago at 30c per bushel plus the haul of 10c to Seattle, Tacoma or Portland must be added to arrive at the actual freight charges which Minneapolis millers will have to pay. This, Puget Sound millers point out, entails an actual waste of 10c per bushel in the back haul. In plain terms, it means that 10c per bushel would be saved if the government would so modify its order that the grain could be bought on country warehouse receipts.

Puget Sound grain buyers have suggested to M. H. Houser, agent of the food committee of the grain corporation for this district, that several important country stations such as Spokane, Pendleton and Walla Walla be selected where inspection can be made and warehouse receipts honored as a means of overcoming the back haul of 10c per bushel.

The installation of the federal grading rules, new in details, and the generally inferior quality of wheat raised, together with the terminal warehouse regulations, have staggered the inspection department of the state. Men are being overworked at small pay and there is great need of more men for grading. Had the crop of the state gone to No. 1 and No. 2 the difficulties would have been simplified. Dockage and smut, a continually sliding scale of grades with 56-pound wheat predominating has caused an apparently endless waste of time and trouble for the department.

The Wool Market.

BOSTON, Oct. 26.—The Commercial Bulletin will say tomorrow:

"Business in wool this week has been somewhat irregular, but on the whole a fair volume of trade is reported, principally in domestic territory and South American medium to low wools. For the latter prices are a bit stronger. Otherwise the market is steady.

"Further business in military goods is being reflected in the yarns, tops and wool market and prices for these items are strengthening. Civilian trade is reported still rather slow."

Scoured basis:

Texas—Fine 12 months, $1.68@1.72; fine 8 months, $1.55@1.60.

Oregon—Eastern No. 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65; territory fine staple, $1.80@1.82! half-blood combing, $1.70@1.75; 3-8 blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Meat Producers Better Paid.

WASHINGTON, Oct. 28.—Prices received by producers for cattle, sheep and hogs have gained 52.7 per cent in the general average from 1916 to 1917. Latest reports compiled at the department of agriculture show these advances:

Beef cattle per 100 pounds, live weight, from $6.55 to $8.40; veal calves from $8.77 to $11.08; sheep from $6.25 to $10.05; lambs from $8.22 to $13.06; hogs from $9.22 to $15.69, and chickens from 14.3 to 18.1 cents per pound.

The highest price at the farm reached during the 12 months was $8.70 for beef cattle in May, $11.08 for veal calves in September, $10.15 for sheep in May, $13.06 for lambs in September, $15.69 for hogs in September, and 18.1 cents a pound for chickens October 1 of this year.

Portland Wheat.

PORTLAND, Ore., Oct. 29.—Wheat receipts last week were the largest of the season, ammounting to 562 cars. Since the first of the month 1755 cars have arrived here. The yards are again becoming congested, but as shippers report fewer cars to be had at loading points, the local situation is expected to clear this week. Most of the cars brought in last week consisted of wheat that had been held up at intermediate points.

There is but little interest in the coarse grain markets and prices of oats and barley are holding steady, as but small lots are being offered by farmers.

Mill feed is still quoted at the old price, and no predictions are made by millers as to when quotations will be reduced.

HOPS.

NEW YORK, Oct. 26.—Hops easy; state, medium to choice 1917, 76@83c; 1916, nominal; Pacific coast 1917, 35@38c; 1916, 20@25c.

Bobtail Sheep Dog

The name of this useful, sagacious and quaint-appearing dog exactly explains his ancestry and occupation, although, strictly speaking, the Bobtail sheep dog is as much a cattle dog as a sheep dog. There are varieties of these rough and heavy coated sheep dogs in other European and Asiatic countries than England, which, however, have long tails. It is one of the oldest breeds of dogs.

In general appearance the Bobtail is a strong, compact-looking dog of great symmetry, absolutely free from legginess or weaselness, profusely coated all over, very elastic in his gallop, but in walking or trotting he has a characteristic ambling or pacing movement. His bark should be loud, with plenty of "ring" in it. He is a thick-set, muscular, able-bodied dog, with a most intelligent expression, free from all poodle and deerhound character. While a fast-enough dog for the wildest of sheep, he is not hard on them; and his great sense or sagacity makes him more of a human companion than simply a dog-aid.

A great characteristic of the Bobtail is his ruggedness. Because of the density of his coat he can put up with most severe climates. The best Bobtails have very heavy coats, there being an undercoat on the body with a long, harsh and almost wire-like overcoat of the texture of the mane of a horse. The undercoat keeps the dog warm and his skin protected from wet and rain, while moisture will roll off the outer coat. Great points in the breed are the all-round feathered fore legs and the general massiveness and squareness of the hind quarters.

Meat Packing in Brazil.

An American company's policy of introducing into Brazil a certain number of cattle of blooded stock and of a type best suited to the meat-packing business, together with the Brazilian governments' intended founding of zootechnic posts, should in a relatively short time result in a notable improvement in the Brazilian herds, says Consult General Alfred L. Moreau Gottschalk, Rio de Janeiro. From the economic point of view a matter of this kind is very vital to Brazil at present, as there seems to be little doubt left that the future holds in store for this republic a prominent place in the meat industry of the world.

In this connection it may be of interest to note that a well-known French banking and credit institution is now going over the whole of this region for the second time, in the hope of obtaining concessions and has purchased two large blocks of land and all the cattle thereon at Maranao.

Cattle From Canada.

The export of cattle from the Sarnia consular district appears to be on the increase. During the calendar year 1915 the Sarnia consulate issued invoices covering shipments of cattle to the United States aggregating in value $895,381, while during 1916 invoices were issued aggregating $1,093,070. For the quarter ended September 30, 1917, the invoices totaled $530,849. At the same time the Canadian customs report shows a decrease, giving the exports for the fiscal year ended March 31, 1916, $12,002,555, and for the fiscal year ended March 31, 1917, as $7,883,842, but gives the quarter ended September 30, 1917, as $5,181,786. From these figures it would appear that about one-tenth of the cattle shipped out of all Canada are exported from the Sarnia consular district, comprising a little more than two counties.

Unearth Clay Pipes.

While plowing in a field near Charleston, Mo., men unearthed a number of clay pipes of peculiar construction. The pipes were richly ornamented in figures and flowers. All appear to have been used in smoking and are highly colored. It is supposed that they are relics of the ancient mound builders.

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

Want Ads

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

FARM LANDS—FOR SALE 651

LOOK HERE LIVE STOCK MEN.

Cattle and sheep are very fond of buck brush and like shrubbery and they keep fat on it. Wish you could see some of the stock running on open range near our lands. We have several places of very fine character for stock purposes, that have splendid moisture and raise fine timothy and clover, which makes fine winter feed for stock. We have meadows of natural grass. Our winters are easy and mostly open, and you can get good tillable lands very close to good range. Write for our folder.

83 acres, 35 acres cleared, small house, good sized barn, chicken house, etc.; good well 16 feet deep, good creek; about 20 acres now in timothy and clover. This may be just what you want. Ask about it.

40 acres, about 25 acres now natural meadow; 20 head of stock; don't seem to be able to keep the grass down, and there's a school just across the road. You could cut this grass for winter feed and let your cattle run on the range.

80 acres of raw land, that grows willow brush and buck brush; in a good community; close to railroad; R. F. D. passes by it; none of it now in cultivation, though it could be easily cleared.

40 acres; 3-room house; 2½ acres cleared; well, small barn, etc.; on state road; close to range; close to school (½) mile; R. F. D. 6 times a week. Only $1500. $300 down, balance 10 yr. payments, 6 per cent interest.

500-1000 acres. We can give you any quantity of land desired from forty acres up.

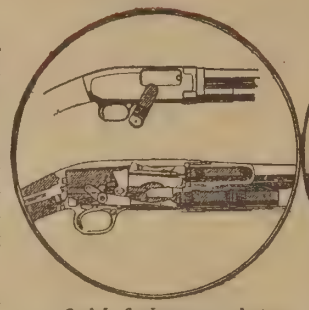
WHAT WILL YOU TRADE FOR 640 acres wheat land in Douglas county, near Waterville? Consider trades for smaller farm, 5 to 40 acres in western Wash.; also lease on 160 acres school land. Modern 9-room house, barn for 32 head stock, several outbuildings, plenty water, farm implements. Valuation with stock and implements $40,000; without, $25,000. Write John Schillereff Sr., Douglas, Wash.

Winchester Model 12. Hammerless Shotgun

Why more duck hunters choose this model than any other

If there's ever a place where you need a gun that's a hundred per cent reliable, it's when you're down in the damp salt marshes after duck.

Whatever gun you may start with, if you keep on long enough, you will come around to the Winchester No. 12 Repeater. It is the favorite in the long run with old duck shooters.



In the damp salt air of the seashore and swamps this gun never "gums." Under the most severe conditions it is a sure-fire, sure-to-work Repeater. It will not jam, catch, or fail to extract the empty shell. It "feels" right, "comes up" right, and *is* right. It works smoothly in whatever position it is held.

At the distance at which you get most chances at ducks, this gun shoots an effective uniform pattern of great game-getting penetration.

The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12 (or the Model 97 for those who prefer a hammer gun) shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly — neither too scattered nor too bunched—and lands with lots of steam behind it.

Quick feeder, sure ejector. Throws empty shell to the side, out of your way.

Even spread, maximum penetration, Winchester shot pattern brings down the game.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrel on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

The barrel of the Winchester Model 12 has been bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Nickel Steel construction preserves the original accuracy forever. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

For those who prefer a hammer action shotgun, we have made the Model 97. It is built on similar lines to the Model 12, but with hammer action.

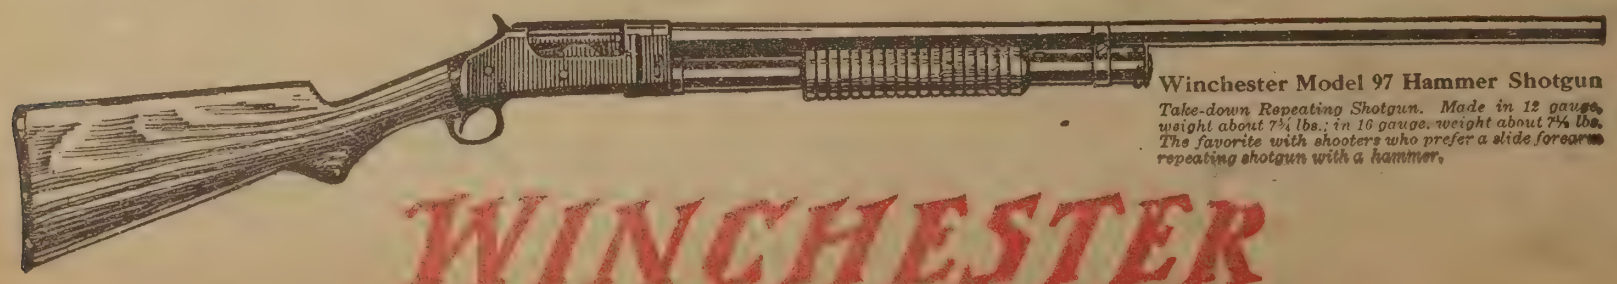
What (W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and has been fired with excess loads for strength.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

It is this care in manufacturing that has produced in the Model 12 and Model 97 guns of unsurpassed game-getting qualities that have won the name of "The Perfect Repeaters" among duck hunters.



Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and Model 97, and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

Can't Mobilize Boys on Four-Minute Plan

So Says A. L. Rogers of State Defense Council in Reply to Query on Next Year's Labor

J. H. Piper, Boy Scout executive at Seattle, has submitted a proposition to the state council of defense to mobilize training camps next year in order to get city boys in condition to do real work on the farm. The executive secretary of the state council, M. P. Goodner, sent this proposition to A. L. Rogers of Waterville, one of the state council of defense, asking him for "your frank ideas and your concrete suggestions on the whole subject." Those who know Al Rogers through years of fellowship could not conceive of a more direct appeal than to ask him for "frank ideas" and "concrete suggestions." The Washington Farmer is fortunate in received from Mr. Rogers himself a copy of his reply to Mr. Goodner. which follows in full:

A. L. Rogers.

October 29, 1917.

Mr. M. P. Goodner, Executive Secretary, State Council of Defense, Olympia, Washington.

Dear Mr. Goodner: Your letter of the 29th inst. regarding the Boy Scout executive, Mr. J. H. Piper, and his ambition of gathering the boys of his organization into mobilized training camps so as to prepare the city boys and get them in condition to do real farm work received. I feel at the present time that we should not discourage any worthy ambition of that nature. We should work over their plan and adopt the best features and coordinate them with the main or general plan of the farm labor problems for the coming year.

You must not forget that our boys and girls are the greatest asset of our state and nation, and can be of wonderful help in this crisis if we handle them properly. As fruit pickers they can be trained by short courses of instruction and become a most valuable asset to orchardists, where great strength, hardened muscles and long experience are not required. They are light, nimble and quick and can climb ladders. They are short in the back and close to the ground, and as berry pickers they can do this work easier and better than older people. All that is required is proper instructions how to handle the different class of products so as not to damage the tree, plants and fruit. This class may be termed emergency workers, and it is vitally important that we have a large supply for next season, especially so in the Wenatchee fruit districts, where they specialize in only one product, the big red apple. Here the peak of the labor problems come at harvest time, and the length of time of employment is only about a month or six weeks.

The state board of education must take very liberal views on vacation periods in school work so that all children can do their bit. Even in normal times we must break away from the old fanatical ideals of giving our children a million dollar finish and only a ten-cent earning capacity. Life's work is not a question of how much you know, but the spirit that is behind the little that you do know, is what makes for success.

A few lectures on trees, vines and fruit culture, also the picking and packing of same, can be given in the grade and high schools in the cities and towns of our state. This will prepare the children for their work and create enthusiasm to do their part. To protect the growers, wages and pay should be governed by piece work, that is, so much per box, and penalties for any damage and poor work. Each school can have a group of workers who will be under the guardianship of some man or woman, that will look after the moral, social and business conditions and make all arrangements with the harvesters' league at different points in the fruit districts. This represents collective bargaining, will insure permanent work and standardized wages and good living conditions, morally, mentally and physically. If these conditions can be guaranteed, sensible fathers and mothers will allow their boys and girls to go forth and enter into the spirit of this helpful, healthful and remunerative work. On the other hand the cities, towns and orchardists that expect the aid of this high class help must express their appreciation by giving attention to their needs and requirements, and stabilize satisfactory conditions by having clean tents with wooden floors, plenty of pure water, private and separate comfort stations for men and women (if it is only four stakes driven in the ground and tarpaulin stretched around them). I would suggest community cook and dining tents be placed in easy access to several orchards and operated on community cost plan and charges for meals on cost basis. This will relieve the tired housewives of the added duties of boarding hired help. The whole equipment is not expensive. The foundation and floors for tents can be of a permanent nature and be used year after year. The tents should be taken down in the fall and laid away for the next season's work. Rough tables with smooth tops, so as to be scrubbed and washed each day, benches for seats, a cook stove and cooking utensils, tin plates and cups, iron knives and forks, tin spoons, and your outfit is complete. Young city folks will be delighted with the privilege of camping out in tented shelters. They will not have epicurean appetites when they pick 80, 90 or 100 boxes of apples per day, but will crave the luscious fruit, crisp vegetables, plenty of fresh milk, pork and beans, corn bread, hot biscuits and honey, and plenty of it, once in a while a good chicken dinner, all raised on the farms they are working on. (It makes one's mouth water to think about it.)

Then again a little healthy, wholesome and moral entertainment should be extended by the community to these young people. They are not only your helpers but they should be considered as your guests and welcomed as such. On Saturday evenings a street dance with music by the band should be the city's part in this movement. On Sunday the boys and girls should not be expected to go to church unless they so desire, for they will have on their rough working clothes, but churchmen and their members should go out among the people in the orchards and give them the glad hand. Don't talk or preach on hell and repentance, but tell stories, sing signs, extend greetings, look into their temporal welfare and see if they are getting the treatment you would like your boys and girls to have when among strangers. That is the way to elevate rural life and

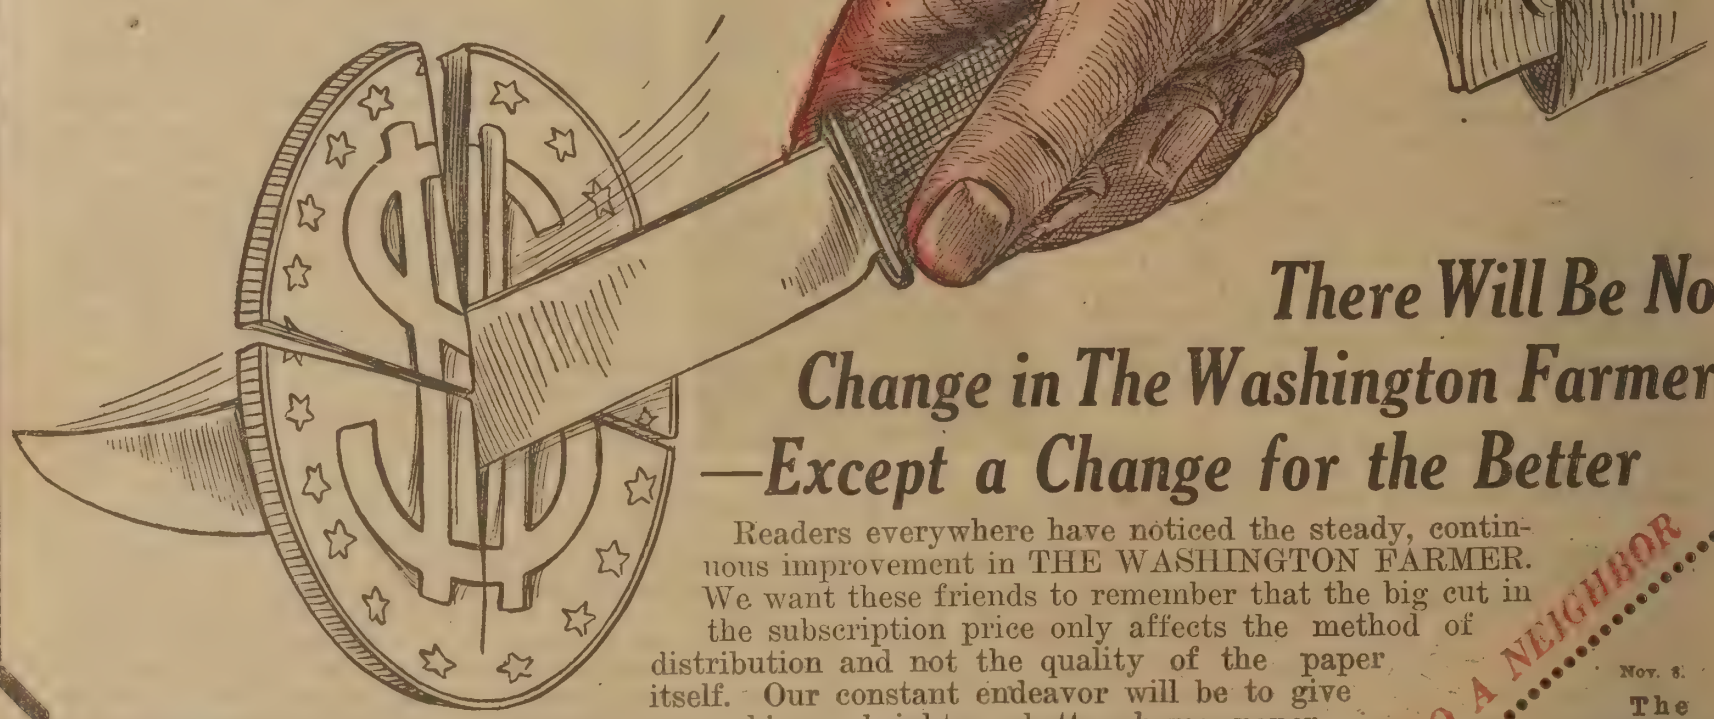
Is the Farmer Disloyal? Read Article This Week, Page 19, Answering This Question

ACT NOW



SAVE MONEY AND RELEASE MEN FOR PRODUCTIVE LABOR

A short time ago we called upon every loyal reader to help us dispense with our big force of agents.

All that each reader was asked to do was to send in his or her subscription order direct to this paper instead of waiting for a representative to call. This required only a minute of each subscriber's time; but in the aggregate it meant a huge saving in salaries, railway fare, hotels, automobiles and other expenses incurred by a force of agents.

More important, in these war times when the labor shortage is acute, our plan promised the release of a small army of men for service in producing the necessaries of life.

The response already received to our appeal has been splendid; but there are still a great many who need another gentle reminder to act even though they are in hearty sympathy with our plan. We have put a schedule of rates into effect designed to give the subscriber the benefit of every dollar saved though dealing direct with the paper. We want every one of our friends to get the benefit of the substantial saving offered. To those who have not yet written us we therefore urge prompt action. Use the coupon today. It is obvious that the continuation of this unusual offer depends entirely on our readers.

There Will Be No Change in The Washington Farmer —Except a Change for the Better

Readers everywhere have noticed the steady, continuous improvement in THE WASHINGTON FARMER. We want these friends to remember that the big cut in the subscription price only affects the method of distribution and not the quality of the paper itself. Our constant endeavor will be to give you a bigger, brighter, better home paper than ever. Among the hundreds of experiences which we print from others engaged in the same line of work as you are, you are almost certain to find suggestions which alone are worth several times the subscription price. And what other things can you buy today for less money than you have been accustomed to pay in the past?

THE COST OF YOUR READING MATTER HAS BEEN CUT

Fix the Minimum Price for Hogs

About $15.50 Per Hundredweight for Average on Chicago Market

The following special telegram to the Farmer from Charles W. Holman of the United States food administration, gives more definite information regarding the fixing of a minimum price for hogs at $15.50 a hundred pounds, than was carried by the Associated Press in the daily papers.

At the close of the conference in Chicago between the representatives of the United States food administration and representatives of the principal live stock exchanges of the country, it was also understood that minimum prices on other live stock will be announced soon, followed by a maximum wholesale price, and possibly a retail price.

This action of the food administration was anticipated in an article published in the Farmer last week in which Herbert Hoover, national food administrator, declared that his studies of the present situation, both in Europe and in the United States, led him at once to say that he regarded the problem of food animals with even more concern than the problem of grain foods. After giving his reasons in coming to this conclusion Mr. Hoover adds: "It appears to me, therefore, that we must concentrate on the increased production of hogs if we are to answer the world's craving for fats."

In this connection it is incidentally interesting to note that a telegram dated at Chicago, November 1 says:

The biggest packing trust ever known came into being today when Joseph P. Cotton, hitherto a New York lawyer, took charge of every meat-packing plant in the country as food administration licensor. He is working on price reductions and has full cooperation of the meat men.

One of the most important paragraphs in the following telegram from Mr. Holman is his explanation of the methods by which the food administration expects to keep the minimum price for hogs up to the stated figure:

Fair Price for Producer.

CHICAGO, Nov. 3.—Joseph P. Cotton, chief of the food administration meat division, today issued the following statement relative to the prices of hogs.

The main purposes of the food administration as to hogs are four:

1. To see that the producer at all times can count on a fair price for his hogs so that it will be profitable to him:

2. That the farmer increases the number of hogs bred.

3. To limit the profit of the packer and the middleman.

4. To eliminate speculation.

All these purposes are necessary because we must have more hogs, so that the ultimate consumer shall at all times get an adequate supply of hogs at the lowest feasible price.

We shall establish rigid control of the packer.

Fair prices to the farmer for his hogs, we believe, will be brought about by the full control which the food administration has over the buying of the allies, our army and navy, the Red Cross, the Belgian relief and the neutrals, which together constitute a considerable factor in the market.

The first step is to stop the sudden break in prices paid for hogs at the central markets. Those prices must become stable so that the farmer knows where he stands, and will feel justified in increasing hogs for next winter.

The prices so far as we can affect them will not go below a minimum of about $15.50 per hundredweight for the average of the packers' droves on the Chicago market until further notice.

We have had, and shall have, the advice of a board composed of practical hog growers and experts. That board advises that the best yardstick to measure the cost of production of the hog is the cost of corn.

That board further advises that the ratio of corn price to hog price on the average over a series of years has been about twelve to one (or a little less). In the past, when the ratio has gone lower than twelve to one, the stock of hogs in the country has decreased. When it was higher than twelve, the hogs have increased.

That board has given its judgment that to bring the stock of hogs back to normal under present conditions the ratio should be about thirteen. Therefore, as to the hogs farrowed next spring, we will try to stabilize the price so that the price the farmer can count on getting for each 100 pounds of hog ready for market will be thirteen times the average cost per bushel of the corn fed into the hogs.

Let there be no misunderstanding of this statement.

It is not a guarantee backed by money. It is not a promise by the packers; it is a statement of the intention and policy of the food administration, which means to do justice to the farmer. CHAS. W. HOLMAN.

Retail Dealer Must Be Reasonable

Government Will Deny Supplies to Those Who Profiteer

The government has told the farmers what they shall receive for their wheat.

The government has told the millers what profit they shall be allowed to make on the grain that they convert into flour and feed.

Now comes the government to tell the dealers what they shall charge for the flour and bread and feed that they receive from the miller or baker and sell to the ultimate consumer.

This latter step in the regulation of the price of staple necessities is one that many feared would not be taken effectively by the government, for it was a conspicuous fact that the food bill did not provide for the licensing of the retail dealer, though it did enable the president to require the wholesaler to operate his business under license regulations.

On November 1 the food administration placed 100,000 food handling concerns under federal license. This number included all the large manufacturers and wholesalers, and all retailers whose annual sales total $100,000 or more.

But the most significant part of the regulations announced is that these large concerns will be denied the right to sell foodstuffs to any retail store that charges an unreasonable price for it. Any wholesale house that sells to such retail store after the food administration has issued an order prohibiting such sale will be denied a license to do business at all.

While the government has not fixed definite prices on the staple food articles the provision just referred to is designed to curb all profiteers, and the food administration has an organization in every state and county capable of enforcing the regulations to the letter.

The foods that hereafter must be handled under license regulations are beef, pork, mutton, fish, poultry, eggs, milk, butter, cheese, flour, sugar, cereals, lard, beans, peas, fruits, vegetables and several varieties of canned foods.

The purpose of the licensing system is outlined by the food administration as follows:

"(1) To limit the prices charged by every licensee to a reasonable amount over expenses, and forbid the acquisitions of speculative profits from a rising market.

"(2) To keep all food commodities moving in as direct a line and with as little delay as practicable to the consumer.

"(3) To limit as far as possible contracts for future delivery and dealing in future contracts."

Relative to its plan of revoking the license of any wholesaler who sells to a retailer after such retailer has been stamped as a profiteer, the administration says:

"The small retailers of food, of whom there are several hundred thousand in the country, while exempt from the licensing provisions, are nevertheless subject to other provisions of the food control act. Every retailer, as well as every other handler of food, is forbidden under the law to make any unreasonable charge, to hoard, to monopolize, waste or destroy food, or to conspire with any one to restrict the production, distribution or supply, or exact excessive prices on any necessities. There are no penalties provided, but the food administration hopes that the arrangement of restricting supplies to violators of the law will be of some effect, for the retailer will find himself unable to buy goods from any wholesaler or manufacturer.

"With few exceptions those engaged in the handling of food have shown the utmost patriotism and a desire to go even beyond the requirements of the law itself in supplying the public with necessities at moderate prices," says the food administrator. "The exceptions are being noted and vigorous use will be made in these cases of the powers conferred by congress.

"For the most part, however, the administration anticipates the full cooperation and voluntary support of all licensees without resort to compulsion."

C. B. Kegley

Services at Albion Cemetery

C. B. Kegley, master of the Washington State Grange, who recently died in Spokane, was buried in the Albion cemetery Saturday, November 3, beside his daughters, Ruth and Henrietta.

Owing to a high wind and storm the service at the grave was short, but very impressive, being conducted by state officials and members of the Palouse, Ewertsville, Seats and Albion grange. Beautiful floral offerings representing emblems of the order were contributed by the King County Pomona, Washington State and the Oregon State granges. Besides these there was a mass of beautiful flowers presented by friends and neighbors of the deceased.

Among the notable people present were F. W. Lewis, state secretary; the Rev. Mr. Powell of Ferndale; L. L. Snow, state lecturer; J. J. Compton and Mr. Chase of the executive committee, J. C. Lawrence of Spokane, J. G. Elliott of Colfax, D. G. O'Shea and George Jewett, president and secretary of the Federal Loan bank of Spokane; Ed Bryne of Garfield, J. S. and J. M. Klemgard, and Fred Hodge from Ewertsville; Price Black and wife from Seats.

Mr. Kegley was well known in and around Albion, having owned a farm two miles north of Albion, later locating on another farm near Ewertsville, from there to a farm near Palouse City, where his only son, Lewis, now resides.

BANKER-FARMER MEET

Gathering at Pullman This Week.

The meeting of the banker-farmer convention at Pullman, Wash., this weeks holds unusual promise, in that a greater number of vital problems will be considered than ever before at a like meeting. The war situation has developed an unprecedented complexity of farm finance problems, and these are to be the central theme of the convention. It is the hope of the committee in charge that a large attendance of farmers and bankers will be present to get acquainted with each other and develop a more cooperative spirit than has ever been manifested. The meeting is November 8 and 9 at the State College of Washington.

St. Paul's Playgrounds.

Farmers Build Irrigation System Without Expert Assistance

By PAUL E. TRIEM

Twenty years ago last May a group of Clallam county farmers opened the first irrigation ditch in the Sequim district. Since that time other ditches have been built by farmers without the supervision of an engineer, and have been operated for farmers, by farmers. There in a nutshell you have the secret of the phenomenal success of irrigation at Sequim: the ability to mind their own business effectively has given these Clallam county co-operators the cheapest irrigation in the world.

The source of water supply is the Dungeness river, lying west of the district served. About 1100 acres of cultivated land are now under irrigation, while, with the completion of the new high line ditch, 15,000 acres altogether will be available for irrigation farming. The high line ditch will serve about 3700 acres, and it differs from its predecessors in that it is being built by a private company, and under the direction of an engineer. When completed it will be about seven miles in length, and the total cost will be close to $25,000. In addition to these ditches serving the country directly around Sequim, there are two ditches west of the river.

Used No Experts.

The least remarkable part of this whole story, however, is this fact of the farmers having built their own irrigation system without expert advice or assistance. It is a comparatively easy thing to do the rough surveying necessary to bring water from an abundant supply to farm lands lying well below this source. The task that is most difficult, and the successful accomplishment of which speaks most eloquently for the community spirit of the Sequim country, is to keep such an irrigation system in successful operation, year after year, without high salaried executives. Disputes and differences of opinion are bound to arise, and many a neighborhood has gone to pieces on this rock of selfish interests. Yet here is a community which for 20 years has been practicing a difficult form of social adjustment, and has been doing so without the intervention of any paid expert. How has it been done?

One of the best informed citizens of Sequim explains it in this way:

"When a man wants to kick, why, we just let him kick till he gets through," he comments. "If an irrigator with a grievance comes to me, for instance, I listen to him and remind him, 'Oh, well, things can't be expected to be perfect in this world, you know. Better take it easy.' And he usually does.

"Of course, there have been times when trouble has appeared pretty close to the surface," he continued musingly. "There were two neighbors who got into a dispute about their respective ditch rights, at one time. One of them would put in a board at the head of his ditch to divert part of the water, and the other would come along and kick the board out. One day they both reached the ditch at the same time, and the man who was in the habit of kicking out the obstruction had a gun.

"'If you put that board in again I'll send you to the hot place in less than a minute!' he shouted.

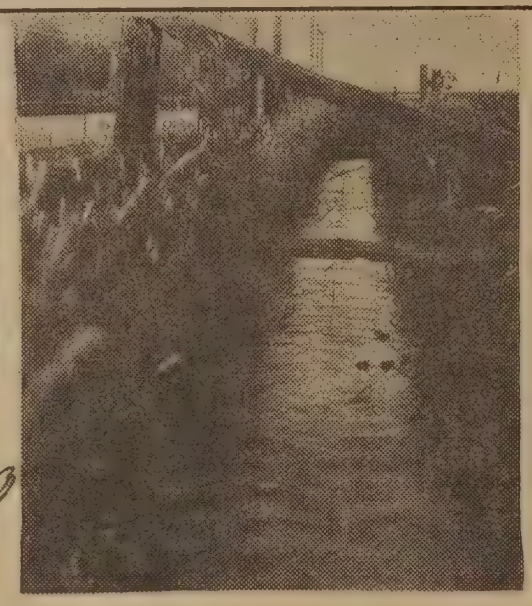
"'Well,' said the other as he stooped down to adjust the board at the head of his ditch, 'I might as well be in hell as in Sequim without water! Go ahead and shoot!'

Get Both Points of View.

"And that was all there was to it," the narrator concluded. "There was just enough humor in the situation to enable the man with the gun to get the other fellow's point of view—and that's a pretty sure cure for any quarrel."

There is a general agreement around Sequim that water is an absolute essential, and not merely one of the luxuries of local farming. The soil is very light, practically a gravel in most places. The brown loam surface soil is only a few inches deep even where it exists at all. Over a large area the entire working soil is gravel, running down to a mixture of gravel and cement at a depth of about three feet. Very evidently in such a formation as this the rains of winter can not be depended upon to furnish soil moisture throughout the growing season. Thad Wagner, manager of the Dungeness Cooperative creamery located at Sequim, says that he remembers the country before the time of general irrigation as a parched and desolate area upon which nothing thrived except such wild growths as sprung up early in the spring, only to disappear under the withering rays of the July sun.

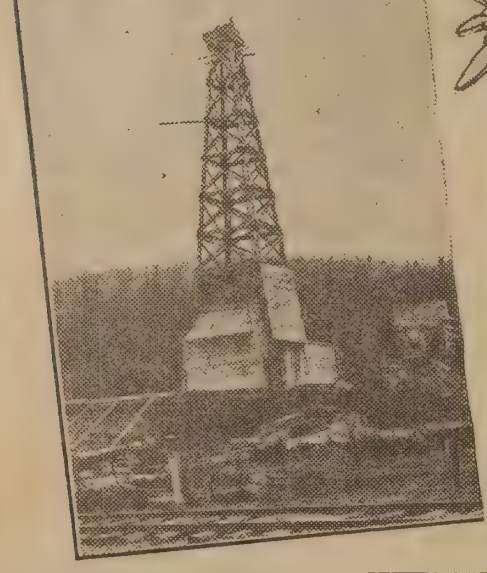
Irrigation Works Wonders.



But irrigation has changed all this. Every sort of forage plant does well on this light soil with an abundance of water. Five tons of clover hay to the acre, and silage corn, wheat, oats and potatoes in proportion can be depended upon. It is a natural forage country, and for this reason is inevitably a dairy country. Scarcely a farm can be found without its silo, or its group of silos. Some trouble has been experienced in getting corn silage to keep, so that oats and peas, wheat and vetch, etc., are usually chosen for ensilage.

Up to the present time, condenseries and cheese factories are conspicuous by their absence, so that the main dairy product is butter. As a direct result of this, the Jersey is the big favorite among cows, with Guernseys and Holsteins distinctly second and third.

The Clallam County Cow Testing association has been formed by the local dairymen to keep tab on the productiveness of the herds.



There is some difference of opinion as to the average selling price of Sequim farm lands. For one thing, there is no great volume of improved land offered for sale. And, naturally, the price of any particular farm will depend largely on its distance from market and its improvements. Probably $275.00 per acre represents the top price for irrigated and cultivated farm land, exclusive of buildings. But, as has just been intimated, there is no artificially fostered "boom," no pressure to sell, on in the farm land market around Sequim.

The top left hand picture shows the barn, silo and part of the kitchen garden on the Thomas Miller farm at Sequim. Next to it is seen one of the Sequim ditches, strictly practical with no unnecessary expense.

The Dungeness Cooperative Creamery company, whose plant is shown above, buys feed in large quantities and resells to its 200 patrons. This creamery turns out about 1700 pounds of butter daily, most of which is sold for fancy city trade. Below this picture are the barn and silos on the E. F. Gierin ranch. Wheat and vetch are used for silage.

The lower left picture shows one of the oil wells. Sequim has hopes of striking oil in paying quantities. At the right is one of Sequim's irrigated orchards, planted to potatoes.

Diversifies His Crops.

A. R. McAnally is farming 76 acres under the Tieton project in Yakima county and finds his best success comes from diversified farming. He has 20 acres in bearing orchard. "Each year I try to diversify my crops in such a manner that should one fail or bring a very low price I would still have enough to carry me through on the other crops," said Mr. McAnally to a representative of the Farmer.

Less Trouble With Codling Moth.

"I have succeeded in eliminating a lot of trouble with codling moth by the use of burlap around the base of my apple trees," said C. H. Renz, well known fruit grower, west of North Yakima. "I have destroyed thousands of worms this year by catching them in the sacks. The burlap is fastened securely around the base of the tree and when the worm hunts a place to make his nest the sack affords an inviting place. We go around every two or three days, removing the sacks and destroying the worms before they have a echanc to go into cacoons and lay the eggs for the next generation. Yes, I spray, of course, but there are a large number of growers in the valley this year who have sprayed religiously five or six times and still have a large percentage of wormy apples. My fruit is comparatively free."

Careful Selection of Seed.

Arthur Rabie of the Moxee valley, Yakima county, is one of the more successful growers of that locality and he attributes his success in large measure to a careful selection of seed. "I would rather be able to buy graded seed potatoes than to grade my market spuds in so many classes," said Mr. Rabie. "If we are careful as to the selection of seed we will produce a more uniform type of potatoes and there will not be so much necessity for a great lot of grading work at marketing time."

Potatoes in Two Grades.

Speaking of the proposal to adopt federal standards for Yakima valley potatoes, T. A. Wayenberg of the Moxee valley, Washington, expressed the opinion that two grades would be sufficient. He also said he feared Yakima valley growers would not be able to successfully market their crop of spuds in the east. "We may be able to sell them all right," said Mr. Wayenberg to a representative of the Farmer, "but I do not see just how we can pay the $15 freight charge to St. Paul and still make money."

Finds Beans Profitable.

W. K. Berklie of the Tieton project, Yakima county, harvested 10 acres of beans this year. He finds the bean crop a profitable one. Mr. Berklie is farming 20 acres and, like many other farmers, finds success comes through constant application of good common sense.

Wheat Market Is Tangled Maze

Growers Are in Serious Predicament; Wheat Lies at Interior Points

Instead of relief from the tangled and confused condition of the wheat market at the present time the farmer who still has possession of his 1917 crop finds only denser fog settling about his problems. To the large grower who does not need to "cash in" on his crop the situation presents no serious difficulties, for the government will, in the course of time, get its regulatory system into smooth operation and clarify the situation. But to the small grower, who needs the returns from his few hundred or one or two thousand bushels in order to be financially able to proceed with his next season's business or to buy winter feed and provisions the situation is little short of grave.

Terminals Are Glutted.

For the present, shipment of grain from interior northwestern stations to coast terminals (Portland, Astoria, Tacoma and Seattle) is prohibited by Max H. Houser, representative of the federal grain corporation in this territory. The reasons seem to be: (1) That the terminal warehouses are full to overflowing, and (2) that there are insufficient cars to handle the crop that is now lying in wait in interior warehouses. The terminals are full because, under the far-reaching regulation scheme of the government, the fundamental purpose of which is to get the greatest food-making results possible out of the grain in the United States, sales and manufacture have been retarded to prevent possible losses or waste through various channels.

Wheat is being used for two purposes: (1) Making flour for local consumption; (2) exportation to England and France by the official buyer for the allied governments. No opportunity is being given by the government for a loss of any grain or any shipping facility where it can possibly be avoided, and this policy is undoubtedly responsible for the fact that there is practically "nothing doing" in the wheat market at the present time.

Make Flour Locally.

The food administration is bending every effort to have wheat manufactured into food with the least transportation possible. That is, it wants local mills to manufacture local wheat for local consumption, thus leaving cars and boats free to handle other pressing commerce.

Mr. Houser has recommended to the mills of the northwest that they increase their storage facilities, and is urging the interior warehouses to study the needs of their local mills and to hold sufficient grain to supply these needs throughout the coming season.

What It May Mean.

In a letter written by Mr. Houser to an interior inquirer, Mr. Houser makes the following significant statement:

"This (meaning the suggestions to the mills and warehouses above referred to) necessitates the grading of all the wheat, and will leave two courses open, either for the interior dealer to make settlement on basis of agreement between him and the farmer on his grade, or leave a small balance until the final grading has been passed, but in the meantime pay the farmer up very closely so that there will be little if any held back."

Information received from a number of sources is to the effect that small growers in some cases are making personal agreement under which they sell to private buyers at prices offered by these buyers, and that in other cases they are accepting advances of part payment for their grain, upon which advances they pay interest until such time as the market awakens and the grain is graded by the government, when the buyer will collect his interest and pay to the seller whatever remainder is due (the difference between the amount of cash advanced and the full price of the wheat as fixed by the government for the grade which it proves to be).

A Serious Dilemma?

It seems not amiss, therefore, to inquire if this does not put the man who has to have money on his wheat in a serious predicament. Either he must sell at private sale, or virtually borrow money on his wheat and pay interest on it for a time. In the former case it is safe to assume that the buyer is going to take no chances of paying more than the ungraded wheat will prove to be worth after reaching a point of inspection to be graded under the government regulations.

A. A. Elmore, northwestern national representative of the farmers' union, estimates that not more than 30 to 35 per cent of the wheat in the northwest has been sold by the farmers up to this time. He says that as a rule the farmers are greatly disappointed with the market tie-up. He says what the government buying corporation should do is to send inspectors throughout the wheat growing districts to inspect and grade wheat so the farmers could sell outright without waiting until their wheat reaches terminals, where the only federal grading inspectors are now located. He says that if the farmers are going to have to hold their wheat indefinitely, the government should make arrangements to pay the cost of the carrying of it, and not allow the grower to suffer losses through the control being exercised by the government.

Who Has Blundered?

In the hope that relief may be secured for the Inland Empire farmers, who are forced by government regulations to hold their wheat until the mills are ready to buy it, R. Insinger, chairman of the Spokane committee of the chamber of commerce, is taking up the situation with Max H. Houser, federal grain buyer at Portland.

The Coast mills are not buying more than their present needs, realizing that present prices will continue throughout the winter, and the interior mills are not stocking up with wheat for the same reason. The farmers, it is estimated, are carrying as a result $40,000,000 worth of wheat, when they need the proceeds of wheat sales to liquidate their indebtedness. General business also is suffering because virtually no wreat is moving. The farmer, in other words, is made to carry the interest charge on the value of the wheat until the mills or the government takes it over.

J. K. McCormick reported to the committee that Mr. Houser had assured him early in the season that the government contemplated some arrangement to carry this interest charge for the farmers, but, so far as is known nothing has been done.

Farmers stand ready now, and have so stood for several weeks, to turn over their wheat to the buyers. But someone has blundered, and it is up to M. H. Houser, the federal agent at Portland, to give an explanation and lift the blockade.

Another Corn Show.

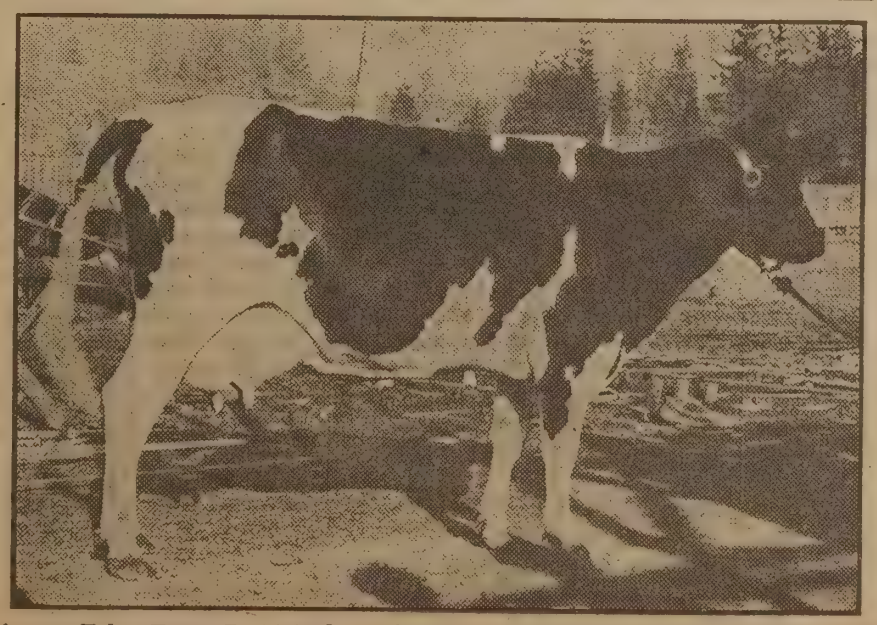
Undaunted by the dry season which has been recorded in the northwest this year, the Exchange National bank of Spokane has announced its second annual corn show. The show will open on November 19 and run throughout the week. This is the same week as the National Apple show, and thousands of persons will take in both. Entries promise a first class show, and one that undoubtedly will be something of an inspiration for corn production in this territory. The bank is anxious to lend aid to those desiring starts of good corn seed.

Western Washington Holstein Breeders' Sale

By PAUL E. TRIEM

In William Bishop's opening remarks before the buyers assembled at the sixth semi-annual sale held by the Western Washington Holstein Breeders' association in Snohomish October 31, the widely known Chimacum breeder warned his hearers not to go east for breeding stock.

"Go into any man's barn out here," he declared, "and you can throw your hat through the cracks. That means fresh air. In the eastern barns, on the other hand, there is not so much as a knot hole left for ventilation and the consequence is that eastern stock is far inferior to ours in point of vitality and freedom from tuberculosis. You can not find anywhere in the world better cattle than will be sold on this platform today, and the beginner who does not take advantage of the present opportunity to buy breeding stock will live to regret his short-sightedness."



William Bishop, at readers' left; Colonel Gue at right. Two live wires in Holstein circles.

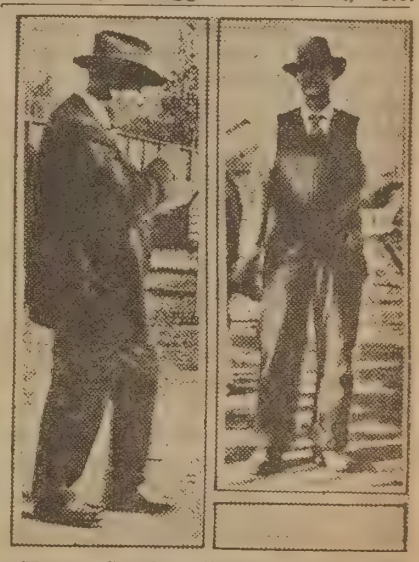
Colonel George A. Gue declared that the time has come for the man who has been buying grades to buy purebreds, and he added that even with present high prices for feed and labor cows of this sort will pay a profit to their owner.

"During a recent visit to the north Portland yards," he added, "I found that scrub cows which in the aggregate have been producing thousands of pounds of butter, are being sold. The yards are full of them at the very time when good feeders and pure bred dairy cattle are becoming harder and harder to buy. The fact is that the scrub cow can no longer be handled at a profit and she is being turned into the only thing she is fit for—sausage!"

In spite of the uncertainty interjected into the dairy situation by the rising costs of feed and labor some 46 head of pure breds were readily disposed of at this sale. The average price received was $238. A. E. Smith's "Aurora Fobes Fayne De Kol 2d" topped the sale, bringing $1000 from the Carnation stock farms. The "Red Cross heifer," Katherine De Kol of Tarboo, brought a total of $430, all of which goes to the Red Cross.

In closing, it is only far to speak a word for Colonel George A. Gue, his able assistant, Harry C. Cranke, and William Bishop, a trio of live wires whose enthusiasm and patience seem without limit. It is safe to assert that without the tireless activities of these men Holstein breeders in western Washington would not be in the position they hold today. The sales follow:

Aurora Fobes Fayne De Kol 2d, consigned by A. E. Smith and sold to Carnation Stock farms for $1000. This fine animal topped the sale.



Sales.

Canary Oak De Kol 2d, No. 218987, born April 21, 1913, Carl W. Cook, Bothel, $190.

Greenbank's Canary Pontiac, No. 153351, born January 7, 1915, George A. Gue, North Yakima, $300.

Aurora Fobes Fayne De Kol, No. 262373, born June 23, 1913, Carnation stock farm, $1000.

Pietertje Aaggie Oakhurst, No. 271760, born November 27, 1914, P. S. Govan, Sequim, $175.

Harry Cranke, Colonel Gue's able assistant, at readers' left. Thomas Yarr of Chimacum, a prominent breeder of black and whites, at the right.

Pauline Korndyke Hartog, No. 350314, born July 26, 1916, P. S. Govan, $150.

Canary Queen Korndyke, No. 344593, born April 5, 1916, M. Treosti, Snohomish, $175.

Paul Aaggie Canary, No. 199815, born January 13, 1917, Conrad Shefer, Tolt, $130.

Canary Jacoba De Kol II., No. 266983, born September 23, 1914, Carnation stock farm, $250.

Selah Johnson, No. 206621, born May 12, 1912, A. E. Smith, Sumas, $300.

Stacy Phyllis De Kol II., No. 180281, born February 8, 1912, William Bishop, Chimacum, $400.

Violet Pauline, No. 233770, born April 2, 1914, A. J. Schold, Silverdale, $285.

Sadie Vale Cornucopia Mercedes, born May 6, 1917, George A. Gue, $100

Center Lilly, No. 149243, born June 3, 1910, A. M. Bailey, $310.

C. K. K. S. V. Bonnie Wayne, born May 2, 1917, Jule Snider, Lyman, $200.

Skykomish Minita, No. 333684, born September 20, 1915, J. W. Burrese, Lyman, $185.

Skykomish Korndyke, No. 333685, born October 7, 1915, A. E. Smith, $225.

Hillvale Colantha Ormsby, No. 152905, born February 12, 1910, A. E. Smith, $230.

Jewel of Sultan, No. 362352, born October 13, 1915, Guy MacL. Richards, Bothell, $175.

Monroe Korndyke De Kol, No. 218235, born July 10, 1913, A. E. Smith, $300.

Model Pauline De Kol, No. 146473,

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian or foreign, one year, 75c.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Maybe So, But We Doubt It

A newspaper article has just come to the attention of The Farmer stating that Mr. So-and-So "promises to revolutionize the wheat industry." Some time ago, says the article, he secured a pound of wheat of a foreign kind, planted it, harvested an enormous crop and is now ready to begin this revolutionary business in the wheat growing industry.

"The great advantage of this wheat," the article continues, "is that it will yield about 120 bushels to the acre. It is a hard wheat and makes as good flour as any wheat grown."

Now, that's fine! That is just the kind of wheat the farmers of the United States, enthusiastically backed by Food Administrator Hoover, are looking for. One hundred and twenty bushels of wheat to the acre is more than four times the average crop produced by the old-fashioned varieties, such as Bluestem, Jones Fife, Red Russian, Little Club, White Hybrid, Turkey Red, Gold Coin and so on. Wouldn't that increase the output of 1918! We would no longer have to eat corn and rye to save wheat for the soldiers.

But The Farmer is just disloyal enough to recommend that farmers stick to the old-fashioned kinds of wheat until this war is won. We have recollections of other "revolutions" that have been promised through the discovery of seed of some kind that produced huge crops of unprecedented quality. Some way, we have more faith in the United States department of agriculture and state college experiment stations than we have in luck, and these official institutions have been working untiringly to improve the varieties of grain to be grown. They have done great good. They have given much sound advice to the farmers of America, and their unanimous advice at this time is that producers stick to the tried and true varieties.

Consider the Pea for Next Year

Pea growing in the northwest was much less successful this season than it has been in the past and there is a pronounced tendency on the part of many to look upon the crop for the future with suspicion.

This is distinctly unfair to the pea. Wheat was also a much less successful crop this year than it has been in the past, but there are few farmers who will refuse to sow it for 1918 for that reason.

Peas have proved a remarkably valuable crop in several districts of the four northwestern states, and in addition have proved to be a great soil builder. This year the straw promises to do much to make up for the feed deficiency that is menacing the live stock interests in many localities.

It is not well to go too heavily into pea growing, for the time has not yet come when they can be safely classed as one of the major crops. But it is equally unwise for farmers to count them out of his diversified scheme merely because they proved a poor money-maker this unusual year.

Grade Before You Sell

"The successful business man buys everything he can at wholesale, and sells at retail. The farmer, however, reverses this and buys at retail, while he sells his finished product at wholesale."

This is the explanation which T. J. Newbill, former Washington state club leader, gives of part of the farm marketing problem. The farmer, as an unorganized unit, has been forced into an impossible position; he is trying to do something which can't be done. And the remedy, according to the same authority, is first of all to learn to produce a "quality" article to sell.

"The big thing in the marketing game," he explains, "is quality, and when you have secured that, you will find that your selling will largely take care of itself."

Quality is partially a matter of appearance, and one of the first steps in securing uniformity in this respect is proper grading. To illustrate this point, Professor Newbill quotes the experience of a Tacoma wholesaler who received an order for 40 carloads of potatoes, to be shipped to California. Buying orders specified that the tubers must be smooth, free from disease, and graded. The Tacoma man started out, and after covering his territory he had just three carloads.

"I could have found 150 carloads if I had had the time to grade them myself," he commented, "and I could have sold them at a profit. But in that case, who do you suppose would have paid me for my work? Why, the farmer, of course!"

An Essential Duty

It was Napoleon who said that "an enemy marches on its stomach." The finest physical trim, the greatest efficiency and the best guns and ammunition in the world will avail nothing if there is not enough food.

Nothing will destroy discipline more quickly; nothing will end a war as quickly as hunger.

While the boys who march by with guns on their shoulders are picturesque and important in time of war, fully as vital and necessary is the man who tills the soil and produces the food that feeds both the soldier and also his wife and children. The man who grows much good, wholesome food this year is a true patriot.

Profiteering Always Unjust

There is never a time when profiteering is anything short of morally criminal. It is doubly criminal at the present time, but at all times it is in strict violation of the commandment, "Thou shalt not steal."

It makes no difference what form the practice takes. We usually think of the big business concern which gets a corner on some needful commodity, but the person who takes any advantage of any other person to take from him more than a reasonable profit is profiteering just as truly as the hoarder of millions of dollars' worth of foodstuffs. The laborer who idles on the job because he can without losing his place is a profiteer. So is the landlord who raises the rent on his tenant above the point of a reasonable income from his investment.

Government regulation is doing much toward relieving the injustice of profiteering on a large scale, but legislation never can destroy it completely. Profiteering is a disease of the American mind; it is an affliction of the American conscience, and until conscience is educated to be content with fair returns it will continue one of the menaces of America's national and personal life.

Blue Sky Laws

The blue sky laws, passed in many states, are intended to keep people from being caught by wildcat companies with stock to sell. Before stock can be sold, when these laws are in effect, a statement of the business and other guarantees must be given state officers.

These laws were attacked, and it was claimed that they were not constitutional, but the United States supreme court has held them to be sound.

Thousands of dollars have been taken from every state in the union, we suppose, by the promoters of crooked companies by means of the sale of stocks.

Washington Gleanings

W. J. Olwell of Davenport has bought from B. R. Williams 480 acres south of Sprague for $36,000.

Monroe Hately has purchased 240 acres four miles from Colton from Coolidge and Davis, paying $18,840.

Fruit shippers of North Yakima are using boxcars to forward crops to market as there are not enough refrigerator cars to meet demands.

Seed growers of Yelm Prairie are planning to secure about 2000 acres which will be used for the raising of selected vegetable and other seed next year.

Tired of waiting for rain, farmers near Walla Walla have been going ahead with seeding. Many are waiting until spring, believing it too late to do anything.

The question of marketing farm produce to good advantage will be made a feature of the second annual convention of bankers and farmers to be held at the state college November 9 and 10.

Seventeen acres of Pine creek land in Okanogan county has been sold by Thomas Jones, pioneer of that region, to Thomas Leese, prominent sheep owner of Ephrata. The price was $25,000.

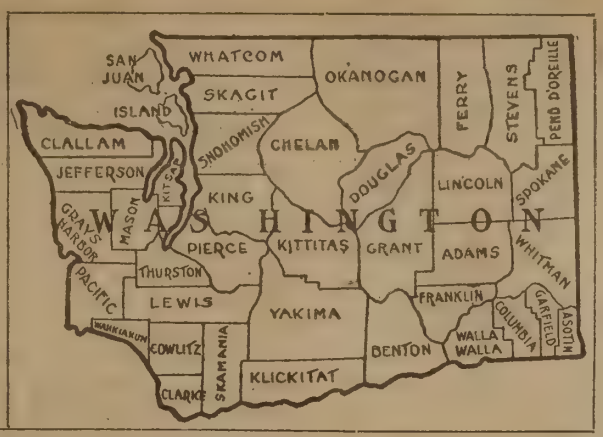
The annual apples grade conference will be held at Spokane November 23. The meeting will recommend to the state department of agriculture the rules to be established for shipments in 1918.

The Selah evaporator plant has begun operations. The plant has a minimum capacity of 15 tons daily and a maximum capacity of 25 tons daily. It is devoted exclusively to the evaporation of apples.

According to E. F. Benson, president of the Washington Irrigation Institute and state commissioner of agriculture, it is probable that this year's session of the irrigation body will be held at Wenatchee some time in December.

M. J. Newhouse, county agriculturist of Pend Oreille county, has been transferred to Skamania and Clark counties, where he will have two assistants in the work. Mr. Cowen will succeed Mr. Newhouse in Pend Oreille county.

Eastern Washington counties produced 29,076,000 bushels of wheat this year, according to estimates prepared by E. T. Marchettie, field agent of the United States department of agriculture, bureau of crop estimates, with headquarters in Spokane.



A county council of the farmers of Klickitat county which is designed to assist H. B. Carroll, county agriculturist, has been indorsed by resolution by Pomona grange. One purpose of the council will be to keep the farmers of the county informed on the suitability of soils for certain crops in the different sections of that district.

What Others Say

Farmers' Review: Criticism of dairymen in the Chicago milk district has been as severe as it has been unfair. Never before have we seen upright, loyal, patriotic citizens of a free country subjected to such a fire of caustic condemnation and conscienceless misrepresentation as has been the lot of fair-minded milk producers who have asked only for a "living wage." Abusing in no way the power that was and is theirs, but asking for their milk only a reasonable price based on cost of production, they were subjected immediately to investigations by officials and forced into court to answer all manner of charges, while some, if not all, of the city newspapers stretched the truth and strained the imagination in vilification of these "enemies of the American people." * * * * If persecution and prosecution of dairymen, and milk boycotts, are pressed there can be but one result—general selling of cows, and milk higher than ever before because of its scarcity, a boomerang officials and city editors may not have anticipated. For the resources of the dairy farmer are limited. His business, like any other, must pay or cease.

Not Feeding Much Wheat to Hogs

High Prices and Hooverism Cause Many to Find Other Feedstuffs to Produce Pork; Potatoes, Rye and Barley Are Utilized

CHEHALIS, Lewis County, Wash., Oct. 27.—The fall work in this county is well under way and nearly completed. The fall grains are practically all in. Most of the potatoes are dug and stored. The potato crop was very short, as was expected, due to the dry weather, but still in some sections, notably the "Big Bottom" country, the potatoes yielded from seven to eight tons to the acre. The late summer rains made a somewhat nobby potato in a few fields. Corn has done fairly well in this county in spite of the late seeding and cold spring. Killing frost did not occur until most of the corn was in the dough stage. Better corn for silage would have resulted had the frost held off another week, but those who had silage corn growing are very well pleased with the crop as it stands. No wheat is being fed to hogs. All has been sold for milling purposes, or for seed. The farmers of this county are doing their share toward saving the feedstuffs and foods. The Bluebell pea did well in the county this year.

A. B. NYSTROM.

Unusually Good Fall.

RAINIER, Thurston County, Wash., Oct. 22.—This has been as fine a fall as I have ever seen in this section of the country, and I have been here 17 years. We had rain enough about a month ago for plowing and starting the seed. Early sown grain is looking well, although a good, warm rain would do it good. We had no frost until the middle of October. We have excellent fall pasture. All the root crops and late gardens made good growth until frost came. A warm fall also matured corn for the silos, which helps out the feed supply. The late fall has been fine for new seeding of clover and grasses. As a rule the farmers are somewhat behind with their work on account of the scarcity of help and high price of labor. The farmers are doing most of their work within their own families. By November 10 the work will be caught up pretty well if the weather continues good. Most of the potatoes have not been dug as yet and there is lots of plowing and seeding to be done. The apple crop is good. Plenty of good seed is available for seeding, but it is high priced. Many farmers have bought automobiles this season, which must mean the country is prosperous. The prospects for next year are fully as good as this. Cattle will go into the winter in good shape. Farmers are keeping all the cows they can.

L. F. DAVIS.

No Frost Losses.

PORT ORCHARD, Kitsap County, Wash., Oct. 25.—Fall work in this county I think is up to normal and if anything a little above. What little land there is to seed is pretty well all seeded and it was put in in very good shape. There has been practically no losses from frosts this fall. Some very late corn was frosted, but the majority of the crop was put into the silos before the frosts came. Farmers are all "Hooverizing" to the extent of planning to get through with just as little outlay of money as possible. The dairymen have planned to put everything in their silos that they can and some are planning on the feeding of cut straw as recommended by the Western Washington Experiment station. Not many hogs are fed in this county.

C. B. SPRAGUE.

Feed Conditions Good.

MOUNT VERNON, Skagit County, Wash., Oct. 26.—Fall work is progressing in good shape. Most of the silo filling is done and the corn crop was unusually good. Some of it was caught by the first frost of the season a week ago. Winter feed conditions are good. Little hay has been fed yet, while the last two years, dairymen had fed large quantities by this time. Most dairymen have either raised or purchased their winter's supply of hay. The number of silos were materially increased this year. Milk prices are $2.75 per hundred pounds. It is commonly agreed that if one had to buy hay and grain at current prices, milk production would be unprofitable, even at this high price. Oats are selling at about $47 or $48 per ton and hay from $20 to $22. Oat raising has proven most profitable this year. Considerable fall seeding has been done for early spring pasture.

C. S. PHILLIPS.

Dry as an Ash Heap.

METHOW, Okanogan County, Wash., Oct. 22.—The weather has been alright for maturing crops, but not favorable for the preparation of next season's crops owing to the long continued drouth. No rain since June 14 has left the soil as dry as an ash heap. The farmers are not satisfied with this year's results. A good many of them who bought wheat last spring at $3 a bushel did not much more than get their seed back and furthermore the government has bought no wheat yet at Pateros our shipping point, so the farmers can't tell what the results will be. The only crop which did well was early planted corn, which seemed to wave defiance to drouth, and averaged 20 to 30 bushels to the acre. It had no rain from the time it came up until maturity. It seems almost unbelieveable, but it is a fact. The farmers are optimistic if that hoodoo of 10 cent hogs could be killed. No fall crops to amount to anything will be planted, as working this volcanic ash soil dry makes it run together.

CHARLES GRANT.

Sow Barley and Rye.

PORT ANGELES, Clallam County, Wash., Oct. 27.—Fall work and seeding is up to normal average in this county and so far there has been no losses from cold weather; the fall has been excellent. Farmers here apparently have caught the spirit of Hooverizing and are adapting themselves to war conditons. They use no wheat for hog feeding, but we find them using potatoes which they have culled from the crop and every little available corner of the clearing is sowed in barey and rye.

J. P. CHRISTENSEN.

Drouth Does Damage.

RITZVILLE, Adams County, Wash., Oct. 22.—An early fall with plenty of rain is essential to raise a good crop and prepare the seed bed, but the lasting drouth is very much dreaded as it bars all labor on land and is very bad on pastures as the grasses are getting sunburned and brittle. Live stock is going down in spite of fresh pastures. The farmers admit a poor crop with a limited price, but seem willing to go at it again for next year. Seed for fall sowing is very scarce.

JACOB HARDER.

Beginning to Hooverize.

CHEHALIS, Lewis County, Wash., Oct. 26.—I have never seen a better fall in western Washington for fall work and this has made up to a great extent for the shortness of labor. We had a good rain in early September that started the fall pastures in good shape and since then there has been practically no rain. There was no frost until a week ago since which time the filling of the silos has been rushed and potato digging has come into full swing. As to the potato crop I would say that the yield per acre is lighter than usual but that the acreage is heavier so we should have as large or a larger crop than last season. Farmers are offered $27 per ton f. o. b. cars today for potatoes. Some are selling but many are holding for prices ranging from $30 to $40 per ton. Apparently there has been more than the usual crop of fall grain sown and it is up and looking well. I think some among the farmers are beginning to "Hooverize," but most of them do not as yet grasp the idea of the possibility of a shortage of food in the United States. Such ideas must have time to take root and grow. The second Liberty loan has many more subscribers among the farmers than the first had because the people are talking about it now in their homes and beginning to grasp the idea that this is not an investment for the rich man alone, but an opportunity for all to do their "bit."

J. C. BUSH.

Barley and Oats for Hogs.

CHIMACUM, Jefferson County, Wash., Oct. 26.—Fall work is behind this year; the chief cause is shortage of help, but we are having very good weather for threshing, which will soon be finished for this locality. It seems as if there will be very good yields of oats and spring wheat. I do not think any wheat feed has been fed to hogs. The chief feed for hogs is barley and oat feed. The farmers and farm hands are buying Liberty bonds to help win the great war.

JOHN VAN TROJEN JR.

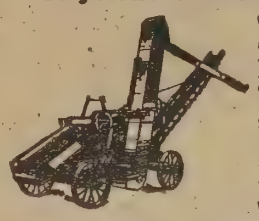
LILLY'S SEEDS

For Fall Planting

BEST FOR THE WEST

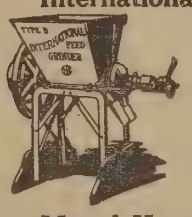
To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seed or seeds not acclimated.

We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seed—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.



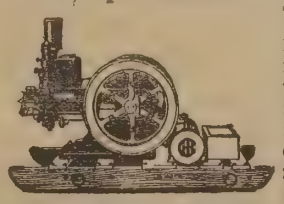
Write for Fall Catalog LILLY'S Seattle, Wash.

Established 1885



Three Useful Machines

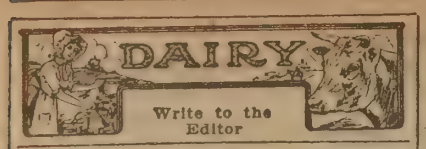
THREE International machines that will pay their way on any farm where there is corn to market or livestock to feed are:



Keystone Shellers, adaptable to large or small ears, shell hard or soft corn clean without cracking the kernels or crushing the cobs. There are eight styles in 1, 2, 4, and 6-hole sizes, with capacities from a few ears shelled by hand, up to 4,000 bushels per day.

International Feed Grinders, for grinding small grain, corn on the cob, or corn in the husk, come in three styles with regular or special plates, 6", 8", and 10" in diameter. Capacities from 5 to 30 bushels per hour take care of all ordinary requirements.

Mogul Kerosene Engines furnish steady, economical power for these and other farm machines. They are simple, reliable, satisfactory; operating on the fuel that is cheapest or most convenient to buy. Mogul kerosene mixers; built-in magnetos that make batteries unnecessary; enclosed crank cases; full equipment, ready to run; are features of all Mogul engines, from 1 to 50-H. P.



Equip your farm with a set of these three useful machines. See the local dealer or write the address below for complete information.

Holding Up Milk

Answered by S. B. NELSON.

Holds Up Milk—We have a cow with a 4-months-old calf. We can not make her give her milk down freely.

A. C. S., Metaline, Falls, Wash.

It is sometimes a difficult matter to treat a cow so that she will let down her milk. Supposing that you try the following treatment: Put the calf in front of the cow, where she can see it, then you go and sit down as to milk the cow, take along a pail full of warm water and a soft cloth. Bathe the udder for some little time, a minute or two, with the hot water. Then take a soft cloth and dry gently. When the udder is nearly dry rub the udded with the hands in a gentle massage, above the udder and gradually down to the teats, beginning to milk the cow easily. This treatment has allayed the nervousness of the cow and resulted in self-control of the cow so that she would let down her milk. You see, the reason that cows do not let down their milk is because they are on a nervous tension and they take personal control of the nerves controlling the blood supply to the udder. As soon as they forget this and the personal control is taken away from the nerves then the milk will come down.

Waste in Making Butter.

To send our allies as much food as possible of the most concentrated nutritive value in the least shipping space is our problem this winter. Among these concentrated foodstuffs is butter.

In the past much butter was spoiled, or its quality seriously affected by the manner in which it was handled after it had been gathered in the churn. The butter maker's greatest skill is called for in removing it and working it into salable form without destroying its firmness, texture and flavor.

The old rule that the buttermilk should be drawn when the butter granules are the size of wheat grains is a good one. The most successful buttermakers never add wash water until the buttermilk is drawn away. Then pure, cold water equivalent to the amount of buttermilk is added and the churn revolved a few times.

The butter may be worked vigorously until it begins to adhere in large lumps if the water is cold enough. The water is then drawn off, and, if a large power churn is used, the butter is salted in the churn. In home butter making in small quantities, however, better salting can be done on the worker.

After a light working place the butter in a cool room so as to allow the salt to dissolve and the whole mass to cool so it will not become oily when put in prints or tubs.

Walla Walla Association.

The report of the Walla Walla valley cow testing association for the month of September, 1917, shows a number of points in which the association has been valuable to its members.

Despite the dry pasture season and an increase of 75 per cent in feed over last year, the average milk production per cow for September, 1917, was 74 pounds greater than for the same month last year. This increase is the result of the culling out of the "slackers" as shown by the association records.

Much interest has been shown in the quality of sires used to perpetuate the herd. Several members have recently purchased purebred sires to head their herds, while others will do so this fall. One member has about closed a deal with an eastern breeder for the purchase of a purebred Holstein sire costing close to $2000.

As a result of weeding out the poorer producers during the last 11 months members of the association have sold 78 unprofitable cows to the butcher for beef. Forty-four cows were sold as milk cows on the merits of their records in the cow testing association.

Of the 485 cows tested during the month 154 were daughters of purebred sires, testifying to the efforts of the members to build up the Walla Walla valley dairy herds.

Seventeen members of the association, owning 26 silos with a total capacity of 2593 tons, are filling the silos with corn silage this fall. The average capacity per silo is practically 100 tons.

The high cow this month is a purebred Holstein belonging to E. S. McKinney, with a record of 97.5 pounds of butterfat and 2034 pounds of milk for the month. Since the beginning of the association year, last November, Dora, the purebred Holstein cow belonging to Walla Walla college, has made 638.9 pounds of butterfat.

Honor List of Cows.

The following men had cows producing over 40 pounds of butterfat during the month of September, and the animals are on the honor list of the Snohomish Valley (Wash.) Cow Testing association:

Edward J. Stevens, Herman Steffen, G. A. Holcomb, Kooistra & Dykstra, Thomas Bowen, D. Metz and D. H. St. John.

The total number of cows tested was 312, average milk 634 pounds, average fat 25.4 pounds and average cost of feed $4.07. The first impression of the Snohomish valley association, says E. W. Soner, official tester, imprints the fact that the dairymen of the valley follow the most approved methods of farming, although there is a natural tendency to carry more stock than the farms can adequately maintain.

Cover Cost of Production.

If the consumer desires the farmer to produce milk he must be willing to pay him a price sufficient to cover the cost of production, says Hoard's Dairyman. Milk at 13 cents a quart, which will be the retail price in many of the large cities, is the cheapest animal food on the market. It is cheaper than beef, pork, mutton or fowl. Two quarts of milk furnish more nutriment than a pound of meat. The reasonable consumer can not expect the milk producer to furnish him foods far below the cost of other food products.

Warm Water Saves Feed.

Warm drinking water for the dairy stock will save feed and also benefit the milk flow. It saves feed because it does not draw on the vitality of the cow as does cold water. It benefits the milk flow because a cow will not reach her maximum production unless she drinks water abundantly. This she will not do if it is ice cold.

Marketing Cottage Cheese.

The utilization of skimmed milk by making it into cottage cheese and using the cheese as a substitute for meat has been urged jointly by the United States food administration and the department of agriculture. Ordinary pasteboard oyster pails make serviceable containers for marketing cottage cheese locally in small retail quantities.

Form the Buttermilk Habit.

"Drink buttermilk freely," says the United States food administration in its effort to encourage the use of dairy by-products. The use of buttermilk is largely a matter of habit. Southern cities consume almost as much buttermilk as sweet milk. The difficulty of keeping milk sweet has been largely responsible for the popularity of buttermilk as a beverage.

Heather.

One always associates heather with Scotland, and it is one of the chief glories of that land of colors; but heather, or ling, is an evergreen shrub which grows all over northern Europe, certain species even being found in Africa, where it reaches the height of large bushes.

Raise Your Calves on
Blatchford's Calf Meal
and Sell the Milk

More calves have been raised on Blatchford's Calf Meal than on all other milk substitutes combined.

100 lbs. makes 100 gallons of milk substitute, costing only one-third as much as milk.

Prevents scouring and insures the early maturity of sleek, handsome calves.

It is steam-cooked and no trouble to prepare or use.

Write for Pamphlet "How to Raise Calves Cheaply and Successfully with Little or No Milk." At dealers, or Blatchford Calf Meal Co., Dept. 58 Waukegan, Ill.

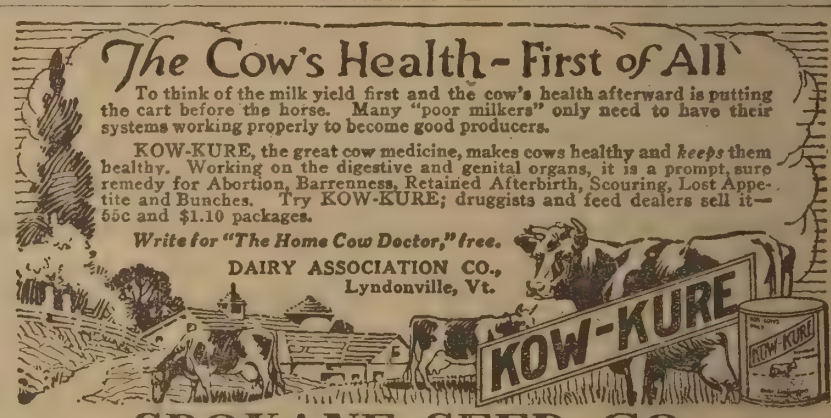
Why Use Dirty Coal-Tars or Dangerous Carbolic Acid

When you see those words what sort of a product do you think of? Probably a dirty, vile-smelling, oily coal-tar or dangerous carbolic acid.



Then you will quickly see the remarkable advantage of using B-K, the POWERFUL disinfectant with ten times the germ-killing strength of undiluted carbolic acid, as B-K is not a poison—contains no acid to sting, or dangerous drugs to poison—no oil to gather filth on stock. B-K is clear and clean as water, and as easy to use. You should use B-K regularly for spraying barns and stock—hog pens and poultry houses—for dipping the birds and stock as well as for mixing in the drinking water. If your dealer does not have B-K, send us his name.

FREE BULLETINS—Ask for complete information—"trial offer" and bulletins on Farm Disinfecting—Contagious Abortion, Calf Scours, Hog Sanitation or Poultry Raising. Dealers wanted in every town.

Good Meat Wasted on Hides.

According to reports received by the meat marketing specialists of the bureau of markets, United States department of agriculture, a Washington, D. C., dealer states that nine steer hides purchased by him carried 79 pounds of waste meat. A Detroit dealer reports that an average of six pounds of waste meat was found on 40 cow and steer hides received at his plant, and that in 10 days his men scraped 2177 pounds of waste meat from hides, or enough to supply low-grade meat to about 5000 people for one day. Faulty butchering in addition to causing a loss of the food value of the meat which is wasted results in a considerable loss of edible fats which remain on the hides.

Packs All Products in Silo.

George J. Dickson, the prominent stockman of Prineville, Ore., is reported to have one of the largest silos west of the Mississippi river, and the only cattle feeder in central Oregon using silage. The silo holds 385 tons and is filled with vetch, grain, alfalfa and clover. "I pack everything grown on the farm into that silo," Mr. Dickson declared.

Veterinary

Dr. S. B. Nelson

Operation Necessary—I have a mare that had a sore on her left lower jaw which had an offensive odor and she appeared run down. The veterinarian said the trouble was caused by a bad tooth, but that the tooth had come out and the sore would heal. The sore is still open. I am feeding her well and not working her very much. What weight of ear corn should one feed to a 1300-pound horse when not working? F. H. D., Hermiston, Ore.

Your horse needs an operation. It has a foreign offending substance in the jaw which must be removed before the jaw will heal. Whether it is a small piece of tooth that is left or a piece of broken bone or some decayed bone in the would, of course I am not able to say, but she will have to be operated on before she will heal completely. Regarding your question as to the amount of feed to give a horse I would suggest that you write to the Animal Husbandry Department, Professor Potter, at the Oregon Agricultural college. He can give you the specific ration which horses should have.

No Milk From Front Teat—I have a 4-year-old Jersey that I purchased which never has given milk out of one front teat. J. A. C., Somers, Mont.

I know of no treatment that would cause the cow to start to give milk out of the one teat. Without any description of what the trouble is I could give no advice regarding it. I would say, however, that the trouble might be a sealing of the end of the teat, or a sealing at the top of the teat, or it may be that the milk producing tissue of the udder does not function. If it is the latter there is no remedy. If it is the first or second then operative measures are necessary and if you possibly could you should get the services of a competent veterinarian. If you can not do that you have little hope of success in the future.

Mare Badly Foundered.—I have a mare that was badly foundered last May and has scarcely been able to hobble all summer. She lays down flat on the ground most of the time and has open sores on hip bones and front legs since last June. Her hoofs on the front feet are coming off and in between the new hoof and the old ones there seems to be a rotting condition. Her appetite is good, but she is getting thinner all the time. Will she be fit for ranch work if she gets well or had I better shoot her now? W. G. P., Lakebay, Wash.

I am of the opinion that the old hoofs should be trimmed off entirely so as to give the new hoofs underneath an opportunity to grow. Sometimes foundered animals get into fairly good condition after they recover, but of course, at times they do not. Treat the growing hoof with the following ointment:

Lard, one part; pine tar, one part. Heat and mix thoroughly, let cool and apply morning and evening at the hoof line.

At the price of feed, you will have to be the judge as to whether it will pay you to keep her. If the bones are going through the bottom of the sole, it may be better to shoot her now. If not, she might recover for you. For the open wounds use the following:

Zinc sulphate, one part; lead acetate, one part; water, 16 parts, mixed. Apply two or three times daily.

Epidemic of Anthrax.

It is reported that a severe epidemic of anthrax has broken out among the cattle of Merced county, California. A rigid quarantine is said to have been fixed and every effort is being made to stamp out the outbreak.

Scrub Bull Kaiser's Ally.

Put the scrub bull into bologna. In your herd he's an ally of the kaiser.

Canadian Wheat Crop.

It continues to be reported that the yields of the wheat crop are satisfactory, and as there is a tendency to increase estimates of the total outturn it would appear that the quantities obtained from the threshers are exceeding expectations. The latest private estimate of the crop is 270,000,000 bushels, against the government figure of 249,000,000, says Broomhall's Corn Trade News. Wheat is now arriving freely at Winnipeg, the quantities are running well over those received at this time last year, and the magnificent grading recently reported is being well maintained. Visible stocks, according to the "official" compilation, have increased 2,400,000 bushels; a year ago there was a decrease of 1,000,000 bushels.

National Dairy Show.

The show herd of 27 registered Holsteins belonging to the Carnation Stock Farms of Seattle, and which have won the majority of blue ribbons at the Chehalis, Spokane, Yakima, Puyallup, Wash., and Salem, Ore., fairs, are this week at the National Dairy show in Columbus, Ohio.

Largest Naval Gun.

The largest naval gun is the 15-inch English gun on the famous superdreadnoughts, and the largest land gun is the German howitzer. Of the two the naval gun fires a shell weighing more than half a ton, while the other fires a projectile a ton in weight.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors.

A Safe, Speedy and Positive Cure for Curb, Splint, Sweeny, Capped Hock, Strained Tendons, Founder, Wind Puffs, and all lameness from Spavin, Ringbone and other bony tumors. Cures all skin diseases or Parasites, Thrush, Diphtheria. Removes all Bunches from Horses or Cattle.

As a Human Remedy for Rheumatism, Sprains, Sore Throat, etc., it is invaluable. Every bottle of Caustic Balsam sold is Warranted to give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

Judge Segis

The new importation to Hollywood. A proven son of the great King Segis. Only 6 years old and has 24 ARO daughters. A few samples of his product follow:

Vanderkamp Segis DeKol at 4 yrs., 33.85 lbs.; ave. test 6.27% fat.
Vanderkamp Segis DeKol at 3 yrs., 30.59 lbs.; ave. test 5.9% fat.
Vanderkamp Segis DeKol at 2 yrs., 20.58 lbs.; ave. test 5.0% fat.
Vanderkamp Segis Florie at 4 yrs., 28.72 lbs.; ave. test 4.85% fat.
Vanderkamp Segis Florie at 3 yrs., 26.32 lbs.; ave. test 4.2% fat.
Vanderkamp Segis Eva at 2 1-2 yrs., 28.55 lbs.; ave. test 4.9% fat.
Vanderkamp Segis Eva at 23 mos., 21.46 lbs.; ave. test 6.3% fat.
Vanderkamp Segis Girl at 4 yrs., 26.58 lbs.; ave. test 5.49% fat.
Vanderkamp Segis Girl at 3 yrs., 24.12 lbs.; ave. test 5.0% fat.
Vanderkamp Segis Girl at 2 yrs., 18.17 lbs.; ave, test 4.6% fat.
Vanderkamp Segis Clara at 4 yrs., 25.67 lbs.; ave, test 4.15% fat.
Vanderkamp Segis Clara at 3 yrs., 24.56 lbs.; ave. test 4.5% fat.
Vanderkamp Segis Belle at 3 yrs., 25.32 lbs.; ave. test 3.9% fat.
Three others above 20 lbs. as junior 2-year-olds, and more to follow.

The Two Hollywood Farm Herd Sires

whose sons and daughters are for sale. They have both proven that they are good ones by the record sheet. Look at the records their offspring have produced.

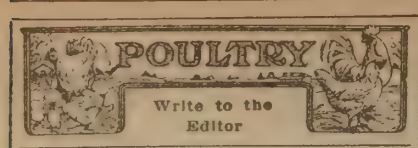
Hollywood Lilith Palmyra

A proven son of the famous King Segis blood, being a grandson of King Fayne Segis, the sire of the 50-pound cow. He is 4 years old and has 5 ARO daughters with more than 35 more to hear from. Look at their records. Can you beat them?

Having a sire with 25 ARO daughters and backed by such as the above, and having a dam with a 32.47-lb. 7-day record and 1077-lb. yearly record made from over 26,000 lbs. milk, you can readily see that he has every right to have as good calves as they are now proving to be. His heifers are just beginning to come fresh. Look at these that are just now tested:

Hollywood Lilith Mercena, 3 years, 33.44 lbs., 5%.
Hollywood Lilith, 2 years, 19.76 lbs., 4%.
Hollywood Lilith Bonheur, 2 years 3 months, 24.19 lbs., 3.9%.
Hollywood Lilith Gelschecola, 2 years 2 months, 20.98 lbs., 4.4%.

More than 35 more of these same kind to hear from.



We believe in having good sires from which to get this kind of cows. There is always demand for them.

A few of the sons of Hollywood Lilith Palmyra left to choose from for your next herd sire. They are hard to beat.

We believe in having good sires from which to get this kind of females and two of this sire's sons with yearly records that are good on both sides. If in need of a herd sire, come and get one of these as they are right and come from the right kind. They will make good for you as they have for us, and you see what they have done for us.

Poultry and Eggs

Licensing Commercial Handlers

At the invitation of the United States food administrator, representative members of the poultry and egg industry convened in Washington recently to discuss the proposed government license plan and to formulate means of reducing waste and encouraging production.

In addressing the conference, Mr. Hoover pointed out the necessity for eliminating speculation and for making the course of food products from producer to consumer as direct as possible. Attractive prices to the producer, he explained, are necessary to secure large production, and yet the price-level of food products to the consumer must be kept as low as war conditions will permit.

Licensing commercial handlers of poultry and eggs, as explained by food administration officials, is a plan of registration compelling the man who would otherwise indulge in doubtful practices to do the thing to which the honest man gladly subscribes. It places a limitation on profits and also enables the government to keep an accurate check on stocks of food in all parts of the country.

Delegates to the conference agreed, after informal discussion, that stocks of poultry, especially young stock, on farms are somewhat below normal due largely to the period of cold, wet weather during the brooding season last spring.

In the opinion of federal authorities there will be a ready market for all poultry products next year and probably for several years to come.

The high price of other meats has increased the consumption of poultry and eggs on farms to the extent that the reduction in poultry receipts this fall has been apparent at nearly all receiving centers.

Migratory Birds

Changes in Open Seasons

The Untied States department of agriculture announces the promulgation of amendments of the migratory bird regulations, to be effective on and after October 15, 1917.

One of the changes permits migratory game birds to be hunted from half an hour before sunrise to sunet during the open season, subject, however, to the provisions of state laws restricting shooting during that time.

Other changes in the open seasons are as follows:

In the states now having an open season from September 7 to December 20—among them being Montana and Idaho—the open season is changed to September 16 to December 31, both days inclusive. These states recently amended their laws by opening the season on September 16 or later and closing it on December 31 or earlier.

The open season in eastern Oregon and Washington is also September 16 to December 31. The open season, October 1 to January 15, is unchanged in that portion of Oregon and Washington lying west of the summit of the Cascade mountains.

In response to numerous inquiries the department announces that the migratory bird regulations are not to be construed to authorize the hunting of migratory birds at a time when it is unlawful to hunt them under state laws.

Alfalfa Hay

Finds It Best All-around Feed

By A. G. HANCOCK, Touchet, Wash.

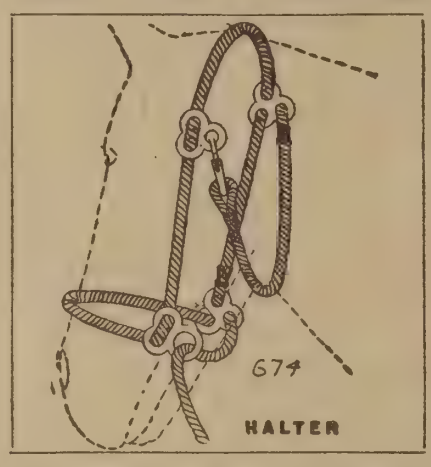
I have been raising alfalfa for 11 years and consider it to be the best all round feed I ever raised. I have a pair of horses that I have worked 10 or 11 years and I do not suppose they have consumed a ton of grain in that time—just good, clean alfalfa hay. They are fat all the year round and some of the time they are really too fat. I see that the manger has hay in it at all times, so they eat when they feel like it. As to hogs, it is also an almost complete feed for growing hogs, say 6 months old and over, but young pigs require some millfeed with the alfalfa to do well. I find it the very best feed for milch cows if the quality is good. It seems to me that the big dairy men should come over to Gardena and learn something to their interest about alfalfa hay and the difference in the different cuttings of hay. We cut four times and I consider the first and fourth cuttings far superior economically to the second or third cutting. The fact is if I were buying I would make the difference about one-fourth. You see, the first cut straw is hollow and most of the fourth cutting, therefore this hay is soft and stock eat it clean, while the second and third is more solid and hard as sticks. There is an increase in production here.

WANTED—A GOAT.

Somebody Can do Soldiers a Turn

There is only one piece of equipment that the U. S. naval training camp at Seattle needs right now that it doesn't possess, and that is somebody's goat. The "somebody's goat" is not figurative language. An actual goat (one with whiskers) is wanted, and Commander Miller Freeman joins in the appeal of the men that somebody subscribe him.

The world over the goat is recognized as the mascot of all mascots for the navy, and the training camp at Seattle wants a modern mascot. And what is more, he is wanted in time to be properly trained for the army-navy football game on Thanksgiving day.

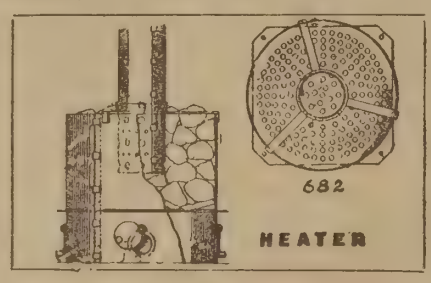


Anybody with a goat that he is willing to dedicate to the cause of Uncle Sam's men can turn the trick by addressing the Welfare office, U. S. Naval Training camp, Seattle, Wash.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

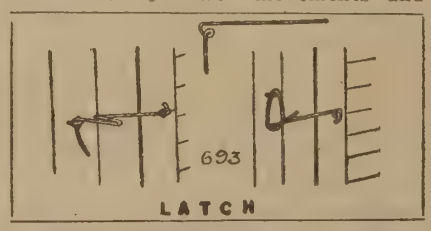
Halter.



The special features of this halter are: First, that the neck latch can be adjusted to heads of different sizes

by moving the cheek plates up or down, and second, that the leading rope tightens about the jaw automatically when the horse struggles.

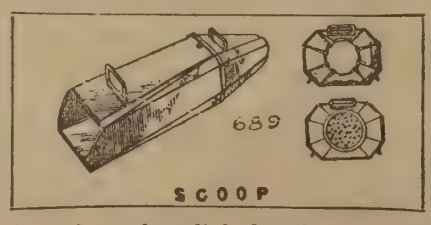
Orchard Heater.



The advantage claimed for this heater is that it can be stored, as flat sheets, in a small space. The grate is

a flat punched metal plate and the body and chimney are metal sheets which are rolled into cylinders for use, but are unrolled for storage.

Simple Gate or Door Latch.



This hook latch is made of stout wire bent in two places at right angles. It is hooked by two movements and

therefore can not be opened by animals. A handy man could make one in a few minutes.

Fruit Picker.

This picker has sharp cutting teeth to sever the stem, and a metal pouch, lined with cloth, to catch the fruit. It

is used on a long light handle to gather fruit from the high branches.

Potato Storing Don'ts

Don't store potatoes while they are moist.

Don't bank potatoes without providing a ventilator.

Don't expose potatoes to injury by frost after digging.

Dont store in a light room. Light lowers the quality.

Don't let the wind dry out the potatoes. A bitter taste will result.

Don't forget to sort out the decayed potatoes before the trouble spreads.

Dont store without first sorting into table grade and culls for feed.

Don't forget to watch the thermometer. The ideal temperature is from 35 to 40 degrees Fahrenheit.

Don't forget to serve freely every day. This will help to keep the storage supply up to table grade.

Don't cover potatoes with damp earth when storing in a hot cellar. They will start to sprout if you do.

Your Country Is Calling For More Products

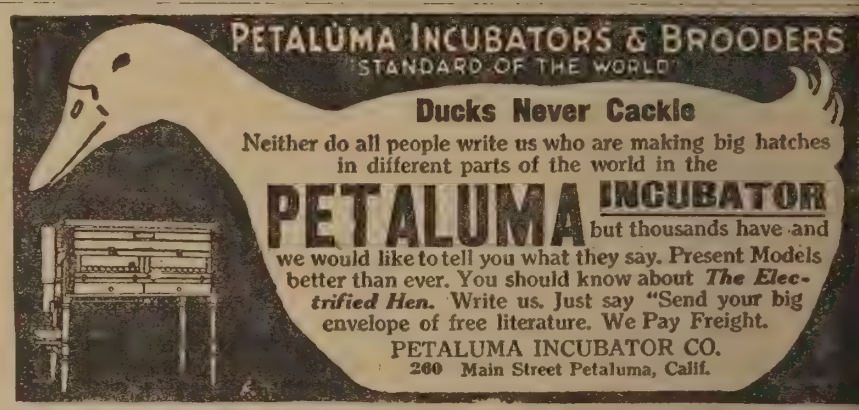
The most important factor in this war is the raising of record crops and bringing new lands into cultivation. The high prices for all products makes this patriotic appeal also of personal advantage to you. Do your bit.

Your Opportunity to Serve Your Country Is in Stevens County.

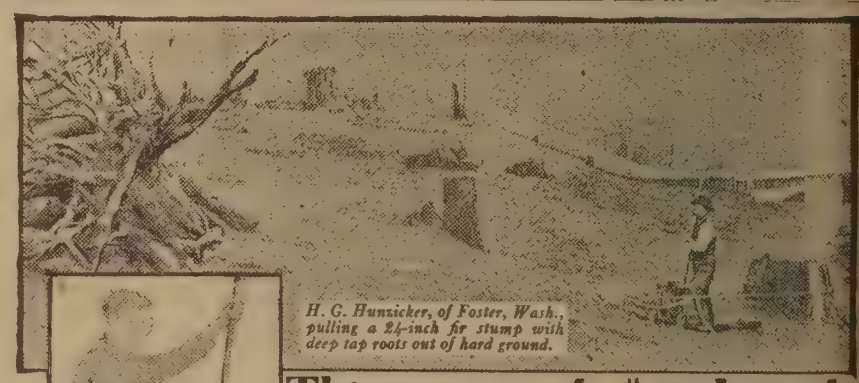
Although prices for all products have increased our low prices and easy terms for logged-off lands near Springdale, Washington, have remained the same.

We will be glad to have you examine the property and talk to the neighboring farmers. Drop us a line when you will be at Springdale, Washington, and our man will be at your disposal.

Phoenix Lumber Co.



Dept. D.



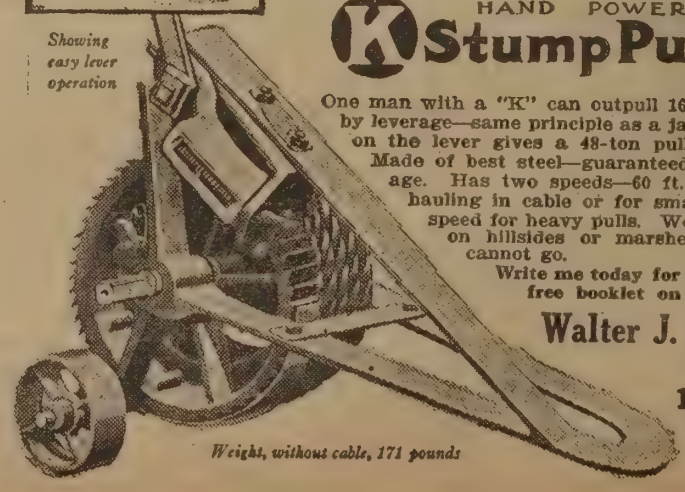
Spokane, Washington.

Please send me your folder on Stevens county logged-off land.

Name .....

Address .....

This man made $35 Land Worth $200 an acre Pulling Big stumps by hand



CLEAR your stump land cheaply—no digging, n expense for teams or powder. Your own righ arm on the lever of the "K" Stump Puller ca rip out any stump that can be pulled with the best inch steel cable. I guarantee it. I refer you to U. S. Government officials. I give highest banking references

HAND POWER
K Stump Puller

One man with a "K" can outpull 16 horses. Work by leverage—same principle as a jack. 100 lbs. pul on the lever gives a 48-ton pull on the stump Made of best steel—guaranteed against breakage. Has two speeds—60 ft. per minute fo hauling in cable or for small stumps—slow speed for heavy pulls. Works equally wel on hillsides or marshes where horses cannot go.

Write me today for special offer and free booklet on Land Clearing.

GRANVILLE LOWTHER
Editorial Contributor

The Life Cycle

Apple Trees and Humans Similar

By GRANVILLE LOWTHER.

Everything in nature seems to have a cycle of germination, growth, fruitage and decay. A man is supposed normally to spend one-third of his life in reaching a normal development, one-third in production and reproduction, and one-third in the gradual decline of his powers. This is not an infallible rule, for many do not reach maturity, many more do not reach the period of gradual decline, but are snatched away by accident, sickness or other circumstances, and others live far beyond the period of expectancy. So it is with all the forms of life, and so it is with trees.

I have been asked recently by investors, "What is the reasonable period of expectancy for an apple orchard?" Men who are accustomed to calculate in terms that cover long periods; periods that include their children or the coming generation, will not highly regard an investment in property that costs two to four times the price of the land without the orchard and yet which will not yield profitable returns for more than 10, 20 or 30 years.

In answer to the question I would say that I could point to orchards that have scarcely reached the bearing period, yet they are dying. They are dying for lack of food and the proper care. In many cases they were planted on soil that was underlaid with rock, or hardpan and the root system can not develop. If it is only a foot to two feet from the surface to a substratum that the roots can not penetrate the trees are bound to be shortlived.

Again I know of orchards where it is only about two to three feet to rock or hardpan. These orchards will live longer, perhaps bear profitably for 10 or 15 years, and then die.

On the other hand there are orchards in the United States that are more than 100 years old and still in profitable bearing. A few years ago I visited the orchard of Mr. Hitchings, about 12 miles from Syracuse, N. Y., and saw a few trees set out by Mr. Hitchings' grandfather, or great-grandfather, I have forgotten which, but these trees were at that time 100 years old. They were healthy, vigorous and in profitable bearing, except that the fruit was not of the best varieties.

The trees had been set in a deep, porous soil, at the foot of a hillside, where the seepage from the hill kept the tree roots always moist, yet where the water could not stand because the porous nature of the soil permitted it to sink away. There was, therefore, naturally perfect underdrainage. Secondly there was an abundant supply of plant food because every year there was more or less wash of the surface soil from the hillside. This surface soil was rich in humus.

Very few orchards are planted where the natural conditions are as favorable as this represents; but the orchardists of the northwest can greatly prolong the lives of their trees ordinarily by opening up the subsoil with tile drainage and by hauling abundant supplies of barnyard manure, or by growing cover crops. Tile drainage is generally meant to carry off surplus water, but it does more than that, it aerates the soil, makes it porous and while it carries off surplus water it also makes less water necessary. If I had to grow an orchard with less than the average amount of water I would tile it. This lets the water down to greater depth, and the tree roots follow it. Then by growing an occasional crop of alfalfa I would feel that my trees would live to an old age and bear profitably.

There is an old apple tree, planted at Fort Vancouver, Wash., in 1825, or thereabouts, and until within the last few years has not had special care. It is still in bearing and is approximately 92 years old.

There is an orchard near White Swan on the Yakima Indian reservation, the property of Klickitat Peter, and five years ago fruit from that orchard was in competition with other fruits at the Washington state fair.

There are occasional orchards, planted by the first settlers in the Yakima valley, about 40 years ago, that are healthy, vigorous, bear heavily and if the fruit were of good commercial varieties, would still be exceedingly profitable. These orchards were generally planted in rich alluvial soils, along the streams, where the roots penetrated the moist subsoil and grew without irrigation.

Proper drainage with plenty of food and water will make the orchards profitable for the next generation.

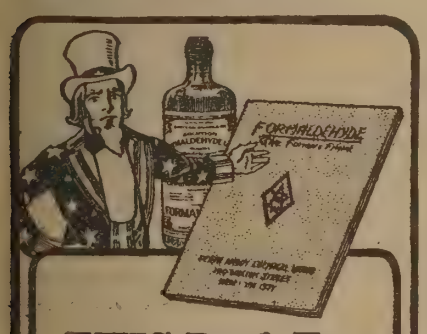
Apple By-Products

Catsup, Pickles and Apple Honey

Apple conservation so strongly urged by the national board of food administration will be given special emphasis at the National Apple show in Spokane during the week of November 19-24 in competitions arranged under the head of "home made byproducts."

In order to make the competition cover as much ground as possible, the apple show trustees have arranged 33 separate contests, embracing apple byproducts in every form, with apple marmalade, apple catsup, crabapple pickles and apple honey as samples. In every contest on preserved apples and similar products packages are limited to two quarts and in jellies and similar products one quart is the limit. The recipe must accompany each entry.

In each of the 33 contests a first prize of $3, a second of $2 and a third of $1 is offered. There are no restrictions as to the number of contests any girl or woman may enter.



A novelty feature in connection with the byproducts contest will be the "Core and Skin Special." This competition will be held on Wednesday, November 21, and the exhibits must consist of jelly or other products made from apple cores and skins in combination. The purpose in holding this contest is to emphasize the fact that every portion of the apple is available for food in some form.

Attractiveness will be a strong feature in guiding the judges, who will also consider food value, taste and number of varieties entered, table decorations and appearance of containers.

This contest is open to any girl or woman in the world. A first prize of $10 is offered and two second prizes of $5 each.

A Tall Man.

Ralph Madsen, aged 18, of Creighton, Neb., who has gone to Omaha in search of a job, is 86 inches tall, weighs 196 pounds and a six-foot man can stand under his outstretched arm without bowing his head. All of Madsen's brothers and his father are more than six feet, but his mother is short.

The Fate of the Unprepared

Among the remarkable events of this war no fact stands out more startlingly than the tragic sacrifice of Russia's unequipped soldiers.

The army has been victimized by intrigue and treachery. Guns were sent to the front without ammunition and ammunition without guns. Supplies were provided that when unpacked proved to be rubbish. Left stranded by communications that broke down under slight pressure the brave Russian troops hurled themselves again and again against foes perfectly prepared.

From the very verge of victory they doggedly fell back fighting with stones and clubs and iron bars, resisting heroically but ineffectively.

No thought can be more abhorrent to Americans than that of our boys ruthlessly slaughtered because of lack of equipment or support which it is the first business of us at home to supply.

Our Government, never before so powerful, is working prodigiously in the preparation of armies and means of warfare. Throughout the nation there is a unity of purpose that is piling on the altar of liberty every personal ambition and corporate gain.

Mines, factories, farms, shipyards, the counting houses and shops of every industry are laboring day and night to supply the sinews of war.

The Bell System is co-operating to mobilize production, transportation and communication, and is using its every energy to speed up American defense.

Washington Game Laws for 1917

The following are the game laws for the state of Washington for 1917:

Open Season.

West of Cascades—Deer (exceptions: Deer in Island and San Juan counties, January 1, 1921; does in Skagit, Snohomish and Whatcom counties, no open season). Goat, October 1-November 1; bear, September 1-May 1; quail (exceptions: Quail in Clallam, Clarke, Jefferson, San Juan, Skagit, Skamania, snohomish and Whatcom, October 1, 1919); ruffed grouse, native pheasants, Chinese pheasants (exception: Chinese pheasants in Clallam, Kitsap and Skamania counties, no open season); blue grouse, ptarmigan, October 1-October 15; duck, goose, brant, coot, October 1-January 15.

East of Cascades——Deer, October 1-November 15; bear, September 1-May 1; ruffed grouse (native pheasant), blue grouse (see exceptions), September 1-November 15.

Exceptions.

In Asotin (in precincts of Clarkston, South Clarkston and West Clarkston, no open season), Garfield and Walla Walla, August 15-October 1. Ruffed grouse in Kittitas and Yakima counties, no open season. Blue grouse in Spokane county, October 1, 1919.

Quail in counties of Asotin (in precincts of Clarkston, South Clarkston and West Clarkston, no open season) and Garfield, October 1-October 10; prairie chicken in Stevens county, September 15-October 1; sharp-tailed grouse in Ferry and Okanogan counties, September 15-November 1; sage hens, Hungarian partridges, male Chinese pheasant in Kittitas county, October 1-October 10; bobwhite quail in Spokane county, October 1-November 1; Hungarian partridge in Lincoln, Spokane and Stevens counties, October 1-November 15; Chinese pheasants in Benton, Stevens and Yakima counties, October 1-October 15; duck, goose, brant, coot, October 1-December 31 (see footnote below).

State Seasons.

Black-bellied and golden plovers, Wilson snipe or jacksnipe, yellowlegs, October 1-December 15; rail, September 16-November 30.

No Open Season.

Moose, elk (1925); fawn, caribou, mountain sheep, squirrels (gray, black, fox), quail, prairie chicken, sage hens, introduced birds (except as above), turkey and dove.

Hunting and Fishing Licenses.

Nonresident: General, $10; fishing, $2. Resident: State, $5; county, $1. Issued by county auditors. No license required of honorably discharged union soldiers of civil war to hunt or fish, or of women and persons under 16 to fish, if residents.

Bag Limits.

One deer in counties east of Cascades. Two deer (one buck in Skagit, Snohomish and Whatcom), one goat in counties west of Cascades. Five in all of partridge, grouse, prairie chickens, Hungarian partridge, Chinese or English pheasants a day or in possession; 10 quail a day; 10 upland birds, but in no event to exceed five if quail are included in bag, and 25 in all a week. In Kittitas county two male Chinese or English pheasants in bag of five upland birds; 20 ducks, geese, brant, golden plover, yellowlegs, Wilson snipe a week (week ends at midnight Saturday), 30 ducks, geese, brant in possession. Possession during close season permitted under permit.

Sale.

Sale prohibited of all protected game.

Export.

Export prohibited of all protected game.

No open season on waterfowl on Columbia or Snake rivers or within one-quarter of a mile of their shores in counties of Benton, Columbia, Douglas, Franklin, Garfield, Grant, Kittitas, Klickitat, Walla Walla, Whitman and Yakima.

Wheat Consumption

England Makes a Cut of One-half

The food administration issues the following:

Under the new regulations of war rationing England has taken upon herself the task of reducing wheat consumption for the forthcoming year to less than half the normal consumption before war began.

Before the war normal consumption of flour in England amounted to 57,678,571 barrels, or 238 pounds per capita per annum. This flour was 71 per cent extract, which means that 71 per cent of the wheat was extracted for the flour and the rest went into by-products, used principally for stock food.

On February 2, 1917, the first war rationing went into effect. This was followed by others and on September 1 the milling regulations were so changed as to provide 81 per cent flour extraction and the compulsory admixture of other grains of 20 per cent. The consumption under this regulation is estimated at only 26,382,857 barrels, or less than 119 pounds per capita, and less than half the normal wheat flour consumption in peace times.

Commencing on September 17 the British government fixed the standard price of flour at $7.38 per barrel and the uniform price for bread at 18 cents for a four-pound loaf, with a one-pound loaf at 5 cents.

Visible Wheat Supply.

The combined aggregate wheat visible supply statistics in bushels, as completed by Bradstreet's since June 30 is as follows:

1917. Week ended	U. S., east of Rockies.	U. S., Pacific coast.	Total U. S.
July 7	16,330,000	2,072,000	18,402,000
July 14	13,408,000	1,741,000	15,149,000
July 21	13,269,000	1,717,000	14,986,000
July 28	10,532,000	1,760,000	12,292,000
Aug. 4	10,162,000	1,530,000	12,692,000
Aug. 11	9,830,000	1,115,000	10,045,000
Aug. 18	9,603,000	952,000	10,555,000
Aug. 25	9,190,000	969,000	10,159,000
Sept. 1	9,614,000	701,000	16,615,000
Sept. 8	10,445,000	694,000	11,139,000
Sept. 15	10,642,000	740,000	11,382,000
Sept. 22	11,529,000	623,000	12,152,000
Sept. 29	12,428,000	644,000	13,072,000
Oct. 6	12,697,000	1,096,000	13,793,000

Sidelights

Fallen Greatness.

"Lizzie does put on such airs. She says the young man she's engaged to is at work in the trenches."

"I know that's strictly true. He's employed by a gas company."—Baltimore American.

Remember.

Son—Father, I'm thinking of taking the political economy course at college.

Alderman Clancy—All right, me son; but remimber this: Ye can't niver depind awn a vote ye buy cheap.—Life.

A Discreet Spender.

Old Lady (who has given tramp a nickel)—Now, how are you going to spend it?

Tramp—Well, ye see, lady, if I buys a tourin car there aint enough left to hire a shofur, so I guess I'll get a schooner; I kin handle that meself.—Boston Transcript.

Nothing Exasperated Intended.

Mrs. Key was visiting home friends, and left the following card to her next-door neighbors:

"Dear Mrs. Garrison—Would you please put out a little food for the cat I have been feeding this winter? It will eat almost anything, but do not put yourself out."—Dallas News.

Alert for the Future.

"You've got a lot of weeds in your garden."

"Pretty fine weeds, too, don't you think?" rejoined Mr. Crosslots.

"Surely you are not nursing them along!"

"Yes, sir. I've been finding out that so many new things are edible that I'm holding out to see whether science don't discover some way of frying the jimson or stewing the burdock."—Washington Star.

A Tongue Twister.

"She stood at the door of the fish sauce shop welcoming him in." How fast can you say that?

Here is another about the famous duel between Shott and Knott. It reads as follows: "Shott shot the first shot, and the shot Shott shot shot not Knott. The shot Knott shot shot not Shott, so Shott shot again, and once more the shot Shott shot shot not Knott. but the shot Knott shot shot Shott, so Knott won notwithstanding."

As She Is Spoke in Siam.

"The king of Siam," said a diplomat, "who is the latest power to declare war on Germany, prides himself upon his English.

"When the king last visited London he met the late Lord Kitchener, whose Egyptian triumphs were still fresh.

"Desirous of telling Lord Kitchener that he was born to command, the Siamese monarch said:

"'Brave lord, you was made to order.'"—Philadelphia Bulletin.

FOR HE'S A JOLLY GOOD FELLOW—UNTIL HE GETS HOME

First U. S. Casualties

Three American Soldiers Are Killed

Official report has been received from General John J. Pershing, who is in charge of the United States expeditionary forces in Frances, that a small party of American soldiers have been vigorously and suddenly attacked by a German detachment and that three Americans are killed, five captured and 12 missing. This is the first official report of any loss of American life on the field of battle. Identification of the dead has not been announced at this writing, nor is it made public who the five men captured and the 12 missing are.

It appears that the incident was planned by the German military authorities for the sole purpose of spilling American blood and effecting American capture, as there is considered no military advantage gained through the action.

The report from General Pershing says that the American soldiers put up a great fight against the odds rushed against them unexpectedly, and that they captured one German soldier. It is presumed other Germans lost their lives in the battle.

Italy Suffers Reverses.

The last week has witnessed one of the greatest single reverses yet suffered by one of the allied nations. Italy, after making gains for weeks, was suddenly faced by a counter attack which was so effective in certain quarters that the Italian army was forced to retreat rapidly in order to avoid wholesale destruction. The retreat was made successfully, though with a loss of probably 100,000 men in killed, captured and wounded. At the present time, however, the Italian forces are making what appears to be a successful stand on the Italian side of the river Tagliamento. While the retreat caused the loss of territory that it had taken Italy months of hard fighting to gain, the reverse was not as severe as it looked at first, when it appeared that Germany and Austria were determined to put Italy out of the war at one fell blow, much as Russia has been put out by a series of blows and by internal disorders. England and France and the United States are rushing aid of very real kind to Italy and it is hoped that out of the near-disaster will grow a unity of purpose in Italy that will ultimately make her a stronger factor in the conflict than she has heretofore been.

Strikes Help the Kaiser.

That the strikes of laboring men in this country are a real factor in aiding Germany is shown by an official report of the Pacific coast district federal reserve bank, which shows that the output of the lumber mills for the month of October was not to exceed three-fourths of a normal output. Largely due to the need of timber for shipbuilding and aeroplane building, the need for the operation of the lumbering industry at maximum capacity is especially great. In like manner it is shown that the shipbuilding industry has been greatly handicapped by the strikes of workmen, thus delaying to considerable extent the construction of ships, without which the country is virtually helpless in her war with Germany.

Telephone Strike Threatened.

Pacific coast cities and rural communities have been threatened with disruption of telephone service as a result of strikes of telephone employes during the past 10 days. Higher wages have been demanded. All effort to reach an agreement between the employing company and the employes appear to have failed, but the government's mediator is at this writing striving to effect a settlement through government regulation. In the meantime, the strike is held in abeyance.

Railroads Do Big Business.

Western railroads are shown by statistics to be doing an unusually large business. The months of May, June and July this year showed an increase in freight handled of about 21 per cent over that of the same months last year. The western lines carried the equivalent of one ton of freigrt 19,000,000,000 miles during those three months as against the equivalent of 15,000,000,000 tons in the same months last year. How greater efficiency in handling freight has been affected is shown by the fact that the actual miles traveled by trains has increased only 15.5 per cent, while the actual mile-tons of freight carried has increased over 21 per cent. This improvement is due in some part to the interest of the farmers and other shippers in loading cars to more nearly full capacity.

In July, 1916, 21.6 tons of freight were loaded into an average car. Better loading had brought this up to 23.8 tons in 1917. Last year the freight trains hauled 608 tons each; this year, 638 tons.

England Wins on Sea.

A week ago announcement came of a German victory in the North Sea in which the allies lost a considerable portion of a freighting fleet of half a score of small vessels. This week comes a similar report showing the destruction by the English navy of a German cruiser and 10 patrol boats which were operating as a patrolling fleet.

Japan in War to Stay.

Japan's full cooperation with the United States in the war until Germany is crushed was pledged by Dr. T. Masao, chairman of the Japanese parliamentary mission to America.

"The Japanese are determined to cooperate with the United States until the last," Dr. Masao said, "and will not stop until our monster enemy, Germany, the pirate of the seas, the assassin of the air and violator of all decencies on land, has been completely crushed. When this monster enemy of ours has been thoroughly beaten down, then and then only shall we have lasting peace."

In explaining that the purpose of the mission's visit to this country was to enable the Japanese to get better acquainted with the United States, he said:

"There is no reason why there should ever by any lack of mutual knowledge, mutual confidence and respect between Americans and Japanese. Let us hope that our association and fellowship in this war will produce so perfect a confidence in each other that the Americans and the Japanese shall always be allies—after the war as well as during the war."

Few Aviation Accidents.

The government committee on public information has issued the following concerning the accidents in training aviators:

There have been to date, in the six and a half months since the beginning of the war, a total of seven accidents, resulting in eight fatalities in connection with the whole training program for America's air army. Of these fatalities, two were caused by men on the ground being struck by the propeller of a machine. The aviation section has been gratified that the fatalities have not been more numerous, especially in view of the hundreds of absolutely new and inexperienced pilots who have been taking the air.

In the selection of aviators especial attention is given to responsibility of character and to general athletic suppleness. The system of training is designed to prevent the occurrence of accidents through inexperience or carelessness. Eight weeks are spent in the preliminary ground training in the theories of flight. Before the men take the air at all they are given careful instruction in running machines along the ground to accustom them to the various controls. Their early flights are made under close supervision with an instructor; and later, when they first fly alone, they are under strict rules for safety.

Can't Mobilize Boys on Four-Minute Plan

(Continued from page one.)

charm the city dwellers with its presence. In fact make it a workable, enjoyable festival time, and when they return to their homes they will surely count the days until they can return again to this happy vacation period. This is also the surest method of eliminating the undesirable help of the I. W. W. and irresponsible misfits that have overrun the horticultural districts of the state.

Now let us analyze the working value of Professor Piper's city boy when turned out of his mobilized training camps for real farm work as he expresses it. I am afraid the very statement of facts proves that Brother Piper is not a farmer, and that he does not realize that it takes a greater amount of traditional experience to run a farm successfully, or to be even an efficient hired man, than in any other occupation. It is a very easy matter to get four minute city men that can grab a few facts and talk to the public in a general way, but that kind of knowledge and preparation has no value in training for successful farm work. Nay, nay, Brother Piper, city bred boys trained in mobilization camps will never have any value as emergency hired men in general farm work. Any kid ten years old raised on a farm, be they boy or girl, would have them skinned a whole mile when it comes to knowing what to do, and how to do it.

For the surplus boy power in our cities we must devise some practical plan to get it occupied in useful and productive employment, by placing the boys where they can best serve, even though the city boy be compelled to go directly to the farm for his employment. The farmer will have to accept him if he can get no other help.

If the war continues, each year that we take large forces of men from productive labor and ship them to the front, labor problems are bound to become more and more acute and we may be forced to utilize the help of women and girls as well as the boys. So we should all plan and work together to the end that the production and conservation of foods may not slacken.

The eastern Washington wheat growers in the dry farming districts are fast stabilizing labor by the introduction of up-to-date cutting and threshing machinery. The small combines will make it possible for the same number of helpers that cultivate and plant the crops in the spring to harvest them in the fall, thereby doing away with the transient harvest laborer.

In these days everybody must work and do their bit. The great labor problem is to distribute this help, so that each individual may do his part where he can best serve.

I am afraid Mr. Piper's mobilization scheme for city boys to become farm helpers on a four-minute plan is too academic for practical results.

Yours very truly,

A. L. ROGERS.

Northwest Live Stock Show Begins

Great Interest in Industry Proved by Entry Lists

The Northwest Live Stock show opens its gates this morning, November 8, at Lewiston, for a week of education along live stock problems. As the final entries were made and the animals assembled at Lewiston indications pointed to probably the greatest show in the history of the organization.

While the exhibition of live stock this year will surpass all records the meeting this year has taken on an unusual character because of the many men of national reputation who will address the stockmen at Lewiston, says Secretary Paul Clagstone. Governors Alexander of Idaho, Stewart of Montana, Lister of Washington, Withycombe of Oregon and Boyle of Nevada are booked as guests at least part of the week. A number of visiting experts from the east, including Secretaries Wayne Dinsmore of the American Percheron society and Evans of the Duroc Jersey association will be heard on Friday. Saturday, November 10, will be stockyards days, and representative delegations are coming from distributing centers at Chicago, Kansas City, Denver, Salt Lake City, Portland and Spokane. In the evening the big annual stockmen's banquet will be held. Monday, November 12, will be an important day, for besides the great Hereford sale, Gifford Pinchot, representing the national food administration at Washington, in the evening will deliver an address covering the whole present live stock situation and future outlook.

Apple Conference Program Announced

In connection with the National Apple show at Spokane, Wash., which begins its tenth annual exposition November 19, an excellent program for the annual fruit growers' conference has been prepared. The conference will be held in the Spokane Chamber of Commerce building beginning Tuesday, November 20, and continuing until Friday afternoon. The following is the list of subjects and speakers, and a general discussion will follow each number on the program:

Tuesday Morning: "Orchard Costs and Economics"—Professor W. S. Thornber, Washington State college, Pullman, Wash.; Leslie L. Palmer, Daniel Hazen Co., Twin Falls, Idaho; R. C. Stockdale, Dufur Orchard Co., The Dalles, Ore.; Professor A. G. Craig, Deer Park, Wash.

"The Labor Problem"—A. L. Rogers, member state council of defense in charge of farm labor; Major E. A. Smith, editor Twice-a-Week Spokesman-Review.

Tuesday Afternoon: "Intercropping, or Using Certain Revenue-Producing Practices in Connection With the Orchard"—Professor C. I. Lewis, Oregon Agricultural college, Corvallis, Ore.

"Live Stock and the Orchard"—Professor E. J. Iddings, University of Idaho, Moscow, Idaho; L. F. Russell, Washougal, Wash.

"Apple Sizes; How to Improve the Size and Grade of Our Northwestern Apples"—Professor O. M. Morris, Washington State college, Pullman, Wash.; Earl Barnhill, Omak, Wash.; J. L. Dumas, Waitsburg, Wash.

"Pruning for Size"—Professor V. R. Gardner, Oregon State college, Corvallis, Ore.

Wednesday Morning: "By-Products of the Apple; Progress Made in the Northwest in the Development of the By-Product Industry"—S. B. Coon, manager Spokane branch, Puyallup and Sumner Fruit Growers & Canning company.

"Evaporators, Progress and Needs; Fruit Susceptible to Evaporation"—Professor C. C. Vincent, University of Idaho, Moscow, Idaho; C. C. Michener, Portland, Ore.; Robert C. Paulus, Salem Fruit Growers' union, Salem, Ore.; F. M. Martin, Yakima, Wash.

"The Obligation of the Grower to Support the By-Products Plant"—Dr. I. D. Cardiff, manager Washington Evaporated Food company, Yakima, Wash.; H. T. Olive, Cashmere, Wash.

"The Community or Home Cannery"—J. O. Ellsworth, county agent, Gooding, Idaho; Mrs. Elizabeth Jones, supervisor Boys and Girls' club, Washington State college, Pullman, Wash.

Wednesday Afternoon: "Packing House and Equipment"—Fred Eberle, manager Yakima County Horticultural union, Yakima, Wash.; Ira Cleveland, Entiat, Wash.; A. W. Stone, manager Hood River Apple Growers' association, Hood River, Ore.; C. W. White, Cashmere, Wash.

"Business Essentials for Fruit Shipping Organizations"—G. A. Nahstoll, United States department of agriculture, Washington, D. C.

"Federal Standardization of Apple Grades; the Proposed National Apple Standard Law"—Led by S. H. Boddinghouse, investigator in marketing, department of agriculture; Wilmer Sieg, Earl Fruit company, Spokane; L. J. Blot, Spokane Fruit Growers' company; C. W. McCullough, Hood River, Ore.; C. A. Malboeuf, Western Oregon Fruit Distributors, Portland, Ore.; M. L. Dean, chief, division of horticulture, state of Washington; F. E. Sickels, manager North Pacific Fruit Distributors, Spokane, Wash.

Thursday Morning: "Pest Control"—Dr. A. L. Melander, Washington State college, Pullman, Wash.; Professor A. C. Burrill, University of Idaho, Moscow, Idaho; D. F. Fisher, U. S. bureau of plant industry, Wenatchee, Wash.

"Actual Experiences in the Yakima Valley"—H. T. Waterbury, North Yakima, Wash.

"Actual Experiences in the Wenatchee District"—F. E. Darlington, Wenatchee, Wash.

"Actual Experiences in the Hood River District"—Leroy Childs, Oregon experiment station.

"Actual Experiences in the Spokane Valley"—Edward Pierce, Opportunity, Wash.

"Actual Experiences in British Columbia"—M. S. Middleton, provincial horticulturist, Victoria, B. C.

Thursday Afternoon: "Practical Use of a War Slogan for Selling Apples"—Colonel E. E. Faville, owner and editor Western Farmer. (The National Apple show is conducting a contest to secure a war slogan for the apple. The 10 best slogans will be submitted to the conference for the decision of the growers themselves during this discussion.)

"Adjusting the Apple Industry to War Conditions"—Charles Hebberd, federal food commissioner, state of Washington, Spokane, Wash.; N. W. Durham, chairman Spokane county council of defense, Spokane, Wash.

"What the Return to Peace Conditions Means to the Apple Industry"—Gordon C. Corbaley, executive secretary Seattle Chamber of Commerce, Seattle, Wash.

Friday: "State Grade and Pack Conference, Beginning at 10 a. m."—Called by and under direction of M. L. Dean, chief, division of horticulture, state of Washington.

Art in America.

The first school of painting to establish itself on American soil was that of Spain, following in the train of viceroys and prelates after the Indian commonwealths had been subjected and Spanish towns had been built. To the present day there exists in the city of Mexico the oldest academy of the fine arts in the western world—the Academy of San Carlos. It is nearly as old as the Royal academy, London.

Raynster

Reg. U. S. Pat. Off.

The hustle and bustle of farm and freight station never stop for rain. Men must be outdoors in the worst of weather.

But—Raynsters have come to rob rain of its annoyances.

This new word "Raynster" is the name of the United States Rubber Company's entire line of weatherproof clothing. And to make sure that you *get* a Raynster when you buy, each coat is labeled.

The Raynster label is your assurance that you are getting a waterproof coat that is serviceable and comfortable and made of the best of materials. Buy by this label—it's your protection.

These practical storm-coats are made with ample room to work. They're made strong and durable. They're made to fit every purpose and person.

Raynsters are of so many different styles and kinds that to say these storm-coats are obtainable to fit the needs of all men, women, boys and girls just starts to tell the story.

Stop at your dealer's and you'll learn the rest about Raynsters. And if you *do*, it's ten to one you take one home.

Send a postal today for interesting book of styles. It shows Raynsters for men, women and children.

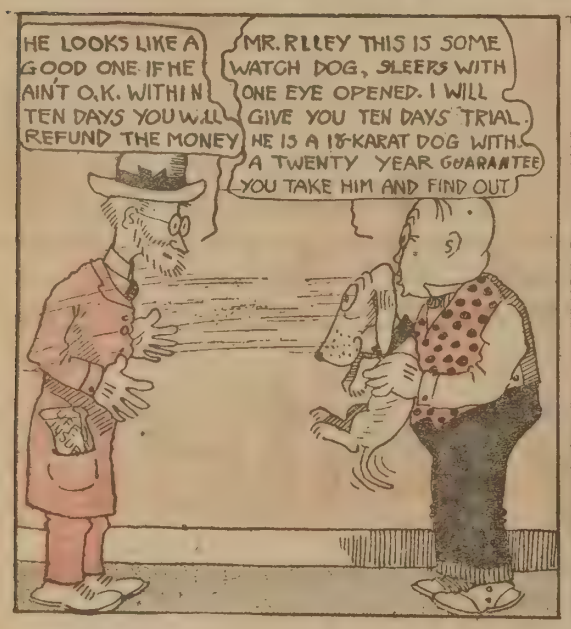
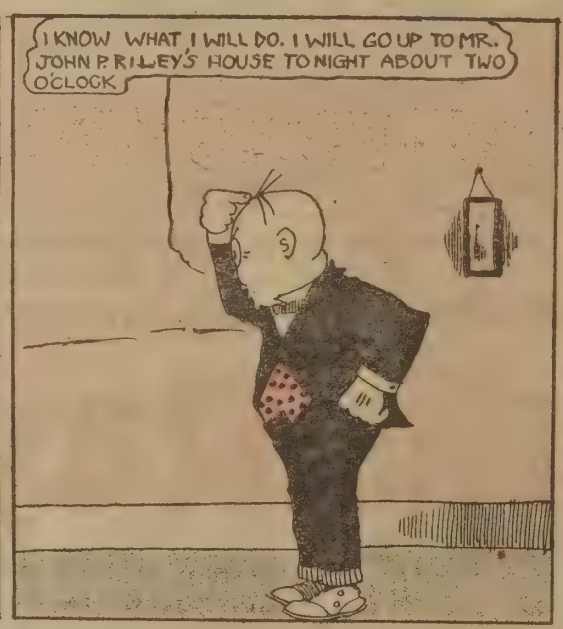
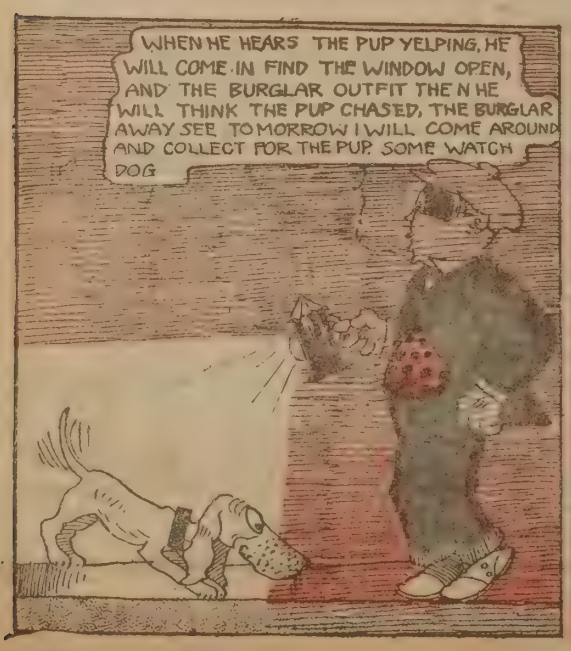
PAPA GETS IN THE WAY OF WILLIE'S LATEST

DEAR TOMMY: I made a slider for Johnny Jones, who is the best batter on our ball team, but runs like an ice wagon. When Johnny tried it first, he jumped too strong and hurdled right on top of Papa. Then Papa made me resign as manager of the club!

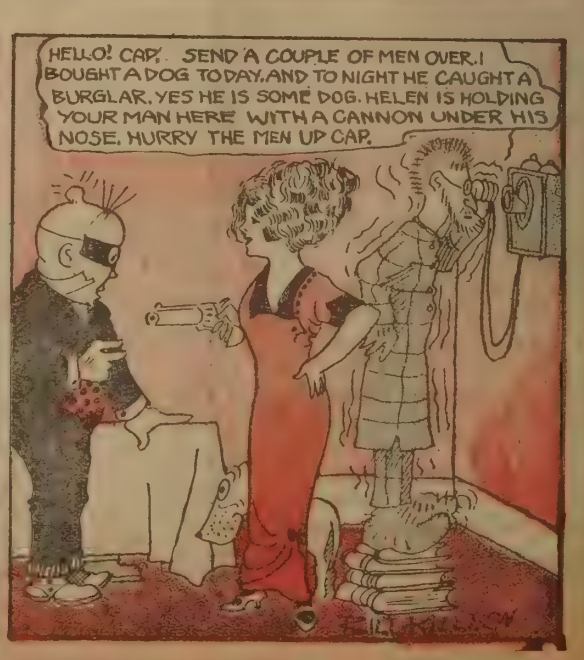


Yours, etc., WILLIE.





PUP PROVES THAT HE IS SOME WATCHDOG



Snohomish Dairy Problems

Association Reports Serious Labor Situation

By PAUL E. TRIEM.

The Snohomish County Dairymen's association held its first annual meeting in Everett, October 2. A large number of representative dairymen attended this meeting, and steps were taken to tighten the heretofore rather loosely organized association into a closely organized business institution. Among the features of the day's program were the detailed explanation of the terms of the contract between the association and its members, given by an attorney; a Liberty loan oration, delivered by a member of the Everett Liberty loan committee; an explanation of the distributor's side of the cost-to-consumer question; a discussion of the various practical details of production and marketing, from the farmer's view point; and the election of a board of five directors.

This board consists of John Lee, representing the Stanwood-Norman district; Ed Holcomb, from the Snohomish district; W. G. Grimm, Arlington district; Gilbert Quale, Island county; and I. S. Thomle.

Among the points brought out during the discussion of the legal side of the contract were several which have caused considerable argument among dubious members up to this time. For instance, in regard to the important matter of a member's ability to get out of the association, once he has signed up, it was explained that any dairyman desiring to go out of the business, either through the sale or lease of his farm; would be perfectly free to do so, but that, on the other hand, the disloyal member who desired to remain in the producing business but to sever his connection with the association for selfish reasons, would find great difficulty in breaking his contract. Financial liability is limited to the authorized capitalization of the association, which is incorporated under the state laws.

The speaker for the Liberty loan committee, who was given an opportunity to address the association directly after the noon hour, told his audience some of the ugly truths about the present war situation which are too often glossed over. Declaring that the people of this country had utterly failed to grasp the significance of the prewar days, he asked whether it was not possible that we are just as blind to the real meaning of what is happening today. After three years of war, during which not one foreign soldier has set foot upon German soil except as a prisoner, the speaker declared:

"Gradually we are awakening to the fact that the nations of the world are facing the greatest military power in history—an organization compared with which that of Napoleon was as that of a corporal's guard! The time for this country to fight," he added, "is while the war is three thousand miles away, rather than at our very doors!"

President John Lee, in an informal address during the afternoon session, brought out the fact that the association had not been formed, as was commonly stated by disaffected interests, primarily to fight the condenseries, or any other organization.

"Our sole purpose in organizing is to attend to our business," President Lee declared. "We are not fighting the condenseries or any other concern, but a time has come when we must look after our own affairs as other business people do. This means organization."

The speaker also called attention to the fact that, according to apparently reliable information in the hands of the dairymen, the federal food commission had agreed upon a price of $5.12 a case, for condensed milk, to be charged by the condenseries on the condition that the latter paid the farmer $3.00 per hundred for his raw milk, during September.

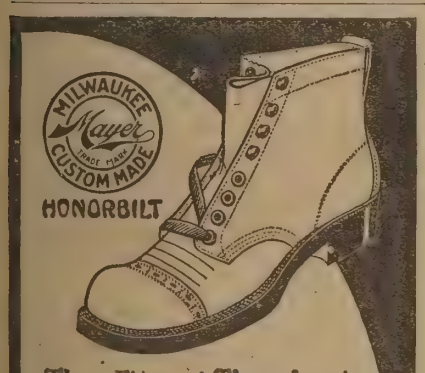
"Did any of you get this price?" President Lee demanded.

In conclusion President Lee brought up the subject of the city milk trade, and requested H. Menzel, a local retailer, to explain why it was that the farmer received but a little over 5 cents a quart to produce the milk, while the distributor received close to 7 cents a quart for his part of the transaction.

Mr. Menzel was ready with his figures. He began with the basic price of from $2.75 to $2.90 per hundred pounds, paid for the milk at the farm. This makes one gallon cost about 24 cents, at this stage of the transaction. Next comes transportation to the city, 2 cents a gallon; 2 cents a gallon loss in handling, due to evaporation, spilling, etc.; 3 cents a gallon for milk bottles, this being worked out on the basis of each bottle making from eight to nine trips; a delivery cost, including wages to driver, team cost, etc., of 10 cents a gallon; pasteurizing and bottling cost, 3 to 4 cents a gallon; making the total cost to the dealer, delivered, about 44 cents for each gallon of retail milk. Some of these figures were questioned by the dairymen, but on the whole the estimate seemed fair. Farther questioning as to the possibilities of saving by eliminating overlapping delivery systems brought out many suggestive ideas, but nothing that could be considered definite information.

The final discussion on the program was perhaps the most important of the day, for it took up the all important matter of labor. Various dairymen expressed the firm conviction that if something is not done to solve this problem, the dairy industry as a whole will have to go under.

"It is no longer a mere question of wages," one of the speakers declared. "We need men to help dig spuds and to help with the cows, and no men are to be obtained at any price."



Another speaker told of one of his neighbors who has been trying for two weeks to secure a milker, but is still unprovided.

"And if we are having this experience at the time of year when labor is usually abundant, what will happen to us during the rush of the next harvest season?" he added.

By unanimous vote, a resolution was passed requesting the board of directors to prepare and send to the federal food commission a resolution requesting aid in this vital matter of adequate farm help. The concensus of opinion was that at a time when so much depends upon food production, it is calamitous for the government to take trained men from the farms, when these same men will have to be replaced in the near future with workers who know nothing about the tasks which confront them.

To Warm the Hands.

For warming the hands there has been invented an asbestos pad within which is a wick to be soaked in benzine and lighted.

IT WILL PAY YOU TO INSERT "WANT" ADS IN THESE STATE FARM PAPERS

RATES ARE LOW

You Reach the Farmers

WHEN our readers send us a "want" ad it is printed in three state papers:

THE WASHINGTON FARMER
THE OREGON FARMER
THE IDAHO FARMER

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.

American Farmer Is Loyal

Spokane Lawyer's Sheer Ignorance of the Facts

For sheer ignorance of facts the following communication from a Spokane lawyer beats anything that has yet come under the Farmer's eye. We do not believe that it would be possible to pack more falsehoods into an equal amount of space:

To the Editor: If the American people by their contribution of blood and treasure succeed in destroying the greatest world menace, the most diabolical blood-thirsty savages, the best organized aggregation of inhuman monsters that have ever been permitted by the supreme power of the universe to encumber the earth, no thanks will be due to the farmers of the Inland Empire in subscribing to the Liberty loans of the government. The disinterested apathy exhibited by them is a disgrace and an insult to the American flag.

Under existing law the farmer is made exempt from military service. He is required to pay practically none of the numerous species of war taxes. A price for his wheat of $2 a bushel has been fixed by law for a two-year period, when it only costs him 50c a bushel to raise it. On account of the war everything the farmer sells has been boosted in price 200 per cent, causing the extreme high cost of living now prevailing, which must be paid by the laboring men and all other who are not farmers.

Nevertheless, the people living in the cities and towns have nearly all subscribed liberally to the Liberty loans, even though a great many were compelled to borrow money to do so, and in face of conditions in the cost of living which produced an enormous strain on their incomes. Even crippled newsboys, blind popcorn vendors, widows, orphans and unfortunate persons in almost destitute circumstances have subscribed their "widow's mite." But the farmer, who in most instances was given his land by the government, and who has become extremely prosperous, sits back in his easy chair, smokes his pipe, his grain warehouses bursting with $2 wheat, his 18c-a-pound hogs trying to break out of the pen, his trees laden with apples worth $3 a box, and refuses to do "his bit," or any part of it, to protect the people of his country from the threatened ravages of the most despicable, ingenious, blood-thirsty, inhuman aggregation of autocratic monsters the world has ever produced.

Mr. Farmer, you are a "slacker." You have no right to be called Americans while you permit others to protect you and you refuse to do your bit.

This accusation does not apply to all farmers, as we know some of them have subscribed liberally to the Liberty bonds, but is intended to apply to that great army of farmers in the country who are real "slackers," and there are thousands of them in eastern Washington. W. H. PLUMMER.

Falsehood 1, that the farmers of this region are not helping to win the war.—Unless the consumers heed Mr. Hoover's appeal, the United States will have only 70,000,000 bushels of wheat this year to send to its allies. In spite of the most adverse weather conditions in the history of the country, the farmers of Washington, Oregon, Idaho and Montana will supply 30,000,000 bushels of that 70,000,000—nearly one half.

Falsehood 2, that the farmer is exempt from military service.—He is not exempt, either in law or in practice. Young men from the farms have enlisted in great numbers. Young men on the farms have been drafted and have gone to the training camps. More of them have been taken than can well be spared if the farmers are to meet the government's crop expectations next year.

Falsehood 3, that the "farmer is required to pay practically none of the numerous species of war taxes."—He is required to pay his part all along the line. There may be some farmer shirkers on the income tax, as there are shirkers in all other lines. If Mr. Plummer knows of such cases it is his duty to report the facts to the collector of internal revenue.

Falsehood 4, that the farmers of the Inland Empire are paid $2 a bushel for wheat that cost them but 50 cents to produce.—The government has cut the price of wheat. Under its regulations the farmers of this region will receive about $1.75 a bushel for a very short yield, for the maximum price of $2.05 is for No. 1 hard wheat delivered at the Coast, and out of that the government will deduct freight charges, discount for soft wheats, and further discount for lower grades than No. 1.

If the government had not intervened, wheat would have gone to $3 a bushel and possibly more. But the farmers would loyally have taken $2, the price they were led to expect from the wording of the law.

It is ridiculous to talk about wheat costs this year of 50 cents a bushel. There was a time when wheat could be grown here for that figure, but that was many years ago. Thousands of farmers in the Pacific northwest will not meet expenses this year.

When the final returns are in the farmers will be found as a class to have bought liberally of Liberty bonds. There are good reasons why they have not bought more. Large numbers of them will make no profits this year. Others in large number will suffer actual loss. The farmers, from the very nature of their isolated lives, can not be reached as quickly by solicitation as the people of the cities. It is physically impossible to organize the country as readily as the town may be organized.

This is no time to engender class hatreds and make class attacks. The farmer could retort that the lawyers are not doing their full part, or the merchants, or the doctors, or the bankers; but that line of recrimination would not help win the war.

We know that the American farmer is as loyal and patriotic as any other class of American citizens. We know that when the history of the war is written it will give him just credit as it should, as it gives him just credit for the great part he has borne in other wars.

Saves Milker's Tempter.

A wire clip to hold a cow's tail against one leg when she is being milked has won a patent for a Michigan inventor.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

What Psychology Really Is and How You Often Use It

Dr. Hirshberg

Strange as it may strike you, psychology is not what many unscientific, but popular writers would have you believe. Actually it is a science which has to do with the business of human activity and conduct.

By means of the carefully checked and controlled observations of many unbiased and just men, who are not influenced by statements, romances or preconceived opinions, and by experiments easily repeated by others, principles, laws and rules are discovered which enable you to tell with some degree of accuracy how an individual or a group of individuals act and adjust themselves to the various situations of everyday life as well as to emergencies.

Professor John B. Watson, head of the department of psychology at John Hopkins university, will say in his next book, to be called "Human Psychology":

"It must be understood at the outset, though, that psychology at present has little to do with the setting of social standards of action, and nothing to do with moral standards. It does lie within its province to tell whether the individual can act in accordance with such standards, and how we may control and lead him to act in harmony with them."

Some Surprising Examples.

Every one employs psychology more or less all his life without knowing it as such. When you fail and learn from failures, it is a problem of psychology. When, after years of unpleasantness, you acquire a knack of working in harness, of getting along with your colleagues and associates, you have mastered a psychological situation.

Whether by skill or bungling you hoe your row or teach your children, you have put psychology to use.

Hit-and-miss methods may be roundabout psychology, but it is practical psychology just the same. Ballyhoo men, barkers and catchers and medicine vendors all use a naive psychology to lure. The "fire sale" and "bargain day" are all "ancient and honorable" schemes of psychological endeavor.

The "Scrouge" who will not devote a "jitney" to true charity can be made to gamble away $10 at a bazar by means of paddles, pocket marbles, grab-bags and other devices.

To apply the art of psychology to a given situation and to predict as to the future, the past activities and behavior of the individual must be known.

The reason you can map out almost as a prophecy what an animal may certainly do in a given variety of situations is because experiments and observations built upon experience and acquaintance indicate almost unerringly what they will again do in like situations.

Creatures of Habit.

With so complex an individual as well trained and thoughtful as man the predictions of future actions are not usually so easy. It is sometimes simple, however, for most men and women, because they are so often slaves to their habits, beliefs and occupations.

Heredity, family traits, occupations, the limits of schooling, temperament, health, sleep, digestion, muscles, neat, amount of food, cold, habits and prospects all come under consideration and lead to a comparatively easy way of prophesying what impends.

The reason a dream is often a truthful and correct psychological summary of what is about to happen is due to the fact that a number of events and situations perceived unconsciously and subtly by the mind are brought to a logical deduction by the untrammelled and uncontaminated fancies of the intellect, undisturbed by the noise and hubbub of the wakeful, workaday physical world.

Natural Gas on Riggs Farm

Furnishes Soft, Clear, Penetrating Light

That one farm home in the Pacific northwest is lighted by natural gas, that rises right on the farm, is probably known to very few people. Yet such is the case. Cass Riggs, nine miles from Dallas, Ore., and a mile and a half from Crowley Station, has every room in his house so lighted with gas that makes a soft, clear and very penetrating light. And the gas well is within 100 feet of the house.

Farm home of Cass Riggs, near Dallas, Ore.

Mr. Riggs is an Oregon pioneer who came across the plains with his parents when a small boy, over 50 years ago. Twenty-six years ago, while digging for water, he struck the first blossom of gas at about 50 feet, after going through a narrow stratum containing salt water. Some 16 or 18 years ago Mr. Riggs had the well sunk to 165 feet and at 150 feet he struck his third and strongest stream of gas. Below the 100 foot level all the water seemed to be salt. Sixteen years ago a pump was put in and ever since then water has been pumped for stock and some for irrigating the garden. The stock do not like the salt water as they do fresh water, of which there is a good well at the house, but they drink it fairly well. The salt is pure and of high grade and an evaporating plant could be cheaply installed.

At intervals gas has been burned at the well and a few years ago a jet was put in which, after water had been pumped awhile, would burn with a great flame. It was only two years ago that Mr. Riggs put in a thoroughly modern plant, with automatic cut-off and had his house piped. When pumping begins, gas comes first, showing that it is constantly rising. Then water and gas are pumped together. In addition to a light in every room a two-burner gas plate has been put in for cooking. The gas burns with a clear blue flame, gives off great heat and is very satisfactory for cooking, but the ladies of the family prefer not to give up their good wood range and it is still used for baking. The gas is odorless and is nonpoisonous. In this it differs from most gases, both natural and manufactured. Mr. Riggs has had many offers of leases, but so far they have been from promoters and he is not going to tie up his place to any one unless positive evidence of real development is in sight. He is not indifferent to the great boon to the Willamette valley or the financial advantage to himself of proof of gas or oil in commercial quantities. But he has a good farm, a happy family and a comfortable living and now he is enjoying the use of natural gas, even if nothing more is ever done.

It is worth stating, however, that there are salt springs in several places in that part of the Willamette valley and that gas has actually been struck in several wells. One of these is a 360-foot well on the Newman place, a few miles from Amity. Gas was also struck in a well being bored for city water, right in the city of McMinnville. Joseph Dubois, proprietor of the Yamhill hotel at McMinnville, and a few others in the valley, are enthusiasts about the prospect for gas and oil. They have reports from two men of national reputation and Professor Smith of the Oregon university recently went over the various prospects, including the Riggs place. All these gentlemen report that the formations are very indicative of both gas and oil; that the salt water is found only in the deposits of the Miocene age and that this is the only age in which deposits that result in gas and oil were made.

Congressman C. N. McArthur, on his last trip home, had his attention called to the gas on the Riggs place and has requested the authorities at Washington to send a scientist who will make an exhaustive report. I believe his request has already been granted. Perhaps the time is near when the Willamette valley will welcome a great oil region as a part of California did a few years ago. If so, it will no doubt cause an era of great development and the farmers will share in the accruing prosperity. But whether so or not, the valley will continue to be productive and prosperous and Mr. Riggs at least will continue to have the advantages of burning his own natural gas. H. A.

THE BARRIER

SYNOPSIS.

Gale is trader of Flambeau, a frontier on the Yukon. Lieutenant Burrell is sent to this camp to preserve order. The day of his arrival Necia, Gale's daughter, returns from a mission school. As she and Burrell are talking, two halfbreed children and a squaw appear, and Necia, noting the lieutenant's look of disgust, informs him that they are her mother, brother and sister. Poleon Doret, a Frenchman, returns from Dawson, and on the same boat comes Runnion, a desperado. In attempting to make Runnion leave Flambeau, Burrell is shot by him and only the quick hand of Poleon saves him.

As Necia is arrayed in a ball gown, which Poleon brought her from Dawson, Burrell happens in. He is amazed at the ease with which she wears the dress and at the fairness of her skin. She confesses to a feeling that she, Necia, should be called "Merridy."

"No Creek" Lee, a prospector, after years of hard luck, makes a big strike. Runnion returns, and with him Stark, who has come to grubstake the miners and open a saloon. Stark causes Gale and the Squaw Alluna, great uneasiness. The men of the camp leave for Lee's claim, Necia, longing for riches so she may become like other girls, begs Burrell to follow them with her. Burrell knows that Necia is coveted by half the men in the camp and that it would cause a great uproar should he spend a night alone with her in the woods. This would be an easy way to compel them to an open state of enmity, which would be preferable to the indifferent toleration which he has met among them. This together with her entreaties and the confession that she loves him, sweeps aside all discretion and together they start on the journey.

Poleon Doret sang gaily as he set out for the claim with Gale. Here was a gift of wealth for him to lay at the feet of Necia with his laughter, his music and his heart. On the way Gale tells him the story of a good girl, loved by two men, a good man and a bad man, and how the he-devil had won in the game of love. That night the party camps in the woods, Stark, Runnion, Lee, Poleon and Gale. In the morning they draw straws to see who will have first choice of claims, Gale and Poleon receiving the lucky ones.

CHAPTER VI.

The Burrell Code.

Not until his dying day will Burrell lose the memory of that march with Necia through the untrodden valley, and yet its incidents were never clear-cut nor distinct when he loked back upon them, but blended into one dreamlike procession, as if he wandered through some calenture where every image was delightfully distorted and each act deliciously unreal, yet all the sweeter from its fleeting unreality. They talked and laughed and sang with a rush of spirits as untamed as the waters in the course they followed. They wandered, hand-in-hand, into a land of illusions, where there was nothing real but love and nothing tangible but joy. The touch of their lips had waked that delight which comes but once in a lifetime and then to but few; it was like the moon-madness of the tropics or the dementia of the forest folk in spring. A gentle frenzy possessed them, rendering them insensible to fatigue and causing them to hurry the more breathlessly that they might sooner rest and sit beside each other. At times they fell into sweet silences where the waters laughed with them and the trees whispered their secret, bowing and nodding in joyous surprise at this invasion; or, again, the breezes romped with them, withdrawing now and then to rush out and greet them at the bends in boisterous pleasure.

They held to the bed of the stream, for its volume was low and enabled them to ford it from bar to bar. Necia had been raised in the open, with the wild places for her playground, and her muscles were like those of a boy, hence the two swung merrily onward, as if in playful contest, while the youth had never occasion to wait for her or to moderate his gait. Indeed, her footing was more sure than his, as he found when she ventured out unhesitatngily upon felled logs that lay across swift, brawling depths. The wilderness had no mystery for her, and no terrors, so she was ever at his side, or in advance, while her eyes, schooled in the tints of the forest, and more active than those of a bird, saw every moving thing, from the flash of a camprobber's wing thorugh some hidden glade to the inquisitive nodding of a fool hen where it perched high up against the bole of a spruce. They surprised a marten fishing in a drift-wood dam, but she would not let the soldier shoot, and made him pass it by, where it sat amazed till it realized that these were lovers and resumed its fishing. Gradually the stream diminished, and its bowldered bed became more difficult to traverse, until, assuming the airs of a leader, the girl commanded him to lay off his pack, at which he pretended to obey mutinously, though thrilling with the keenest delight at his own submission.

"What are you going to do?" he inquired.

"Mind your own business, sir," she commanded, sternly.

From her belt she drew a little hunting-knife, with which she cut and trimmed a slender birch the thickness of his thumb, whereupon he pretended great fright, and said:

"Please! please! What have I done?"

"A great deal! You are a most bold and stubborn creature."

"All pack animals are stubborn," he declared. "It's the only privilege they have."

"You are much too presumptuous, also, as I discovered in your quarters."

"My only presumption is in loving you."

"That was not presumption," she smiled; "it was preemption. You must be punished."

"I shall run away," he threatened. "I shall gallop right off through the wood and—begin to eat grass. I am very wild."

As she talked she drew from her pocket a spool of line, and took a fly hook from her hat; then, in a trice, she had rigged a fishing rod, and, creeping out upon a ledge, she whipped the pool below for a half dozen rainbow trout, which she thrust into his coat while they were still wriggling. Then she as quickly put up her gear, and they resumed their journey, climbing more steeply now, until, when the sun was low, they quit the streambed and made through the forest towards the shoulder of an untimbered ridge that ran down into the valley. And there, high up on the edge of the spruce, they selected a mossy shelf and pitched their camp.

They had become so intimate by now as to fall into a whimsical mode of speech, and Necia reverted to a childish habit in her talk that brought many a smile to the youth's face. It had been her fancy as a little girl to speak in adjectives, ignoring many of her nouns, and its quaintness had so amused her father that on rare occasions, when the humor was on him, he also took it up. She now addressed herself to Burrell in the same manner.

"I think we are very smarts to come so far," she said.

"You travel like a deer," he declared, admiringly. "Why, you have tired me down." Removing his pack, he stretched his arms and shook out the ache in his shoulders.

"Which way does our course lie, now, Pathfinder?"

"Right up the side of this big, and then along the ridge. In two hours we come to a gully running so"—sne indicated an imaginary direction—"which we go down till it joins another stream so, and right there we'll find old 'No Creek's' cabin, so! Won't they be surprised to see us! I think we're very cunning to beat them in, don't you?" She laughed a glad little bubbling laugh, and he cried:

"Oh, girl! How wonderful you are!"

"It's getting very dark and fierce," she chided, "and all the housework must be done."

So he built a fire, then fetched a bucket of water from a rill that trickled down among the rocks near by. He made as if to prepare their meal, but she would have none of it.

"Bigs should never cook," she declared. "That work belong to littles," then forced him to vacate her domain and turn himself to the manlier duties of chopping wood and boughs.

First, however, she showed him how to place two green foot-logs upon which the teapot and the frying pan would sit without upsetting, and how long she wished the sticks of cooking wood. Then she banished him, as it were, and he built a wickiup of spruce tops, under the shelter of which he piled thick, fragrant billows of "Yukon feathers."

Once while he was busy at his task he paused to revel in the colors that lay against hill and valley, and to drink in the splendid isolation of it all. Below lay the bed of Black Bear creek, silent and sombre in the creeping twilight; beyond, away beyond, across the westward brim of the Yukon basin, the peaks were blue and ivory and gold in the last rays of the sun; while the open slopes behind and all about wore a carpet of fragrant short-lived flowers, nodding as if toward sleep, and over all was the hush of the lonely hills. A gust blew a whiff of the camp smoke toward him, and he turned back to watch Necia kneeling beside the fire like some graceful virgin at her altar rites, while the peculiar acrid outdoor odor of burning spruce was like an incense in his nostrils.

He filled his chest deeply and leaned on his axe, for he found himself shaking as if under the spell of some great expectancy.

"Your supper is getting cold," she called to him.

He took his seat beside her on a pile of boughs where the smoke was least troublesome; he had chosen a spot that was sheltered by a lichen-covered ledge, and this low wall behind, with the wickiup joining it, formed an enclosure that lent them a certain air of privacy. They ate ravenously, and drank deep cupfuls of the unflavored tea. By the time they were finished the night had fallen and the air was just cool enough to make the fire agreeable. Burrell heaped on more wood and stretched out beside her.

"This day has been so wonderful," said the girl, "that I shall never go to sleep. I can't bear to end it."

"But you must be weary, little maid," he said, gently; "I am."

"Wait, let me see." She stretched her limbs and moved slightly to try her muscles. "Yes, I am a very tired, but not the kind of tired that makes you want to go to bed. I want to talk, talk, talk, and not about curselves either, but about sensibles. Tell me about your people—your sister."

He had expected her to ask this, for the subject seemed to have an inexhaustible charm for her. She would sit rapt and motionless as long as he cared to talk of his sister, in her wide, meditative eyes the shadow of a great unvoiced longing. It always seemed to make her grave and thoughtful, he had noticed, so he had tried lately to avoid the topic, and tonight in particular he wanted to do so, for this was on time for melancholy. He had not even allowed himself to think, as yet, and there were reasons why he did not wish to do so; thought and realization and a readjustment of their relations would come after tonight, but this was the hour of illusion, and it must not be broken; therefore he began to tell her of other people and of his youth, making his tales as fanciful as possible, choosing deliberately to foster the merry humor in which they had been all day. He told her of his father, the crochety old soldier, whose absurd sense of duty and whose elaborate southern courtesy had become a byword in the south. He told her household tales that were prized like pieces of the Burrell plate, beautiful heirlooms of sentiment that mark the honor of high-blooded houses; following which there was much to recount of the Meades, from the admiral who fought as a boy in the Bay of Tripoli down to the cousin who was at Annapolis; the while his listener hung upon his words hungrily, her mind so quick in pursuit of his that it spurred him unconsciously, her great, dark eyes half closed in silent laughter or wide with wonder, and in them always the warmth of the leaping firelight blended with the trust of a new-born virginal love.

Without realizing it, the young man drifted further than he had intended, and further than he had ever allowed himself to go before, for in him was a clean and honest pride of birth, like his mother's glory in her forebears, the expression of which he had learned to repress, inasmuch as it was a Dixie land conceit and had been misunderstood when he went north to the academy. In some this would have seemed bigoted and feminine, this immoderate admiration for his own blood, this exaggerated appreciation of his family honor, but in this southern youth it was merely the unconscious commendation of an upright manliness for an upright code. When he had finished, the girl remarked, with honest approval:

"What a fine you are. Those people of yours have all been good men and women, haven't they?"

"Most of them," he admitted, "and I think the reason is that we've been soldiers. The army discipline is good for a man. It narrows a fellow, I suppose, but it keeps him straight."

Then he began to laugh silently.

"What is it?" she said curiously.

"Oh, nothing! I was just wondering what my straight-laced ancestors would say if they could see me now."

"What do you mean?" the girl asked, in open-eyed wonderment.

"I don't care," he went on, unheeding her question. "They did worse things in their time, from what I hear." He leaned forward to draw her to him.

"Worse things? But we are doing nothing bad," said Necia, holding him off. "There's no wrong in loving."

"Of course not," he assured her.

"I am proud of it," she declared. "It is the finest thing, the greatest thing that has ever come into my life. Why, I simply can't hold it; I want to sing it to the stars and cry it out to the whole world. Don't you?"

"I hardly think we'd better advertise," he said, dryly.

"Why not?"

"Well, I shouldn't care to publish the tale of this excursion of ours, would you?"

"I don't see any reason against it. I have often taken trips with Poleon, and been gone with him for days and days at a time."

"But you were not a woman, then," he said, softly.

"No, not until today, that's true. Dear, dear! How I did grow all of a sudden! And yet I'm just the same as I was yesterday, and I'll always be the same, just a wild little. Please don't ever let me be a big tame. I don't want to be commonplace and ordinary. I want to be natural—and good."

"You couldn't be like other women," he declared, and there was more tenderness than hunger in his tone now, as she looked up at him trustingly from the shelter of his arms. "It would spoil you to grow up."

"It is so good to be alive and to love you like this!" she continued, dreamily, staring into the fire. "I seem to have come out of a gloomy house into the glory of a warm spring day, for

(Continued on page twenty-four.)

Many new subscribers, becoming interested in our serial story, "The Barrier," have expressed a desire for previous chapters which would give them a better review of the story than is possible in the short synopsis of previous chapters running with each instalment.

As the issues of The Farmer containing these chapters have been exhausted, we have decided to print next week a very full and comprehensive synopsis of the previous chapters of the story. With this extended synopsis any reader will get a satisfactory and intelligent review of the previous chapters of "The Barrier" so that he will be practically at home with the remaining instalments of this most striking serial.

All subscriptions beginning with next week's issue will contain this extended review of the previous chapters.

All the World's a Stage, and All the Men and Women Merely Players

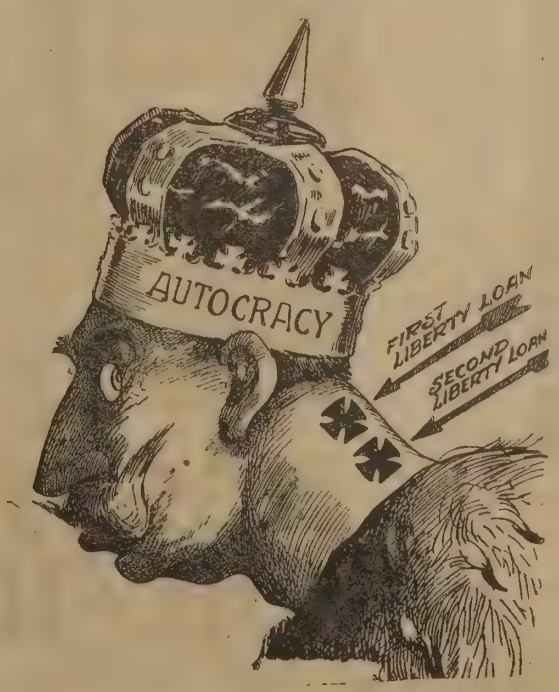
Lifts Pilot and 20 Men 7000 Feet

The Handley-Page is Britain's largest and most famous bomber. It has lifted a pilot and 20 passengers to 7000 feet during a test flight. The Germans captured one of these machines last year and gave its size as 98 feet span, 65 feet length of fuselage, having two 280-horsepower Rolls-Royce engines. It is a magnificent machine, larger, faster and in many ways far superior to the Gothas.



College Girls Till the Soil

Copyright by International.

Vassar college girls, who for some time past have been learning agriculture at the institution's experimental farm, have shown by results that they can farm with the best of men. They demonstrated their skill as farm laborers at the Eastern States exposition and dairy show, which opened recently at Springfield, Mass.

Editorial Contributor.

To Remove Scorch

Scorch upon cotton and linen sometimes can be removed if the fibers are not actually burned. Wool and silk are disintegrated at a lower temperature than cotton and linen and can not be restored to their original condition after being scorched, says a bulletin on the removal of stains from clothing and other textiles, issued by the United States department of agriculture. For removing slight scorch stains from cotton and linen use one of the following agents:

1. Water and Sunlight—Wet the spot with water (or soap and water) and expose to the sun for a day, or longer if necessary. The scorch disappears much more slowly if the material is not moistened before exposure.

2. Bread Crust—Very slight scorch on the surface of materials which are not especially delicate sometimes can be rubbed away with a bread crust.

Wheat Substitutes

Upon us, as a nation, has devolved the duty of providing food materials for a great number of people, at a time when certain staple crops are not sufficient to meet the demand, says Nell McConnell, professor of home economics, Idaho Technical institute. Our supply of wheat can not do what it has formerly done—that of furnishing 31 per cent of the total fuel value of the American diet, and leave any for our neighbors—therefore, we must substitute.

Most housewives are somewhat familiar with the use of cornmeal and whole wheat and graham flours. However, whole wheat and graham flours are not really substitutes, and most of us tire of cornmeal easily, so why not look about and see what we have at our disposal? We have belonging to the class of cereal grains—all of which are very similar in composition and food value to wheat—rye, barley, buckwheat and oats. Rye flour, as it is prepared for the market, is more nearly like wheat than any of the others. Consequently it is possible to substitute it for white flour in most of our recipes, getting practically the same texture, but a little difference in flavor and color. For instance, biscuits may be made very satisfactorily using all rye or half rye flour. Follow your usual method of making yeast bread and substitute rye flour for from one-half to two-thirds the amount of flour used. Try it in muffins, and even in spice cake or gingerbread, and you will probably decide that you can "do your bit" in saving wheat at not a very great sacrifice after all.

Muffins and bread made from rolled oats are very popular with people familiar with them. I would suggest these recipes:

Quaker Muffins.

Rolled oats, one cup.
Flour, one cup.
Sugar, three tablespoons.
Baking powder, four teaspoons.
Salt, one-half teaspoon.
Milk, one cup.
One egg.
Fat, one tablespoon.

Scald milk, pour on rolled oats, and let stand one-half hour before mixing. Mix and sift dry ingredients and add to the rolled oats and milk mixture. Add egg slightly beaten and melted fat. Beat well and bake in greased muffin tins one-half hour in a moderately hot oven.

Oatmeal Bread.

Rolled oats, two cups.
Boiling water, two cups.
Molasses, one-half cup.
Yeast, one cake.
Lukewarm water, one cup.
Salt, one teaspoon.
Fat (melted), one tablespoon.
Bread flour, seven cups.

Scald the rolled oats with the boiling water and let stand until cold. Soften the yeast in the lukewarm water and add to the first mixture when cool. Add the molasses, salt and melted fat. Stir in the bread flour. Turn on a floured board and knead. Return to bowl and let rise until double in bulk. Cut down, shape in loaves and let rise until double again. Bake in a moderate oven 45 to 60 minutes. This makes three loaves. Fleischmann's or compressed yeast is used in the original recipe. If dry yeast is used start it as for any other bread.

War Bread.

Rye flour, one and one-quarter cups.
Whole wheat flour, three cups.
White flour, 12 cups.
Lukewarm water, five cups.
Salt, one and a half tablespoons.
Yeast, two cakes.

Note—All measurements in recipes given are level.

Savory Potato Dishes

When all the family gathers around the comfortable supper table every housekeeper takes pride in the substantial hot dishes she places before them. Nowadays an all-meat dish is out of the question, but a combination with potatoes will stretch the meat flavor and make an equally satisfactory offering.

Here are some potato combinations that will please a hungry supper crowd:

Potato Pie.

To one quart of hot boiled potatoes add enough hot milk to moisten. Season with butter and salt. Mash in kettle in which they were boiled and beat with a fork until light. Stir in half a cup of minced ham. Have ready four hard boiled eggs and half a cup of stock or gravy. Arrange potatoes and sliced eggs in dish in alternate layers, with potatoes forming top and bottom layers. Moisten with the gravy. Brush over the top with milk or egg and brown in hot oven.

This dish can be arranged in three layers, with the middle layer some kind of meat hash bound together with egg or thickened gravy.

Family Potatoes.

Use six cold or freshly boiled potatoes. Cut into quarters and put in saucepan with a pint of gravy or soup stock. Add one chopped onion, salt and a little red pepper. Simmer on back of stove half an hour before serving.

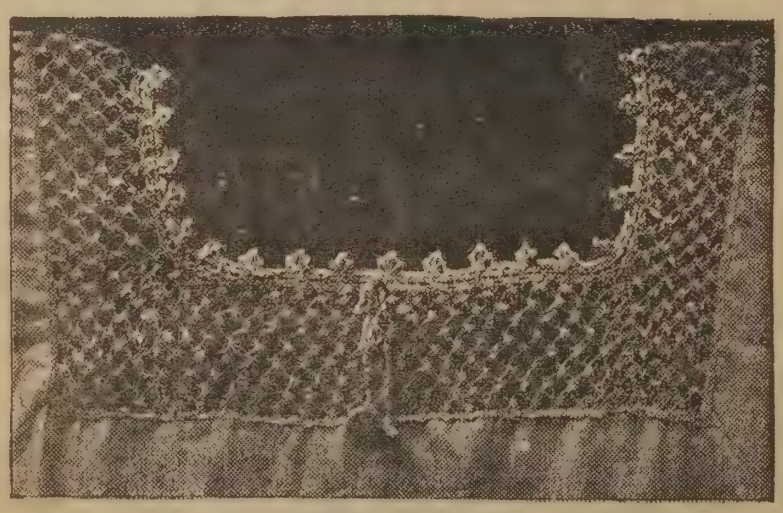
Potato Roll.

Heat one pint of mashed potatoes and half a cup of milk in saucepan. Add one tablespoon of chopped parsley, salt and a little red pepper or paprika. Stir in four well beaten eggs and mix thoroughly. Remove from fire and beat until light. Heat one tablespoon of fat in frying pan and spread the potato mixture evenly over the pan. Cook until golden brown. Roll like an omelet and serve smoking hot.

Red pepper or paprika is preferable to black pepper in these potato dishes.

Soap making at home is not to be despised in these days of advancing thrift, so it is not surprising to receive the request from one of our subscribers for some of our women readers to give their experience in making soap from the waste fats in the kitchen.

Can Spring Chicken.



A good way to have spring chicken at any time of the year is to can them. Season and fry as though preparing for serving directly on the table. Fry until the meat is about three-fourths done, then pack at once into hot jars, pour liquid from the griddle over the chicken, partially seal, then place jars on a rack in a vessel with enough water to cover jar one inch and boil for one and one-half hours, then seal the cans tight. Be sure to use good new rubbers. A good rubber should regain its shape after being tretched and should stand bending without breaking.

Eat More Poultry.

There's no law against eating turkey before and after Thanksgiving, as well as on the national holiday. The more poultry Americans eat at home the more red meat we can spare the boys in France and our allies.

Crochet and Tatting Designs

By WINIFRED WORTH

LOVERS' KNOT YOKE.

Crochet workers always appreciate yoke designs. This one of many novel motifs is especially chic and attractive.

Two balls No. 60 Cordonnet.

Begin with 5 knot st. and continue until desired size is made.

For Edge. 1st Row—Ch. 5, 1 t. in top of knot st. Ch. 2, 1 t. in next t. st. Continue around neck, join.

2d Row—Ch. 5, 1 t., ch. 3. To make p.: 2 ch., 1 dt., 1 p., 2 ch., 1 t., 1 p. All in 1 sp. Ch. 2., 6 dc., in next 2s. Repeat until end and join.

To make cord or draw strong: Take two lengths of thread and ch. one and one-half yards for cord. Medallion ch. 3. Join to cord, fill in with 16 t., join.

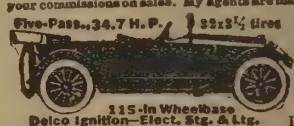
ATTENTION!
Every Red Blooded American!

PRESIDENT WILSON'S reply to His Holiness Pope Benedictus' Peace note gives the clearest and most complete reason why the United States of America is at war with the Imperial German Government.

It is a momentous document and will go down in history as being "one great masterpiece" equal to, if not greater, than the Declaration of Independence.

Every home should have a copy framed and kept where you may look upon it with the respect and reverence it deserves.

"A Most Patriotic Christmas Gift."



We have reproduced this "Reply" and illuminated it in a most beautiful manner, using the highest skill known to the Printer's and Engraver's Art.

The size is 14x17 inches. Single copies mailed to any address in the United States or Canada, 60c. Two or more copies at 50c each. Stamps accepted.

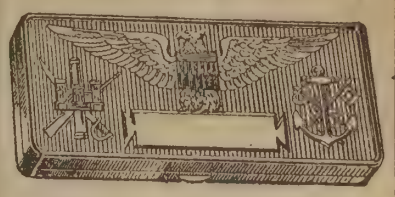
Baked Apple Butter.

A Kansas City woman says she solves the problem of stirring apple butter by putting it in the oven and baking it. She washes the apples and runs them, unpeeled, cores and all, through a food chopper. She then puts them in a kettle in the oven with a little water and lets them cook till soft. They are then run through a colander, sweetened and seasoned to taste. No stirring nor sticking down by this method.

Violin Music for Names of Three Violin Players



ALOHA OE

We give you a 50 cent Music Book of 23 select pieces for Violin in easy arrangement, printed on fine paper. Send us names and addresses of three violin players. We want every violin player to have our musical magazine, "The Musicians' Mouthpiece." Easy orchestra Books and Music. Strings for all instruments, etc. **Enclose 10c for mailing this Music Book.**

The Nation's Strength

is not only in the mailed fist but in the hand of industry—the hand of health. It behooves all of us to be strong and keep strong, in order to carry the present day burden.

As a strength-giving food product Ghirardelli's Ground Chocolate is an ideal blend of foods—cocoa and pure sugar, each full of elements that supply energy and build up worn tissues.

A tablespoonful of Ghirardelli's Ground Chocolate, 1c. worth, makes not only a delicious but an unusually nutritious beverage. Drink daily a cup of

Ghirardelli's Ground Chocolate

Comes in ½ lb., lb. and 3 lb. cans.

D. GHIRARDELLI COMPANY

Since 1852 San Francisco

Dear Boys and Girls: I heard a speaker say the other day that all our friends across the sea and all our soldiers would have plenty to eat if only we—all of us—would help a little. It is hard to help a little; it is hard to remember. It is not easy to know that we can help by doing without just a little. We think—

"Well, just one more slice of bread and butter won't make much difference."

"Just a little more jam or sugar won't make much difference."

One teaspoonful of sugar less for all the people in the United States will make a lot of sugar every day. Somebody told me that it would make 200 tons of sugar. What a lot it is, and how many people it would help!

We can not send our teaspoonfuls of sugar to the soldiers and the poor, starving people, but if we save our little, we won't have to use so much, and there will be more in the world.

Le us do our little bit every day; let us try to remember every day to take a little less. We will be helping every time we save.

I would not want my little nieces and nephews to go hungry as so many poor little children have to do in Europe, but let's not waste a thing that we do not need. I should like to have you write me about it—how you save and what you are doing each day.

Loving, AUNT NELLIE.

Named Uncle's Calf Clover.

Dear Aunt Nellie: This is my third letter to the Cousins' Corner. Our school started the first of October. We have a nice teacher. We have lots of fun at school. There are only 10 children in our schol. One of my uncle's cows had a calf, and they let me name it. I named it Clover. Mama and two of my brothers and I were picking blackberries today. We couldn't find one of our cows. She was gone two days and one night before we found her. Her name is Darling. The new horse I told you that we were going to get is a nice horse, but I don't like to ride him. His name is Jim. I do not like that name. I like Pride, Dave and Billie for horses' names. I am writing to three of the cousins. Their names are Lillian Deerpop, Laura Lee and Viola Augst. I haven't heard from Viola yet. I got a picture from Lillian Deerpop. She is a nice looking girl and writes a nice letter, and so does Laura Lee. They both seem very nice. I can ride horseback and do other work outside. I would like for some of the cousins to write to me and I surely would answer them. Aunt Nellie, I will write again.—Iris Chevalier, Prevost, Wash.

Esther Reads the Corner Every Time.

Dear Aunt Nellie: This is the first time I have written to the Corner. I read it every time. I try to get it first. I am 10 years old. I am in the sixth grade. My teacher's name is Miss Harrold. I like her very much. I like to go to school, too. I like arithmetic, spelling and reading the best of my studies. We have two horses. Their names are Ben and Nigar. Ben is brown and Nigar is black. When the sun is hot they shine and look very pretty. We have one cow. Her name is Daisy. She is red and white. We have one cat. Its name is Patrick. It is black. We have one dog. Its name is Pedro. It is white. I have six sisters. One is married. I have one brother. I would like to hear from some of the cousins soon. I like to read letters and get them but I can not write a good one. I think I will close for this time and hope to write again. —Esther Dorn, Box 46, Naches, Wash.

Muggins Does Many Cute Tricks.

Dear Aunt Nellie: The first money I ever earned I carried wood and did errands for a neighbor and helped my mama. This summer I sold papers and Collier's; this fall I earned $4 in five days picking cranberries. I have the cutest maltese kitten named Queenie and a white and tan puppie named Muggins. It is not much larger than Queenie and it carries little sticks of kindling and puts them in the woodbox, but jumps in the box, too, every time, and carries a small roll of paper, too, and does so many cute tricks it would take too much space to tell them. If any boy or girl will write me I will tell them how I train my dog. Enclose stamp for reply. I was 10 years old the 22d of last August. Have I a twin?—Charles W. Colvin, Longbeach, Wash.

An Enthusiastic Corner Booster.

Dear Aunt Nellie: I was very much surprised when I saw my name in the prize list of our Corner and I felt glad, too. I received the pretty prize which were the lovely bulbs, and thought them magnificent. I could not express my many thanks to you for them, but I hope you realize I fully appreciate them. I am going to begin at once growing my bulbs, and I hope that I can watch each step in their growth. I am going to take care of them myself. My, I do hope that our Corner may increase, since it encourages us to write to it, and the beautiful prizes it offers would entice any one to write. I am going to ask my chums to write, and that will help it to increase until it will get so large the editor of The Farmer will allow us another extra page for our Corner. Now, Aunt Nellie, don't you think if all the cousins felt as enthusiastic about this as I that we should have more space for our letters? I know there are more letters coming in each day, and each one wants their letter published, so each one get right in and dig, and I think we will win our other space for our letters. I do not think the editor will be hard to coax letting us have another page for the Corner. I will close saying, "Hurrah for Aunt Nellie and long live the Corner!"—Gladys Powell, Box 76, Edison, Wash.

Not So Much Fun in the City.

Dear Aunt Nellie: This is the first time I have written to the Corner. I enjoy reading the cousins' letters. I am 8 years old and I will be 9 years old the 12th of March. I live on a farm. I like to live on a farm better than in a city. For in the city you can not roam about and have so much fun. I go to Howard school. In summer we walk and in winter we drive. I like my teacher fine. Her name is Miss Thompson. We have four sheep, five calves and eight horses. One of the horses is a riding pony. I like to ride her. I ride her after the cows. She is dark brown in color and her name is Fly.—Jimmie Prince, Sunset, Wash.

To Have a Play Shed at School.

Dear Aunt Nellie: This is the first time I have written to the Corner, but I hope it won't be the last. My father takes The Farmer and I enjoy reading the Corner letters. I live on a five-acre farm. We have a 62-acre ranch in North Yakima. My father has gone back to help pick apples this fall. I am 12 years old and my birthday is the second of February. I am in the sixth grade. My teacher's name is Mrs. Hatfield. The school board is going to build a play shed, for the children to play in when it is rainy. Bars, rings and other things will be put in. They are also going to build a windmill, so there will be better water. I have one brother and one sister. Their names are Theodore and Fronie. My sister is the oldest and she is a dressmaker.—Ethel Friend, Box 75, Langley, Wash.

We Hope Clair Writes Again.

Dear Aunt Nellie: This is my first letter to the Children's corner. I go to the Windy Hill school. I am in the fifth grade. I am 9 years old and my birthday is the 6th of March. Have I a twin? My father is a farmer. We have five horses. Their names are Dickey, Dick, Nell, Toots and Browny. We have five cows and eight pigs. We have a little dog named Buster. He can do a lot of tricks. Well, I will write again.—Clair Greely, Okanogan, Wash.

Hazel Is a New Cousin.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. I like to read the Children's Corner. I have two sisters and one brother. We have two pigs and two dogs. We have an auto, too. My papa works in an electric light plant. We have 10 rabbits, 12 chickens and two horses.—Hazel Moore, Box 5, R. 2, Republic, Wash.

Beautiful Sunsets in Curlew.

Dear Aunt Nellie: We have very beautiful susets here. There are golden, crimson and orange shades in the sky. When the sun drops over the mountains it sends up the different colored arms against the white clouds all around them.—Lillian A. Strong, Curlew, Wash.

"The Barrier" By REX BEACH

(Continued from page twenty.)

my eyes are blinded and I can't see half the beautifuls I want to, there are so many about me."

"Those are my arms," interjected the soldier, lightly, in an effort to ward off her growing seriousness.

"I've never been afraid of anything, and yet I feel so safe inside them. Isn't it queer?"

The young man became conscious of a vague discomfort, and realised dimly that for hours now he had been smothering with words and caresses a something that had striven with him to be heard, a something that instead of dying grew stronger the more utterly this innocent maid yielded to him. It was as if he had ridden impulse with rough spurs in a fierce desire to distance certain voices, and in the first mad gallop had lost them, but now far back heard them calling again more strongly every moment. A man's honor, if old, may travel feebly, but its pursuit is persistent. It was the talk about his people that had raised this damned uneasiness and indecision, he thought. Why had he ever started it?

"The marvelous part of it all," continued the girl, "is that it will never end. I know I shall love you always. Do you suppose I am really different from other girls?"

"Everything is different tonight—the whole world," he declared impatiently. "I thought I knew myself, but suddenly I seem strange in my own eyes."

"I've had a big handicap," she said, "but you must help me to overcome it. I want to be like your sister."

He rose and piled more wood upon the fire. What possessed the girl? It was as if she knew each cunning joint of his armor, as if she had realized her peril and had set about awakening his conscience, deliberately and with a cautious wisdom beyond her years. Well, she had done it—and he swore to himself. Then he melted at the sight of her, crouched there against the shadows, following his every movement with her soul in her eyes, the tenderest trace of a smile upon her lips. He vowed he was a reprobate to wrong her so; it was her white soul and her woman's love that spoke.

When she beheld him gazing at her she tilted her head sidewise daintily, like a little bird.

'Oh, my! What a fierce you are all at once!"

Her smile flashed up as if illumined by the leaping blaze, and he crossed quickly, kneeling beside her.

"Dear, wonderful girl," he said, "it is going to be my heart's work to see that you never change and that you remain just what you are. You can't understand what this means to me, for I, too, was blinded, but the darkness of the night has restored my vision. Now you must go to sleep; the hours are short and we must be going early."

He piled up a great, sweet-scented couch of springy boughs and fashioned her a pillow out of a bundle of smaller ones, around which he wrapped his khaki coat; then he removed her high-laced boots, and, taking her tiny feet, one in the palm of either hand, bowed his head over them and kissed them with a sense of her gracious purity and his own unworthiness. He spread one of the big gray blankets over her and tucked her in, while she sighed in delightful languor, looking up at him all the time.

'I'll sit here beside you for a while," he said. "I want to smoke a bit."

She stole a slim brown hand out from beneath the cover and snuggled it in his, and he leaned forward, closing her lids down with his lips. Her utter weariness was manifst, for she fell asleep almost instantly, her fingers twined about his in a childlike grip.

At times a great desire to feel her in his arms, to have her on his breast, surged over him, for he had lived long apart from women, and the solitude of the night seemed to mock him. He was a strong man, and in his veins ran the blood of wayward forebears who were wont to possess that which they conquered in the lists of love, mingled with which was the blood of spirited southern women who had on occasion loved not wisely, according to Kentucky rumor, but only too well. Nevertheless, they were honest men and women, if over-sentimental, and had transmitted to him a heritage of chivalry and a high sense of honor and courage. Strange to say, this little, simple half-breed girl had revived this honor and courage, even when he tried most stubbornly to smother it. If only her love was like her blood, he might have had no scruples; or if her blood were as pure as her love—even then it would be easier; but, as it was, he must give her up tonight, and for all time. Her love had placed a barrier between them greater and more insurmountable than her blood.

He sat for a long time with the dwindling firelight playing about him, his manhood and his desires locked in a grim struggle, wondering at the hold this forest elf had gained upon him, wondering how it was that she had stolen into his heart and head and taken such utter possession of him. It would be no easy task to shut her out of his mind and put her away from him. And she * * * ?

He gently withdrew his fingers from her grasp, and, seeking the other side of the wickiup, covered himself over without disturbing her, and fell asleep.

It was early dawn when Necia crept to him.

"I dreamed you had gone away," she said, shivering violently and drawing close. 'Oh, it was a terrible awakening——".

"I was too tired to dream," he said.

"So I had to come and see if you were really here."

He quickly rekindled the fire, and they made a hasty breakfast. Before the warmth of the rising sun had penetrated the cold air they had climbed the ridge and obtained a wondrous view of broken country, the hills alight with the morning rays, the valleys misty and mystical. They made good progress on the summit, which was paved with barren rock and sparsely carpeted with short moss, while there was never a hint of insects to annoy them. Merrily they swung along, buoyed up by an unnatural exaltation; yet now and then, as they drew near their destination, the young man had a chilling premonition of evil to come, and wondered if he had not been foolhardy to undertake this rash enterprise.

"I wish Stark was not one of Lee's party," he said once. "He may misunderstand our being together this way."

"But when he learns that we love each other, that will explain everything."

"I'm not so sure. He doesn't know you as Lee and Poleon and your father do. I think we had better say nothing at all about—you and me—to any one."

"But why?" questioned the girl, stopping abruptly. "They will know it, anyhow, when they see us. I can't conceal it."

"I am wiser in this than you are," the soldier insisted, "and we mustn't act like lovers; trust this to me."

"Oh, I won't play that!" cried Necia, petulantly. "If all this is going to end when we get to Lee's cabin, we'll stay right here forever."

He was not sure of all the logic he advanced in convincing her, but she yielded finally, saying:

"Well, I suppose you know best, and, anyhow, littles should always mind."

They clung to the divide for several hours, then descended into the bed of a stream, which they followed until it joined a larger one a couple of miles below, and there, sheltered in a grove of whispering firs, they found Lee's cabin nestling in a narrow, forked valley. Evidently the miner had selected a point on the main creek just below the confluence of the feeders as a place in which to prospect, and Burrell fell to wondering which one of these smaller streams supplied the run of gold.

"There's no one here," said Necia, gleefully. "We've beat them in! We've beat them in!"

They had been walking rapidly since dawn, and, although Burrell's watch showed 2 o'clock, she refused to halt for lunch, declaring that the others might arrive at any moment; so down they went to the lower end of "No Creek" Lee's location, where Burrell blazed a smooth spot on the downstream side of a tree and wrote thereon at Necia's dictation. When he had finished, she signed her name, and he witnessed it, then paced off 440 steps, where he squared a spruce tree, which she marked: "Lower center end stake of No. 1 below discovery. Necia Gale, locator." She was vastly excited and immensely elated at her good fortune in acquiring the claim next to Lee's, and chattered like a magpie, filling the glades with resounding echoes and dancing about in the bright sunlight that filtered through the branches.

"Now you stake the one below mine," she said. "It's just as good, and maybe better—nobody can tell." But he shook his head.

"I'm not going to stake anything," said he.

"You must!" she cried, quickly, the sparkle dying from her eyes. "You said you would, or I never would have brought you."

"I merely said I would come with you," he corrected. "I did not promise to take up a claim, for I don't think I ought to do so. If I were a civilian, it would be different, but this is government land, and I am a part of the government, as it were. Then, too, in addition to the question of my right to do it, there would be the certainty of making enemies of your people, old "No Creek" and the rest, and I can't afford that now. With you it is different, for you are entitled to this ground. After Lee's friends have shared in his discovery I may change my mind."

All arguments and pleadings were in vain; he remained obdurate and insisted on her locating two other claims for herself, one on each of the smaller creeks where they came together above the house.

"But nobody ever stakes more than one claim on a gulch," objected the girl. "It's a custom of the miners."

"Then we'll call each one of these branches a different and separate creek," he said. "The gold was carried down one of those smaller streams, and we won't take any chances on which one it was. When a fellow plays a big game he should play to win, and, as this means such a great deal to you, we won't overlook any bets."

Necia consented, and when her three claims had been properly located the couple returned to the cabin to get lunch and to await with some foreboding the coming of the others and what of good or ill it might bring.

(To be continued.)

News for Breeders

At the Oregon State fair, Professor E. L. Potter, head of the animal husbandry department of the O. A. C., purchased from Doerfler Brothers of Silverton, Ore., the first prize under 6 months Duroc Jersey boar pig, paying $100 for him. The pig is a very typy Duroc, with good, strong back, feet and legs, good body and excellent head.

J. E. Fjelsted, recently field animal husbandman for the extension department of the University of Idaho, has accepted the place made vacant by the resignation of Professor George R. Samson, assistant professor of animal husbandry at the O. A. C., specializing on swine. Professor Samson has taken charge of his farm near Alpine, Ore., and will give play to his preference for hog raising as well as general farming. Professor Fjelsted's experience in the Idaho field as well as his college training, well fit him for his work.

J. O. Skirving, near Redmond, Ore., is not only a good breeder of Duroc Jersy swine, but he is certain that good market hogs can be made profitable at present prices of feed and of hogs. Four of Mr. Skirving's gilts last spring farrowed 41 pigs, of which he saved 34. While they were small he sold all but nine to neighbors, without pedigrees, receiving a total of $175. He expects to make market hogs of most of the nine, though he may sell some bred gilts. These are well-bred Durocs and Mr. Skirving will, with some of these, get rightly into the breeding game. He has had sows of the J. W. Fruit breeding, also from Meadow Brook farm. He has one litter from Chief Top Notcher, a famous boar brought out by Tom Lawson. He is now using Good E Nuff Jack, a grandson of Burk's Good E Nuff. While this boar has a rather coarse head, he is a great breeder and his pigs have quality.

Mr. Skirving uses chopped alfalfa hay as a winter ration and alfalfa pasture in the summer, but he is rather a heavy grain feeder and believes in crowding a pig to early maturity.

H. A.

Second Annual Combination

40 Pure Bred Swine Sale 40

North Portland, Oregon, Tuesday, Nov. 20, 1917

During the Pacific International Live Stock show.

The same rules will govern this sale that were used last year. The swine will be passed on by competent judges and only No. 1 stock will be allowed to enter the sale ring.

If in the market for service boars, bred or open sows or gilts of Poland China, Duroc or O. I. C. swine, come to this sale or write for catalogue to

R. W. HOGG, Rt. 2, Salem, Ore.

HIGHLAND FRUIT AND POULTRY RANCH.
J. NONNENMACHER,
R. F. D. 3. NORTH YAKIMA, WASH

Oregon Shares Credit.

To the Editor: I note in issue of October 18, page 26, under "Honor for Oregon Jerseys" at California State fair, you mention the young bull Jolly Senator Raleigh, that won junior and reserve championship for Messrs. Thorp, Lockford, Cal. Oregon also shares in this honor, as he was bred at Edgewater farm, and we sold him to J. E. Thorp when 8 months old. He was taken from Sacramento to Nevada State fair and won the grand championship for bulls at that fair. We also bred and raised the dam of this calf, and he was sired by our herd bull Raleigh's Jolly Nobleman.

EMERY T. SMITH.

Edgewater Farm, Myrtle Creek, Ore.

The above letter is self-explanatory, and The Farmer is glad to add this grand young bull to Oregon's credit. Mr. Smith, whose business keeps him away from home nearly all the time, is a Jersey enthusiast, who keep a very small herd. But he has decided views as to the blood lines he prefers and has paid fancy prices for the animals of his choice. He has both the sire and dam of this young bull and has one full brother to him. The bull is sired by Raleigh's Jolly Nobleman, pronounced by an authoritative judge connected with the O. A. C. to be one of the best bulls in the state. He traces 21 times to Golden Lad 1242, the great bull that all Jersey breeders like to show in extended pedigrees, and 54 times to old Sultan P. His sire was imported in dam by T. S. Cooper & Sons, and they have featured him much in their advertising. They sold him when only 1 month old to the late Dr. Emery of Nashville, Tenn., for $510. When 3 years old, with 14 of his daughters in the sale ring, he sold for $2225.

The dam of the young bull is Golden Jolly Buttercup, out of the imported cow, Samel's Jolly Buttercup. Her private record is 506.48 pounds of butter, and I personally know Mr. Smith then had no silo nor such feed provisions as a cow should have. So it will be seen this Oregon-bred bull had license to win and should be a sire of producers.

H. A.

Melba Perfection.

Melba Perfection, first in her class and grand champion female at the Oregon State fair this year is to be entered in the sale at the Pacific International. She is owned by Frank Brown.

Jersey Breeders Organize.

Chester C. Farr, Snohomish county (Wash.) agricultural agent, reports the organization of 10 prominent Jersey breeders, the organization to be known as the Snohomish County Jersey club, which has for its object the popularizing of the Jersey cow. The following officers were elected for the ensuing year: W. G. Grim, president; Jeffrey Hilton, vice president; H. Coy, secretary-treasurer; D. F. Sexton and D. McRae, trustees.

H. L. Brewer of Satsop was present at the meeting.

Valuable Cow Dies.

William Bishop of Chimacum, Wash., has announced the loss of the well-known cow, Lutscke Vale Cornucopia. This animal is claimed to have made the world's record in milk production last year, when she produced 31,246 pounds. This record was made after she had given birth to twin calves. Since that time she has brought a second pair of twins.

The loss of the cow was due to a 10-penny nail which she ate in her feed.

Wishes to Drain Silver Lake.

Former Attorney General Crawford appeared before the Oregon state land board recently and asked that permission be given to E. D. Lutz of Lake county to drain Silver lake. There are 8160 acres of land in the lake and the plan is to divert the water and use it for irrigation purposes. The board took the matter under advisement.

Breeders' Department

HOLSTEIN CATTLE

Registered Holsteins

Both sexes for sale. Bulls include some 30-pounders from Grand Champion sire and dam, others with 15 nearest dams averaging 25 and 27 lbs. Prices low. Write promptly to

H. R. BOOMER, New Plymouth, Idaho.

JERSEY CATTLE

Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.

WAIKIKI FARM, R. 7. Spokane, Wash.

DUROC-JERSEY SWINE

At Pacific International

Stock Show, N. Portland, Nov. 19-24, see some of our Big Type Durocs, offspring of the great breeding boar, Golden Rod, and other best Duroc strains.

Sales Manager

Grain and Produce Markets

Chicago Grain.

CHICAGO, No. 5.—Corn ran up in value today stimulated by federal announcements virtually establishing $15.50 a hundredweight as a minimum price on hogs. The market closed strong 1⅜c to 2⅜c net higher with December $1.17¼ and May $1.12¼ to $1.12⅜. Oats gained ½@⅝c to ⅝@¾c and provisions 30 to 50 cents.

Oats went upward with corn and on buying which indicated better domestic demand.

Provisions as well as grain jumped as the result of the government recommendation of a $15.50 hog price minimum. It was said this standard was materially above what packers generally had expected.

Pacific Northwest Grain.

PORTLAND, Ore., Nov. 5.—Grain futures: November oats, $48 bid; feed barley, $51 bid; brew barley, $51 bid.

Eastern oats and corn in bulk: Oats, No. 3 white, November, $43 asked; No. 38 clipped, white, $44.50 bid; corn, No. 3 yellow, January, $52.50 bid; No. 3 mixed, $51.50 bid; oats, No. 3 December, $43.50 bid; clipped, $44.50 bid; corn, yellow, February, $52 bid; mixed, $50.50 bid.

San Francisco Grain.

SAN FRANCISCO, Nov. 5.—Barley—December, $2.39@2.41; May, $2.40@2.42½.

Minneapolis Grain.

MINNEAPOLIS, Nov. 5.—Wheat—Receipts, 764 cars, compared with 968 a year ago.

Corn—No. 3 yellow, $2.10@2.12.

Oats—No. 3 white, 57¼@58¾c.

Flax, $3.28@3.30.

Flour—Unchanged. In carload lots, fancy patents, $10.50, wood; first clears, $9.75, jute; second clears, $6, jute. Shipments, 75,390 barrels.

Rye, $1.73½@1.74½.

Barley, 98c@$1.28.

Bran, $31.50@32.

Cash Quotations.

CHICAGO, Nov. 5.—Corn—No. 2 yellow, $2.17; No. 3 yellow, nominal; No. 4 yellow, $2.16.

Oats—No. 3 white, 60@60½c; standard, 60¼@60½c.

Rye—No. 2, $1.76½.

Barley, $1.10@1.34.

Timothy, $6@7.75.

Clover, $18@24.

Car Receipts at Coast Points.

Receipts of grain and hay in car lots at Coast points for the fiscal year beginning July 1, up to Saturday night for 1917-18 and 1916-17 were as follows:

Seattle—	Wheat	Oats	Barley	Hay
1917-18 1813	518	98	1795	
1916-17 2383	549	151	1459	
Portland—				
1917-18 ... .3057	553	88	732	
1916-17 2478	904	66	635	
Total—				
1917-18 ... .4870	1071	186	2527	
1916-17 ... .4861	1453	217	2094	

Live Stock Quotations.

At Omaha.

OMAHA, Nov. 5.—Hogs—Receipts, 3800. Market, 25c to 35c lower; heavy, $16.40@16.75; mixed, $16.50@16.70; light, $16.15@16.90; pigs, $14@18; bulk of sales, $16.50@16.70.

Cattle—Receipts, 1300. Slow to steady; native steers, $9.50@16.75; cows and heifers, $6.50@9.75; western steers, $8.50@13.50; Texas steers, $7@10.50; cows and heifers, $5@9.30; canners, $5@6; stockers and feeders, $6@12.50; calves, $9.50@12.50; bulls, stags, etc., $5.75@7.50.

Sheep—Receipts, 30,000; steady to lower; yearlings, $11.50@13; wethers, $11@12.50; ewes, $10@11; lambs, $16.25@17.25.

At Chicago.

CHICAGO, Nov. 5.—Hogs, 39,000; weak. Bulk, $16.30@17.05; light, $15.50@17; mixed, $15.90@17.20; heavy, $15.90@17.25; rough, $15.90@16.10; pigs, $11.75@15.

Cattle, 37,000; weak. Native steers, $6.75@17.25; western steers, $6.15@13.50; stockers and feeders, $6@11.60; cows and heifers, $4.75@11.90; calves, $7@13.50.

Sheep, 27,000; weak. Wethers, $8.70@12.85; ewes, $7.50@11.25; lambs, $12@16.75.

At Portland.

PORTLAND, Ore., Nov. 3.—Cattle—Steady; receipts, 36. Best beef steers, $9@9.50; good beef steers, $7@9; best beef cows, $6@7; ordinary to good cows, $4@5; best heifers, $6.50@7.50; bulls, $4.50@6.75; calves, $7@9.50; stocker and feeder steers, $4@7.25.

Hogs—Steady; receipts, 56. Prime light, $15.75@15.85; prime heavy, $15.60@15.75; pigs, $13.50@14; bulk, $15.25@15.50.

Sheep—Steady; receipts, 26. Western lambs, $14@14.50; valley lambs, $13.50@14; yearlings, $12.50@13; wethers, $12@13; ewes, $8.50@10.50.

At Salt Lake.

CITY, Nov. 3.—Cattle—Receipts past week have been better, [illegible] steers and canner stuff is still below packers' demands. Strong demand for fat steers. Market higher than last week. Choice steers, $9@10; good steers, $8@9; fair steers, $6@7.50; choice cows and heavy heifers, $7@7.50; fair to good cows and heifers, $6.50@7; cutters, $5@6.25; canners, $4@5; grass bulls, $6@7; veal calves, $9@11.

Hogs—Hog run a little heavier; market somewhat stronger than last week; demand still exceptionally good for fat hogs. Choice fat hogs, 175 to 225 pounds, $15.75@16.25; mixed hogs, 160 pounds and up, $15.25@15.75.

Sheep—Receipts during past week continue heavy. Considerable feeder stock has changed hands. Market continues steady. Strong demand for fat yearling wethers and fat ewes. Good choice lambs, $15.75@16.50; ewes, $8.25@9.50; wethers, $10@10.50; yearlings, $10.50@11.50.

Spokane Union Stock Yards.

Hogs—Receipts 158, market strong. Prime light, $15.50@15.60; prime heavy, $15.40@15.60; pigs, $13.25@14.50; stockers and feeders, $11@13.25; bulk of sales, $15.60.

Cattle—Receipts 350, market steady. Best beef steers, $8.50@9; good steers, $7@7.75; best beef cows, $6.75@7.50; good cows, $5.50@6.50; common cows, $3@5; best heifers, $6.75@7.50; bulls, $5@6.75; calves, $6.50@8; stocker and feeder steers, $5@7.25.

Sheep—Receipts none, market steady. Prime lambs, $13.25@14; good lambs, $12@12.50; prime yearlings, $11.50@12.50; prime wethers, $11.25@12.25; best mutton ewes, $8.50@10.

Portland Market.

PORTLAND, Ore., Nov. 5.—Barley and oats are holding steady, but dealings are limited strictly to actual wants of mills and feeders. Mill feed closed at former prices. The market is firm in spite of the increased production and lower prices are not looked for this month.

Owing to the accumulation of wheat here and at other Coast terminals, the Food Administration Grain corporation has served notice on grain men to ship no more wheat to the Coast for account of the corporation until further notice.

A sharp decline of 3 cents in cheese prices was announced from Tillamook at the close of the week. Lower markets in the east and a slow movement here made the cut necessary.

Butter is also weak with indications of a decline in print prices in the near future.

Receipts of Oregon ranch eggs have increased slightly, but not enough to affect prices. Storage eggs are weak and likely to be reduced in price sharply, as consumption is not up to expectations.

The demand for poultry is very good, especially for hens, receipts of which have fallen off. The country dressed meat market is steady.

Potato prices are unchanged, but dealers say the market is weaker. There is a good demand for onions with farmers slow sellers.

The cranberry crop in Clatsop county, Oregon, and Pacific county, Washington, has been harvested and amounts to about 4500 barrels as against 2000 barrels last year. Prices are higher because of the big advance in the eastern market. Coast berries are quoted on the street at $4.50@5.50 for boxes.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $48.50 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $50; brewing, $51; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 52c per dozen candled, 55@60c.

Poultry—Hens, 17½@20c; ducks, 18@20c; turkeys, live, 20@25c; geese, 10@11c.

Butter—City creamery, prints, 48@49c per pound; cubes, extras, 44@44½c.

Cheese—Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 15@15½c; pork, 18½@19c.

Hops—1916, 17@20c; 1917 crop, 25@27c.

Potatoes—Oregons, buying price, $1.25@1.50 per hundred.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans—California small white, 14½c; large white, 14¼c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.75 cwt.; sweet potatoes, $3.75 cwt.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $2.50; Red Macintosh, $1.50@1.75 box; Winter Bananas, $2 box; Jonathans, $1.25@1.35 box; Wageners, $1.25@1.35 box; Rome Beauties, $1.25@1.35 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 29@30c lb; brick cheese, 33c lb; domestic Swiss, 33c lb; Young Americas, 26c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

Potato Market Summary.

According to the newly established field office for markets at North Yakima, in charge of Robert L. Ringer, field assistant, potato shipments decreased 1000 cars during the week of October 26-November 1. Shipments for the seven days totaled 4025 cars in comparison with 5026 the previous week. State of Washington shipped 72 cars and Montana 30 cars. Minnesota and Wisconsin were in the lead in shipments. According to the bureau of crop estimates report of October 1, New York and Pennsylvania each had a crop maturing greater than the combined prospects of Oregon, Washington, Montana and Idaho. The estimate figures for the four states of the Pacific northwest are:

	Per Cent of Normal.	1916 Total Crop in Bushels	Estimated Crop of 1917
Washington ...	70	9,900,000	9,687,000
Oregon	70	8,250,000	7,766,000
Idaho	87	4,050,000	6,477,000
Montana	60	4,875,000	5,882,000

The prices in the producing section have held remarkably steady during the last week and the prices in the cities have held just as firm.

Minnesota and Wisconsin Round Whites are selling from $2@2.10 per cwt. Washington Netted Gems topped the Chicago market Wednesday at $2.40 per cwt. In Minneapolis Round Whites are holding steady at $2.10, while in Kansas City, Nebraska, Early Ohios held the stage at $2.40. In Fort Worth, Texas, the California output has the best of the market, going at $2.25 per bushel, against Colorado and Idahos at $1.75.

Seattle Wheat.

SEATTLE, Nov. 3.—There is plenty of wheat at all storage elevators here for present requirements. Considerable of the poorer grades of wheat is being sold for chicken feed. Protests against this sort of thing have been entered by the food committee, but millers are urging the needs of poultry and livestock for feed are acute. In various portions of the state millers have reports that farmers are offering their milch cows for sale, due to the high price of feed and the unfavorable weather for grazing, and millers are becoming apprehensive that the livestock industry may be dealt a fatal blow if high prices persist.

There is a heavy demand for mill feed, but the trade is insisting upon shorts exclusively.

The matter of the embargo against receiving wheat at North Coast terminals is adjusting itself without the united action asked of the railways last month against delivering any more cars for the shipment of grain for this port. The Union Pacific has embargoed one Oregon port, but farther than this no action has been taken by any of the lines.

A. H. Hankerson, Mr. Houser's local representative on the federal food committee of the grain corporation, said today that friction and confusion regarding the grading and handling of grain was gradually being eliminated, and that before the end of the month business would be at normal.

The Wool Market.

BOSTON, Nov. 2.—The Commercial Bulletin will say tomorrow:

The demand for wool the last week has not been heavy, but it has been sufficient to keep everything very firm. The call has been principally for wools suited for military needs, although there has been some business in almost every grade of wool.

The situation at the mills is hardly changed, some new business being available constantly on government account, although the civilian trade is still rather slow.

Scoured basis:

Texas fine 12 months, $1.68@1.72; fine 8 months, $1.55@1.60.

California northern, $1.70@1.75; middle county, $1.45@1.50; southern, $1.35@1.40.

Oregon eastern No. 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65.

Territory, fine staple, $1.80@1.82; halfblood combing, $1.70@1.75; ⅜ blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Hide Prices Announced.

SEATTLE, Nov. 1.—This morning Seattle wholesale hide dealers announced an advance of 3 cents per pound on the buying price of light calf and dry hides. New buying price of calf: Up to 15 pounds, 28 cents; dry hides, 30 cents, and salted horse hides, $2 to $4.50 each. No. 1 tallow is higher at 10 to 12½ cents per pound.

Seattle Market.

SEATTLE, Nov. 3.—The demand for jumble pack apples has been one of the features of the week. Some of the individual houses have sold two and three carloads of the fruit at 2@3c per pound. Fortunately for this trade, the fruit has generally been well colored. Lug boxes moved rapidly, but the basket pack lacked freedom. Coloring was not good. The result of the rush of cheap fruit drew attention from the better selections and these were dull. Owing to the value of larger sizes and keeping qualities, however, no fears are expressed as to the ability of the street to clean up later. Lug boxes of Jonathans are being stored.

Poultry will be steady next week, demand and supply presenting a rather normal aspect.

The movement of potatoes on this market has been light, with eastern Washingtons very dull. Eastern Washington growers are quoting at $33@36, and the market there is firm. Puget sound growers ask $30@34.

SELLING PRICES.

Feed—Scratch feed, $78 per ton; all grain chop, $64 per ton; oats, $56 per ton; rolled oats, $57 per ton; wheat, $74 per ton; bran, $32 per ton; shorts, $35 per ton; soy bean meal, $65 per ton; whole corn, $84 per ton; cracked corn, $85 per ton; alfalfa meal, $35; chick feed, $80 per ton.

Hay—Eastern Washington timothy, $32 per ton; alfalfa, $27 per ton; double compressed, $35 per ton; wheat hay, $25 per ton; Puget sound, $25 per ton; straw, $12.

Butter—Washington creamery extras, cubes, 48c per lb.; do bricks, 49c per lb.

Eggs—Fresh ranch, 62c per doz.

Onions—Yakima, $3.25 per cwt.; Oregon, $3.50@3.75 per cwt.

Potatoes—Puget sound, $1.85@2 per cwt.; eastern Washington, $2@2.25 per cwt.

Butter and Eggs.

PORTLAND, Ore., Nov. 3.—Butter prints extras, $48; cubes extras, $44@44.50; prime first, $43@43.50.

Butter fat, Portland deliver, No. 1 sour cream, 52c.

SAN FRANCISCO, Nov. 3.—Butter—Fresh extra, 43c; prime firsts, 42 1-2.

Eggs—Fresh extras, 56 1-2c; fresh firsts, 56c; fresh extra pullets, 46 1-2.

CHICAGO, Nov. 3.—Butter—Receipts, 4777 tubs. Unchanged.

Eggs higher; receipts, 3881 cases; firsts, 38 1-2@39 1-2; ordinary firsts, 36@37c; at mark, cases included, 38c.

SAVE MONEY ON ENGINES
Buy direct from my factories, where I build a powerful, economical, reliable, perfectly designed Galloway Masterpiece Engine from the highest quality materials and sell to you at lowest manufacturers' price. Tens of thousands in satisfactory use. All sizes from 1¾ to 16 h.p. portable, stationary, saw rigs, pumping outfits. They operate on

Straw as Feed

Some Rations for Wintering Stock

To the Editor of The Washington Farmer: Very little straw should be fed to horses at hard work, and it forms too bulky a ration for growing colts. Horses during the winter have ample time for chewing and digesting their feed and may often be profitably wintered largely on clean, bright straw. It should not form the whole ration of the farm horses, because it will not be sufficient to put them in condition for the hard work in the spring.

Stock will not fatten on straw, and one should not expect to secure a large milk flow from its use. Straw from the legumes is more easily digested than that from the cereals. Field-pea straw is finer, and is more valuable than the coarse straw of field beans or soy beans.

The following rations are recommended by the United States department of agriculture. These rations will give excellent results when supplemented by whatever small quantities of grain that may be necessary for the health and thrift of the animals.

Wintering Beef Breeding Herd.

1. Straw, 16 pounds; silage, 20 pounds; cotton seed or linseed meal, 1 pound.

2. Straw, 20 pounds; cotton seed or oil cake, 2 pounds.

3 Corn-stover, 35 pounds; cotton seed or linseed oil meal, 1 pound.

Rations for Wintering Farm Flock.

1. Oat straw, 2 pounds; legume hay, 2 pounds.

2. Oat straw or corn stover, 1 pound; silage, 1 1-2 pounds; legume hay, 2 pounds.

Rations for Wintering Horses.

1. Daily ration for 1250-pound horse at light work: Barley straw, 5 pounds; alfalfa hay, 6 pounds; rolled barley, 8 pounds.

2. Daily ration for 1500-pound idle horse: Corn fodder (with ears), 18 pounds; alfalfa, 5 pounds.

3, Daily ration for 1000-pound horse at severe work: Oat straw, 6 pounds; alfalfa, 10 pounds; whole oats, 6 pounds; rolled barley, 6 pounds.

4. Maintenance ration for 1000-pound horse: Oat straw, 8 pounds; alfalfa, 4 pounds; oats or barley, 5 pounds. C. E. HOWELL.
Pullman, Wash.

Additional information regarding the use of straw as feed will be found in the following suggestions received in answer to a request from the Farmer:

CONRAD SCHMICK, Endicott, Wash.: We have lots of wheat straw to sell and the rest of our neighbors have straw to sell, too. We do not know the price for straw this year. Our straw is not baled. It is all loose. Any one wanting it could come and bale it themselves or take it loose.

CHARLES KLUNDT, Page, Wash.: Wheat straw is not worth much in this country. Stock is turned on to stacks. No straw is being baled around here.

T. R. BOOKER, Othello, Wash.: Wheat straw is used to some extent for winter feed. This year it is nearly all filled with weeds (Russian thistle). All straw fed here is fed loose. The demand for straw is good here. I think farmers would be better off if they did not feed straw. You can't expect stock to winter entirely on wheat straw.

OTIS ROBINSON, Lantz, Wash.: The straw is used mostly by the farmers to feed their stock. Each farmer has stock to eat his straw. I do not know what it would be worth by the ton. We used to sell for $1 per load.

PETER HANSEN, Withrow, Wash.: We will have plenty of straw in this neighborhood for the stock.

J. R. HEARLE, Lacrosse, Wash.: There is no great shortage of feed in this vicinity. There is no demand for wheat straw for feed, except where a man can put his stock right to the strawstacks in the winter time. Baled straw is unknown here and loose straw is about $1 a load and sometimes nothing at all.

F. A. HART, Connell, Wash.: Wheat straw is the only straw we have here. I use it for nothing except to turn stock into when not at work, and they do fairly well on it when they are not working. As feed when working I do not consider it of any value whatever. Stock can not hold up on straw and grain and do the amount of work they should, considering the high price of labor.

ED TIEDT, Soap Lake, Wash.: As a rule the straw is all used for feed around here. There is no straw sold here by the ton or baled. If sold it is by the stack and the price is from $10 to $20 a stack. This year every one is saving the straw for feed for his own stock. There is some demand, but no one is selling.

MERVIN M'DONALD, Waterville, Wash.: Twenty pounds of wheat straw with the addition of 10 pounds of oats will take the place of 30 pounds of wheat hay, when the horses are not working, and in the winter time. There is a demand for wheat straw for feed and the average price is one dollar per ton loose at the stack. Very little straw is baled in this locality.

FRANK GILDERSLEVE, Hooper, Wash.: There is a good demand for all kinds of straw. They are not baling any in this part of the country. They sell it in the stack at different prices. The straw is extra good this year. It makes good feed for cattle and horses.

F. M. LYLE, Hatton, Wash.: We winter our stock on our straw. Some seasons there is a demand for straw. Since I have been in this country I have sold straw for $20 per stack off of 40 acres. Last year there was not much demand as all the farmers had a pretty good crop. This fall straw will be in demand as there is a short crop. There has been nothing in having it baled here before. We would have to have about $10 per ton in order to make anything out of it if we baled it.

GROW MORE BEETS.

Food Administration Makes Plea.

The national food administration, forecasting the difficulty of producing sufficient sugar for the world's needs during the coming few years, has isued a call to farmers in beet-growing districts to increase their acreage of beets as well as a well-balanced crop will permit. Administrator Hoover considers the sugar problem one of the vital problems confronting the people of the United States at this time.

English Apple Crop.

The English apple crop is now being gathered. Until recently apples were practically unobtainable, owing to restricted imports, and prices were up to a shilling (24 cents) a pound wholesale. Owing to the lack of men in the heavy orchard districts, and the consequent insufficient spraying of the trees, there is said to be a serious shortage in the crop.

Want Ads

Want Ad Rates 30c Per Line

Want ads are run at this rate in The Washington Farmer and its associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

How to Figure Cost of Ads

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

EDUCATIONAL 45

GRADUATES OF THIS SCHOOL NOW hold excellent positions in Washington, D. C., and other cities. Stenography, bookkeeping, etc. Whitney College of Commerce, Coeur d'Alene, Idaho.

QUALIFY FOR ONE OF THE THOUsands of civil service and government positions now open. Write for literature. Creekmur's Business College, Moscow, Idaho.

IRRIGATED FARM LANDS.

ALFALFA LANDS, under government irrigation; abundant water; low altitude; rail and water transportation to coast markets; good schools, good roads; products alfalfa, corn, cream, hogs, honey, fruits, vegetables; long growing season; unimproved land $30 to $60 per acre; improved $100 to $250. Write for further information and literature. Dodd & Knapp, Hermiston, Ore.

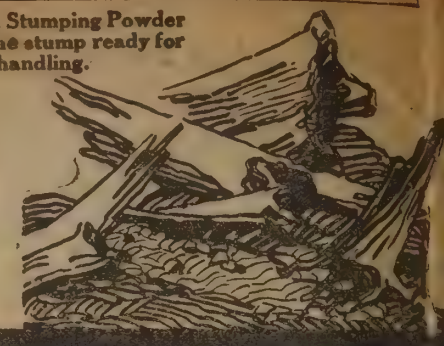
IRRIGATED LANDS—WANTED 666

FOR SALE VERY CHEAP—13-ACRE IRRIgated orchard tract, 4 miles from Caldwell, Idaho. About 7 acres commercial bearing trees. Will take Liberty bonds. Call or write G. H. Summers, 121 South Lincoln st., Spokane, Wash.

TO EXCHANGE—REAL EST. 705

WHAT WILL YOU TRADE FOR 640 acres wheat land in Douglas county, near Waterville? Consider trades for smaller farm, 5 to 40 acres in western Wash.; also lease on 160 acres school land. Modern 9-room house, barn for 32 head stock, several outbuildings, plenty water, farm implements. Valuation with stock and implements $40,000; without, $25,000. Write John Schillereff Sr., Douglas, Wash.

In answering advertisements don't fail to mention this paper.



The first step in stump blasting; making hole under the stump.

Loading sticks of Giant Stumping Powder in hole under center.

Giant Stumping Powder left the stump ready for easy handling.

Save money on your stump blasting

The explosives that get stumps out cleanest and cheapest are those that have a heaving and lifting effect, shattering the stumps just enough to break them up. Then you can handle them easily.

"The farmer," says an Experiment Station, "should use an explosive prepared especially for his work; one that stands all ordinary shocks of handling and transportation and does not easily freeze. He does not need and should not use the expensive nitroglycerine explosives." Thousands of farmers have taken this advice and have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

always save them money because they go further than any other stumping powders. Also, because they are made especially to suit *western* farm conditions and because they are always uniform in composition and action.

Giant Farm Powders—the product of the oldest manufacturer of high explosives in the United States—are the only genuine "giant powders" for agricultural use. They are made in two brands—Giant Stumping Powder and Eureka Stumping Powder.

Giant Stumping Powder is the ideal explosive for blasting stumps in wet ground. It keeps perfectly for months, resists water and chilling, and gets the stumps out economically.

Eureka Stumping Powder is the money-saving, low-freezing explosive for blasting stumps in dry soil. It costs less than Giant Stumping Powder and careful blasters save many dollars by using it for wet work also.

EVIDENCE

I bought five boxes of your Stumping Powder and now I want to sell a lot of other powder that I have.
RUDOLPH STADELI, Silverton, Ore.

Your Stumping Powder has a wide breaking power and less fumes to contend with after being exploded than any other on the market.
G. L. METZGER, Hillsdale, Ore.

In using a thousand pounds of your Stumping Powder neither I nor any of my men had the least bit of trouble in getting the very best results. I have used practically every powder on the market and find there is more strength in yours. J. L. EIDSON, Silverton, Ore.

Your Stumping Powder shoots the roots and spreads wide in the ground instead of going down. It is the best powder we have used.
G. S. McCARTNEY, Russellville, Ore.

I find your Stumping Powder all you claim for it. ELI CLINKER, Camas, Wash.

I am a large user of powder in stump blasting as well as in grading roads, breaking boulders and making ditches. I get good results from the Giant brands all the time.
MICHAEL HARVEY, Charleston, Wash.

Giant Stumping Powder gives good results when all other means of removing stumps have failed.
ROBERT CHABOT, Moclips, Wash.

Make This Test

You want to clear your land as cheaply as you can. If you are not using Giant Farm Powders, try them *now*. Mark and mail the coupon at the right. We will have our nearest distributor supply you—at the lowest market price—with a 25-pound or 50-pound case of Giant Stumping Powder or Eureka Stumping Powder. Compare this with any other and *prove* for yourself that Giant Farm Powders will save you money, time and work.

We Issue Five Valuable Books for the Farmer

They tell and show how to remove stumps and boulders, how to increase the fertility of the farm by blasting the subsoil, how to have earlier-bearing, thriftier orchards by blasting holes for trees, and how to drain your land by using Giant Farm Powders. These books are written especially to cover Pacific Coast conditions, and will be helpful to every farmer. Choose the books that you prefer and *mark and mail the coupon.*

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 46. NOVEMBER 15, 1917. ** WEEKLY.

Bankers May Create Student Loan Fund

Financial Stress With Those Studying Agriculture Would Be Relieved by Small Loans

One result of the farmer-bank convention at Pullman last week probably will be the establishment of a new fund of several thousand dollars from which agricultural students at the state college may borrow small sums to tide them over periods of financial difficulty in securing their education. Members of the Washington State Bankers' association, including President J. A. Swalwell, expressed themselves strongly in favor of the move, and the association will take the matter up at its next meeting. President Swalwell promised that the association would consider the proposition if the officers were authorized by the convention to take it up, and the authorization was unhesitatingly given.

The movement received its first big impetus when President Thomas Brewer of the Fidelity National bank of Spokane offered to start subscriptions to a students' loan fund with $100 from the bank that he represented. Upon President Swalwell's suggestion that it would be better to have the movement carried on by the state association, thus enlisting the cooperation of all the banks throughout the state. Mr. Brewer withdrew his offer and joined in the plan to have the fund raised by the banks of the state as a whole, as represented by the association.

President E. O. Holland of the state college told of many worthy farm boys who, for lack of sums as small as $50, were prevented from getting an education of the kind that they could take back to the home farm and use to double and quadruple its production.

In the course of the discussion which followed his statement the fact was brought out that many of the land grant agricultural colleges and universities are provided with a loan fund maintained by organizations of bankers, farmers and other public-spirited business groups, which the president of the college lends to worthy students. The fact that the University of Montana has a fund of nearly $7500 loaned by Chancellor Elliot in this way was mentioned.

Thomas H. Brewer.

President Brewer of the Fidelity National of Spokane said that he knew of a young man who had received agricultural training and gone back to his home farm in a part of central Washington in which this year the wheat crop, owing to unusual adversities, had been nearly a failure. The wheat crop put in by this young man and safeguarded by methods of seed selection, sowing and farm management in general, had, in the same region, alongside of other wheat fields which had suffered greatly, yielded over 40 bushels per acre.

Mr. Brewer stated that if this matter were viewed as a business proposition only it would be good policy for the bankers of the state to maintain at the state college a fund from which the college authorities could lend to worthy students in this way, helping them get an education which later would be used to the advantage of their home community. It has been the experience of educators that nowhere can so little a sum of money do so much good as when wisely bestowed upon a young man or young woman who is at a crisis in an educational career.

How Long Will Germany Fight?

At the banker-farmer convention meeting at the state college at Pullman last week a large part of the discussion bore upon the part that bankers and farmers could unitedly do to strengthen the country for the war. It was R. C. McCroskey, banker and farmer of Garfield, for many years a regent of the state college, who put the war problem before the convention of bankers and farmers in terms so graphic that the profoundest attention was paid to his words.

"I served in the civil war—on the confederate side," said Senator McCroskey. "At the beginning of the war the seceding states were offered virtually anything if they would return to the Union. They were assured the privilege of returning with rights unimpaired. Most attentively did the north court the south, trying by every reasonable proffer to induce the states to come back; and we in the south were left virtually nothing to fight for but state's rights, which was, when all is said, but a dream.

"Yet we fought on for four years, and the bitterness of the struggle is a matter of history. I say to you now, gentlemen, if we of the south would fight for four years in the face of the reasonable things proffered us by the north, fighting only for a dream—if we would do this, how long will Germany fight, believing, as her 65,000,000 people do, that defeat means the quartering of the German empire and the extinguishing of the German nationality? Answer that question, will you? It is my opinion that we are liable to be raising wheat for wartime purposes for several years. We are in for a struggle that will reach every sinew of the nation and take the best we have if we win—and win we must!"

Cooking Hog Feed Aids Hoover

With Grain So High and Need of Conserving It So Great, a Careful Study of Feed Problems Is Fast Becoming Real Necessity

GIG HARBOR, Pierce County, Wash., Nov. 1.—Hereabouts fall work, including seeding, is not only up to the normal standard, but I think I may safely say that it is considerably above the average. This is partly owing to the fine, warm fall weather with just rain enough to permit plowing and working the land, and partly, I hope and think, to increased zeal and hopefulness on the part of the farmer. Losses from frost or early rainfall are so slight when weighed against the benefits derived as to seem almost negligible. High prices of feeds have forced farmers to become careful thinkers and figures. In the feeding of hogs corn is almost out of the question; wheat also. The cooking of such feeds as barley, peas, shorts, bran and potatoes seems to have been settled upon as the most economical system under present circumstances. To this, of course, is added all the skim-milk that can be had without robbing the veal calves. In my own work with poultry I think I will never again feed so much whole wheat as I formerly did, even though the price may come down to normal. About the time moulting set in, I commenced feeding wet mashes twice a day. I used large quantities of potatoes, mangels, beets, carrots and other roots, well cooked, chopped fine and while hot mixed with bran and a little corn meal, 12 quarts to 100 hens. At night a good, solid feed of whole grains mixed for scratch feed. The pullets fared a little better in the way of a light extra grain feed at noon. Two or three handsful of oil meal are also added to these mashes when corn is not at hand.

W. D. BOYNTON.

Pig Club Holds Fair.

SOUTH BEND, Pacific County, Wash., Oct. 31.—The fall seeding is progressing nicely. There have been only two killing frosts this month. The boys' pig club of Menlo held a little fair there at the lodge hall. The older people had an exhibit of fruit and vegetables in connection with it. The residents along the Nasel river had a fair in the schoolhouse. The county superintendent of schools and the agriculturist gave addresses. This has been the driest fall we have had for many years, less than two inches of rain falling during the month. However, the ground is in good condition for fall plowing. Indications point to an open winter. The evergreen blackberries proved to be a more profitable crop to those that raised products for the local cannery than pole beans. The first blackberry canes were brought to this county by Mrs. W. W. Tilly, of Menlo, who planted them in pioneer days. This climate and soil was so suitable that there are now quantities of bushes all over the county. Some of the farmers raised shell beans for their own use. They do well if planted early enough.

MRS. WINNIFRED BUCKINGHAM.

Barley Is Only Substitute.

LA CROSSE, Whitman County, Wash., Nov. 1.—Lack of rain has retarded field work. Prospects for fall seeding, thus far, are not very promising and, no doubt, a large acreage will wait for spring seeding. A few are seeding in the dust and occasionally one is seen dry plowing. October was the driest since 1884. The only possible substitute for hog feeding is barley, but it is scarce and high. No doubt the most profitable hog feed is hogging off the small patches of wheat.

M. E. SCHRECK.

Young Men Join Army.

SHELTON, Mason County, Wash., Oct. 29.—Fall work and seeding is much ahead of normal. Weather conditions have been most favorable and have been taken advantage of by every enterprising farmer. Fall seeding is not finished, but is proceeding as fast as labor conditions will permit. The weather continues most favorable, but in many cases the farmers' helpful sons have been absorbed into the great preparedness work going on at Camp Lewis. Forty-seven young men have answered the call for military service from Mason county and on good authority it is claimed more than half of these are farmer boys, a large per cent of whom are our native sons. Fathers and mothers and sisters have taken to the fields and the work proceeds with a will to make it successful. "More food and better food" is the slogan for this county and "Hooverizing" is the rapidly developing method. So far as is known wheat is not and never has been used in this county as food for hogs. Its use as chicken feed is common and much of the wheat used is shipped into the county. Our county agriculturist is making himself known and very useful by organizing our apple products, grading, packing and finding a good market.

SCOTT HAYES.

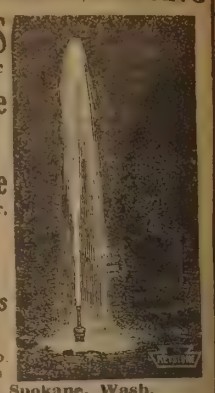
Cowlitz in Good Condition.

CASTLE ROCK, Cowlitz County, Wash., Oct. 29.—Farm work is progressing very slowly in the county, owing to the shortage of farm help, but, thanks to the potato digger, with which, with a little extra work in preparing the potato row for clean digging, the grower is able to throw the tubers on top of the ground ready for the pickers, potato harvesting is well under way. The prevailing price is from $1 to $1.75 per hundredweight. Seeding has been above normal this fall and crop losses due to frost or cold weather have been small in this district. Those having prunes have gathered a good crop and dried them, storing for the winter price. Apples are a short crop and the canneries are making a price of $15 per ton and taking any kind that will peel. This proves that the country at large is awake to the fact that we can get along with things nowdays that were considered worthless before the farmer and his family had started to Hooverize. The farmers, as a rule, are economical and work from early morning until late at night, and they need all the protein and encouragement that can be given them. Bran and shorts are the principal cow feed in the grain line. Those having silos use the short system. There has been no substitute for hog feeding. There has been considerable agitation over the prospects of forming what is called logged land districts and asking the state to help in the development work, but nothing definite has been accomplished. It is anticipated that when the members of the farm loan association get their money from the farm loan bank at Spokane they will get busy and clear up some of the outlying spots of the logs and stumps ready for next year's crop, the members are progressive and it is believed that a great number of acres now lying in waste will be put into a high state of productiveness in a few years. Considerable trouble has been reported from the moles digging among the potatoes and other crops, so arrangements have been made for a mole expert to spend a few weeks in the country campaigning for the suppression of the pest. It is said that the hides are valuable for decorations. Apple are being used in the place of canned fruits and in some cases large driers are going to be used. Road work is going on as fast as possible, but is handicapped by shortage of teams. Men and teams have been offered $7.50 per day. This has been a splendid fall for farm work, no rains to speak of and just frost enough to flatten down the rank growth of potato vines. Several tons of cabbage have been shipped to the Seattle market and brought good returns. Milch cows are changing hands among the farmers, shifting around where the feed can be had. The butterfat market keeps very regular and prices are about the same. Veal calves are selling for 17 cents, dressed; hogs from 20 to 22 cents, eggs 55 cents per dozen and hay $25 per ton. Straw, heretofore wasted, brings $7 per ton. On the whole the district is in a better shape to combat the high prices than ever before. Grain is high. Skim milk does fine for hogs, if the other feeds are given to keep the hog from having constipation, which has caused much sickness and, in a few instances, death to the hog.

C. C. BROWN.

No Seed Shortage.

NEWPORT, Pend Oreille County, Wash., Oct. 27.—I would say that weather conditions of early fall were generally favorable for the maturing and harvesting of crops, but they have not been favorable for preparation for next season's crops. Farmers generally are far from being satisfied with the results obtained this year. It is too late now for fall planting, but I have have not heard of any shortage of good seed for the area that has been planted to fall wheat.



CHARLES N. TALMADGE.

Farmers Economize.

MONTBORNE, Skagit County, Wash., Oct. 29.—No fall seeding has been done in this locality. The crops were all harvested and in good condition before the frost came. Farmers are economizing or Hooverizing as much as possible. The by-products of wheat are not being substituted on account of high prices of other grains.

Rate Increase Is Sought Again

Railroads Seek Added Toll From Farmers and Consumers of the West

Once again the farmers and other producers of the northwest as well as the consumers of both western and eastern products, must arouse themselves for defense against an invasion of their just rights by the railroads. The already famous "15 per cent increase" rate case is to be reopened. On December 17, just one month from Saturday of this week, the interstate commerce commission will sit in open session to hear the petition of the railroads for the enormous increase in rates on produce and manufactures handled by the western rail lines.

A year or more ago the railroad employes asked an increase in pay and shorter hours. In order to avert a strike congress, at the request of President Wilson, enacted the Adamson law, which awarded to these employes practically what they asked. The railroad companies appealed to the supreme court of the United States on the ground that the Adamson law was unconstitutional, but gracefully withdrew its appeal at the last moment and agreed to accept the terms of the law.

What It Really Meant.

At that time The Farmer warned its readers that there was probably "a nigger in the woodpile." That "nigger" showed himself later when the interstate commerce commission issued an order giving the eastern railroads a flat blanket increase in freight rates of 15 per cent, effective on June 1, 1917, unless the protests of shippers convinced the commission prior to that time that the increase was unjust. The protest was made with considerable success. On June 29, after a continuation of the case, the commission granted certain minor increases in rates to western lines, but denied the application for the increase as a whole.

Now comes the western railroads with a plea for reopening of the case, and the commission has granted the request and set December 17 as the day on which it shall begin.

As it did last spring The Farmer issues the call for grain growers, live stock men, orchardists and all other producers and consumers in the northwest to make themselves heard on this vital matter. How much the proposed increase would take out of the pockets of the farmers of the northwest is somewhat problematical but it would take millions.

Authoritative figures indicate that the railroads of the country made earnings of approximately $2,500,000,000 during the last fiscal year. A 15 per cent increase on this gigantic total would mean an increase of $375,000,000—another considerable "war tax" on the producers and consumers of the country. Exactly what proportion of this would come from the western producers and consumers as contemplated by the railroads in their present petition to the interstate commerce commission can not be accurately figured, but it is evident that it would be a large amount.

Have Earnings Decreased?

The new application of the railroads is based on their plea that the increased cost of labor, coal and the materials out of which their equipment is manufactured has greatly reduced their net incomes.

In a published statement on the general subject Clifford Thorne, representing the National Council of Farmers' Cooperative associations and oil men, totaling something like 1,000,000 producers all together, denies that the net earnings of the roads have decreased.

"It is true that the cost of labor and railroad supplies has gone up," says Mr. Thorne, "but it is also true that there has been such a remarkable increase in traffic that over and above all these added expenses American railroads, as a whole, during the fiscal year ended June 30, 1917, earned net more than in any other year, with one exception, in their entire history.

Every farmer in every western state should protest and do it with vigor. A flood of personal protests to the interstate commerce commission might be impracticable and of little avail, but a flood of protests by live stock organizations, farmers' cooperative societies, granges, farmers' unions, dairy associations, farm bureaus and every organized group of producers would give the commission food for thought, and probably save the producers of the west a few million dollars.

Education Is Keynote at Lewiston

Excellent Display of Animals Marks Live Stock Show

By HORACE ADDIS.

Again the educational feature is the one most emphasized at the seventh annual Northwest Live Stock show held at Lewiston, Idaho, November 8-15. Some old faces remain and some new ones come on the scene, with new entries of live stock each year. But so long as the educational features are kept to the front and education is made the basic principle of the show, so long will it prove its right to existence, and so long may we expect increased attendance and great success.

The opening day featured a great meeting in the horse show tent, at which Governor Withycombe of Oregon, Governor Stewart of Montana and Governor Alexander of Idaho delivered addresses. The big tent was beautifully decorated with flags and bunting. Every seat was taken and many stood through the meeting.

Patriotism Is Keynote.

Each of the governors was lavish in his praise of the fine stock on exhibition, but the keynote of each address was patriotism. That we must win the war, and that it may cost many lives and much treasure, which should be freely given, was urged over and over again, and each time met with hearty responsive cheers. Governor Lister of Washington was unavoidably delayed, but he addressed fully as large a crowd the second afternoon. He also urged that we must in every way help the boys in the trenches to win this war, and he met with the same hearty response.

A parade of fine horses and cattle, with brief lectures on the different breeds and their uses by Professors E. L. Potter of O. A. C. and E. J. Iddings of the University of Idaho closed the meeting.

In a smaller tent each day was held demonstrations by the University of Idaho extension department, with Miss Fenton, assistant to Miss Amy Kelly, state leader, and Miss Dorothy Taylor, emergency home demonstration agent, in charge. They demonstrated the use of dairy products in place of meat, of butter substitutes and other means of household economies. Miss Taylor's district is Lewis, Nez Perce, Idaho, Clearwater and Latah counties, with headquarters at Moscow, and she will answer calls for demonstrations and lectures throughout the district.

A great live stock parade was one of the show's prominent features.

That the finances of the 1918 show are such as to insure the continuation of exposition on a high standard is indicated by the subscription at the annual banquet of nearly $4000. Together with the aid given under the law by the state, and the support of Lewiston business men, next year's finances seem secure.

Each night, downtown, were held the meetings of the association, beginning with the opening night, at which President Thomas Fenn delivered his annual address, dealing with the progress of the association and the show. A number of short speeches were made by others, the principal address of the evening by Governor Lister, whose theme —a theme that ran through all the proceedings of the week—was patriotic support of the war.

Tuesday evening, after several interesting and inspiring addresses, five members of the board of directors were elected. H. R. Smith, now live stock commissioner of the live stock exchange, Chicago, and formerly professor of animal husbandry of the College of Minnesota, and who judged beef cattle, spoke encouragingly of the general live stock situation, and made some very practical suggestions. Professor Arnett, animal husbandman of the Montana Agricultural college, who judged horses, spoke in a similar vein, especially with regard to the horse. And Dr. H. G. Bodle, Idaho, state veterinarian and head of the live stock sanitary department, told of the work done by his department and the need of coopera-

(Continued on page thirty.)

Producers May Deliver Own Milk

Inland Empire Dairymen Declare War on Distrubitors

What may prove to be war to the death by the producers of milk in eastern Washington on the Spokane milk distributors is declared in the announcement of the Inland Empire Dairymen's association that it is going to incorporate and prepare to sell milk in Spokane direct to the consumers.

Milk in Spokane is now selling at 14 cents a quart bottled and delivered, a compromise price recently agreed upon by the distributors and producers, the producers at first demanding 30 cents a gallon to the distributors and the latter fixing their figure to the consumers at 15 cents on that cost basis. The producers declare that they believe they can deliver milk much cheaper than 14 cents and yet receive more for their product themselves.

"We feel that we are not getting what we should for our product and that the consumer is paying too much," President H. S. Findley said. "It is our belief that we can remedy this situation, and this is the purpose of our action. We have received encouragement from some people with capital in Spokane, and I think there will be no difficulty as to finances. I believe, also, that we shall meet with public support. The members of the consumers' committee appointed by Mayor Fleming have said we should have a better price for our milk. The mayor was inclined to be caustic about our request, but I think he saw things in a different light after he had considered things.

"Our plans are immature at present. We will incorporate, and for this purpose must state our intentions. The articles will likely give us authority to establish a plant and distribute milk. We now figure on handling milk in bulk; but, of course, if we go ahead we will probably come to the bottling and distributing. Probably we can find enough stores and restaurants to take our output. If so, the problem will be simplified. Our course will depend on developments.

"I believe we can sell milk to the retail trade at 10 to 11 cents a quart in bulk, at least, and at 30 to 32 cents a gallon in 10-gallon cans to the larger customers.

"Our articles will authorize us to buy and sell feed for the benefit of our members, and also to sell eggs and probably other things we produce. By such a combination our success would be more assured."

Butter Record Broken.

Announcement has been made by the cow tester of the University of California, that Aagie Acme, of Riverside Second, a Holstein cow, owned in Woodland, Cal., has broken the world record for butter production with a year's product of 1331 pounds. The announcement says that the cow yielded 1331.41 pounds of butter in 365 days, 1167.96 pounds of butter in 305 days and 2426.51 pounds of butter in two years. The records displace those established by Keystone Beauty Plum Johanna, a Holstein owned in Pennsylvania, it was claimed.

Aagie Acme's milk production for the 305-day test was 22,092.8 pounds and 24,682.7 for the 365-day test.

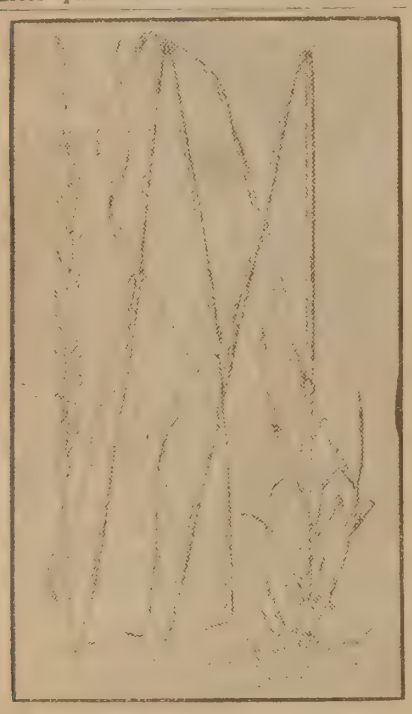
New Enemy of Pacific Northwest Farms



One Careless Farmer Can Keep His Neighbors Fighting Quack Grass

By F. L. PICKETT
Washington State College

In the Pacific northwest states there now are thousands of acres of ground infested with quackgrass, and a serious thing about it is that one careless farmer in a neighborhood can keep all of his neighbors fighting this pest. Carelessness in keeping down roadside weeds will bring upon farmers of he adjacent countryside the same trouble.

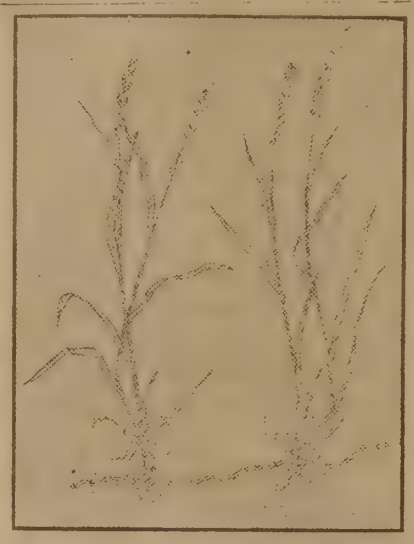
Quackgrass or "couchgrass" as it is sometimes called, is comparatively new in the northwest, but it already threatens to compel the abandonment of many fertile fields. In middle western states this same question arose some years ago. Farms were abandoned. Finally, the situation grew so serious that the farmers were willing to go to the expense of clearing their land of this pest, and began to cooperate with one another.

Out here, we may as well begin now. Within the last few years, all but the drier parts of the Pacific northwest

Quackgrass, a new enemy of the Pacific northwestern farms.

have been invaded by quackgrass, and it is spreading—and, worst of all, it exists and is spreading on scores of farms where it is not recognized as a weed at all, the farmers thinking it is useful on account of its deceptive appearance.

Quackgrass resembles bunch grass, to which it is so closely related. It is a rapid grower, is perennial, and spreads both by seeds and by underground stems or rootstocks. It is the production of rapidly-growing underground stems, which are entirely hardy in this climate, that makes the plant a serious pest. One plant if undisturbed, will, in two seasons, spread over a square yard of ground. If the ground be plowed and carelessly tilled the spread of the weed is much more rapid, for each part of the rootstock broken by the plow and carried to other parts of the field starts a new plant, which, in turn becomes the center of a spreading patch.



Any broad-bladed grass which tends to spread rapidly should be viewed with suspicion. When the young plants of quackgrass are pulled up, they are connected by the jointed rootstock with small scale leaves at the joints and long, sharp-pointed buds at the ends. In the summer the heads, resembling the bunch grass, make the identity of the plant certain. Every farmer who suspects any grass patch on his premises should send specimens large enough for certain identification to the county agricultural agent or to the state college so he may know certainly whether or not he is going to have to deal with this weed pest. This will not only bring certain information to the farmer, but will be of great value to the county agent and to the men at the state college in making their record of the spread of the grass more complete.

Quackgrass may be brought into a locality by the seeds in wheat, oats or larger grass seed on the market. Much of the hay from infested areas contain quackgrass seeds mature enough to grow, and a considerable percent of these seeds grow even after the hay has been used as food by cattle and horses. The seeds are not infrequently found in coarse ground feed and are not all destroyed by grinding and by the chewing of cattle. The appearance of new bunches of this grass along railroad right-of-ways should be noted at once and steps taken to kill the plants. All patches growing on waste ground serve as seeding-points from which the pest may be scattered to fields near and far.

In considering the means to be employed and the cost of ridding a patch of ground of quackgrass the thought of be kept constantly in mind is that failure means nearly or quite total loss of the use and value of the soil. In soil subject to very careful cultivation through the seeding to hoed crops, the eradication of the grass is not difficult. If the formation of green leaves can be prevented through a full growing season, the plants will usually be weakened too far to recover. The underground stems store up food material formed by the green leaves or blades. This food is used by the new shoots in their growth, and the prevention of the development of new green leaves means that the reserve will in time all be used up and the plant will die. That careful cultivation will get rid of the pest has been proven in both eastern and western Washington by actual experience of gardeners and orchardists.

Because its general appearance is so much like other forage grasses, quack grass often is widely spread over fields not subject to clean cultivation through the growing season before its presence or nature is noticed. Once thoroughly established its growth is such that the production of paying crops of wheat or other small grains is impossible. In such cases the most vigorous action is necessary to prevent the entire loss of the use of the soil. In the drier parts of the states where the pest is found it may be destroyed in summerfallow by continuous working of the soil with the disk and leveller. The soil should be moved often enough to prevent the growth of green blades. This will require thorough working six to ten times through the summer. In parts of the state with greater rainfall the best means of eradication is to throw the land into hoed crops for two or three seasons, or until the soil is free from the grass.

Taken early, quackgrass seedlings are as easily killed as those of any other grass. Much may be done in the careful preparation of seed beds to prevent the growth of seedlings. Valuable work can be done in midsummer in the prevention of seed formation by cutting the grass in waste areas just as soon as

Quackgrass, showing the entire plant system, both above and below the ground.

the first heads appear. The old, well-established patches must be given very vigorous treatment.

Hogs Fed Naturally.

R. D. Lewis, who is farming 40 acres under the Tieton project, Yakima county, attributes his success with Duroc Jersey hogs to the fact that he makes it possible for them to feed naturally. He uses hoppers for nearly all kinds of feed and the results he has obtained have been most gratifying. "It is far cheaper for me to feed a hog all he will eat for a short time than it is for me to starve or half-feed him over a long period," said Mr. Lewis. "My hogs pay even with the high prices of feed now prevailing, because I try to produce pork in the very shortest time possible."

Porpoise and Whale.

Whales and porpoises are mammals, like cattle and sheep, and their flesh is "meat," not "fish." In texture and appearance it resembles beef, though the color is darker red, and the flavor is closer to that meat than to any other. It is devoid of all fishy taste.

Grange Visiting Day at Newspaper Office

The above is a photograph of the grange visiting day at the Woodland (Wash.) Chronicle office, when grangers got out the paper. The following are the names of those in the picture:

Top row from left to right—Mrs. Harry Warden and son, Mrs. E. H. Tartar and daughter Jewel, Mary-Lyle Tartar, Mrs. Ben Barr, Mrs. Cloid Early and baby, Mrs. E. W. Robinson, Mrs. Robert Barr, Mrs. Godfrey Ehman, Mrs. Hogan Pirtle, Mrs. Gus Simpson, Mrs. R. E. McNeal.

Lower row (sitting, left to right—Mrs. E. E. Glover, R. E. McNeal, E. W. Robinson and daughter, Gus Simpson and son, Hogal Pirtle, Godfrey Ehman, Jessie Jake Guilds.

Information Bureau

The Farmer will be glad to answer questions of general interest, as well as those of a practical nature, relating to the farm or farm home. There will be no charge for this service. Questions must be signed with your name and postoffice address and will be answered either by personal letter or by publication when of general interest.

Address Farmers' Information Bureau, Room 35 Review building, Spokane, Wash.

The Order of the Thistle.

Is the Order of the Thistle and the Order of St. Andrew one and the same thing?

Answer—The Order of the Thistle is a Scottish order of knighthood, sometimes called the Order of St. Andrew. It was instituted by James VII. (James II. of England) in 1687, when eight knights were nominated. It fell into abeyance during the reign of William and Mary, and was revived by Queen Anne in 1703. As at present constituted, the Order consists of the British sovereign and knights to the number of 16. The insignia consists of a collar, badge, jewel, star and ribbon. The collar is composed of golden thistles and leaves connected by crossed sprigs of rue, enameled. The badge is a golden eight-pointed star, whereon is an enameled figure of St. Andrew, bearing in front of him his cross in silver; it is worn attached to the collar. The jewel is worn round the neck with the ribbon. The star is of four points, with a St. Andrew's cross embroidered in silver upon it. In the center is a green and gold thistle within a circle of green, bearing the motto in golden letters. Ribbon, dark green. Motto: Nemo me impune lacessit. Besides the knights ordinary, there are extra knights (princes) and a dean, a secretary, the lyon-king-at-arms, and the gentleman usher of the green rod.

Order of Thistle.

What "Income" Really Means.

Question: If I pay $200 for box shooks and $30 for paper and nails, and then sell my apples, including boxes, paper and nails to the amount of $1120, do I have to pay an income tax on the said income? F. F.

To this inquiry The Farmer replied in part as follows:

You do not have to pay an income tax on your business as you outline it to us. Personal income taxes are paid on net income only. That is, since the expenses you enumerate total $230 and your gross income amounts to $1120, your net income is only $890, which is too small an income to require the payment of a tax under the present law.

The lowest net income requiring the payment of a tax is $1000. A single man having a net income of $1000 must pay a tax on it, but a married man need pay no tax unless his net income is $2000 or more.

By net income is meant the total receipts from business or salary less the actual expenses incurred in the conduct of the business or the earning of the salary. That is, no personal expenses, like the cost of living, may be educated from the gross receipts in figuring the net income.

Stores and Income Tax.

Question: We have a cooperative farmers' store. Our business was incorporated in July of the present year. Our gross sales for the quarter ending October 1 were less than $2500. After paying our manager, the net income will probably be not more than $500 per annum. Would we be taxed under this law (the income tax law)? C. H. B.

To this question The Farmer replied in part as follows:

All store companies are required to file a statement of their business with the internal revenue department. The fact that yours is a cooperative store does not exempt it, nor does it make any difference whether it is making a profit or losing money. The statement to the revenue department is required, and upon the showing of profit that department will determine whether or not an income tax will have to be paid

The Otter's Wanderlust.

Of all the beasts in the world, the otter, that fierce outlaw, is the greatest wanderer.

It is as if he were afflicted with a curse that forbids him to be still, that forces him ever to push on—on—on! Rest as rest he knows not. Three days will see the end of his longest inaction, and the amount of miles he covers in a fortnight would amaze some folk.—Outing.

Women and Girls in Orchards

Pick or Pack Fruit Beside Their Fathers, Brothers and Husbands

By PAUL E. TRIEM

Twenty or twenty-five years ago, the enterprising traveler, passing through Wenatchee, paused just long enough to brush the dust from his shoes and to note with disapproval the flat and unpromising valley, covered with sage brush. There was but one orchard in that part of the state of Washington in those days, according to most accounts, and that was on the Phil Miller place. Today the entire valley, farther than the eye can reach, is filled with apple and pear trees. A prosperous city has grown up on the spot where formerly the Siwash pitched his lodge. Automobiles innumerable have taken the place of the buckboard and the buckskin cayuse, which long ago clattered away over the dusty trail toward the land of yesterday.

In many unusual respects, the Wenatchee district may be looked upon as a model which other parts of the country will do well to follow. In the first place, the balance between city and country interests and activities is perfectly maintained. This district is not a city or a country, in fact, but a community. The high commercial value of apples and lands upon which apples could be raised is largely responsible for this fortunate condition, for this commercial high pressure has induced the city people to become not only owners but operators of orchards and has also extended the area of bearing trees into the city itself. In this way there has been insured a community interest usually lacking where the city man and the farmer are engaged in entirely different lines of activity. The practical bearing of this factor is well illustrated by the present labor situation in Wenatchee. Farm labor is scarce this season throughout the country. There is always some labor scarcity in a one-crop country at harvest time. But in spite of these facts and the added circumstances that this apple community beside the Columbia has given or will shortly have given nearly 800 of its young men to the national army, thus robbing it of much potential man power, the apples are being picked without more than the usual need for careful management. What makes this possible? The answer can be given in two words: community organization. Long before picking time came on, the Wenatchee Commercial club had gotten into touch with the federal employment department and the state harvesters' league, so that in case of emergency, labor reenforcements could be rushed to the district at any time. And perhaps even more effective than this was that constant and habitual good understanding between town and country, which makes it the most natural thing in the world that in times of stress the women and girls go out into the orchard and pick or pack beside their fathers and brothers and husbands. Certainly there is no better place in the world for the young people of the community to be. The crisp air and the golden sunshine of October, a glimpse of distant snow capped foothills and mountains through the dark green foliage of the apple trees, and perhaps the silent, blue-black current of a nearby irrigating ditch, all lend an atmosphere of enchantment to the prosaic work.

It is in these irrigating ditches that the real life blood of the valley flows. Without water, the soil becomes almost powder dry during the summer. It is for this reason that the real awakening of the Wenatchee country dates back to the year 1903, when a high-line canal was constructed by a company headed by W. T. Clark. The Wenatchee river, which is the source of the various canals of today, takes its rise high up in the foot hills, in the region of perpetual snow. Because of this potential source of almost unlimited irrigating water, the development of the orchard lands has been rapid.

The soil of the Wenatchee country is a volcanic ash, tremendously rich in these essentials of plant growth apt to be lacking. Potash and nitrogen in particular are found in abundance. Probably it was this native richness in plant food which led early orchardists into an error in the method of handling the soil which in recent years is being corrected. For many years it was supposed that soil so well supplied with all the elements, particularly nitrogen, needed no ammendments or additions to keep it up to the maximum of productivity. Now alfalfa is being grown in many orchards for the sake of the humus it will add. Without this practice, it was found that gradually the soil was becoming too compact, as the fiber or humus was exhausted. What used to be enthusiastically spoken of as "clean cultivation" is no longer regarded as the summum bonum in orchard management.

During this year of 1917 as never before, perhaps, the absolute dependence of a community on transportation, both internal and external, has been forced upon the growers. More and more the light team and ranch hack or lumber wagon are being replaced with the light or heavy motor truck, for hauling the apples from orchard to warehouse or shipping point. Soon, probably, there will be nothing but trucks, and the team and wagon will have gone to join the cayuse of yesterday. The problem of moving the fruit after it reaches the railroad station has become increasingly difficult of solution each year, until with the advent of the present season many growers are crying out for relief from what some of them regard as the mismanagement of the railroads. The crop of apples for this year will probably total about 7500 cars in the Wenatchee district. To move this tremendous tonnage, it has been found necessary to splice out the insufficient supply of "reefers," or refrigerator cars, with cars of various other types never designed for the conveyance of perishable commodities.

Local transportation is one of the problems of the orchardists in the Wenatchee district. The upper picture shows six and a half tons boxed apples on a motor truck. Trucks are coming more and more into favor among the growers.

Clean cultivation is no longer practiced by many growers as it tends to deplete the humus in the soil.

In conclusion, it may be interesting to note the growth in orchard area and in fruit trees during the last four decades. In 1873 the first orchard was set out by Miller brothers, the nursery stock having been obtained from Dr. Jewett of White Salmon. For 30 years, little more was done toward developing what was eventually to be the community's "money crop." With the completion of the high-line canal, in 1903, the present orcharding era really began, and by 1915, when the government took a tree consus, about 42,000 acres were in cultivation in the Wenatchee-North Central Washington district, with apple trees numbering 855,687 and 135,000 pear trees.

Supply of Hay

That the shortage of hay is not a condition which is so serious as might be expected appears from a recent trip taken by R. A. Blanchard, agriculturist of the Live Stock State bank of North Portland, to Washington points. Mr. Blanchard traveled through the Kittitas, Yakima and Columbia valleys. He said: "Alfalfa stacks were in prominence everywhere. I asked townspeople and bankers regarding the hay shortage and they assured me that from one-half to one-third of the hay had not been sold and a great number of the farmers were holding for higher prices."

Mr. Blanchard stated that about 70,000 tons were being shipped from Kittitas county over to the coast, the government being the largest buyer for the cantonment camps. While prices were soaring there seemed to be no real danger of a hay shortage, as the trouble appeared to be largely on account of the prices the farmers were asking.

Big Cattle Show

Entries at Portland High Class

In Shorthorn classes alone, 32 western herds will be shown at the Pacific International Live Stock show at Portland during the week of November 19, and a comparison of this number with the 38 herds shown at the Chicago International gives an idea of the size and importance of the Pacific International next month. Among the Shorthorn exhibitors are the following well known herds:

Oregon—Frank Brown, Carlton; W. O. Minor, Heppner; A. Chalmers, Forest Grove; J. B. Cornett & Son, Shedd; E. F. Anderson, Albany; W. J. Townley, Union; G. W. DeLay, Hot Lake; Richard Kiger, Corvallis; W. B. Ayer, Carlton; A. M. Harradon, Carlton; Perry Smith, Yamhill; E. H. Holloway, Albany; Oregon Agricultural college, Corvallis.

Washington—A. D. Dunn, Wapato; Day & Rothrock, Sprague; J. H. McCroskey & Son, Fishtrap; Joseph Turner, Meyers Falls; Alex Morrison, Valley; George Bertrand, Olequah; Washington State college, Pullman.

California—Hawkins & Son, Hollister; Alexander & Kellogg, Suisan; Carruthers Farm, Mayfield; H. M. Elberg, Woodland; T. J. Miller, Los Angeles; Thomas Harrison, Glen Ellen; University of California, Davis.

Montana—Childs & Anceny, Helena; H. L. Sommers, Bozeman.

Idaho—University of Idaho, Moscow.

Herefords.

The Hereford exhibit will be made up of eleven of the best herds in the west, among them being herds that have competed against the best in the United States and come out winner. These breeders have spared neither time nor money in building their herds to such a high standard that they win in the fastest competition and a rare treat is in store for the admirers of the "whitefaces." The following herds are entered:

Oregon—George Chandler & Son, Baker; W. P. Emery, Macleay; W. O. Huntley, Ontario; Oregon Agricultural college, Corvallis.

Idaho—L. L. Young, Nampa; Henry Thiessen, Sweetwater; University of Idaho.

Montana—A. B. Cook, Townsend; J. D. Miles, Livingston.

Washington—Washington State college.

Oregon, Washington and Idaho will have their best herds of Aberdeen Angus on display. Congdon & Battles will bring from their far-famed Yakima farm a herd that has won premier honors in all shows of the United States. A. H. Eagleson & Sons of Boise, Idaho, are sending a show lot that comes from one of the oldest established herds in the state. George Dickson, one of the foremost beef producers of Oregon, will also show a string of the "Doddies" from central Oregon.

Home Made of Dirt

By Ray W. Felton.

Patience and perseverance will accomplishe wonders. In the case of C. W. McCormick and his son Henry McCormick, of the Naches valley, these two virtues provided them with a splendid home, one of the most substantial in all the valleys of the Yakima. Years ago, when the McCormicks first settled in the Naches, sawed lumber was very scarce and consequently very expensive. The McCormicks wanted a house better than that which they were living in, so Mr. McCormick decided to use the material most plentiful and most easy of access. That happened to be dirt. Yakima valley dirt had not acquired the value in those days which it now possesses. Mr. McCormick was an old time brick maker and he found by testing that the soil on their farm would bake readily and that an excellent grade of building brick could be produced. He secured a small mould and by making three bricks at a time managed to produce, with the assistance of his son Henry, 100,000 brick during the summer, enough to build the eight room dwelling which forms the center of the very attractive grounds on the McCormick ranch.

Henry McCormick, prominent in grange circles of Washington, recalled the brickmaking experience the other day. He was the "offbearer."

"It was a back-breaking summer," remarked the younger McCormick. "We tried to get several of the neighbor boys to help, but they didn't stick, so it fell to father and me to mould and burn those bricks, three at a time until we had enough to build the house."

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

Have You Well Seasoned Plans?

What are your well seasoned plans? What has your farming experience taught you? What have you learned from others that you have found useful in your own conditions? How much of what you have read have you tried out, holding fast to that which is good?

Haphazard farming is no better than haphazard teaching in the schools or the haphazard practicing of law in the courts or the haphazard trading in the stores. All this haphazard work may result in fool's luck now and then, but is no sure foundation of prosperous farming year in and year out.

What are your seasoned plans for the coming year of our Lord 1918?

It is well to try experiments on a small scale, to listen to all sorts of advice, and on the same small scale adopt any fragments of that advice which seems the most likely to succeed, but your enduring success as a farmer, like enduring success of men in other vocations, depends upon plans which have been tried and not found wanting, methods which have proved themselves valuable through years of experience.

These seasoned plans you should cherish as the most valuable of all your farm knowledge.

Two Hogs on Every Farm

A food production slogan has been started: "Two hogs on every farm."

There is great need for the production of more pork and bacon and lard, and the farmers should make genuine attempts to increase the number of hogs in the country. To assure an increase, the food administration has taken official action committing the government to the policy of guaranteeing about $15.50 a hundred pounds for pork on the basis of the Chicago market. Owing to different classes of hogs and different localities where they are produced with reference to their reaching the consumer, it is difficult to establish an ironclad price for them. But the government has definitely declared that it will assure fair play to the farmer who will endeavor to help win the war by growing hogs.

Whether the slogan of two hogs on every farm is a good one is questionable. But the slogan of "More hogs" on the farms certainly is warranted. The farmer should use good judgment. Perhaps he should not try to raise even one porker, or perhaps he should raise twenty. It depends on his farm conditions. It might mean actual loss if he tried pork production instead of something for which his farm and his own knowledge were more suited. In hog raising, like everything else he should study conditions and act on well-thought-out plans. But in comparatively few cases should wholesale hog raising be tried out on the farms today. Only a few farms are prepared for hog raising on a large scale. Only a few farmers are educated along hog raising lines sufficiently to jump suddenly into the business. Most farmers should be content with one breed sow and her litter. Some should be content with only one pig to eat the waste.

Relief to Apple Growers

The distress among apple growers due to shortage of cars in which to ship their fruit may soon be relieved. The government has taken cognizance of the situation and has promised cars as rapidly as they can be secured and hauled into the northwest, without handicapping even more vital transportation. The announcement indicates refrigerator cars will be requisitioned from other traffic where the produce or manufactured goods is less perishable than apples. At all times the government has made it clear that the apple crop was, in its opinion, a vital food essential, and that no losses should be allowed to occur that could reasonably be prevented. With the government forced into channels of regulation and paternalistic activities that have heretofore been unheard of in this country, it is gratifying that it should make this special effort in behalf of the apple industry. And, while it is vitally essential that the crop be protected from losses wherever possible, the producers should refrain from impatience with the government. It is doing its utmost to handle a maze of difficult situations, of which the apple transportation problem is only one.

Corn for Stock Feeding Needs

When, several weeks ago, the desirability of shipping in corn for stock feeding needs in the Inland Empire was pointed out by the Farmer at an agricultural meeting held in Spokane, the suggestion was made light of in some quarters. "Why corn is selling for more than wheat," said one objector, "and it is ridiculous to think that it can be profitably shipped to the Pacific northwest."

But it was further pointed out that while that was true of old corn, a very different situation would appear with the harvesting of the new crop—the greatest in the history of the country.

One can now contract at Missouri river points for all the corn he wants at around $1.15 a bushel, December delivery; and contracts can be had for even cheaper corn for May delivery. The freight rate from Missouri river points is 28 cents a bushel, and even if we add five cents a bushel for handling charges, corn could be laid down here for $1.48 a bushel.

The Farmer is reliably informed that the Equity association in Montana, a cooperative farmers' organization, has already contracted for large supplies of Missouri river valley corn, which it will bring out in December and distribute to its members at cost.

The Spokane Chronicle reports:

> A considerable movement of shelled corn from the corn belt to the Pacific northwest is planned to overcome the shortage of grain in this territory for feed for live stock, according to Professor G. R. Hyslop of the Oregon Agricultural college.
>
> It will be shipped in bulk, and will carry considerable moisture, especially that delivered in December and early January. It will be standardized under the federal grades, most of the western receipts being that known as No. 3 mixed.

There will be a double advantage in feeding corn. It can be had at a price considerably below that of wheat, and it will save the wheat for shipment to our allies in Europe.

The Farmer renews its advice that granges, farmers' unions and other cooperative bodies take prompt steps to investigate the large possibilities of this movement. No step should be omitted that will tend to foster the endangered live stock industry in the Pacific northwest.

A Little Disappointing

The national food administration admits that it is a little disappointed that about half the families of the United States refused or neglected to sign the food saving cards during the recent food pledge week. "We hope to have so many of these window cars displayed in the homes of the land that the absence of one rather than its presence will be noticeable." said one state food administrator. "It ought to be that the lack of one of these window cards would be taken almost as a sign of disloyalty to country."

Many families did not sign the cards pledging themselves to "Hooverize" because they had no opportunity to do so. Many signed them who are not making any added attempt to save wheat, meat, fats and sugar. Many who did not sign them are really saving in accordance with the desires of the food administration. It is not always the signer who saves. But in this case, the entire nation should display a united front. Every name in America should be on the food conservation roll. Every home should have a card displayed to say to the world, both friend and foe: "We are enlisted in the service of our country. We can't fight in the trenches, but we can feed those who can fight. We are living well, but we are saving the foods the soldiers must have."

Washington Gleanings

Yakima's $1,000,000 sugar factory began operations recently.

John Tuhill, who put in 30 acres of beans on Mr. Dunning's place near Dayton, raised a $1900 crop, which is over $60 per acre.

The Yakima valley potato crop is estimated at 85 per cent of normal by County Agriculturist Price. Twelve thousand acres are in potatoes.

The total oats yield for Skagit county this year approximates 600,000 sacks or 1,800,000 bushels. Skagit county farmers will receive about $1,500,000 for this season's crop.

Land Commissioner Clark V. Savidge announces that the next sale of state lands will be on the first Tuesday in February, 1918, and that it promises to be a record-breaker.

The business men of Leavenworth closed up their offices and stores one day recently and everybody went to the orchards in the vicinity of Peshastin where they helped to harvest the apple crop.

The Thurston County Poultry and Pet Stock association will hold its annual show this year in Olympia from November 20 to 24. The show will consist of two departments, one for poultry and one for rabbits and hares.

The Wenatchee valley exchange recently shipped a car of Acme brand Winesap apples to Shanghai and one to Hongkong, China, from its Cashmere warehouse, and one from its Dryden plant to Manila, of Acme brand Winesaps.

Dates for the annual irrigation institute, at which the irrigationists of the state meet to discuss their common problems, have been fixed for December 10 and 11. The session may be held in North Yakima instead of Wenatchee.

What Others Say

National Stockman and Farmer: There may be some who will believe that a dealer can ignore cleaning and sterilizing and still deliver sweet milk, but we are not among them.

Dakota Farmer: Oleomargarine is making desperate efforts to get in as butter—a plain fraud. Let it be sold in its natural color and on its own merits and not be palmed off as butter.

Rural New Yorker: There will be greater demands than ever for gardens next year, and good seed represents both promise and performance. The early bird this year stands the best chance of catching the seed.

Farmer and Stockman: The trouble all too many city folks make is in not explaining the needs plainly enough to the men and women of the country whose aid they wish. They seem to think that all they have to do is to ask for charity and it will be forthcoming. This is a grevous mistake. We have systematized our charitable work nowadays, eliminating the unworthy and the unscrupulous. An appeal which can not be explained and its merit proved, so that all will understand, is not worth heeding. But whenever a worthy cause is made plain to the folks of the country the response is immediate and generous to the limit of ability.

Training of the Live Stock Judge

First Essential in Acquiring Skill Is in the Learning to See

By E. J. IDDINGS

Apprenticeship was the old system of training for a profession. The lawyer, the physician, the mechanic worked for a certain number of years under men of acknowledged ability and in time came to be recognized for ability and skill in that particular line.

A somewhat similar process was necessary to make the expert judge of live stock. After years of experience and some success in caring for, breeding and developing farm animals, there came, by common consent, the well deserved

Recognition of Judge.

There are hundreds today who do not have, and who do not seem to be able to secure the advantages of live stock apprenticeship. Some of these people are youngsters; others are quite a bit past the age of youth. They hope, however, to secure information concerning market and various breed standards and requirements and wish to acquire skill in accurately estimating the comparative merits of farm animals. Such are the students of animal husbandry in our colleges, the regular attendants upon agricultural short courses and the earnest readers of information upon live stock judging found in the agricultural press.

The first essential in acquiring skill in live stock judging is in learning to see the amateur and superficial examiner of an animal perceives only the dim outlines of animal form. His final opinion depends largely as to whether or not his hasty "looking over," which often means "overlooking" both points of merit and defects, has or has not left on him a pleasant impression. The impulsive and the inaccurate judge is hasty as a rule, not dependable.

In passing accurate judgment there must be examination not only of the general form or outline, but of details of structure as well. In the horse, for example, the width of the forehead, eye, throat latch, set of shoulder, muscles of the back, loin, croup, forearm and gaskin, set of knees, pasterns, hocks, feet and possible unsoundnesses of many kinds. These, with many more, must receive attention if the final opinion or judgment is to have value. To acquire proficiency in making accurate estimates of animals requires:

Time.
Long practice.
Systematic and careful examination.
Exercise of level headedness in balancing various points of excellence, as well as defects, in passing final judgment.

In calling attention to the many details that enter into the complete make-up of the animal, to show something of the relative importance of the various points and to show the necessity of detailed examination is the function of the score card as used in the first instruction in stock judging.

After one has details of animal form well in mind it becomes natural for him to examine every farmer, even the most minute, and such examination is quickly made by the expert and experienced judge. In the passing of a horse or a cow before groups of people the capable and experienced judge of live stock will see numerous things that others do not see because "the others" do not know where to look or what to look for.

Score-Card Judging.

The study and practice of score-card judging gives the inexperienced a proper understanding of the importance of close and detailed examination and an idea of the relative weights and importance to be ascribed to the various parts of the animal makeup. Once this is understood the score card is no longer used in practice. The capable judge carries an ideal of type for the fat hog, the steer, the Percheron horse, the Shorthorn, the Cotswold, etc., through all the various market classes and grades of animals and the large number of widely differing breed types. With this ideal animal the judge unconsciously measures or compares each animal upon which he passes judgment. After initial work of the kind mentioned all judging, therefore, becomes a comparative rating of animals. In

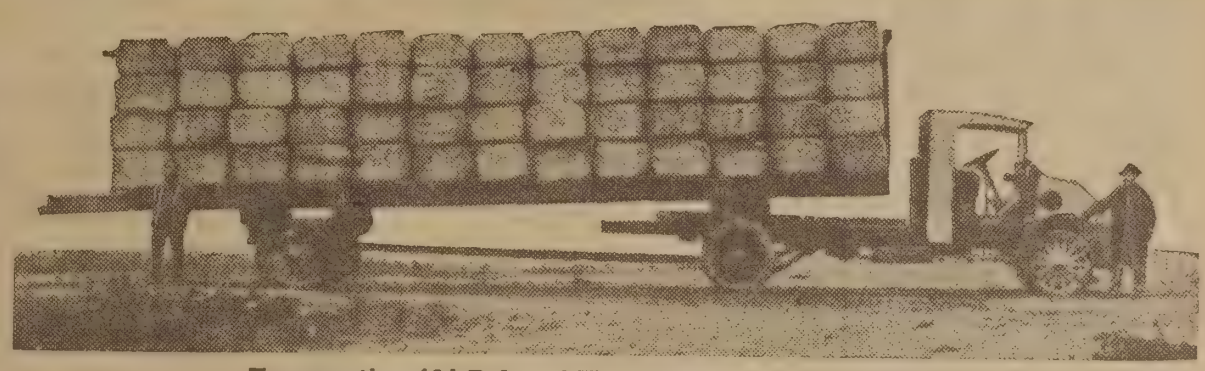
TOWER'S FISH BRAND
REFLEX SLICKER

Practical as a plow, and just as necessary. Make every rainy day count.

Waterproofs Absolute are Marked thus—

TOWER'S FISH BRAND



A. J. TOWER CO. BOSTON

SAVE MONEY ON SPREADERS

Buy direct from my factories where I build the lightest draft, easily handled, expertly designed spreader from highest quality materials and sell to you at lowest manufacturers' price—less than wholesale! Thousands upon thousands of Galloway Spreaders giving satisfaction. Nine styles and sizes. Also build engines and cream separators. 800,000 satisfied customers—some in your vicinity. Close shipping points save freight. My free catalog honestly describes Galloway goods. Get it before buying. Please mention implement wanted.

WM. GALLOWAY CO. Box 2449 WATERLOO, IOWA

Transporting 104 Bales of Hops, More Than a Carload.

Efficiency and Economy on the Farm

are mighty important things these days. Everything costs more. The real way to make money is to save it and to get the best results from all work you perform. You can do this in your hauling. You can CUT DOWN THE ACTUAL COSTS OF LABOR AND GASOLINE, USE HALF THE ORDINARY TIME REQUIRED AND TRANSPORT MORE PRODUCTS WITH THIS REDUCED EFFORT AND COST BY HAVING A

Universal Trailer

Which Can Be Coupled to *Any* Standard Motor Truck

This remarkable trailer, which has an exclusive "DOUBLE BUNK," to insure the solidity and balance of your load, is simple, very strong and will last a lifetime. It pulls directly from the axle—not from the springs. It can be backed up and turned in a short radius without uncoupling.

You are enabled to haul from 50% to 100% additional bulk, dead weight or long LENGTHS with it—real loads of live stock, hay, grain, flour, feed, milk, fruit, as well as scores of other things.

Owning one of these UNIVERSAL TRAILERS and a truck you will be able to make money by hauling your neighbor's products to market.

Built in several sizes by

WATERING THE COWS.
Warm Water Conserves Energy.

Almost any dairyman knows that his milch cows must have warm quarters in which to eat and sleep and chew their cuds and digest their food. Frequently, however, failure of cows to produce a profit on their keep is due to failure on the part of the owner to provide such comfortable quarters.

Another very common failure on the part of the dairyman, according to some good authorities, is in the matter of watering. Cows are heavy drinkers—if they are good milkers. They consume at one drinking some times several gallons of water. On a winter day it is no uncommon thing to see a sensitive dairy cow stand and shiver after drinking her fill of cold water from a trough that perhaps has ice around the edges.

There can be no gainsaying that this results in a very real loss of energy; of energy that should go to the production of milk and butter. Hence, those who argue in favor of warming the water that the cows drink appear to have good ground for their claims.

It is generally advocated that water be not below 70 degrees in temperature for the milking cow, and it is claimed that they readily learn to appreciate the warm water and drink freely of it. There is declared also to be less danger from the effects of chill. Especially is this true of cows that for any reason are delicate in health. It is urged that cows that are just about to come fresh, or that have recently freshened, should never be allowed to drink heavily of cold water. There is less danger if warm water is given them to assure them against the injurious effects of sudden drop in temperature which would result if their bodies were required to warm a few gallons of water from near the freezing point.

Training the Stock Judge

(Continued from preceding page.)

passing upon a single animal this animal is compared with the "right kind" the judge has in his mind as his ideal. In passing upon a group of animals the top or first is picked in comparison with the "right sort" mentioned above and all others are rated accordingly.

In passing it may be remarked that except as an ideal kept in mind the animal exactly right in every way has not existed, does not now exist and in all probability never will exist. Nature and man working together in animal breeding get the animal only approximately near to an ideal standard. Long years and patient, intelligent effort by master minds among animal breeders have brought our pure-bred animals of today and made them a vast improvement, so far as adaptation to man's needs is concerned, over the forms from which they have been developed.

The Best Judges.

Careful reading of literature on types and breeds and judging and study of animals in connection; obtaining of help from experienced live stock men; attendance upon animal husbandry short courses and other live stock extension work; attendance at shows and study of the animals exhibited there and of the work of the official judge; years of live stock apprenticeship with good herds; attendance at an agricultural college, thereby getting systematic training and some valuable experience; by one or several of these means a man may acquire skill in live stock judging. Our best judges of today have been produced by live stock apprenticeship and practical experience in working with and managing herds, by college training or by a combination of both.

One may be a judge of but one kind of animal, as fat hogs, steers, Hereford cattle, or any one of numerous other breeds and types. Some judges are recognized as capable to pass judgment upon several different breeds or kinds. As a rule a judge who is more generally trained has a specialty of one or two kinds of animals in passing upon which he is at his best.

If the several other means here mentioned are not available for the many there is the comparatively inexpensive college or winter short course training in live stock judging, recognized today as effective, with capable men as instructors and excellent herds upon which to practice.

Certainly it is a very great satisfaction to know even the rudiments of live stock judging and one really desirous of acquiring training and experience can certainly have his desires gratified by one or more of the methods suggested. More capable judges of live stock in Idaho and contiguous states will mean for more good live stock and greater progress in upbuilding the flocks and herds of the northwest.

Food Questions

The two following questions were answered by the Oregon Agricultural college experts:

Where can beet pulp, as well as molasses for feeding, be obtained, and especially what is the value of molasses for feed?

There is a sugar beet factory at Grants Pass, but their entire output is taken up by the growers. There are several other plants in the northwest with limited outputs of pulp. The largest company selling pulp is in California, and reports are that the supply is short. Molasses for feed can be secured in drums or barrels in Portland. It will make clover straw more palatable, but such a combination calls for some other feeds high in protein for dairy cows. The common way to add the molasses to the straw is to dilute the molasses to the ratio of a pint of the molasses to a pail of water and pour it over the straw. Animals should become used to the molasses gradually.

Is soy bean meal better than oil meal for feed, and what are the relative values of shorts, barley, beet pulp and turnips?

Soy bean meal is slightly higher in digestible nutriments than is oil meal. When fed in large quantities soy bean meal has a tendency to make soft butter. Cocoanut meal or cottonseed meal have a tendency to harden butter. Oil meal is slightly laxative and cooling. A large variety of feeds is recommended.

Shorts are heavy and should be fed in combination with bulkier feeds. Shorts have a slightly higher feed value than bran, but are less palatable.

Barley is ranked next to oats as a feed for dairy cows. It should be rolled, as should oats.

Beet pulp makes a very good substitute for silage where the latter is not available. From a feeding value the cost must be considered in preparing a ration.

Turnips make a good, succulent feed but taint the milk, so it is advisable to feed turnips immediately after milking.

Clallam County Report.

During the month of September a total of 498 Clallam county (Washington) cows were tested. These cows averaged for the month 594 pounds of milk and 27.89 pounds of butterfat. One hundred and eighty-five cows produced over 30 pounds of fat for the month, according to the report of E. O. Leonard, official tester.

The high herd honors for the month go to Fred Edgington. His herd of 14 cows averaged 706 pounds of milk and 35.54 pounds of butterfat for the 30 days. Jim Belfield's herd of 31 cows average 677 pounds of milk with 34.69 pounds of butterfat. Ed Pettit's herd of 12 cows averaged 606 pounds of milk and 43.35 pounds of butterfat. Fred Willis' herd of eight cows averaged 541 pounds of milk and 33.24 pounds of butterfat. Ben Emerson's herd of four cows averaged 765 pounds of milk and 32.96 pounds of butterfat.

Results of Test.

Hollywood farm has reported the following records to Superintendent Gardner in the last few days:

Hollywood Lilith Mercena, No. 278,-103, a junior 3-year-old daughter of Hollywood Lilith Palmyra, No. 118,678, and Hollywood Mercena, a 28.44 pounds Hollywood heifer, has just completed a 33.44 pounds seven-day record from 5331.6 pounds milk showing a 5.032 per cent butterfat test. This record places her fifth highest in her class, according to volume No. 26 of the Advanced Registry.

Second Annual Combination
40 Pure Bred Swine Sale 40
North Portland, Oregon, Tuesday, Nov. 20, 1917

During the Pacific International Live Stock show.

The same rules will govern this sale that were used last year. The swine will be passed on by competent judges and only No. 1 stock will be allowed to enter the sale ring.

If in the market for service boars, bred or open sows or gilts of Poland China, Duroc or O. I. C. swine, come to this sale or write for catalogue to

R. W. HOGG, Rt. 2, Salem, Ore.

LaConnor Flats Stock Farm

Pure bred registered Holstein cattle. Herd sire Segis Pontiac Acme; average of three of nearest dams; butter, 1 year, 1030.82 lbs.; milk, 24,380.3.

J. H. HULBERT, Mt. Vernon, Wash.

"They have got hand-milking beat by a mile," this well known dairyman says. "One man and a boy are milking 50 cows in an hour and a half."

Hundreds of dairymen in the Northwest say this same thing about

B-L-K MILKERS

They bring relief from all-the-year-round milking drudgery—*freedom* from trouble and expense of hired help.

The B-L-K is in every respect a **successful** milker. The action of the teat-cups is the natural, intermittent motion of hand-milking.

Frozen, Moldy Straw

By R. A. BLANCHARD.

With the shortage of hay comes an increased use of straw and feeders will do well to be cautioned on troubles that are likely to arise from poisoning of stock. Already one case has come to notice and more will perhaps develop as the cold weather advances. The cause of the disease is from a fungus which appears to be most prevalent in hay that has become frozen or moldy. The writer has seen 10 head killed outright in Montana by eating the little clumps of frozen and moldy straw and apparently had developed an appetite for it. There is no definite cure and stock men who are apprised of the danger will do well to prevent the occurrence of this by fencing the stack and feeding it out or by removing all decayed, frozen or moldy portions.

Dr. Luce of the Idaho experiment station recommends giving a purgative to all the animals regardless of whether they show symptoms or not; of those animals attacked, refuse feed for 24 hours. This is to be followed by giving either one quart of raw linseed oil or one ounce powdered aloies or any reliable aloine cathartic ball. This can be repeated every day if there is no action. Like all other maladies affecting stock the prevention is by far the cheapest.

World Live Stock Conditions.

The University of Oregon school of commerce is making a study of live stock conditions in all parts of the world, with a view of determining the probable status of this industry after the war.

Official figures have just been received from the Netherlands showing that while the number of cattle and sheep have increased, the number of swine has decreased. When the last census was taken in March and April of this year the number of cattle of all kinds and ages was 2,205,132. In 1910 it was 2,026,943, a gain of 13.5 per cent.

The number of sheep this year was 520,235; in 1915, 482,022, a gain of 7.7 per cent.

The number of swine this year was 1,185,438, compared to 1,259,844 in 1910, a loss of 9.9 per cent.

The price of a cow not giving milk and sold for slaughter in Holland is now from $50 to $115; of a calf for veal, from $13 to $35. A good milk cow sells for about $125. The latter figure is a decline of $40 or $50 in comparison with the prices prevailing a few months ago and is due to the scarcity of fodder. There is serious talk of slaughtering or exporting several hundred thousand cattle because of inability to feed them sufficiently.

Veterinary

Dr. S. B. Nelson

Ringbone.—I bought a 10-year old pony this spring. She was all right at that time, but now shows signs of ringbone. I do not know how long she has had it. Also is it true that the government is going to put the price of hogs down to 10 cents? A. O. A.

Your pony with the ringbone may be helped by only two things: First, blister it thoroughly. Second is to fire and blister both. The latter is the better treatment. If there is any chance for her to recover she will recover under the latter treatment. You should have the services of a veterinarian for this operation. I am not advised regarding the government action regarding the price of hogs. I hardly think so, as there is quite a shortage in hogs, and we need the food.

Wound Does Not Heal—Two weeks ago one of my cows bloated badly on alfalfa and I was obliged to use a trocar to save her life. The opening I made shows no signs of healing yet, and when she moves about the gas or air blows back and forth through the hole and keeps the edges of the wound dry. There also seems to be a lot of air between her hide and her body. She does not eat very well, and seems to be very stiff in her movements.

G. H. L., Omak, Wash.

Judging from the above letter I would be of the opinion that the portion of the contents of the rumen went down between the stomach and the abdominal wall, and is forming an abscess that will come to a head at the lower part of the abdomen somewhere near the udder. I would suggest to you that you take a knife and scrape the edge of the wound that you made with the trocar and bring the wound together with a stitch, using possibly the boiled very heavy silk for this purpose. That may give it a chance to heal. In order that the load may be lightened, cut down her feed considerably. If, as I suppose it will, this forms an abscess at the lower part of the body that will have to be treated specifically. First, it will have to be opened by a good free incision and then the abscess washed out with a 2 per cent solution of any coal-tar disinfectant that you may happen to have. After this, it should be washed out daily so as to allow it to heal from the top.

Fail in Breeding—We have a free range law here, but some of the people have no fences and when the cattle come their way they are beaten and driven away. I have several cows that I can not get with calf. Is this the cause?

F. H. W., Harmony, Wash.

Constant abuse of animals may, of course, cause them to fail in breeding. That is a well-known condition. I doubt, however, where animals run free on the range that they can be subjected to a sufficient abuse which would cause the trouble that you mention. I am rather of the opinion that there is some internal specific reason for the same. There are three or four things that would cause this trouble. Some of these can only be remedied by the services of a man especially trained to recognize them and to perform the operation necessary for the treatment. The others sometimes yield to medical treatment, and for that reason I am going to suggest two treatments for you to try. You can try one first, and then the other if the first one fails.

The first is the easiest treatment. Put a cake of yeast in a quart of lukewarm water and place this on the back of the stove an allow it to ferment. Use this as a vaginal injection the first and second day prior to breeding.

The second treatment is known as the sodium bicarbonate treatment. Put a teaspoonful of sodium bicarbonate into a quart of lukewarm water, or rather warmer than luke warm, and wash out the vagina with this solution two or three days prior to breeding the animals.

CUTTER'S
BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Serums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest.

Prices:

10 dose pkge. Single pills	$1.00
50 dose pkge. Single pills	4.00
10 dose pkge. Double Pills	1.50
50 dose pkge. Double Pills	6.00
Cutter's Pill Injector....	1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

The Cutter Laboratory of Illinois, Chicago

Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull.

Write the breeders advertised below for prices, pedigrees, etc.

The American Jersey Cattle Club, 314 West 23rd Street, New York City

Jersey Isle Stock Ranch

Herd headed by Bright Light's Knight 103741, a line-bred Gamboge Knight-Combination. Castillan Lady 26628 made 603.3 lbs. fat (715.3 lbs. butter) and 11,530 lbs. milk in 11½ mos., and my herd has highest average test of 399.8 lbs. fat in Buhl Cow Testing association. Young stock for sale.

C. E. LONG, Buhl, Idaho.

Two Choice Bull Calves

From cows with official records of 914 and 663 lbs. butter in a year. Prices in proportion to production and quality.

ED CARY, P. O. Carlton, Oregon. Station, Lafayette, Ore.

724 Pounds Butter

and 11,076 pounds milk is the record the dam of a bull calf dropped Sept. 1, 1917. The sire, Dominus, is out of an 817-lb. cow and sired by a bull out of an 853-lb. cow. PRICE $125 for quick sale.

J. B. STUMP & SON, Monmouth, Ore.

Two Bulls Ready for Service

Sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Good individuals. Only $100 Each.

F. E. LYNN. Perrydale.

Every Cow a Record

Fifty per cent of our cows that have dropped more than one calf have records above 700 lbs. butter, 85 per cent fat. Golden Glow's Chief and Adelaide of Beechlands blood predominates. Special prices on bull calves under 9 months old.

LADD FARM. Oswego, Ore.

Green Meadows Farm Jerseys

Young bull out of dam on official test making good record. Sire a grandson of Goldon Glow's Chief, out of dam with official test of over 700 lbs. butter in a year. Other bull calves from register of merit dams. Also cows and heifers.

HENRY STEWART, Prop., Albany, Ore.

Wynoochee Home Farm

Home of
The Gold Medal Jerseys.

Young stock whose dams or granddams in my herd have won gold medals from the A. J. C. C.

JOHN H. TAYLOR, Montesano, Wash. Box 426.

Maple Lawn Place

Register of Merit Jersays

Herd headed by a double grandson of Spermfield's Owl, Moose o' Fernwood, No. 173024, whose dam has official record of 916 lbs. butter.

Young stock of both sexes from dams on official test.

ROBT. L. BURKHART, Albany, Ore.

Waikiki Farm

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

IRA P. WHITNEY, Manager. ROUTE 7, SPOKANE, WASH.

Look Up My Winnings on Jerseys

at Oregon State Fair. Junior championship and other prizes; only five shown. For nine months my herd has had highest record in Marion County Cow Testing Ass'n. Lowest records since June, 470 lbs. butter as senior yearling in 10 months. Other two lowest, over 600 as 2-year-olds.

F. A. DOERFLER, Silverton, Ore.

$100 to $250

Young Jersey bulls, ready for service, sired by St. Mawes Golden Poppy, whose dam has official record of 1120 lbs. butter in a year. Some out of Register of Merit dams, priced according to quality of dam.

M. H. JONES, Perrydale, Ore.

Register of Merit Jerseys

A few REGISTER of MERIT cows and their offspring FOR SALE.

H. T. THIESSEN & SON, Milwaukie, Ore.

Bull From Gold Medal Dam

Out of Brown Bessie Alphena's Gem, 827 lbs. butter in year. Sire, Engineer's Bluster, whose dam, Mabel's Bluster, once held world's record for 3-year-old production. His first daughter on test, in this herd, beginning under 2 years old, will make over 500 lbs. butter. Other bulls from Register of Merit dams.

N. H. SMITH, R. D. 2, Oregon City, Ore.

ASHBURN FARM

Register of Merit Jerseys

In nearly 13 years we have yet to get our first poor heifer or dissatisfied customer. We have the best of the Golden Glow's Chief and St. Mawes strains, with the cross of our great Kentucky bull, Valentine's Ashburn Baronet.

J. M. DICKSON & SON, Shedd, Ore.

Oak Ridge Jersey Farm

Register of Merit Cattle

Twenty-nine years breeding Jersey cattle. Write us for prices and pedigrees. For information address

RILEY E. HULBURT, Albany, Ore.

Ashwood Farm Jerseys

FOR SALE—BULL CALVES; sired by ST. MAWES OF ASHWOOD and out of daughters of HOLGER now making creditable Register of Merit records.

McARTHUR & STAUFF, Rickreall, Ore.

FARMERS USE A POWERFUL DISINFECTANT

B-K disinfecting protects live-stock against disease. Ten times stronger than carbolic, yet not a poison. Contains no acid, tar or caustic. Safe—clean—cheap Used in barns of leading breeders.

Meat Breeds Wanted

The war is forcing greater attention to the meat qualities of the fowls. The Plymouth Rock and breeds of that size are to be more in demand as long as the meat shortage exists, and that will likely be for a number of years to come. One result of the food campaign and the high prices will be that the consumer will study the chicken a little more when purchasing. When paying 25 and 30 cents a pound she will buy the one that has a large proportion of meat and a relatively small proportion of bone and waste. That is food conservation. This will be a blow to the Leghorn. As the price of meat rises and the premium on the meat chicken increases the tendency will be for farmers and many poultry keepers to keep a larger chicken.

The markets are now discriminating against the Leghorn. In the Portland markets a five or six pound hen sells for two cents a pound more than a three-pound Leghorn. That means that the Plymouth Rock is worth 50 or 60 cents more than the Leghorn. The Wyandottes and Rhode Island Reds are in the same class as the Rocks, and when I speak of the Leghorn I mean that they represent many small breeds which need not be mentioned.

In deciding on a breed, therefore, if in doubt, choose the larger breed, at least during the continuation of the meat shortage. It will be in the line of patriotism. If careful in the selection, the larger breed may lay as well as the smaller. At present prices of feed and meat it will not pay to use the very large breeds. The farmer will do well to keep close to the general purpose type in chickens. There is no discounting the Leghorn for egg production, but in the present emergency they hardly fill the bill. Poultrymen, however, who have good flocks of Leghorns should not dispose of them, for more eggs are needed and there is profit in them. J. D.

Save the Poultry

Americans are not all conducting their business wholly for their own private gain in these strenuous days. Many industries are being federalized or put under some federal supervision. And there is no complaint. The people understand that in times like these the necessities of the nation are supreme.

The poultryman can serve the nation by keeping poultry, probably as much as by buying a Liberty bond. And he should not shirk the possibility of a slight loss for a time, if need be, because the nation and the soldiers need poultry meat and eggs. There is no danger, however, of a loss if the poultryman will study methods and keep a flock of good layers. A flock of good layers will make more money now than before the war. I said good layers. Poor layers will make a greater loss now than before the war. If it should happen that there will be little or no profit, the poultryman should not send his flock to the market forthwith, for two reasons, first the country needs more eggs and poultry, and it is every man's patriotic duty to help the country in the hour of need; and second, the profit will be better later on.

Potatoes and beans will not take the place of meat foods for the soldiers, or for the civilians, and farmers must produce meat to win the war just as much as buy Liberty bonds.

The farmer really has a tremendous responsibility, and he is not going to show his patriotism by the per cent profit he can make on his labor.

If the profit on keeping poultry at the present time is small, and it is not small under proper methods, later on when the war is over there is likely to be more prosperity for the poultrykeeper than he has ever before seen. The price of feed will take an immediate slump, but the prices of poultry and eggs will keep at a high figure for several years after because of the smaller number of poultry on the farms. It will take two or three years to replenish the stock. Poultry keeping has been wiped out in some of the European countries and greatly reduced in others, and there should be a great export demand for eggs across the water. There is considerable export demand now, but on account of a lack of shipping space, the exports are not heavy. That is the only thing that is keeping the price of eggs below $1 a dozen.

No good laying hens should be marketed. It is almost criminal to send good laying pullets to market. The slackers should be killed off—those old hens that have lost their teeth, and those others that stopped laying early in the summer to molt. Keep for another year those that continue to lay late in the fall. How to select was explained in a former article. If the hens don't lay, don't kill them off before you know whether they have been fed right. It is some times the fault of the feeder.

The country wants more eggs and poultry meat. J. D.

Eggs at $1 a Dozen.

Eggs will be selling for $1 a dozen in Newfoundland this year, according to information just received by the University of Oregon's school of commerce. This price prediction was made at the recent special meeting of the Newfoundland Poultry association, and is based on the advance of the cost of feed. Members of the association point out that feed which sold last year at $2 a sack is now bringing from $4 to $5 a sack. Most of the eggs consumed in Newfoundland are imported from Canada and the United States, and the supply at present is limited. They are retailing now at 65 cents a dozen. Imported poultry dressed is selling at 45 cents a pound, and the local product, which lacks the weight and flavor of the imported, at a few cents less.

Sidelights

The Only Way.

Food Administrator Hoover said in Washington during the filibuster against the food-control bill:

"We must control food or flour will rise to $20 a barrel and meat to 50 cents a pound.

"Why, look at prices already!

"I said to a haggard family man the other day:

"'See here, Jones, you'll ruin your health if you work all day on your books in the city and then go out and do night work on other men's books all the evening. My boy, you're burning the candle at both ends.'

"'I got to, Mr. Hoover,' said Jones. 'It's the only way to make both ends meet.'"—Philadelphia Bulletin.

Efficiency in Embryo.

The acumen of Julius Rosenwald, who subscribed $2,000,000 to the Liberty loan, led a Chicagoan to say:

"It was impossible to overreach Rosenwald, even when he was a boy.

"One summer day, when a boy, he delivered some eggs to a druggist for egg phosphate and such like drinks. The druggist counted the eggs, and there was one egg over. Julius demanded it back, but the druggist said:

"'No, I'll keep it, and you can have a drink at the fountain.'

"'All right,' said the boy.

"'Now, then,' said the druggist, 'what'll you have?'

"'Egg phosphate,' said Julius."—Philadelphia Bulletin.

Surf Coasting.

The sport of surf coasting reached this country from Hawaii and promises in a few years to become a popular sport. In California it was much practiced this past summer, while a few surf boards might be seen on the New York beaches. American manufacturers have put on the market a special surf board which is a considerable improvement over the plank used by the Hawaiians, having an air chamber at one end. All we lack now is the Hawaiian skill in riding the big breakers standing up.—Exchange.

The Speculators

It is clear to any one who thinks, that the tendency is now to give the producer a fair profit for his labor, cut out the gambler and speculator, and reduce the cost of food to the consumer. There is a class of gentlemen, who never produce a dollar in values, yet manage to get hold of the necessities of life in such quantities as to control prices and the consuming public is robbed of millions that go annually into the pockets of these parasites. These gamblers in human labor, toil, sweat and destiny, generally find ways to bear the markets during the harvest periods and to bull them after they have gotten possession of the commodities. This is the bear period for apples. The farmers, many of them have no storage, cannot hold the crop and must sell. When the crop is all out of the hands of these producers, and into the hands of the speculators, then the prices are boosted. The producer has not benefitted, and the consumer is robbed.

The war is teaching us the lessons we have needed and shown us the folly of supporting in luxury an army of men and their families, who are non-producers, never add a dollar to commercial or productive values, and yet live in a luxury some of the kings and queens of Europe would be proud of. We are cutting out the liquor business as a war necessity, because we think we can not afford to manufacture a billion dollars of food values annually into alcohol. We must now abolish all needless and unproductive toil, and dispose of the classes that do not toil.

G. L.

Diseases of Roses

I have received a letter from Mrs. John Garver, Oakley, Idaho, which reads in part, as follows: "Will you tell me what to do for my roses, 'Baby Ramblers?' They have a white mold or mildew on all the leaves, and then curl up and do not grow."

In reply, I would say that it is a little hazardous to diagnose a case without seeing it. Even then some times doctors make mistakes so I am told. However, according to your description, I am almost certain the disease is powdery mildew.

Powdery mildew attacks a great many varieties of plants, and is especially prominent on apples and roses. It usually attacks the tips of actively growing branches, but may occur in spots on the under side of mature leaves.

The disease is a fungus, a very small vegetable, feeding on other organisms and destitute of chlorophyl, or green coloring matter. It develops mainly as a covering on the surface of the growing twigs and leaves and sends feeding threads, which, in larger plants would be called roots, into the outside cells, and from these cells extract their food, much as a larger plant extracts its food from the earth. The leaves present a wilted appearance and are smaller than the normal, because the food is being absorbed and the leaves injured by th emold.

The fungus hibernates and is carried over winter on the affected twigs.

Remedy.

Just before the buds open in the spring, spray with atomic sulphur, 7 pounds to 50 gallons of water. Spray thoroughly.

G. L.

Codling Moth Again

I have received a letter from Mrs. O. L. Pickett, Palouse, Wash., in regard to the large percentage of codling moth this year. Mrs. Pickett writes a very appreciative letter and since I have made it a rule to publish all the unfavorable criticisms, except from one writer whose language would not do to print, I may be excused if I print the favorable criticisms.

Mrs. Pickett says: "I am glad to see in a recently published number of the Farmer, a contribution on the unusual number of codling moths affecting the apples this season. You are in a position to investigate the matttr, while we are not. A third or more of the crop of 1917 was ruined by worms, especially Jonathans and Baldwins. We sprayed three times and the same kind of spray was used on our's as on our neighbors. All the same, one of them suffered as we did and that one has mostly Winesaps and Spitzenburgs.

"I think you can do no better service for the orchard industry than to sift this matter to the very bottom. I thank you for the very excellent things I have learned from your department.

"MRS. O. L. PICKETT."

The best we can do through life is to learn all the helpful things we can, practice them and pass them on to others. Any thing I may learn in this department I will gladly publish, and it is a pleasure to know they are appreciated.

G. L.

Orchard Mites

How the Pest Practices Thrift

An orchard mite that practices thrift by isolating its food source with an enveloping web that it spins about the entire trees, has appeared in three Oregon and one Washington districts. Afterward it falls upon the leaves which, under its attack, turn yellow and fall to the ground. It lives in an active state through the winter, wrapped in a protective covering of web. The lime-sulphur spray, two applications at a 1-12 strength just after the leaves drop and again just before they break out in the spring, will control it, says A. L. Lovett, the Oregon agricultural college entomologist.

British Columbia Contest.

The final report of the sixth international egg-laying contest, held under the auspices of the provincial department of agriculture at Victoria, October 6, 1916, to October 4, 1917, shows the following prize-winners in the two classes:

Class 1—Light Weights.

J. O. M. Thackeray, Chilliwack, B. C., White Leghorns, 1193 eggs, first prize $100.

Horace Dryden, Corvallis, Ore., White Leghorns, 1064 eggs, second prize $50.

G. O. Pooley, Duncan, B. C., White Leghorns, 1061 eggs, third prize $25.

Graves & McCulloch, Saturna island, B. C., White Leghorns, 1046 eggs, fourth prize $10.

Class II—Heavy Weights.

Dean Bros., Keating, B. C., White Wyandottes, 1188 eggs, first prize $100.

E. D. Read, Duncan, B. C., White Wyandottes, 1174 eggs, second prize $50.

F. W. Frederick, Phoenix, B. C., Rhode Island Whites, 1095 eggs, third prize $25.

G. D. Adams, Victoria, B. C., White Wyandottes, 1087 eggs, fourth prize $10.

The Perfect Bull Terrier.

The modern bull terrier is the result of very careful and intensive breeding. It is now a well-defined type and has lost almost all the characteristics of its ancestor, the bulldog. It must be pure white, except for the nose and eyes, which must be black. Any other marks, while they do not disqualify in the show ring, are considered undesirable.

Disposing of Culls.

This year there has been a market for cull fruits at prices larger than I have ever known for stock of that grade. Canneries, evaporators and vinegar factories are taking about all that class of stuff and paying from $6 to $8 a ton. This is not profitable, if the whole crop had to be disposed of at those prices, but it is better than to allow it to waste, because it is a profit above what it costs to load it and haul it to market. The evaporators are making a good profit, because they have large contracts from the government. The vinegar factories say they are disposing of all their stock at profitable prices and the canneries are doing a good business. This as compared with former years is "food conservation," for ordinarily most of this stuff is wasted.

G. L.

Admit Women Students.

The Harvard university medical school opens its doors to women.

Using More Potato Flour.

Use of potato flour in England is growing more general, according to reports received by the University of Oregon school of commerce. The successful substitution of potato flour in place of flour made from cereals, has caused a general investigation of the possibilities of making similar substitutions in this country. The British food controller recently authorized the addition of one pound of potatoes for every seven pounds of flour in the manufacture of bread. Obviously this will release one-eighth of the cereal flour that otherwise would be necessary.

A new market for potatoes may be opened up if the demand for potato meal as a substitute continues.

The Bait.

"I wonder what they bait with to catch swordfish."

"Army worms, I suppose." — Boston Transcript.

Your Country Is Calling For More Products

The most important factor in this war is the raising of record crops and bringing new lands into cultivation. The high prices for all products makes this patriotic appeal also of personal advantage to you. Do your bit.

Your Opportunity to Serve Your Country is in Stevens County

Although prices for all products have increased our low prices and easy terms for logged-off lands near Springdale, Washington, have remained the same.

We will be glad to have you examine the property and talk to the neighboring farmers. Drop us a line when you will be at Springdale, Washington, and our man will be at your disposal.

Cleveland Tractor

Prepare *Now* for Bigger Crops Next Spring

Forget the old routine. Adopt improved methods. That's the only way to solve your labor problems and boost production in 1918.

Munition plants and factories in general are working at top speed. They have steadily drained farm labor from the fields. Now the draft has taken many more men.

You must cut down on labor requirements. That is exactly what the Cleveland Tractor, the country over, is helping wide-awake farmers to do.

This wonderful little machine will do your work *better, faster, and at much less cost* than you can possibly do it with horses and men.

Hauling two 14-inch bottoms, it plows 3½ miles an hour—8 to 10 acres a day. That is more than you can do with three good 3-horse teams and 3 farm hands. And at this high speed the Cleveland Tractor turns over the prettiest job of plowing you ever saw.

Figure up the saving—not only in labor—but in time and good, hard cash.

In addition, the Cleveland enables you to plow when you need it and where you need it. Because it *crawls on its own tracks*, it can go over almost any soil at any time. That is something you can't do with horses and men. *Think of the extra yield that means.*

Moreover, the Cleveland does not pack your seedbed. It is light—only 2750 pounds—and has 600 square inches of continuous traction surface. No other tractor built exerts so small a pressure.

The Cleveland gives you 20 h. p. at the pulley and 12 h. p. at the bar—economical, dependable power to do your hauling and stationary engine work.

Rollin H. White builds the Cleveland Tractor with all the scrupulous care he put into the manufacture of motor trucks. He uses only the best materials—only the finest motor truck parts and gears. He has protected all gears with dirtproof, dustproof casings.

He has so designed the Cleveland Tractor that it *steers by the power of its engine.* Just a light turn of the wheel and the motor does the rest. Anyone can drive it. It will actually *turn in a 12-foot circle*—less than it takes to turn a team.

These are real advantages—too big and too important to be overlooked. There are others just as big. Combined, they make the Cleveland the biggest labor-saving, time-saving, money-making implement introduced into modern farming.

Prepare now for bigger, better crops next spring. Decide now to make the Cleveland earn money for you, as it is doing for hundreds of others.

We are so crowded with orders that we cannot promise delivery of new orders before January 1st. So it is necessary that you order now for delivery early in 1918.

Write to us today for full particulars and name of the nearest Cleveland dealer. Use the coupon or address Dept BK

"Want" Ads in These Papers Are Economical and Effective

Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.

Dumb Animals Humanize Mankind

Typical Men Congregate at Northwest Live Stock Show

Reaching Lewiston Wednesday afternoon, I met Jim McCroskey at the Bollinger hotel. It seemed like old times. The present Northwest Live Stock association is the outcome of many smaller live stock associations, holding their meetings here and there—now the Inland Empire Breeders' association, meeting alternately at Pullman and Moscow with Professor E. E. Elliott and Professor H. T. French, respectively, throwing the live stock departments of the two state institutions open to stockmen—now as the Washington State Live Stock association, holding one of its most enthusiastic meetings in Spokane, having as its chairman E. F. Benson, the present head of the state department of agriculture of Washington. Now it was a finely fitted steer put on exhibition by Klemgard & Metzger, now another fat animal which was the idol of Jack Foster of the college farm at Pullman. Those were the days of the Whitefaces of Paul Clagstone and those were the days of Jack Splawn of the Yakima valley and of B. T. Byrnes of Latah county, etc., etc.

Then came the era of organizing auxiliary live stock associations in the different counties, one of the most successful developing into the vigorous and progressive Stevens County Live Stock association.

You can not down Jim McCroskey. He is not just the man he was a year ago, nor will he be ever just the same again. His son Don, as a lad and as he was growing into young manhood had become a part of the later live stock meetings and shows. Now that Don has left us it is seen more clearly than ever how he was becoming a part of the live stock industry centering around the Northwest Live Stock show. More and more the memory of Don will become a source of subdued inspiration to his father as the days and the months wear away the deadening shock of his untimely departure from a most promising career.

While I was talking with Jim McCroskey, Governor Withycombe of Oregon came to us, and I was heartily glad to shake his hand again. It did not take long for the governor and Jim to become acquainted. Each had known of the other and both at heart are stockmen. I have always contended that a child was humanized by a brute animal and often brutalized by human animals; that it takes a pet animal to subdue the careless and selfish youngster. Becoming attached to a pet dog, or calf, or lamb does much to create a sense of responsibility and kindness in the boy or the girl. It is worth while to observe the humanities as they are developed in stockmen as a class.

I asked Governor Withycombe as to his son Robert, who has been doing real work as head of the state experiment station in Union county, Oregon, and there was an excusable pride as he told me of the arrival of a fine boy in Robert Withycombe's home, the governor's first and only granchild. Here again the father and son are visited by the peculiar comradeship which you find existing between the lovers of good animals.

Soon President Penrose of Whitman college joined our little circle and found easy acquaintanceship with Jim McCroskey. Many a time as a boy Jim had taken care of Father Eells' pony as the pioneer missionary made his headquarters at the McCroskey home. I rather believe that there is no single recollection more gratifying to president Penrose than that of having the privilege of having known Father Eells. What the venerable missionary stood for during the 55 years of his journeyings up and down the Inland Empire, that President Penrose has stood for during 27 years since he came to the Oregon country with that historic band of young missionaries of these later days.

To my mind there is no other gathering of persons that so breathes the spirit of the Pacific northwest as do these meetings of the stockmen of the Northwest Live Stock association. E.A.S

Night and Day

Together Until the War Is Over

In his address before the annual convention of the American Federation of Labor at Buffalo, N. Y., November 12, President Wilson made the following points:

"The war was started by Germany. Her authorities deny that they started it. But I am willing to let the statement I have just made await the verdict of history.

"I believe the spirit of freedom can get into the hearts of Germans and find as fine a welcome there as it can find in any other hearts.

"Power can not be used with concentrated force against free people if it is used by free people.

"Germany is determined that the political power of the world shall belong to her. There have been such ambitions. They have in part been realized. But never before have these ambitions been based upon so exact and precise and scientific a plan of domination.

"We must stand together night and day until the war is over. While we are fighting for freedom, we must ensure the freedom of labor."

Hadn't Kissed the Kittens.

Jean, age 3, was visiting at her grandfather's farm. She tired of the new kittens and puppies and went in search of her mother. When that lady was found she help up her face for the usual kiss. "I'd kss you if I thought you hadn't been kissing those kitties," mother said. "I haven't," Jean said. And when she had the kiss she smiled adorably and said: "But I's been kissin' those little puppies."

Washington First in Apples

By GRANVILLE LOWTHER.

I have just received a report from the U. S. bureau of crop estimates to the effect that "The 1917 apple crop for Washington takes the position of the largest of any state in the United States. Dry weather and the late season will reduce the size of the apples below normal, and the injury from worms is reported high; otherwise of good quality. Commercial production for the entire state chiefly from Wenatchee and Yakima will show 6 per cent over last year. The estimated number of cars 17,500."

It should be noted that in 1899 Washington ranked 25th in the order of importance in the number of bushels. In 1909, or 10 years late, she ranked 14th. In the same year in the value of her fruits she ranked 10th.

This year, 1917, she will rank first in the number of bushels and in value. From now on New York is our only rival for the first place and while the uncertainties of a full crop in any particular section may throw us behind occasionally, I have no question that we will in a 10-year average hold the place that New York has held for so many years.

According to the census of 1910 Washington stood 15th in the estimated number of bearing trees as compared with other states. The states that had larger numbers, were in the order of their importance as follows: Missouri, New York, Illinois, Pennsylvania, Arkansas, Michigan, Virginia, Kansas, Iowa, Indiana, Kensucky, Tennessee, West Virginia, Maine, Washington.

The states that produced a larger number of bushels of apples in 1899 were in the order of their importance as follows: New York, Pennsylvania, Ohio, Virginia, Illinois, Michigan, Indiana, West Virginia, Missouri, Kentucky, Tennessee, North Carolina, New Jersey, Connecticut, California, Kansas, Maryland, Iowa, Massachusetts, Arkansas, New Hampshire, Maine, Nebraska, Vermont, Oregon. The estimate places Washington as the 25th state in the order of importance in the number of bushels produced that year.

In relation to the products in bushels in 1909 the states in the order of their importance are as follows:

New York, Michigan, Pennsylvania, Missouri, Kentucky, Iowa, California, Virginia, Maine, Colorado, Nebraska, Illinois, Indiana, Washington. This leaves Washington 14th in the list of states. In relation to the value in dollars for the same year, the states are as follows: New York, Michigan, Pennsylvania, Missouri, Iowa, Colorado, Virginia, Kentucky, Ohio, Washington. This estimate makes Washington 10th in the value of its fruits while ranking 14th in the amount produced.

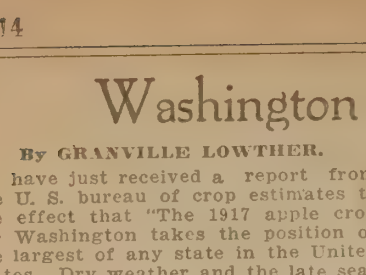
Growing Corn

Secret Is in the Cultivation

There are still a great many people in the world like the man who is said to have viewed the hippopotamus in the circus and passed on with the remark that "there ain't no such animal." Several of these people looked at J. W. Hall's corn on his farm at Avon in Skagit county, Washington, and passed on with the remark "corn like that can't be raised in Washington—anyway it can't be raised in an unfavorable season."

The fact remains, however, that Mr. Hall has been growing this corn for several years.

The specimens shown in the accompanying picture were 17 feet high with good leaves and well formed and perfectly developed ears. This corn is a cross between Minnesota No. 13 and Reid's Yellow Dent. This is the third year's breeding and with the crop produced under the poor conditions of the last season Mr. Hall feels safe in saying that it will produce a paying crop every year.



J. W. Hall and his family with a sample of the Hall corn grown on his farm near Avon, Skagit county.

"Why do they think they can't raise corn here?" Mr. Hall was asked.

"Well," he said, "most of them never tried to raise corn and those who did never knew how to handle it. In my opinion the secret of growing a successful crop of corn is in the cultivation, providing of course the proper attention has been given to the selection of the seed. You must cultivate, and cultivate, and keep on cultivating. Too many people do not know how to cultivate. They run too far away from the plant through a mistaken idea that close cultivation might injure it. They should cultivate close, and, starting early, keep on as long as the cultivator can get through."

Yours, etc., WILLIE.

Russia Talks Peace

Radical Rebels Oust Conservatives

The rebels in Russia under the leadership of Nikolai Lenine have ousted the conservative government under the leadership of Premier Kerensky and have taken full control in Petrograd. Kerensky fled from the capital to certain quarters of the army that remained loyal to him and reports at this writing indicate that the soldiers are sufficiently loyal to insure an attempt on his part to regain the capital.

The rebels who have taken the advantage for the present are of the strongest socialistic and pacifist type. They have announced the institution of a complete rule of the land by the peasant class and reports indicate that they will at once take up measures looking forward to a possible reestablishment of peace. Reports sifting through unofficial channels from the Russian centers indicate that an armistice of perhaps three months will be asked, during which peace negotiations could be entered into.

Whatever the immediate result of the success of the rebel element may be, it seems practically certain that Russia can no longer be any considerable factor in the war. The internal strife between the conservative and the radical factions is so strong that neither side can rule with any power of certainty. The revolutionary nature of the situation is in considerable degree the result of German activities, apparently, and it is to be assumed that Germany and Austria will do all in their power to continue the internal dissension. It is probable that increased German strength on the western battle lines will be noted now as a result of the elimination of the Russian forces. On the other hand, Germany may try to press her advantage and march upon Petrograd, the way to which was practically opened by the capture of strategic points in and adjacent to the gulf of Riga.

Italy Greatly Menaced.

No less interesting than the Russian situation is that in Italy, where the German allies have been striking terrific blows for the last two weeks, making great inroads into Italian territory. After gain of much territory by Italy following a long, costly campaign, Germany and her Austrian allies suddenly presented reenforcements and made an attack that necessitated rapid Italian retreat to prevent the complete destruction of the latter's army. The English and French armies are rushing what aid is possible to the Italians and this country is lending material aid to strengthen the morale of the Italian forces. At this writing the retreating army is coming to a stand on the Piave river and the world is watching the outcome of the impending battle with tense interest. The sudden attack on Italy is looked upon as a great strategic move designed to eliminate that country from the war in a manner equal to the way Russia has been virtually eliminated.

Should this result be effected, it would relieve the German and Austrian armies of pressure from the east and the south and permit them to concentrate their entire power against the French and English and American forces in the west.

Again, rumors have been reported that the Teutonic allies were formulating new peace terms to offer to the entente allies, and if Italy is crushed or nearly so the advantage may be utilized as an influence on England and France and this country to listen to the peace terms. However, the strength of these three nations is felt to be such that nothing short of the original peace terms of America and her allies will be considered.

Bury American Soldiers.

The three American soldiers first to fall in battle on European soil have been buried in France. Military formalities marked the burial, honors being shown by the French. The official representative of the French government at the services asked that the bodies be allowed to remain in French soil, symbolizing forever the unity of spirit and purpose and character of the French and American governments.

Will Call More Drafted Men.

Probably in February, the war department will make another call on men registered in the great new national army. President Wilson and Provost Marshal General Crowder have issued statements indicating the call, and summarizing the results of the selective draft program to this date.

The regulations themselves and the questionaires, which more than 9,000,000 registrants will be required to fill out, are being forwarded to local boards, but have not yet been made public.

War department officials estimate that the whole process can be completed within 60 days. This means that no second call will be made upon the draft forces before the middle of next February, as the period of classification will not begin until December 15.

American Soldiers Active.

The American contingent in France is reported to be rapidly getting in line for actual fighting. So far, the only casualties reported are those that occurred in the first skirmish, when three soldiers were killed and a score or so captured or wounded.

War Council in France.

The United States has joined in a great war conference in France between all the allies now facing Germany and Austria. This country's representatives are headed by Colonel E. M. House. It is hoped that out of the conference will grow a greater centralization of the allied plans of operation against the enemy.

France Controls All Corn.

All the corn in France will be requisitioned soon, Maurice Long, minister of provisions, announced in the chamber of deputies. Grinding mills will be put under government control to standardize the bread prices throughout France.

New York Women Can Vote.

By a majority vote of about 60,000 the people of New York voted in favor of woman suffrage last week. The vote marks one of the most notable victories for suffrage in the history of the movement. It is announced that with New York in the suffrage column women workers will urge upon President Wilson that he indorse a constitutional amendment for national suffrage during the next session of congress.

Another Disastrous Fire.

Another serious fire has been reported from the New York waterfront. This time a large factory of the Washburn Wire company, which has large orders from the government, was destroyed with a loss estimated at $2,000,000. Indications were that the fire was incendiary, and it is believed that German propagandists are responsible for this and other recent destructive fires.

Queen "Lil" Is Dead.

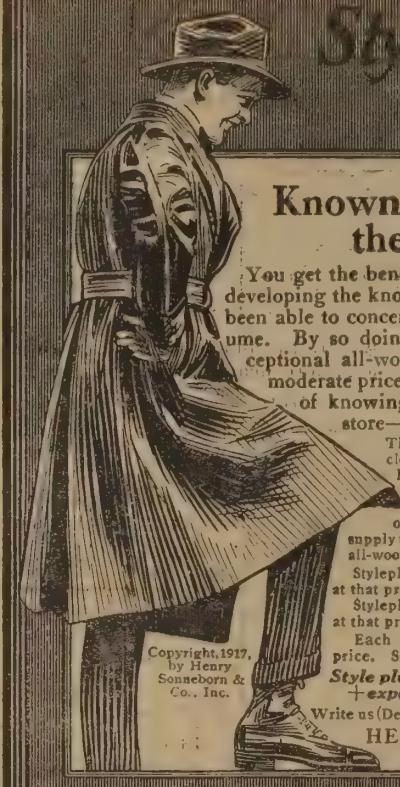
The famous and picturesque character, former Queen Liliuokalani of Hawaii, is dead.

Turks Slay a Million.

Henry Morgenthau, former United States ambassador to Turkey, states that the Turks have wantonly slain in the most cruel manner approximately 1,000,000 Armenians since the opening of the war. The entire Armenian race faces extinction, due to the sword and starvation at the hands of the ruthless Turks.

Troop Train Wrecked.

A train carrying about 200 American soldiers en route to an eastern camp was derailed near Minneapolis Sunday. A defective rail is supposed to have caused the derailment. None of the soldiers was hurt.



Enemy Supplies Taken.

That the German government has large stores of supplies held in this country under what is intended to be thought private ownership, to be rushed to Germany immediately after the war is over to rehabilitate German industry, is the opinion of the United States government. Recently secret service agents uncovered stores totaling nearly $75,000,000 that had not been reported under the requirements of the food control bill. Considerable portions of these are believed to be held by individuals for the German government. Steps to seize such stores are understood to be planned.

Controls Flour Exports.

The national food administration has announced that it will exercise complete control over the exportation of flour from this country to Europe from this time forth. This action has been taken with a view to centralizing the handling of flour in order to prevent every possible loss either of actual food value of transportation facility. It is intended also to insure the shipment to the allies of such quantities of flour as are needed, removing the danger of shortage or a surplus.

Styleplus Clothes $17 and $21

Known Price—the Styleplus Idea

You get the benefit of our unique methods. By developing the known price idea in clothing we have been able to concentrate and vastly increase our volume. By so doing we lower our costs, giving exceptional all-wool fabrics, style and tailoring at moderate price. There is the added advantage of knowing the price before you go into the store—and guaranteed satisfaction.

This unique Styleplus system has given these clothes astonishing popularity—made a great hit with good dressers and careful buyers.

In spite of the fact that vast quantities of wool are required for making uniforms, our unique methods enable us to continue to supply the men of America with guaranteed stylish all-wool clothes at known moderate prices.

Styleplus Clothes $17 (black label) always excel at that price.

Styleplus Clothes $21 (green label) always excel at that price.

Each grade the greatest possible value at the price. See for yourself at the Styleplus store.

Bread Must Be Cheaper

Government Promises to Curb the Bakers

Farmers will applaud the announcement from Washington that the food administration will reduce the price of bread by putting every baker in the country under federal license.

Extensive investigations by federal, state and city committees have proved that present bread prices are generally in excess of prices warranted by $2 wheat. In some towns and cities they are more nearly a $4 price for wheat.

Profit Must Be Reasonable.

These investigations have convinced the government that the bakers can make a reasonable profit selling a 20-ounce loaf at 10 cents and a 10-ounce loaf at 5 cents. While the government will require the making of bread in these standard weights, it is not its immediate intention to fix prices outright. The regulation will prescribe that only reasonable prices may be charged, but "reasonable" will mean reasonable. Mr. Hoover is well advised that the indicated prices are reasonable.

Tre law clearly authorizes the government to put bakers under license regulation. It exempts retailers, but bakers are manufacturers and wholesalers.

No Longer the "Goat."

The farmer has more than a passing interest in this action; he wants a square deal for himself and he also wants a square deal for the consumer of his products. He does not intend to be made the "goat" for extortionate prices. He does not wish the false assertion dinned into the ears of the consumers that he is to blame for excessively high prices of bread, milk and other necessaries.

Relatively high prices the consumer must expect to pay, for world conditions have put cheap living out of the running. Production costs have mounted steadily against the farmers and they can not throw off the high prices laid upon them by world conditions.

But it is obvious that before the government took a hand in price regulation a great many middlemen were capitalizing high prices in order to make excessive profits. When consumers complained, they met the stereotyped explanation that the farmers were to blame and were getting rich beyond the dream of avarice. Mr. Hoover is puncturing that falsity.

Mole Pelts

Twenty-Two Boys Receive $156

County Agent D. C. Howard of Columbia county, Ore., has just received a check for $156 from a fur company of New York in return for the 609 mole pelts sent them a few days ago, giving an average of 26 cents per pelt. This amount, together with the 10 cent bounty paid by the county, should make mole trapping a good business for the boys. The 600 moles were trapped by 22 boys and of this number 168 pelts sold at 40 cents, 309 at 25 cents and 117 at 10 cents each. One boy received an average of 32 1-2 cents for his lot of pelts. Three others received over 30 cents. Still another boy received only 15.4 cents and another 17.8 cents for their lots. The difference was due to the manner in which the skins had been cared for. It is no more trouble to handle them right than wrong.

The county has paid bounty on 1096 moles and several hundred were sold earlier in the season without securing the bounty. Besides the value of the skins and the bounty, it is safe to say that hundreds of dollars damage to the farmers' crops and meadows has been prevented.

We hope that every farmer's boy will obtain some of the "out of sight" traps and get some of this good money, says Mr. Howard. It will help to grow more and better crops for our country. Therefore it is patriotic to trap moles.

Jackrabbit Hides.

Five years ago County Agent R. A. Ward of Crook county, Ore., sent two test bales of rabbit furs to manufacturers and received an offer of less than 1 cent apiece for them. Last winter Mr. Ward sent a community shipment of about 3000 skins, which netted the shippers 5 cents each. Now he has received an order for 50,000 jackrabbit hides at 8 cents a skin for prime skins and 5 cents each for seconds. Last year Mr. Ward maintained an assistant at an experiment station at Fort Rock, Lake county, who was able to skin and stretch eight rabbits an hour. Skins from poisoned rabbits are, if anything, better than those from shot, bruised or trapped rabbits, so homesteaders can poison several hundred, pile them up frozen like cordwood until they have enough to spend a few days skinning. Skins should be taken off flat, not "cased," and care should be used not to tear them. Torn, bloody or mutilated skins will not be accepted. In order to concentrate this first shipment east to central points, Mr. Ward has requested those having hides for sale to send them to his office at Redmond.

REMEMBER!

Increased rate of postage —letters **three cents** an ounce. If you send a larger coin than a 25-cent piece be sure to ask your postmaster how much additional postage will be required.

The Motor Car

On the Farm

Speed of Motoring.

An interesting illustration of the value of automobile trucks is taken from the experiences of a fruit growing company in Virginia, says Dun's Review. The speed of delivery, the heavy loads, the great number of trips possible each day over a long distance, and the reduced cost of labor and maintenance could hardly be more strikingly set forth than in the case of this concern. In the fruit business speed of marketing is essential. Peaches can not be kept more than a few days and will then decrease in value very rapidly. The fruit-growing company referred to has a young growing orchard which this year was expected to mature about 65 carloads of peaches, but, on account of the fact that the railroad station where the peaches could be loaded into refrigerator cars was five miles distant over an unimproved mountainous road, the transportation problem was no easy one.

In previous years six-horse teams had been used. They required a driver and an extra man to work the brakes on the down grades. They could not handle more then 75 crates at a single load and, owing to the five-mile haul, could make but two trips per day. The Maximum load of peaches for any one day was six cars—about 2640 crates, while the average load was three cars a day—about 1320 crates. To deliver the season's crop required from eight to 17 six-horse teams.

Thought for the Morning.

In the morning, when thou art sluggish at rousing thee, let this thought be present: "I am rising to do a man's work."—Marcus Aurelius.

FOR HE'S A JOLLY GOOD FELLOW—UNTIL HE GETS HOME

Economic Interest in Botany

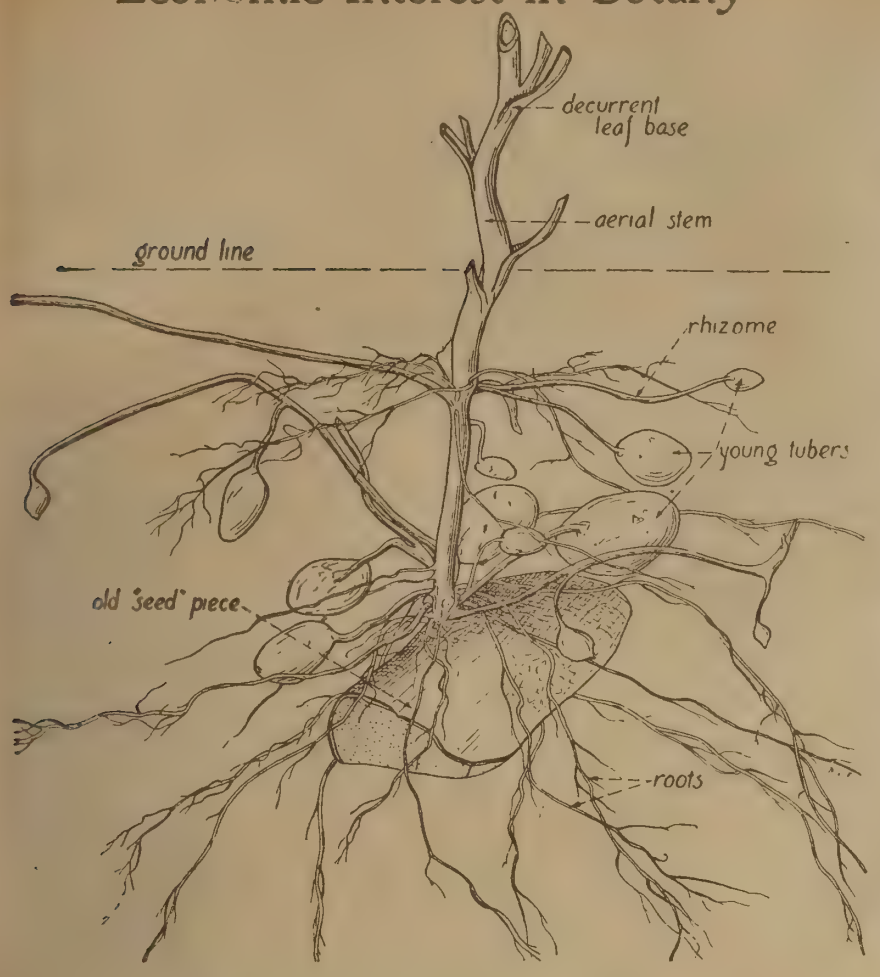

Figure 12—Portion of a sprouting potato tuber

Here is one of the illustrations in a new book just published by P. Blakiston's Sons & Co. of Philadelphia, entitled "Botany of Crop Plants," by Wilfred W. Robbins, Ph. D., professor of botany at the Colorado Agricultural college. The author says that the book has grown out of a course of instruction extending over a number of successive years. In the preparation of the book the writer says he has had in mind non-agricultural as well as agricultural schools, "for it can not escape notice that there is a growing tendency wherever botany is taught to tie it up more closely with economic interests an to draw more and more upon economic plants in citing examples and in choosing subjects of study in the laboratory." A noticeable feature of the book is the direct method adopted of labeling drawings. For instance, in the accompanying illustration it will be noticed that the drawing is labeled "portion of a sprouting potato tuber." Speaking of this illustration, the book says: "Although the potato, ordinarily, would not be considered a stem, still if we follow through its development and examine its structure, we are convinced that it is stem (Fig. 12). When we plant a slice of potato, "sprouts" are soon sent out from the "eyes." These sprouts, with their nodes, and internodes, and their scale leaves, are quite obviously horizontal underground stems (rhizomes). Soon, the tip of a rhizome begins to enlarge, and a potato is formed; hence, the potato is seen to be a simple enlargement of the tip of an underground stem. Furthermore, examination of the tuber reveals the presence of a terminal bud ("seed end" of the potato), and lateral buds along the sides. The buds are the so-called "eyes." In an elongated potato we may be able to detect the spiral arrangement of the buds. Lenticles may also be observed on the corky layer (skin) of the bark of the potato.

Shorthorn Progress.

At the recent meeting of the board of directors of the American Shorthorn Breeders' association at Kansas City several items of general interest were acted upon.

It was voted to accept entries for the National Shorthorn Congress, Show and Sale to be held in Chicago the third week in February next in the regular Shorthorn classes up to a maximum of 325 head and in the milking Shorthorn classes up to a maximum of 75 head. The amount of money appropriated for prizes for this occasion will approximate $8000. This will unquestionably be the most important even within Shorthorn circles that has ever been staged in this country. In order that the small breeder may have an equal chance with the large breeder the entries from individual herds will be limited to 15 head. With the purpose to assure the patrons of the sales a superior class of cattle, all of the show entries will be offered. In fact no animals will be permitted to show that are not included in the sale offering.

It was decided that a gold medal would be given by the association to the student in the college judging teams who scored the highest number of points in judging Shorthorn cattle in the forthcoming International Live Stock exposition.

In an effort to further serve the interests of the milking Shorthorn breeders it was arranged for the association's representative, L. J. McMartin, to spend several weeks in New England and eastern territory among the breeders and make a study of the needs and prospects of the milking Shorthorn interests there.

Liberal appropriations were voted to the California Land and Live Stock show; also the live stock show held at Fort Worth in March.

The association's investment in Liberty bonds was increased from $10,000 to $20,000.

Woodpeckers.

There is a variety of woodpeckers living in California whose main article of diet is acorns. They store away their provender in a peculiar fashion, boring holes in the bark of the white oak or other wood trees just large enough to fit the kernels, and tapping them in, small end first, with their bills.

COMMUNITY ROAD-BUILDING

Farmers and Townspeople Solve the Problem

By P. G. HOLDEN.

Community clubs play an important part in the development of civilization. They present the greatest of opportunities for the cooperation of town and country to the lasting benefit of each. They enable the residents of the town and those of the rural districts to get together and do things for the welfare of all that otherwise would not be done.

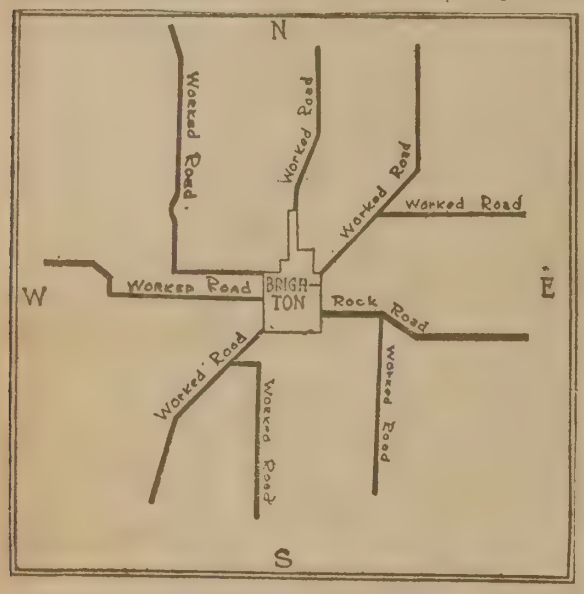
This arousing of common interest in common interests brings the members of the community closer together, socially, industrially and economically.

In movements of this character every small town should feel vitally interested, for it can extend its trade territory many miles by uniting with the farmers in community welfare work. This work may take one form, or it may take another, but the life of any community organization depends upon having something to do that is worth while.

By the assistance of farmers, the town of Brighton, Ill., a village of only 600 people, has worked wonders in the way of community road building.

For 10 years the people of Brighton have been joining hands with their rural neighbors in cooperative work that not only has bettered the whole community, but has given the town a commercial and educational standing equal to that of many cities 10 times its size.

The community organization, which has thus united town and country, bears the unique title of "The Betsy Ann Association." It has given the community 27 miles of excellent roads, a $15,000 accredited high school, a $5000 community building and a neighborhood spirit which knows no township line or corporate boundary.



The Betsey Ann association is incorporated but not for profit. It has 165 members, divided about equally between town and country, and its membership fee is only 25 cents. The executive committee consists of nine members of which not more than five can be residents of the town.

The first improvement inaugurated by the association was the purchase of a fire bell. This bell was christened by a telephone operator, Miss Nell Flanagan. She gave it the name of Betsey Ann, which title has since passed to the association.

During the second week of August, each year, the associatoin holds a two-day picnic in a large tent. Concerts, dramas and other forms of entertainment are given by local people from both town and country. These picnics are always attended by 2500 or 3000 people. All concessions are run by the association and all the profit goes into the treasury. About $500 is realized each year. This money is spent in road improvement.

One year the association built a mile of rock road, extending eastward from the town limits. Each year a contract for dragging, at frequent intervals, nine different roads, for a distance of three miles from town, is awarded. Each member of the executive committee has charge of a three-mile strip. An appropriation of $400 is annually made for this purpose.

These 27 miles of good roads are the visible results of the Betsey Ann association. They make it possible for Brighton to visit and to entertain her neighbors. They connect the town with the farm and make the interests of one the interests of the other. They have made possible the community building. They have made a reality a high school, for both town and country children, from which graduates are admitted to any college.

Twenty-seven miles of road improvement around Brighton, Ill., work of the Betsey Ann Community association.

Bunch Grass Boy and His Teacher

There is no wonder at all that the recollections of Ida C. Young, prompted by the Bunch Grass Boy story which has been running in The Farmer, should call forth more memories of those old days on the part of Joe Ashlock. The Farmer has been privileged to read the reply of Mr. Ashlock to Miss Young's article in a recent issue and takes the liberty of taking the following extracts:

Your comments started in the mind of me a train of recollections that reach from where I am sitting to Blue lake, south of that alkali bitten burg which Mayor McIntee referred to as "Cowley Satie," and which now exists on the map as Coulee City.

Howevér lonesome my bunch grass days were, the days since I left the grass country have been eventful. I used to get hungry for the grass. There was near Pullman town a small area of scab land that had never been spoiled by the plow. I used to sneak out to this grassy place when it was raining and I was homesick, just so that I could smell the grass. There was a scrubby bit of sage in the grass, and I felt like pinning a wet sprig of this in my buttonhole, so that I could carry the fragrance of the grass land back to my student's room in the dormitory.

My arrival in the college town of Pullman was not heralded by any blare of trumpets or waving of banners. It was raining pitchforks and darkies, and the mud all over Pullman streets was knee deep—a sort of medieval effect, in keeping with the study of ancient history, which I at once took up. I had in my possession one suit of clothes, a pink necktie, with a green leaf worked in it, a cardboard suitcase and a fiddle. The fiddle box had a hole sawed in the side of it, and I had filled this hole by stuffing in a yellow sock, which was half of the one extra pair of socks I had. I recall that when I mounted the mile grade up college hill the next day the yellow sock hung out of the hole and I had to stop to stuff it back in. I recall also that I lifted my hat to every girl I met, not knowing that you weren't supposed to speak to girls in town unless you knew them.

I recall also what went with the yellow socks. I was in a civics class awhile after that. Bill Moss, the "orneriest" fellow in the class, from my point of view, squinted down at the socks and said in an audible whisper:

"Hey, rook, where'd y'u git them yeller socks?"

After that I was called "hey, rook" and "yeller socks" till I left the socks in the janitor's waste basket one night and bought some red ones, appearing in class the next day with my trousers turned up at the bottom.

Nothing much happened to me in those early days. My teacher of English was H. C. Sampson, later president of the Cheney normal, still later manager of the Western Union Life Insurance company and now a capitalist somewhere. Sampson called for a theme one day, subject optional. I had to hunt a dictionary and find out what "theme" meant; also I had to look up the meaning of the word "optional." Sticking my two definitions together, I figured that Mr. Sampson wanted me to write an essay about something and that I could choose my own subject.

I wrote a story about artificial eggs. I was prompted to do this because at our dormitory table we had not seen an egg for weeks and weeks, and I was a lover of eggs. I told how "French scientists' had figured out how a hen made eggs and were making eggs themselves now, in a factory by the Seine (which I discovered on a map of France), and how the eggs outclassed anything any hen had made. I began with the inside of the egg and worked my way out carefully, describing each step minutely. Then I handed my "theme" in.

Well, when class met the next day Sampson addressed the class thus:

"I have in my possession a theme of a most unusual kind—it shows striking

(Continued on page twenty-five.)

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Your Face a Book Men Read—Your Thoughts Its Story

Dr. Hirshberg

One of the popular writers of yesteryear said that "emotion is as wearing to the face of a woman as it is to the tail of the dog." There was never a truer scientific word spoken. The man who has a face like a bendiction or the woman of whom it may be said, "there is virtue in her face," give you an insight into the soul behind the complexion.

A beautiful face is a silent commendation, so it behooves a man or a woman to regulate the though and the emotions so as to mould the skin and flesh with virtues and honors.

Until a very short time ago the theory of Desparto held sway, that emotions do not directly, but only indirectly, influence the muscles and the flesh. It was Professor William James of Harvard, Lange of Copenhagen and Watson of Johns Hopkins university, who developed facts to show that muscle and structural actions really form integral parts of your emotions.

When your muscles tremble with fear or the heart palpitates with emotion, these bodily movements are part and parcel of the emotions in a correct scientific as well as colloquial sense. They are, in brief, inseparable from feelings, and if prevented or controlled by the will, the corresponding emotion is crushed out of being.

The feeling of pathos which sweeps over you, accompanied by certain sensations of swallowing and relaxation, are inseparable from the emotions that make them.

The drawn face, which thwarted desires and disappointed efforts bring forth, are as much a part of the feelings as anything. When the overactive glands, whether thyroid, adrenals or other glands, exhibit themselves with lowered or elevated blood pressure, profuse perspiration, nausea, rapid respirations or any of the other physical signs of emotions are in evidence, it is all tommyrot to speak of "mind over matter." As a matter of fact, the emotions are not the mind, but are a distinctly material portion of the anatomy.

The moral of all this is plain. Physics and chemistry make a definite potpourri for the emotions. When a person has a "sweet, grave aspect," it will be found that the chemistry and physics of his cosmos are in harmony with this appearance.

Thoughts' Molding Methods.

If you feel cheery and benevolent, your face will necessarily reflect it. If you are a hypocrite, consciously or unconsciously, the contention between your pretenses and the realities beneath will soon or late be asserten on your face and a smug Get-Rich-Quick-Wallingford-like countenance will be the unpleasant result.

Much so-called character reading and mind reading is based upon a careful observation of faces. Even some phrenologists, bump-hunters and palmists trick gullible mortals by a seeming study of the skull or the hands, all the while reading the open book of the face.

Obviously, if you would have a face that is frank, honest, pretty or powerful, there must be feelings and thoughts equivalent to play the role of a sculptor of the flesh. Lady Macbeth recognized the importance of this when she upbraided Macbeth in the words: "Your face, my Thane, is a book, where men may read strange matters."

All the World's a Stage, and All the Men and Women Merely Players

Lieutenant Hans Berg.

Hans Berg, who brought the British liner Appam into Hampton Roads as a prize after her capture off the Azores by the German raider Moewe nearly two years ago, was one of the 10 prisoners who escaped from the alien detention camp at Fort McPherson.

American Troops on Fifteenth Century Bridge

Copyright by International

Modern history harked back to the 15th century for a setting when troops of the Pershing expedition crossed this famous old bridge on their way to the front in northern France, the other day. The bridge became famous when the victorious troops of Charles the Fearless crossed it in their pursuit of the retreating army of Louis XI. Now it gets a new lease of fame.

Mentioned for a Throne.

The above is the photograph of Count Tarnow Von Tarnowski, formerly an ambassador to the United States, who has recently been mentioned as possible king of Poland.

Use Machine to Pour in Fortifications

An anomaly indeed is a building machine in the trenches. This one, a concrete mixer, is used to turn out trench lining and gun placements. The British annexed it from the Boches in a recent capture and it now merrily grinds out complacently its cud of wet concrete—it is neutral.

Honor American Women.

This is the photograph of Anne Morgan, who, with her co-worker, Mrs. Anne Dike, of the American fund for French wounded, has been decorated by the French minister of agriculture in recognition of her services for the people of devastated France. The Morgan-Dike unit has been engaged in rebuilding some ruined villages.

Frenchmen to Teach U. S. Troops

Copyright by International

Eighty officers of the French army have arrived in the United States to teach our boys the art of modern warfare. Colonel Clouden (seated) is in command, and Captain Coutiron, standing at his right, is assisting him.

THE BARRIER

By REX BEACH

Author of "The Spoilers," "The Ne'er-Do-Well," "The Silver Horde," etc.

Copyright, 1908, by Harper & Brothers.

Below is printed the first six chapters of "The Barrier" in condensed form. This is for the benefit of the many new readers of the Farmer who have expressed their desire for the opening chapters and who were greatly disappointed to learn that the supply of these back numbers has been exhausted. Read this full and comprehensive synopsis of what has gone before and then read chapter VII., also in this issue, and you will not want to miss the rest of this thrilling story of the north and west during the days of the gold rush.

Chapter I.

Many people were in debt to the trader of Flambeau and many counted him as their friend. Gale was ever the same to all, in days of plenty or in times of famine, his store was open to every man, and all received the same measure. He spoke in a level voice and he smiled but rarely. He gazed at a stranger once and weighed him carefully, thereafter his eyes sought the distances again, as if in search of some visitor, whom he knew or hoped or feared would come.

Today as the old man looked out on the mighty Yukon he wished, as he had often before, that it could sweep away the heavy trouble which weighed him down. Ever as he did this he feared that some day his isolation would be broken and that people and the law would come to Flambeau bringing with them the thing which he feared to meet. And now that the time had come he was unprepared.

Down-stream, a thousand yards away, men were raising a flagstaff. He noted the symmetrical arrangement of the buildings, noted the space that had been smoothed for a drill ground, noted that the men wore suits of blue, and noted, in particular, the figure of an officer commanding them. Half-aloud he murmured, "That means the law. The last frontier is gone. The trail ends here."

Necia, the daughter of Gale, had just returned from a mission school. Like some wood-sprite, dark, slender, light-footed, and with laughter like the tinkle of silver bells, Necia was worshipped by the people of Flambeau and adored by her father.

Lieutenant Burrell, a Kentuckian, had been sent to establish a military post and to protect the miners of Flambeau in their own self-government. The people regarded him with distrust, thinking he had come to "run" the camp. Only Necia, captivated by drawl, his clean, fresh manliness, and most of all by his youth, met him with any degree of friendliness. And Burrell, surprised to find in this wilderness, a girl like the girls at home and yet so unlike them, entirely new in her sweet simplicity and dewy, flower-like freshness, was frankly delighted with Necia.

As the two were talking one afternoon a slinking squaw and two children approached. The jetty, beady eyes of the youngsters, their coarse black hair and swarthy skin evidenced that they were breeds with the Indian blood nearest the surface. Burrell showed his contempt and Necia informed him that the little boy and girl were her brother and sister, John and Molly Gale, and that the squaw was her mother.

Chapter II.

John Gale was an intelligent man, but instead of spending his evenings over a book he would sit motionless, hour after hour, his pipe in his mouth, enthralled in thought. Tonight the mood was upon him again. Alluna, his squaw, was crouched upon a bearskin.

Soon Necia came to say good night. John Gale had never kissed his daughter. On rare occasions he would take the little ones in his arms and romp with them, but he had never done these things with her. When she went out, Gale spoke:

"She will never marry Poleon. He is not her kind. She has been talking a lot about this soldier, but he would not marry a half-breed. If she really got to loving him it would be bad for all of us."

Evidently Alluna read some hidden meaning in the words, for she spoke quickly:

"Better that you kill him before it is too late. Soon the nights will be dark. The river never gives up its dead. I can do it if you dare not. No one would suspect me."

Rising, Gale put his hand firmly on her shoulder: "Don't talk like that; there has been too much blood let already," and with that he strode out of the house.

The next morning the steamboat arrived and all of Flambeau went down to meet it. Burrell was there and Necia. The lieutenant had spent long hours the night before pondering over the revelation of Necia's blood. He had come from a family of slave-holders, to whom a drop of impure blood meant more than any other thing. The knowledge of the girl's parentage had brought a change in his attitude toward her which he was glad she did not perceive.

Down through the crowd came a tall Frenchman, with a laughing, chattering Gale youngster under each arm. At sight of Necia, his face lighted up and she introduced him to Burrell proudly as "Napoleon Doret—our Poleon. The man stood a good six feet two, straight as a pine sapling, with his spirit showing in his whole body, and in the set of his head, in his dark, warm face, which glowed with eagerness when he talked, and that was ever — except when he was singing.

On the same boat came Runnion, who had been thrown on the steamboat at Dawson by the town officials. Before he had been in camp an hour he bought a gun and cartridges from Gale. As the trader watched the fellow practice a treacherous trick with the gun a plan outlined itself in his mind. There was no doubt that the stranger was dangerous. Had not Burrell come to preserve law and order? Gale had a desire to see how the soldier would act under fire. If he emerged scatheless, it would give him a line on his character; if he did not—well—that would be so much the better. So he told Burrell that it was up to him to get Runnion out of Flambeau immediately. The lieutenant had never drawn fire on a man and the job was distasteful to him, but he told Runnion that unless he had money enough to last him through the winter he must leave and demanded his gun till he had gotten on the boat. Drawing his weapon from beneath his vest, Runnion presented it to the officer, butt foremost, hammer underneath, the tip of his forefinger thrust through the trigger guard.

Then as Burrell reached for it with his left hand, suddenly the stranger's wrist jerked, the soldier saw a blue flicker of sunlight on the steel as it whirled, saw the arm of Poleon Doret flung across the bar with the speed of a striking serpent, heard a smash of breaking glass, felt the shock of a concussion and the spatter of some liquid in his face. Then he saw the man's revolver on the floor half way across the room, saw fragments of glass with it, and saw the fellow step backward, snatching at the fingers of his right hand.

Napoleon had seen the manner of the stranger's surrender of the gun, and realizing what it meant, had struck with his bottle just in time to knock the weapon from his hand, but not in time to prevent its discharge. As the stranger staggered back, Burrell clipped him just above the ear with a swift downward blow of his Colt.

They revived the man, bound up his injury hastily, and as the steamer cast off Runnion walked unsteadily up the gangplank, turning to cry back to the lieutenant: "I'm coming back to winter with you."

As Burrell left the two men at the store he gave his hand frankly to the French-Canadian and said: "I want to thank you for saving me from my own awkwardness."

Chapter III.

The Gale children fairly reveled in the gifts Poleon brought them from Dawson. Necia watched their delight with tear wet eyes. As she opened her own package her hands trembled and her cheeks flushed. When the last knot was untied she gasped in astonishment. She took the things out gently, reverently—a clinging black lace gown of Paris make, a picture hat with long, jet plumes, and other dainty garments. Finally she laid her present aside and, turning to Poleon, said in a hushed, awed voice:

"It's all there, everything complete. Oh, Poleon—you dear, dear Poleon." She took his two big hands by the thumbs and looked up at him, her eyes wet with emotion. "It was very nice of you, but—I can't wear it. I have never seen a dress like it except in pictures, and I couldn't." She saw his face fall, and added impulsively: "I'll wear it once, anyhow, Poleon, just for you. Go away, quick, now, and let me put it on."

So, with the sun streaming brightly into her room, lighting up the moss-chinked walls, the rough barbarism of fur and head and trophy, Necia donned the beautiful garments. She hesitated modestly when she saw the low cut which exposed her neck and shoulders, then she brought forth a Spanish shawl and draped it about her. Never before today had she paid any marked attention to the fairness of her skin. It was odd, too, that she knew instinctively every feature of these alien garments, and that they caused her not an instant's trouble.

Just then a shadow crossed her window and thinking, of course, it was Poleon, she swept out into the big room, very self-conscious and very pleasing to the eye. She was in the middle of the room before she looked up and encountered, instead of Poleon, the embarrassed eyes of the lieutenant. She would have fled but that would have made things worse, so she stood silently, her lithe young figure drawn up to its height—and her head, upon which the long black braids were coiled, was tipped back to a haughty poise. This was no Indian maid, the soldier vowed, no blood but the purest could pulse in such veins, no spirit save the highest could flash in such eyes.

"Where did you learn to wear things like that?" he questioned. "where did you get that—well—that air?"

"It seems to me I have always known. It's instinct, I suppose. I've always had visions of women—white women—dressed in dainty, soft things. I seem to have a memory, although it is hardly that either—it's too vague and tantalizing to tell what it is except that I should be called Merridy."

"Merridy? Why that?"

Necia drew from her breast a thin gold chain, on which was strung a band ring inscribed "From Dan to Merridy." "It was grandmother's, that's where I got the fancy for the name, I suppose. I haven't had it off my neck since I was a baby." She held it out for him to examine, and he glimpsed the milk-white flesh of her neck.

Going out, he found the trader in the store. In the course of their conversation, Burrell inquired hesitatingly:

"Is this your first marriage, Mr. Gale? What leads me to ask is Necia—she is—well—she is such a remarkable girl."

Gale's face underwent a change, but he answered quietly:

"I ain't never been married. When I took Alluna it wasn't the style and neither of us has thought much about it since."

Soon after Gale went in the house to find Necia posing in her new regalia for Poleon's benefit. In a strange and unexpected fury, he commanded her to take the things off and went out, leaving Necia in tears.

Chapter IV.

During the weeks that followed, Meade Burrell saw much of Necia, content with the pleasure of her company and happy in the music of her laughter. Necia, who did not seem to see anything in her blood or station to make her inferior to other women, unfolded before Burrell like some beautiful woodland flower and, little by little, she shared with him all her girlish beliefs, hopes and aspirations.

A month later, Runnion returned, with an evil glint in his eye, gold in his pocket, and ample provisions for the winter with him, shouting to Burrell insolently that this time he had come to stay. With him was a stranger, Ben Stark. He had the appearance of one who had trod the edge of things all his life and his eyes were of a peculiar cruelty. Evidently he had some connection with Runnion's affairs for he bossed the unloading of the provisions.

Burrell was unused to the ways of mining camps, but by the mysterious manner of "No Creek" Lee, who had come to town for provisions, and from the suppressed excitement of Doret and Gale, he knew that something was in the air.

It seemed that Stark had a record as long as a sick man's drug bill. He had run the biggest saloon and variety house in the northwest at one time and was known as a "killer."

While the men were in the store, Alluna entered and asked for sugar in her native tongue, the Pat-Ute language. Stark recognized it at once and asked Gale if that was his squaw. He had been in California himself for a while, he said.

The old man went through the store at the rear and spoke to Alluna with unwonted severity, "I have told you never to use your native tongue before strangers. That man in the store understands."

The squaw dropped her work and came up close to Gale. "Can he be the one?"

Gale shook his head. "I don't know.

"Great lovely dove!" ejaculated Burrell, fervently—wondering if this glorious thing could be the quaint half-breed girl of yesterday.

THE BARRIER Chapter VII

The Magic of Ben Stark.

Before the party came in sight the sound of their voices reached the cabin, and Burrell rose nervously and sauntered to the door. Uncertain how this affair might terminate he chose to get first look at his enemies, if they should prove to be such, realizing the advantage that goes to a man who stands squarely on both feet.

The trail came through the brush at the rear, and he heard Lee say:

"This here's the place, boys—the shack ain't 50 yards away."

"Likely looking gulch," Gale was heard to reply, in his deep tones—there was a crackle of dead brush, a sound as of a man tripping and falling heavily, then oaths in a voice that made the lieutenant start.

"Ha, ha!" laughed Doret. "You mus' be tried, Meestaire R-r-unnion. Better you pick up your feet. Dat's t'ree tam' you've—"

They emerged into the open behind the house to pause in line back of Lee, who was staring at the stovepipe of his cabin, from which came a wisp of smoke. It seemed to Burrell that they held their position for a long time. Then he heard Lee say:

"Well, I'll be damned! Somebody's here ahead of us."

"We've been beaten," growled Stark, angrily, pushing past him and coming round the corner, an ugly look in his eyes.

Burrell was standing at ease in the door, smoking, one forearm resting on the jamb, his wide shoulders nearly filling the entrance.

"Good afternoon," he nodded, pleasantly.

Lee answered him unintelligibly; Stark said nothing, but Runnion's exclamation was plain.

"It's that damned blue-belly!"

"When did you get here?" said Stark, after a pause.

"A few hours ago."

"How did you come?" asked Lee.

"Black Bear Creek," said the soldier, curtly, at which Runnion broke into profanity.

"Better hush," Burrell admonished him; "there's a lady inside," and at that instant Necia showed her laughing face under his arm, while the trader uttered her name in amazement.

"Lunch is ready," she said. "We've been expecting you for quite a while.

"Ba Gar! Dat's fonny t'ing for sure," said Poleon. "Who tol' you 'bout dis strike—eh?"

"Mother; I made her," the girl answered.

"Take off your packs and come in," Burrell invited, but Stark strode forward.

"Hold on a minute. This don't look good to me. You say your mother told you. I suppose you're Old Man Gale's other daughter—eh!"

Necia nodded.

"What time of day was it when you learned about this?"

"Cut that out," roughly interjected Gale. "Do you think I double-crossed you?"

The other turned upon him.

"It looks that way, and I intend to find out. You said yesterday you hadn't told anybody——"

"I didn't think about the woman," said the trader, a trifle disconcerted, whereupon Runnion gave vent to an ironical sneer.

"But here's your girl and this man ahead of us. I suppose there's others on the way, too."

"Nonsense!" Burrell cut in. "Don't quarrel about this. Miss Gale got wind of your secret, and beat you at your own game, so that ends it; but there's plenty of ground left for all of you, and no harm done. Nobody knows of this strike from us, I can assure you."

"I call it dam' sleeck work," chuckled the Canadian, slipping out of his straps. "De nex' tam' I go stampedin' I tak' you 'long, Necia."

"Me, too," said Lee, "An' now I'm goin' to tear into some of them beans I smell a bilin' in yonder."

The others followed, although Stark and Runnion looked black and had little to say. It was an uncomfortable meal—every one was ill at ease; Gale, in particular, was quiet, and ate less than any of them. His eyes sought Stark's face frequently, and once the blood left his cheeks and his eyes blazed as he observed the gambler eyeing Necia, gazing at her with the same boldness he would have used in scanning a horse.

"You are a mighty good-looking girl for a 'blood,'" remarked Stark, at last.

"Thank you," she replied, simply, and the soldier's vague dislike of the man crystallized into hate on the instant. There was a tone back of his words that seemed aimed at the trader, Meade thought, but Gale showed no sign of it, so the meal was finished in silence, after which the five belated prospectors went out to make their locations, for the fear of interruption was upon them now.

First they went downstream, and, according to their agreement, the trader staked first, followed by Poleon

Poleon resents an insult to Necia.

and Stark, thus throwing Runnion's claim more than a mile distant from Lee's discovery. From here they went up the creek to find the girl's other locations, one on each branch, at which Stark sneeringly remarked that she had preempted enough ground for a full-grown white woman.

Runnion's displeasure was even more open, and he fell into foul-mouthed mutterings, addressing himself to Poleon and Stark while the trader was out of earshot.

"This affair don't smell right, and I still think it's a frameup."

"Bah!" exclaimed Doret.

"The old man sent the girl on ahead of us to blanket all the good ground. That's what he did!"

"Dat's fool talk," declared the Frenchman.

"I'm not so sure," Stark broke in. "You remember he hung back and wanted to go slow from the start; and didn't he ask us to camp early last night? Looks now as if he did it just to give her time to get in first. He admitted that he knew the Black Bear trail, and if he lied about keeping his mouth shut to the squaw, he'd lie about other——"

"Wait wan minnit," interrupted Poleon, his voice as soft as a woman's. "I tol' you dat I know all 'bout dis Black Bear Creek, too—you 'member, eh? Wal, mebbe you t'ink I'm traitor, too. W'at? W'y don' you spik out?"

The three of them were alone, and only the sound of Gale's ax came to them; but at the light in the Cana-

(Continued on page twenty-seven.)

Stark is not the name, but he had reason enough to change it. It makes no difference whether this one is the man or not. He will come and I shall know him. For a year I have felt that the time was short and now I know it. Flambeau is a trading post no longer. Lee has made a strike. Poleon and I are going back with him tonight, but we must say nothing or it will start a stampede. Stark is going too. Before we return, I shall know." A half hour later, equipped with provisions, Gale struck the trail to the interior where he found Poleon Doret waiting.

Somehow today the sense of his isolation came over Burrell stronger than ever. His stripes of office seemed to erect a barrier more complete than had they been the emblems of the penitentiary. Besides, he had taken a deep dislike to Stark, and in Runnion he knew he had an enemy.

The only redeeming feature of the place was Necia. Her sweetness, fineness and sparkle placed her on a higher plane than any woman he had ever met. But on account of the unhappy circumstances of her birth, he had almost decided it would be wiser not to see her again. While Burrell was thinking of these things, Necia knocked at his door and came in perfectly unconscious of there being any impropriety in her act. She began at once to tell eagerly of the strike that Lee had made. Tomorrow would be too late. There would be plenty of time to start this afternon and she knew a short cut.

At first Burrell objected. The men did not like him, he knew nothing of mining and, being a soldier, he did not know that he had the right to take up claims. All the while he fought with himself, for there were reasons why he longed to take this trip. He was hungry to beat the men at their own game. Even open enmity was better than indifferent toleration. More than that he knew that Necia was coveted by half of them. A night spent in the woods alone with her would stir them up a bit, make them sit up and notice him. He was not so sure either that it would be wrong to her. She had come to him, and after all she was but a halfbreed girl.

The chances of riches meant much to Necia, the chance to live like other girls, future, heaven, evenything to her. Her eyes were wet with the sudden dashing of her hopes and her chin quivered in a sweet, girlish way.

And then, he did not know just why, something caused him to take the pleading girl in his arms, fiercely kissing her upturned face, over and over, promising to go with her anywhere. Necia made no resistance, but clung to him in sweet surrender, and yet there was nothing unmaidenly about it. Then she hid her face in his neck, whispering shyly, "I love you, I love you, Meade."

Finally she drew serself away, telling him smilingly that he was wasting time. He made his preparations to go swiftly, a madness was upon him and he took no pains to analyze the reasons for his decision. Taking up his burden of blanket and food, he said to Necia:

"Are you sure you won't regret it?"

"Not while you love me," she answered, and together they stepped out to the trail.

Two hours later, pausing for a moment beside Black Bear creek, Burrell turned and shook his fist at the village, six miles away, then joined his companion, and hand-in-hand, they plunged into the untrodden valley.

Chapter V.

Poleon Doret was singing gaily as the trader joined him that morning for he was very happy. It seemed that this strike of Lee's had been arranged providentially for his own especial benefit. Had he not watched Necia grow from a slip of 13 and spoken never a word of his love?

Now that she was a woman he could bring his burden of prosperity and lay it at her feet, saying: "Here is another offering, my Necia, and with it go the laughter and the music and the heart of Poleon Doret."

Finally, unable to avoid any longer the subject uppermost in his mind, Poleon spoke to the trader: "Necia gettin' beeg gal' now, by and by she's goin' marry on some feller—w'at?"

"I don't mind if she gets a man that will treat her right."

"Necia wouldn't marry no bad man. She's too good and to purty for have bad husban'," broke in Poleon.

"She is, is she?". Gale turned on him with a strange glare in his eyes. "Them's the kind that get the he-devils. There's something about a good girl that attracts a bad man, particularly if she is pretty. Let me tell you what I saw with my own eyes.

"There was an eastern girl who came west, a girl just as good and pure as Necia and just as pretty too—yes, and a thousand times prettier. Two fellows fell in love with her. One was a good man who had never been in love before and so was not up to all the fancy tricks that pretty girls hanker after. The other fellow came from a neighboring town, he had knocked around a good deal and was a better liar, but he was not straight. He was handsomer and younger and the very purity and innocence of the gorl drew him, being a change from what he was used to. The other man, tied up as he was in his dreaming, did not realize what was going on and the two men did not know each other by sight. The end of it was that the girl married the bad one. The other man was all torn up about it. The girl's husband tried to break her spirit in a thousand ways, tried to make her a bad woman like the others he had known. She couldn't leave him on account of the youngster—they had a child—so she stood it for three years till she saw that he would make a bad woman of her as sure as he would make one of the kid—till he got rough—then the woman sent for the other man. He had been loving her all the time and you'd better believe he went."

"W'at happen den?" insisted Poleon.

"It's a long story and I just told you this much to show what I said was true about a good girl and a bad man, and to show why I want Necia to get a good one."

At this point, Lee, Stark and Runnion joined them. All that afternoon the five men wound up the valley following one another's footsteps and always there were dense clouds of mosquitoes above their heads. There was a shorter cut, but Lee had chosen the level ground rather than climbing the divides, loaded as they were. There was a slight chance that the people of the camp would hear of the strike and beat them in. Stark swore if they did they would have no easy time.

As the men were gathered around the campfire that evening, Lee, the one-eyed miner who had made this lucky strike, told of his long and solitary quest, when ill luck had risen with him at the dawn and followed him from camp to camp. Now that fortune had at last smiled upon him it was him for the big feed and the long drink. Then Stark talked of his life in California. In time the stories reminded the Frenchman of the conversation that morning and he said: "Say, John, w'at happen to dat girl we was talkin' about? John was tell about a feller he knowed w'at marry a good gal' jus' to mak' her bad lak' hese'f.'

"How's that?" inquired Stark, turning curiously upon the old man.

Gale had risen and remarked sleepily that it was time to turn in. The story, he explained, was a long one and had happened when he was in Washington. Hours after the others were asleep, Gale lay, staring up at the stars, and trying to solve some riddle which baffled him.

The next morning, before they resumed their march, the men, at Gale's suggestion drew straws to see who would have the choice of locations. Lee held the straws so every one would have an even chance. Gale drew the longest, which meant first choice, and Doret's was next in length to that of the trader.

Taking up their burdens again, they filed toward the narrow valley.

Chapter VI.

Not until his dying day will Burrell lose the memory of that march with Necia through the untrodden valley. They wandered hand in hand into a land of illusions, where nothing was real but love, and nothing was tangible but joy. When the sun was low they selected a mossy shelf high up on the edge of the spruce and pitched their camp.

"This day has been so wonderful," said the girl. "Tell me about your people, your sister."

He had expected her to ask for this, for the subject held an inexhaustible charm for her. Tomorrow would come readjustment of relations, but this hour of illusion must not be broken, and so he began to tell her tales of other people and his youth. He drifted farther than he intended, for to Burrell this exaggerated appreciaion of his family honor was an unconscious commendation of an upright code.

When he had finished, Necia remarked: "Those people of yours have all been good men and women, haven't they?"

Burrell began to laugh silently. "I was just wondering what some of my strait-laced ancestors would say if they could see me now."

"There is no wrong in loving. I want to sing it to the stars and cry it to the whole world. Don't you?" asked Necia.

"Well, I shouldn't care to publish this tale of our excursion, would you?"

"I have often taken trips with Poleon and been gone for days and days at a time."

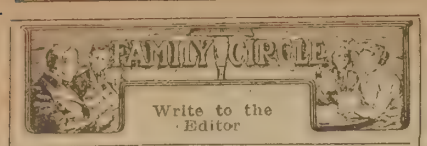
"But you were not a woman then," he said softly.

"No, not till today, that's true. I don't want to ever be commonplace and ordinary. I want to be always natural and good. I've never been afraid of anything and yet I feel so safe inside your arms. Isn't it queer?" she continued dreamily.

The young man became conscious of a vague discomfort. He realized dimly that for hours he had been smothering with words and caresses a something that instead of dying, grew stronger the more utterly this innocent maid yielded to him. A man's honor, if old, may travel feebly, but its pursuit is persistent. It was as if the girl knew each cunning joint of his armor, as if she realized her peril and had set about the awakening of his conscience, with a cautious wisdom beyond her years. He vowed he was a reprobate to wrong her so; it was her white soul and woman's live that spoke.

"Dear, wonderful girl," he said, "it is going to be my heart's work to see that you never change and that you remain just what you are. You can't understand what this means to me. I was blinded, but the darkness of the night has restored my viison."

He piled up a sweet scented couch of boughs, covered her with a blanket and tucked her in.



"I'll sit here beside you for a while," he said. "I want to smoke a bit."

She stole a slim, brown hand out from beneath the covers and snuggled it in his, falling alsleep almost instantly, her fingers twined about his in a childlike grip.

At times a great desire to feel her in his arms, to have her on his breast, surged over him, but the simple, little half-breed girl had revived his honor and courage. If only her love was like her blood, he might have had no scruples; or if her blood were as pure as her love—even then it would be easier, but as it was, he must give her up tonight and for all time. He sat for a long time with the dwindling firelight playing about him, his manhood and his desires locked in a grim struggle and then seeking the other side of the wickiup, covered himself, without disturbing her, and fell asleep.

At dawn they started out again, reaching Lee's cabin before the rest. At the lower end of "No Creek," Lee's location, Burrell blazed a smooth spot on the tree and wrote thereon at Necia's dictation. Four hundred and forty steps away, Necia marked on another spruce tree, "Lower center end stake of No. 1 below discovery. Necia Gale, locator." No amount of pleading would persuade Burrell to stake a claim for himself, so after Necia had located two more on the forks of the creek, the couple waited the coming of the others and what of good or ill it might bring.

This is the end of the synopsis of Chapters I. to VI. Chapter VII. given in full, beginning on this page.

Where Are Your Children?

By ELIZABETH QUAKER.

"Mothers, know where your children are, especially your girls." is the good advice given by a dear old lady at a meeting recently.

At first it might seem unnecessary to remind country mothers of this responsibility, but when one sees little children two miles from home at nightfall without their parents' knowledge of their exact whereabouts; or coming home from school at any time they choose. On time tonight; an hour or so later tomorrow night. Really looks as though country mothers have grown somewhat careless.

Nearly all parents are anxious to have their children at school on time in the morning and the children are taught to avoid "tardy marks." Be as much concerned about the time of their return at night.

Then the aimless visiting and Sunday afternoon wandering allowed some youngsters just entering their "teens." Having no work to do they are restless and start out to find "something going on." Something to satisfy the craving for excitement and amusement.

This should be an opportunity to strengthen their characters by teaching them to quiet that uneasiness for themselves.

Here is where the country mother has more means at hand than the city parent. When daughter comes downstairs all "togged up" and vaguely says, "I'm going for a walk," sanction, but direct it: "Alright, put Happy in his gocart while I smooth my hair a bit, and we will go to call on Mrs. Jones, and, Mary, let's take a bunch of lilacs; she likes them so well."

Or take all the family on a ramble through the fields. Gather every conceivable interesting thing from flowers and branches to pebbles and snailshells. Interest them in a hobby of some sort and respect any collecting tendencies they may have.

Be a "chum" and companion.

The exacting of strict obedience is very important, but not the only factor entering into the successful rearing of a family of children

Little Jars Work Wonders.

To the Editor: I call to mind many things to save that I have learned as a pioneer's wife. The greatest help to me is the preserving of meats and vegetables, etc., by canning. On the farm beef is much cheaper when one buys it in winter by the quarter. Can your chickens in the fall. Save bushels of feed. Then at hog killing time, enough sausage, backbones and spare ribs are canned to use the remainder of the year. Vegetables and fruit in their season, can be saved. Perhaps I find it more practicable on the farm, but if I was a city resident I surely would watch the market for all such things. Buy when cheapest if fresh, and can. I have a homemade steam cooker made with a wash boiler that Miss Sutherland of Pullman gave me directions for and I find it one of the most saving articles I have in my home. I use it to do all my canning in and seldom have a failure. The wonderful use the energetic housewife can work with her little glass jars. The best butter I ever used was packed in brine and sealed in Mason fruit jars.

Old Sweaters

Do Not Throw Any Part Away

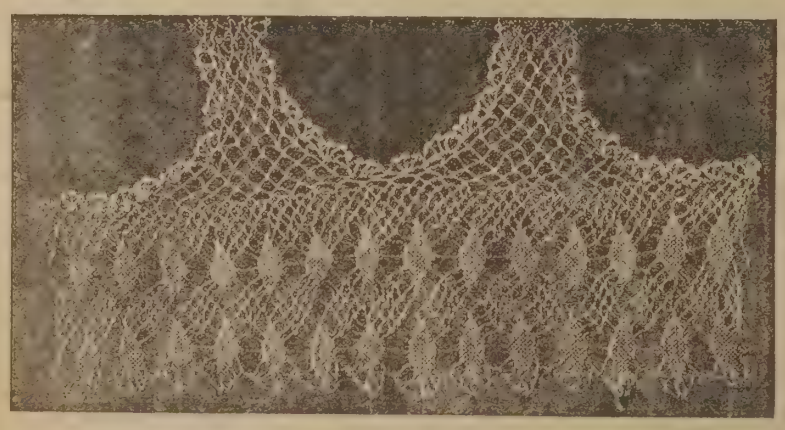
By Mrs. S. Hayes, Mount Idaho, Idaho.

When sweaters are worn out at elbows and across back and chest they are discarded, but there is no need of throwing them in the ragbag, as a skein of yarn to harmonize and a little bit of dye will do wonders with the remains, especially if there are children in the family, or if you know of friends who would appreciate a little help in that line.

Stylish toques can be made of the upper part of the sleeve of large sweaters and they will fit children up to 12 years of age. Cut the sleeve from the shoulder, cut straight across and above elbow also; gather one end into a bunch (on wrong side) to close it, and try on person to be made for to get the length, then trim off, right depth. From the other sleeve, cut off a band, four or more inches wide and sew to the bottom of the above toque, wrong side out, with the seam outside, so when the band is rolled up on the toque it will be right side out. With the skein of yarn feather stitch the raw edge of rolled band, or nicer still, crochet a plain scallop around it and make a ball or pom-pom for the top by wrapping yarn around three fingers of the hand 50 times (the coarser the yarn the less it takes) tie in the center and cut both ends and trim in ball shape, sew securely over place where toque was gathered into a bunch and "there you are." A glance at toques in catalogues will help in their construction.

If there is more than one sweater to work on, each of different color, two-colored toques can be made by using sleeve of one for toque and band of sleeve of the other for facing, having skein of yarn to match facing for pom-pom. By cutting off a sleeve of a white sweater and dyeing it green, old rose or violet, and using it as rolled band on the white makes as nice a "head gear" as one could wish, with a large pom-pom of harmonizing color on each. White "lazy daisy" worked in yarn around colored brim makes it loveliet still. If the sweaters were of good wool yarn enough can be raveled to take the place of a skein of yarn.

A nice child's muff to match toque can be made of a large sweater sleeve. It is made on the same principal as the toque and both ends are banded, drawing in slightly and the muff is lined with two or more thicknesses of the same sweater. Toque, scarf and muff are quite nobby made like this. To make the scarf take a long strip of the lower part of a sweater, cut off eight or 10 inches wide and crochet around the edge.



The good part of the sleeve of small sweaters make fine mittens for children. A simple way is to cut a mitten, thumb and all, allow for large seam and put in a diamond-shaped piece in the hollow where thumb joins the palm. They are also excellent lining for denim mittens for doing chores. An old mitten will do for a pattern.

Small sleeves also make good moccasins for the bedroom or to wear inside of boots, after fall rains "set in." Cut length ways of sleeve over a stocking foot pattern and use the band, down front of sweater, as a cuff at the ankle to keep it snug.

The "tail" part of sweaters make fine petticoats for little girls. If the edge is frayed a plain scallop crocheted around it remedies that, as well as improving the looks. The fine Jersey sweater tails, by goring slightly, make warm yokes for ladies wool petticoats and are smoother fitting. A long strip of the lower part cut off eight or 10 inches wide and crocheted around the edge makes a warm scarf.

Crochet and Tatting Designs

The Bunchgrass Boy

(Continued from page twenty.)

originality on the part of the writer, who will please step to my desk after class." Then he gave enough of a hint as to the particular theme he was referring to to enable me to know that he was talking about me. I went to the desk with knees knocking.

Sampson asked me bluntly what magazine article I had copied my "theme" out of. I told him none. He began to get red in the eyes, but I guess perceived by and by that I was in a stammering, stuttering, trembling way telling the truth when I insisted that the "egg theme" was a fabrication of the imagination. From that time on I felt myself a failure at the theme-writing game.

Later, I was directed to write an "optional theme," and this time I remembered my definitions. I described a cougar playing with a calf's head, cuffing it about just as a cat does a mouse. This theme was introduced to the class in a public reading, and my drooping spirits revived somewhat.

Cut Flavoring Costs in Three: *Here We Tell YOU How*

INSTEAD of using A TEASPOONFUL of lemon or vanilla to flavor a cake or other creations, USE A FEW DROPS of Crescent Mapleine. This IS THE NEW, THE POPULAR flavor. So good that MORE than a million housekeepers are already using it. So highly concentrated that A FEW DROPS will flavor MORE food than the customary teaspoon of flavoring. COSTS LESS than good vanilla — 2-ounce bottle. 35c. BUY a bottle today. SEND 4c stamps for the Mapleine Cook Book, showing 250 good ways to use it. SEND for the cook book at once. BUY a bottle of the Mapleine from your grocer today. Dept. S., Crescent Mfg. Co., Seattle, Wash. (M-49)

Look, Men, Here is *Real Value* in Popular Priced Underwear

Everybody read about those big features chock-full of extra value over there in the illustration. You never saw anything like it at anywhere near the price. This underwear is just the right price for everybody and the underwear everyone should wear.

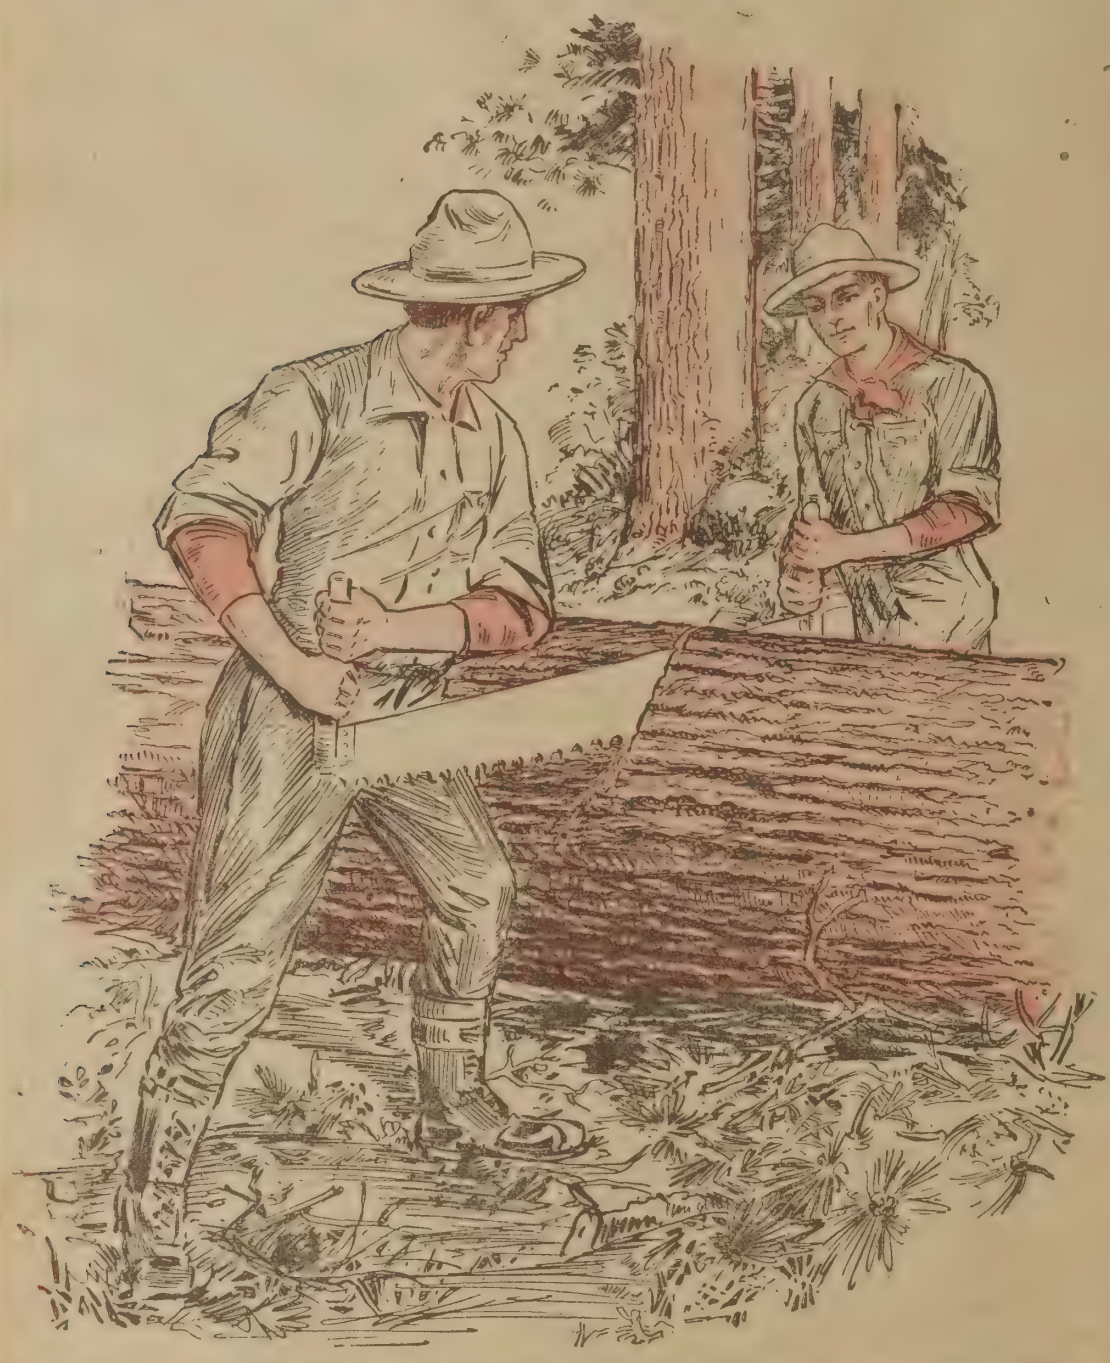
Greatest Winter Underwear **HANES** Sold at Popular Prices

ELASTIC KNIT **UNDERWEAR**

is made of the finest long-fibre cotton in the Southland, silky-smooth and fleecy warm. Naturally elastic and comfortable, but made a whole lot more so. You'll sure be happy to slip in this unusually fine underwear and laugh at the cold.

And the fit? Say, man, tailor-made underwear couldn't feel any better than Hanes. Made as strong as cast-iron and as comfortable as a feather bed. Pre-shrinking makes it hold the shape and size. It's the biggest real value in the world for popular priced garments and union suits.

A New Bang-up Boys' Union Suit



We've got the boys' union suit that you and every parent have wanted. A high-quality, long-wearing, economical union suit. You'll like it because you can see the extra value. Your boys will like it because it's warm, comfortable and cozy. Its value can't be duplicated.

READERS SAVE MONEY

By sending subscriptions direct to this paper and thus eliminating cost of middlemen, the following rates are obtained:

25c for one year's subscription to The Washington Farmer.

50c for three years' subscription to The Washington Farmer.

$1. for five years' subscription to The Washington Farmer.

We will be able to keep the above rates in effect if our readers send their subscription orders direct to this paper, and so make it possible for us to dispense with the big force of agents we are accustomed to employ.

RELEASE MEN FOR PRODUCTIVE LABOR

Consider these points about the new subscription plan which we ask our readers to act upon. It is in accord with the government's request to release as many men as possible for productive labor. It is in keeping with the principle of cooperation for which we have all been working. It means that our friends on the farms of this state get the benefit of every dollar which would ordinarily go for agents' salaries, railway fares, hotel bills, automobiles and miscellaneous expenses. You can do your part in making the new plan an unqualified success by sending in your subscription order promptly; and by asking your neighbors to do the same.

We have been highly gratified by the loyal response already received from all parts of the state; and earnestly urge those who have not acted already to do so at once.

Remember, only the method of handling subscriptions is changed; the quality of the paper will be maintained and improved wherever and whenever possible.

PLEASE TELL YOUR NEIGHBORS ABOUT THIS OFFFR

Your remittance may be in any form most convenient--silver, stamps, personal check, postal money order, express money order, or bank draft.

Nov. 15

The Washington Farmer,
Review Bldg.,
Spokane, Wash.

I desire to take advantage of your plan to deal direct with your readers in securing and renewing subscriptions, thus saving the middleman's cost and releasing men for productive labor.

TOWN ..... R. F. D. .....

STATE .....

Junior Red Cross Society.

Dear Aunt Nellie: I am going to write a letter to the Children's Corner after so long a time. I am going to the Krupp public school. I am 12 years old and am in the seventh grade. I have a very good teacher. His name is Mr. McCarthy. We drive four miles to school, but are going to move to town in a few weeks. The girls at school have organized a Junior Red Cross. We are going to knit for the soldiers. The first thing we are going to do is to give an entertainment to get money for the Red Cross to buy yarn. My grandmother came from far away Virginia to see us. She stayed about six weeks with us. I was very glad to see her come. I am going to tell you about our farm and what we did this summer. We have 22 head of horses and five cows and calves. We own 160 acres of land, but are farming 640 acres. This summer I stayed at home and helped my mother around the house, doing little things. I helped cook for the harvest hands. I made nearly all the cakes. There are also some clubs around in the country, among them being the Pig club, and Garden and Canning clubs. I didn't join any of them, but my brother joined the Pig club. One day he turned his pigs out and I didn't believe they were his pigs they had grown so since I saw them last. Our garden did very well till there was a large dust storm come up and killed most everything, although we had quite a few beans, some corn and all kinds of peas, radishes, turnips and different things. We did some irrigating. We raised over 200 chickens this year, for the last month or so we have been eating chickens nearly every day. I would rather live on a farm, where you can have so many things. We have canned over 200 quarts of fruit and have made five and one-half gallons of apple butter. I have been to two basket socials this fall. I had a good time at both. I took music lessons all summer on an organ. This fall my music teacher gave a recital and I played. My fingers were sore, but I played anyway. The dust is blowing as usual. We have been having lots of dust storms this fall and summer. —Edith James, Box 114. Krupp, Wash.

A Member of the Red Cross.

Dear Aunt Nellie: I received my prize which I thought lovely. Could the cousins guess what it was? It was some bulbs containing iris, dahlias, narcissus, tulips and hyacinth. I am going to select nice beds for them. I thank Aunt Nellie and think the gift is lovely. This time I am going to write on three subjects so now I will start. Helping the Red Cross is my first subject. I am a member of the Red Cross. You have to pay $1.25 to join. The ladies make scarfs, sweaters, washrags and sponges. They make many other things, too. I can crochet and sew. I can embroider a little, too, but I cannot knit. I am going to learn to knit. I wonder if any of the cousins belong to the Red Cross. I hope they do for it is very patriotic to belong to it. It is for a good cause. Thanksgiving comes in November. The snow falls fast. The boys go out with their sleds. The girls also go out. On Thanksgiving we crack nuts and have a good deal of fun. Thanksgiving dinner is a big and enjoyable one. We are always filled up by the time we are ready to go to bed—Mary Esther Symington, Selleck P. O., Box 97, Kangley, Wash.

Make Slippers for Soldiers.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 13 years old and in the seventh grade. I live on a 40-acre farm. We have two cows, one horse, one colt, one dog, two puppies, one cat and one kitten. We have 175 chickens. I will take for my subject "Helping the Red Cross." We have a Red Cross meeting the first and third Thursday of each month. We then sew things for soldiers. We bring old pieces of wool and cotton and sew it into chamber slippers. If I were old enough I would be a Red Cross nurse. I will close now with love to Aunt Nellie.—Anna Becker, R. F. D. 1, Box 56B, Clinton, Wash.

Glad to Hear from Vera Again.

Dear Aunt Nellie: This is my second letter to the Corner. I hope many other children will write to you, as I like to read the letters, and I am sure many other children do, too. We have four hundred acres of land, but it is all logged-off land, except about 80 acres, which is creek bottom. We have eight cows and six heifers. We send about five gallons of cream to town every other day. I have one sister and one brother. My sister's name is May and my brother's name is Joe. I am 12 years old and in the eighth grade. If I have a twin I should like to hear from her.—Vera Allen, Box [illegible], Roy, Wash.

Enjoyed Visit to Seattle.

Dear Aunt Nellie: I have not written to you for a long time, as I have been in Seattle visiting my sister and brother. I certainly had a fine time. We left Bellingham at 10 o'clock and arrived in Seattle at 4. We went to a big park called Woodland park. Everything was nice and green and flowers were blooming. There was quite a large animal there in the park called gnu. Its head was like that of a cow and had horns like a cow. Its body was like a horse's and its feet were like a cow's. The bears, lions, tigers and buffaloes were there, too, and also birds. One of the buffaloes was so ferocious it had to be shot. We went to town most every day and saw many nice things. One building is 42 stories high, called the Smith building. One store, called the Bon Marche, is a block long. I go to school and am in the eighth grade. My teacher's name is Mr. Gilmore. He is a very nice teacher. I am quite short, have blond hair and gray eyes. I am 14 years old. The name of our school is Riverside. —Emma Brune, R. F. D. 2, Lynden, Wash.

Milking 120 Cows Now.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My name is Evelyn Righetti and I am in the third grade and I am 7 years old. My teacher's name is Miss Isabel Ross. We have 500 acres of land and 200 cows. We only milk 120 cows now. We have eight horses and two little colts. The name of the colts are Bell and Maude. My oldest brother has a Ford car and two of my sisters and my brother go to high school every morning.—Evelyn Righetti, Monroe, Wash.

Goes to School With Brother.

Dear Aunt Nellie: I am 9 years old. I go seven miles to school with my brother in the car. I take music lessons and am learning to play the piano. I have a pony and a pet sheep called Bug. Bug is a very nice pet. She will eat bread and sugar out of my hand. She likes to drink out of a cup. My pony's name is Ky. She is quite small and has a white face. She is sorrell. We live on a ranch. We have 31 sheep and nine horses and five cows.—Carolyn Montanye, Colville, Wash.

Forest's Birthday Comes in July.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I do not think it shall be the last. I am 10 years old and am in the fourth grade at school. My birthday is the 7th of July. I am the third to the best in my class out of six pupils. I have also two brothers younger than myself. The youngest of us is three years old and the second is seven years old. We live on a five-acre farm seven miles from Mt. Vernon.—Forest Eisen, Mt. Vernon, Wash.

A Dog Named Lion.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I was 7 years old the sixth of April and am in the second grade. I have a sister and a brother. Their names are Florence and Jerold. My sister will be 12 years old. We have 13 head of horses and 45 head of hogs. We have one dog named Lion. We live on a farm.—Lola Ferrell, Silcott, Wash.

"Filax," the Life-Saver.

Braving the dangers of that shell-torn area known as "No Man's Land," times without number and credited with saving the lives of 100 French soldiers is the record of "Filax," German sheep dog and Red Cross worker, who visited this country a few months ago on furlough, says Our Dumb Animals.

This is just one example of his faithfulness and intelligence:

A French lieutenant fell into a German trap and was wounded so badly that he was unable to get back to his own trenches. When he fell his helmet rolled off and was lodged under his doubled-up body. He would have died if Filax had not found him. Not being able to locate the helmet, the dog squatted down on his haunches and slowly licked the face of the unconscious soldier. This acted as a restorative and presently the man opened his eyes, pulled his helmet from under his body and gave it to Filax. Shortly after a rescue party headed by the faithful Filax found him and brought him in.

THE BARRIER

(Continued from page twenty-three.)

dian's face Runnion hastily disclaimed any such thought on his part and Stark shrugged his denial.

"I don' know you feller' at all," continued Poleon, "but Ole Man Gale, he's my frien', so I guess you don' better talk no more lak' dat."

"Don't get sore," said Stark. "I simply say it looks bad." But the other had turned his back and was walking on.

There are men quite devoid of the ability to read the human face, and Runnion was of this species. Moreover, malice was so bitter in his mouth that he must have it out, so when they paused to blaze the next stake he addressed himself to Stark loud enough for Poleon to hear.

'That lieutenant is more of a man than I thought he was."

"How so?" inquired the older man.

"Well, it takes nerve to steal a girl for one night and then face the father, but the old man don't seem to mind it any more than she does. I guess he knows what it means, all right."

Stark laughed raucously. "I thought of that myself," he said.

"That's probably how Gale got his squaw," concluded Runnion, with a sneer.

It seemed a full minute before the Frenchman gave sign that he had heard, then a strange cry broke from his throat and he began to tremble as if with cold. He was no longer the singer of songs or the man who was forever a boy; the mocking anger of a moment ago was gone; in its place was a consuming fury that sucked the blood from beneath his tan, leaving him the pallor of ashes, while his mouth twitched and his head rolled slightly from side to side like a palsied old man's. The red of his lips was blanched, leaving two white streaks against a faded, muddy background through which came strange and frightful oaths in a bastard tongue. Runnion drew back, fearful, and the older man ceased chopping and let his ax hang loosely in his hand. But evidently Poleon meant no violence, for he allowed the passion to run from him freely until it had spent its vigor, then said to Runnion:

"M'sieu, eider you are brave man or dam fool."

"What do you mean, Frenchy?" said the man addressed, uneasily.

"Somebody goin' die for w'at you say jus' now. Mebbe it's goin' be you, m'sieu; mebbe it's goin' be him. I can't tell yet, but I'm hope an' pray it's goin' be you, because I t'ink w'at you say is a lie, an' nobody can spik dose kin' of lie 'bout Necia Gale."

He went crashing blindly through the underbrush, his head wagging, his shoulders slumped loosely forward like those of a drunken man, his lips framing words they could not understand.

When he had disappeared Runnion drew a deep breath.

"I guess I've framed something for Mister Burrell this time."

"You go about it queer," said Stark. "I'd rather tackle a gang-saw than a man like Poleon Doret. Your frame-up may work double."

"Huh! No chance. The soldier was out all night alone with that half breed girl, and anybody can see she's crazy about him. What's the answer?"

"Well, she's mighty pretty," agreed the other, "most too pretty for a mixed blood, but you can't make the Frenchman believe she's wrong."

"Why, he believes it now," chuckled Runnion, "or at least he's jealous, and that's just as good. Those two will have trouble before dark. I wish they would—then I'd have a chance."

"Have you got your eye on her, too?"

"Sure! Do you blame me?"

"No, but she's too good for you."

"Then she's too good for them. I think I'll enter the running."

"Better stay out," the gambler advised, "you'll have sore feet before you finish. As a matter of fact, I don't like her father any better than you like her lovers—"

"Well, it's mutual. I can see Gale hates you like poison."

"—and I don't intend to see him and his tribe hog all the best ground hereabouts."

"They've already done it. You can't stop them."

Before answering, Stark listened for the trader, but evidently Gale had finished his task and returned to the shack, for there was neither sign nor sound of him.

"Yes, I can stop them," said Stark. "I want the ground that girl has staked, and I'm going to get it. It lies next to Lee's, and it's sure to be rich; ours is so far away it may not be worth the recorder's fees. This creek may be as spotted as a coach dog, so I don't intend to take any chances."

"She made her locations legally," said Runnion.

"You leave that to me. When will the other boys be here?"

"Tomorrow morning. I told them to follow about four hours behind, and not to run in on us till we had finished. They'll camp a few miles down the creek, and be in early."

"You couldn't get but three, eh?"

"That's all I could find who would agree to give up half."

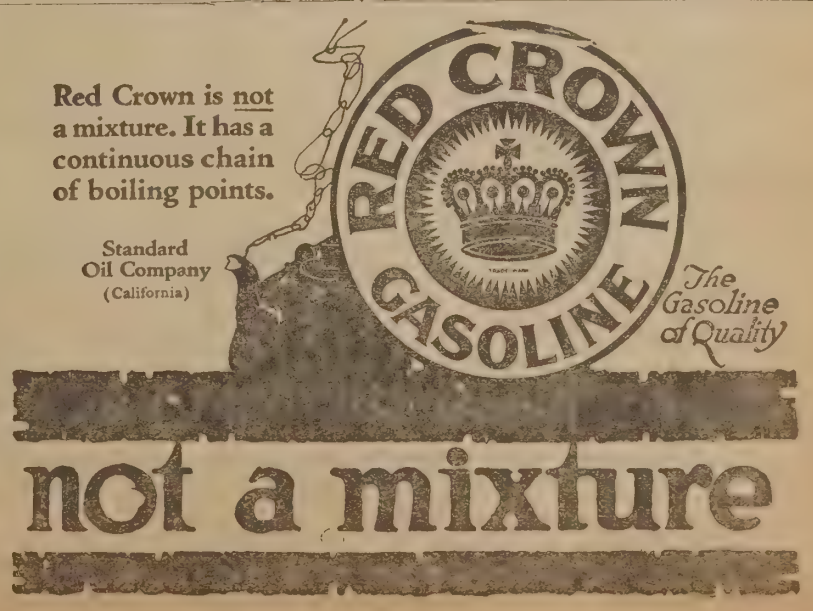
'Can we count on them?"

"Huh!" the other grunted. "They worked with me and Soapy on the Skagway trail."

"Good. Five against three, not counting the girl and the lieutenant," Stark mused. "Well, that will do it." He outlined his plan, then the two returned to the cabin to find Lee cooking supper. Poleon was there with the others, but, except for his silence, he showed no sign of what had taken place that afternoon.

Stark developed a loquacious mood after supper, devoting himself entirely to Necia, in whom he seemed to take great interest. He was an engaging talker, with a peculiar knack of suggestion in story telling—an unconscious halting and elusiveness that told more than words could express—and, knowing his west so well, he fascinated the girl, who hung upon his tales with flattering eagerness.

Poleon had finished several pipes, and now sat in the shadows in the open doorway, apparently tired and dejected, though his eyes shone like diamonds and roved from one to the other. Half unconsciously he heard Stark saying:



"This girl was about your size, but not so dark. However, you remind me of her in some ways—that's why it puts her in my mind, I suppose. She was about your age at the time—19."

"Oh, I'm not 18 yet," said Necia.

"Well, she was a fine woman, anyhow, the best that ever set foot in Chandon, and there was a great deal of talk when she chose young Bennett over the Gaylord man, for Bennett had been running second best from the start and everybody thought it was settled between her and the other one. However, they were married quietly."

The story did not interest the Canadian; his mind was in too great agitation to care for dead tales; his heart burned within him too fiercely and he felt too great a desire to put his hands to work. As he watched Burrell

(Continued on page thirty-one.)

News for Breeders

W. A. Smiley, near Gardner, in Douglas county, Ore., recently purchased two of the good cows and one heifer from J. M. Dickson & Son of Shedd, Ore. This included Ruth Viola, a granddaughter of Golden Glow's Chief, with an official record of 543 pounds of fat or over 637 pounds of butter, and Clara Marea, also a Register of Merit cow and a great breeder. The heifer is by the Dickson herd bull, Valentine's Ashburn Baronet. Mr. Smiley, who is prominent in cow-testing association work, has a good grade herd of Jerseys, but there are his first purebred and he has started well.

At the "Paramount Stud" sale of William Crownover's Belgians at Hudson, Ia., Oct. 16, the great stallion Forceur, generally conceded to be the greatest breeding stallion in America and one of the best of the entire breed, sold for the record price of $47,500. He was purchased by C. G. Good of Ogden, Ia., with Henry Lefebure & Son of Fairfax, Ia., as the active competitors for him. The latter firm later in the sale took one of Forceur's weanling colts at $1825. The 53 head sold totaled $98,775, an average of $1864. The stallions, including Forceur, brought an average of $3297 and the mares and fillies $1127 each. Most of the animals remain in Iowa, the one sold farthest west going to Montana. H. A.

Raleigh's Sunbeam.

The above photo shows Raleigh's Sunbeam, a 3-year-old Jersey cow, shown by E. O. Erickson of North Yakima at the Washington state fair. She is a very handsome type Jersey, as the picture shows, and won second in her class. But it is for her splendid milking qualities and the good calves she brings that Mr. Erickson prizes her most.—H. A.

Swartz Sells Heifers.

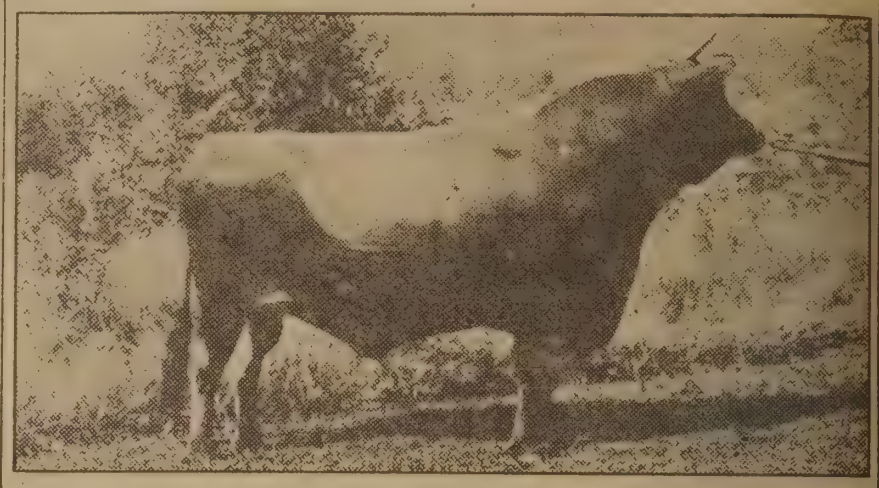
One of the striking results of advertising is revealed in a letter to The Farmer from C. A. Swartz of Springfield, Ore. Mr. Swartz writes that McArthur & Stauff, the Rickreall, Oregon, Jersey breeders, purchased the heifers advertised by him a short time since.

Congressman McArthur, who is a regular reader of The Farmer, saw the ad while in Washington. He wrote Mr. Stauff to go and see them, resulting in the purchase. Both the gentlemen are greatly pleased with their buy, says Mr. Swartz. The breeding is partly along the same line as the McArthur & Stauff herd and some are closely related to N. H. Smith's 800-pound cow, Picabo. Mr. McArthur realized the value of the breeding more quickly than others.

Colony Segis Newman.

J. von Herberg reports the sale of Colony Segis Newman, who goes to Kittle Bros., owners of the famous Fairhurst herd at Holland, Ohio. He believes that this is the first time in the history of the breed that a bull, born and bred on the Pacific coast, has been sent east to head a great herd. This animal is indeed worth sending to the Coast for.

He is sired by Aaggie Cornucopia Newman, sire of the world's champion junior 2-year-old, and world's champion 3-year-old for milk production. He has eight daughters under full age that average 103 pounds of milk in a day, two of which are 30 pounds.



The price of the animal runs in the four figures.

Increase in Naval Tonnage.

It is said on reliable authority that 10,000 sailors in our navy have made a total gain in weight amounting to 75 tons. This is by no means to be regarded as the least important item in reckoning the increase of our naval tonnage.—Providence Bulletin.

Waikiki Farm Jerseys

"Home of the Pilot Family"

COUNT'S FOXY LAD OF WAIKIKI.

A grandson of Pilot. Grand Champion bull of the northwest, 1917. His dam, Eminent's Foxy Belle, is now on R. of M. test and in 7 months and 9 days has given 9627 pounds milk. 514.7 pounds butterfat.

Herd Sires: Count's Foxy Lad of Waikiki 142808 (see description under cut).

Model's Pilot of Waikiki 152038, Junior Champion, Spokane, 1917. Sire, Golden Winner's Count 105789. Dam, Pilot's Model, Champion Senior 2-year-old Jersey of the west. Register of Merit record with first calf, 12,639 pounds milk, 618.2 pounds butterfat.

Our foundation cows are equal to the best in America. Register of Merit records up to 828.4 pounds of butterfat in one year.

Write for illustrated booklet. Several young bulls of excellent breeding for sale.

ABERDEEN ANGUS

Yakima Herd of Aberdeen Angus

In the famous valley of the Yakima is one of America's greatest collections of the breed.

At the recent Chicago International our breed won 1st on aged herd, 2d on young herd, 1st on calf herd and 2d on get of sire. All stock exhibited, except 2, were of our own breeding. We have an exceptionally good lot of yearling bulls for sale. To introduce our stock in this section we are pricing them within reach of small breeders and range men.

Congdon & Battles

Otto V. Battles, Mgr.

GUERNSEY CATTLE

LENA'S STATESMAN
No. 24,744 FOR SALE

He was Grand Champion at the Oregon State Fair, 1917, with seven aged bulls in the show ring. His sire is Golden Prince of Oregon, No. 11912, Grand Champion bull at the Alaska-Yukon Exposition at Seattle, and never defeated in all his long show ring career, but was always an outstanding winner.

LENA'S STATESMAN'S dam and granddam milk from 45 to 52 lbs. a day, testing 5 per cent and over. They are both heavy producers and show ring winners.

LENA'S STATESMAN was five years old Oct. 4. He is a proven, impressive sire on both pure and grade cows, and is as remarkable for his dairy quality as his breed type. For further particulars and price address

D. H. LOONEY. Jefferson, Ore.

Valley Junction Shorthorns

The grand champion bull, General Hampton 390583, at the head of the herd. Young bulls fit to head the best pure bred herds and others that will make impressive improvements on range herds. Priced according to quality.

W. W. GREEN & SONS, Union, Ore.

Grain and Produce Markets

Chicago Grain.

CHICAGO, Nov. 12.—Both in activity and strength oats today led corn. Scarcity of cars available for the movement of oats proved the dominating factor. Oats finished 2c to 2⅝c net higher. Corn gained 1½c to 2⅛c, closing unsettled, with December $1.20½ and May $1.15¾. Provisions advanced 2½c to 50c.

Corn rose mainly as a result of upturns in the oats market and in Wall street quotations.

Provisions swung upward with grain.

Cash Quotations.

CHICAGO, Nov. 12.—Corn—No. 2 yellow, $2.25½; No. 3 yellow, $2.22; No. 4 yellow, nominal.

Oats—No. 3 white, 63@64¾c; standard, 63¼@64¾c.

Rye—No. 2, $1.77@1.77½.

Barley, $1@1.33.

Timothy, $6@7.50.

Clover, $18@24.

Pacific Northwest Grain.

PORTLAND, Ore., Nov. 12.—Grain future bids: December oats, $50.25; feed barley, $52.50; brewing barley, $53.

Eastern oats and corn in bulk bids: Oats, No. 3 white, November, $45.50; 38-pound clipped, $46. Corn, No. 3 yellow, January, $55; No. 3 mixed, $55. December oats, No. 3, $45.50; oats, clipped, $46.50. February corn, yellow, $54; corn, mixed, $52.50.

San Francisco Grain.

SAN FRANCISCO, Nov. 12.—Barley; December, $2.43½ bid, $2.45 asked. May, $2.45½ bid, $2.47½ asked.

Minneapolis Grain.

MINNEAPOLIS, Nov. 12.—Wheat receipts, 671 cars, compared with 565 a year ago.

Corn—No. 3 yellow, $2.20@2.25.

Oats—No. 3 white, 61¾@62¾c.

Flax—$3.39@3.47.

Flour in carload lots, fancy patents, 20 cents lower, quoted at $10.30 wood; first clears, 10 cents lower, quoted at $9.65 jute. Other grades unchanged. Shipments, 89,897 barrels.

Rye—$1.76@1.77.

Barley—98c@$1.27.

Bran—$31.50@32.

Live Stock Quotations.

At Omaha.

OMAHA, Nov. 12.—Hogs—Receipts, 4300; market 10c to 20c lower. Heavy, $16.70@17; mixed, $16.85@17; light, $16.90@17.25; pigs, $19@19; bulk of sales, $16.80@17.

Cattle—Receipts, 20,000; steady to lower. Native steers, $9@16; cows and heifers, $6.75@9.75; western steers, $8.50@13.50; Texas steers, $7.50@10.75; cows and heifers, $6.50@9.25; canners, $5.25@6.25; stockers and feeders, $6.50@8.75; calves, $9.50@12.50; stags, etc., $5.75@8.

Sheep—Receipts, 7300; strong to 25c higher. Yearlings, $10.75@13; wethers, $11@12.50; ewes, $9.25@10.75; lambs, $16@16.75.

At Chicago.

CHICAGO, Nov. 12.—Hogs—Receipts, 40,000; strong. Bulk, $17.10@17.50; light, $16.65@17.50; mixed, $16.70@17.60; heavy, $16.70@17.60; rough, $16.70@16.90; pigs, $13.25@16.75.

Cattle—Receipts, 23,000; firm. Native steers, $6.75@16.80; western steers, $5.85@13.40; stockers and feeders, $5.65@11.50; cows and heifers, $4.50@11.75; calves, $6.75@13.

Sheep—Receipts, 20,000; firm. Wethers, $8.70@12.85; ewes, $7.50@11.25; lambs, $12@16.65.

At Portland.

PORTLAND, Ore., Nov. 12.—Cattle—Steady; receipts, 931. Best beef steers, $9@9.50; good beef steers, $7@9; best beef cows, $6@7; ordinary to good cows, $4@5; best heifers, $6.50@7.50; bulls, $4.50@6.75; calves, $7@9.50; stocker and feeder, steers, $4@7.25.

Hogs—Higher; receipts, 1327; Prime light, $16.20@16.40; prime heavy, $16@16.20; pigs, $14@14.50; bulk, $16@16.25.

Sheep—Steady; receipts, 925. Western lambs, $14@14.50; valley lambs, $13.50@14; yearlings, $12.50@13; wethers, $12@13; ewes, $8.50@10.50.

Spokane Stock Yards, Monday.

Hogs—Receipts none; market strong; prospects higher. Prime light, $15.80@15.90; prime heavy, $15.70@15.90; pigs, $13.75@14.75; stockers and feeders, $12@13.25.

Cattle—Receipts, 392; market steady. Best beef steers, $8.50@9; good steers, $7@7.75; best beef cows, $6.75@7.25; good cows, $5.50@6.50; common cows, $3@5; best heifers, $6.75@7.50; bulls, $5@6.50; calves, $6.50@8; stocker and feeder steers, $5@7.25.

Sheep—Receipts, none; market steady. Prime lambs, $13.25@14; good lambs, $12@12.50; prime yearlings, $11.50@12.50; prime wethers, $11.25@12.25; best mutton ewes, $8.50@10.

Butter and Eggs.

PORTLAND, Nov. 10.—Butter—Prints, extras, 45@49c; cubes, extras, 43c; prime firsts, 42c; dairy, 31c.

Butter fat, Portland delivery, No. 1 sour cream, 51c.

SAN FRANCISCO, Nov. 10.—Eggs—Fresh extras, 58½c; fresh firsts, 58c; fresh extra pullets, 52c.

Seattle Market.

SEATTLE, Nov. 10.—The spud market is firm in all quarters, Yakima growers quoting $33@34 and Puget sound producers holding at $30@31. Jobbers complain constantly of the quality. Little regard is held for former grading rules, and quotations are based on mixed grades. There has been some improvement since the food committee announced that it would hold inferior spuds mixed with good stock to be waste. Only a small percentage of Yakima Gems are in demand here, buyers being satisfied with the Puget sound offerings.

The apple trade of the week has been brisk, but it has run almost exclusively to jumble packs. Practically every house on the street is dabbling more or less in lug boxes of apples, with prices all the way from 75c per box to 2 and 3c per pound. Delicious, Winter Bananas, Spitzenburgs and Jonathans have been selling in this way.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 54@56c per dozen; pullets, 45c dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; 4 lbs. and under, 17@19c; old roosters, 14c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15s per lb.; springs, live, 21c per lb.; hens and young tom turkeys, 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 15@16c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@16½c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 32@33c per lb.; salt kip, 13c per lb.; green hides, 15c per lb.; green calf, 28c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Portland Market.

PORTLAND, Ore., Nov. 12.—Although the butter market is very weak and much shading of print prices is indulged in, a few of the city creameries have seen fit to raise the buying price of butterfat a cent to 53 cents delivered here. This works a great hardship on the country creameries which must meet the competition for butterfat and at the same time can not get over 43 cents for their surplus butter. They believe the market is being manipulated against them by the big city creameries.

Cheese is slow in spite of the recent 3-cent reduction in price and another cut will be necessary to work off the big stock accumulated here.

The arrival of several cars of eastern eggs has weakened the local market, in spite of the extreme scarcity of fresh Oregon ranch. The latter are hard to move at 59 cents, case count, as fresh eastern are being offered generally at 45 cents. Storage eggs drag at 36@40 cents.

The demand for poultry is good and the large arrivals clean up readily at firm prices. Dressed veal and pork are selling at a lower level.

The potato market continues easy with good offerings by nearby farmers. There is a moderate shipping demand, but cars continue scarce.

The hop market rules slow with buyers quoting Oregons and Washingtons around 23 to 25 1-2 cents, but there is practically no eastern demand.

Wool is also quiet, with no recent selling out of local stocks reported. The hide market is strong at unchanged quotations.

There has been some trading in 1917 Oregon beans at 11 to 12 1-2 cents to the grower. Jobbers' purchases are light, as they are not permitted by law to carry beyond a 60-days' supply, so speculating this season is out of the question, unless it be by the farmers.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $49 per ton.

Millstuffs—Bran, $30 per ton; shorts, $33.

Barley—No. 1 feed, $50.50; brewing, $52.50; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 50c per dozen; candled, 55@58c.

Poultry—Hens, 17 1-2@19c; ducks, 18@20c; turkeys, live, 20@25c; geese, 10@11c.

Butter—City creamery, prints, 45@49c per pound; cubes, extras, 43c.

Cheese—Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 14 1-2@15c; pork, 19@19 1-2c.

Hops—1916, 16c; 1917 crop, 25@25 1-2c.

Potatoes—Oregons, buying price, $1.25@1.50 per hundred.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans—California small white, 14½c; large white, 14¼c per pound.

Spokane Market.

The wholesale prices quoted in the list below are not the prices paid to producers or shippers; they are those charged by the Spokane commission houses to the retail trade for standard produce. The prices quoted for live stock, however, are the prices given to the producer.

Potatoes—New local potatoes, $1.75 cwt.; sweet potatoes, $3.75 cwt.

Apples—Large eating apples, $1.25@1.50; cooking apples, $1 box; Delicious, $1.75@$2.50; Red Macintosh, $1.50@1.75 box; Winter Bananas, $2 box; Jonathans, $1.25@1.35 box; Wageners, $1.25@1.35 box; Rome Beauties, $1.25@1.35 box; Spitzenbergs, $2.50 box; King Davids, $1.25@1.35 box.

Butter—Blanchard cartons, 49c lb; Medo-Maid, 49c lb; Cascade, 49c lb; Gold Leaf, 49c lb; Better Butter, 49c lb; Attalia, 49c lb; Diadem, 49c lb; Hazelwood, 49c lb; Solid Pack, 48@49c lb; Jersey Belle, 47c lb; Peerless, 45@46c lb; Snowcap, 38c lb; cooking butter, 38c lb.

Cheese—Wisconsin full cream, twins, 27c; triplets, 25c; Hazelwood full cream, triplets, 27c lb; Hazelwood Young America, 28c lb; Wisconsin limburger, 32@33c lb; brick cheese, 34c lb; domestic Swiss, 38c lb; Young Americas, 26c lb.

Eggs—White filler, guaranteed, $13.25 case; selected storage, $12.50.

Live Poultry—Hens, 13c lb; broilers, 20c lb; old roosters, 8c; ducks, 12½c lb; geese, 10c; turkeys, 20@22c.

Dressed Poultry—Hens, 18c lb; broilers, 28c lb; old roosters, 12½c; ducks, 18@20c; geese, 16c; turkeys, 25@30c.

Hide Quotations.

Green Cows and Steers—25 lbs and up, 13c; salted cured, 16c; green bulls and stags, 11c; salted cured, 13c; kip, 15 lbs to 25 lbs, 22c; calf skins up to 15 lbs, 16c; dry flint hides, 30c; dry salted, 26c; dry calf skins, under 7 lbs, 30c; dry sheep pelts, 35@40c; dry shearlings, 10c@$1 each; green horse hides, $1@2 each; dry horse hides, $2.50@4 each.

The Wool Market.

BOSTON, Nov. 9.—The Commercial Bulletin tomorrow will say:

"Another week of moderate but steady trading is reported through the wool trade here, with prices uniformly firm and on medium and low grade wools showing a tendency higher. The situation at the mills shows little change, machinery being well occupied, with additional government orders being placed from time to time."

Scoured basis:

California: Northern, $1.70@1.75, middle county, $1.50@1.55; southern, $1.35@1.40.

Oregon: Eastern No. 1 staples, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65.

Territory: Fine staple, $1.80@1.82; half-blood combing, $1.70@1.75; three-eighths blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60; pulled extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

Portland Wheat.

PORTLAND, Ore., Nov. 12.—Wheat receipts have dwindled to a few cars daily. As stocks on hand are sufficient to last the mills for a considerable time, it is not expected the embargo on shipments to tide water will be raised soon. The trade, as well as farmers, are anxiously awaiting word from Chicago as to the plan by which growers may realize on their crops without sending the grain to Coast terminals.

There is a moderate trade in oats and barley and some movement in eastern corn to arrive, all at reasonably firm prices. Hay continues steady and millfeed is firm with the demand equal to the enlarged production. Present mill feed prices are likely to continue at least until the first of the month.

Seattle Wheat.

SEATTLE, Nov. 10.—Grain buyers here expect that the visit of M. H. Houser, representative of the Federal Grain Corporation to Washington will have an important bearing on holding wheat in the country in view of the embargo against shipment to tidewater terminals. The plan has been advocated all along by millers as the only solution of proper distribution, but some of the local grain dealers fought the proposition. Attempts were made to get the local car service commission of the committee of national defense to furnish cars at country stations for wheat until the congestion could be cleaned up, but no action was taken.

Education Is Keynote

(Continued from page three.)

tion to save needless loss from preventable diseases.

Directors Are Elected.

The directors elected are: J. D. Farrell, president of the O.-W. R. & N. railway, and Harry L. Somers, Bozeman, Montana (superseding John L. Smith and F. R. Steele); James H. McCrosky, Fishtrap, Wash.; John McGregor, Hooper, Wash., and W. J. Jordan, Lewiston, Idaho, were reelected.

The Exhibitors.

Percheron exhibitors were: A. R. Hunter, 11; S. Metz & Sons, 6; A. B. Riddell, 2; Mayer Brothers, 3; Wren & Greenough, 8; Brown & Mood, 6; Loyal Sales, 2; Julius Giese, 4; Taminy Horse company, 1; Follett & Schooler, 1; John Swank, 1.

Shires—Mayer Brothers, 3; G. A. Draper, 3; J. O. Cooper, 7; A. B. Riddell, 1; Metz & Son, 3; Brown & Mood, 1.

Clydesdales—I. H. Lowery, 7; Metz & Son, 1; A. B. Riddell, 1.

Belgians—A. B. Riddell, 6; Metz & Son, 1; John Swank, 1.

Hackney—Brown & Mood, 1.

Clyde Leachman showed a very classy black four-horse team and George Chambers grades.

Of cattle the Shorthorns were out in decidedly the largest numbers, yet they could scarcely be said to show any greater quality than the magnificent lot of Herefords shown. Here again Champion sometimes met champion, and some one had to go down to defeat, always with the best good nature. And the show was so strong that in either breed it was no dishonor to take second place. The Aberdeen Angus, while represented by only one breeder, had a herd that measured up in quality and worth to that of any on the ground.

Shorthorn exhibitors were J. H. McCrosky, with 19; Day & Rothrock, 20; A. D. Dunn, 19; Childs & Anceny, 12; W. J. Townly, 9; Joe Turner, 15; Harry L. Summers, 12; G. W. DeLay, 6; J. B. Cornett, 4; Henry Keyt, 3; J. R. Wyatt & Son, 2; William H. Leonard, 15. Mr. Leonard's were all for sale and not to show; quite a number of those shown are in the sale, and probably 20 others of those tested are for sale only.

Hereford exhibitors were A. B. Cook, 26; A. O. Huntley, 30, half of which were for sale only; George Chandler, 14; Henry Thiessen, 21; J. D. Miles, 13; Platt Brothers, 11.

The Idaho university showed bulls, heifers and fat steers, Shorthorns, Herefords and Angus being represented.

Poland Chinas Lead.

Poland Chinas led in numbers as well as quality in the hog division, though Duroc Jerseys made a show of very high quality and considerable numbers.

One breeder made a splendid show of Chester Whites. There were just two Berkshires—both good ones—on the ground and five nice Hampshires.

Poland China exhibitors were J. M. Royston estate, 16; W. H. Howard, 14; Howard & Royston, 4; Wilson Brothers, 7; P. L. Sain, 13; Hugh Walter, 21; J. W. Miller, 8 and a litter.

Duroc Jerseys—Robert Nelson, 35; G. A. Draper, 10; H. L. Summers, 1.

Chester Whites—Ed Schoel, 21; Mrs. J. C. Jansen, 1.

Berkshires—Berkoda Farm, 2.

Hampshires—G. R. Sullivan, 5.

Nearly all the middle wools and one or two each of both long and fine wool breeds of sheep were on exhibition, in large or small numbers. From the blocky little Southdowns to the rangy Rambouillets they were in first-class or at least, fair condition, and made up a sheep show of excellent quality.

Shropshire exhibitors were W. H. Zumwalt, 7; Brown Brothers, 8; Francis Kizer, 4; E. S. Sweet, 12.

Hampshires—J. G. Hubbard & Sons, 13; Mrs. R. A. Jackson, 2; Brown Brothers, 12.

Rambouillets—Mrs. R. A. Jackson, 12; Stanley Coffin, 2.

Southdowns—J. G. S. Hubbard & Sons, 14.

Oxfords—Fisk Farm, 10; C. P. Kizer, 11.

Lincolns—J. G. S. Hubbard & Sons, 5.

Fat sheep—Madden children, one pen lambs, one pen yearlings; Robert Anderson, 1 pen lambs; Vernon Chapman, pen lambs; University of Idaho, three crossbred wethers and six purebred Southdowns; Brown Brothers, two Shropshire wethers, and J. G. S. Hubbard & Sons, two.

Besides all the above there were four cars of hogs, two of sheep and four of five of cattle. It was a great show in every department. The attendance was made up to a very large degree of people who could and did appreciate what they saw. And the success of the 1917 show assures still greater things for the shows to come.

THE BARRIER

(Continued from page twenty-seven.)

and Runnion bend over the table looking at a little can of gold dust that Lee had taken from under his bunk his eyes grew red and bloodshot beneath his hat brim. Which one of the two would it be, he wondered. From the corner of his eye he saw Gale rise from Lee's bed, where he had stretched himself to smoke, and take his six-shooter from his belt, then remove the knotted bandanna from his neck and begin to clean the gun, his head bowed over it earnestly, his face in the shadow: He had ever been a careful and methodical man, reflected Poleon, and evidently would not go to sleep with his firearm in bad condition.

"Nobody imagined that Gaylord would cause trouble," Stark was saying, "for he didn't seem to be a jealous sort, just stupid and kind of heavy witted; but one night he took advantage of Bennett's absence and sneaked up to the house." The story teller paused, and Necia, who was under the spell of his recital, urged him on:

"Yes, yes. What happened then? Go on." But Stark stared gloomily at his hands and held his silence for a full minute, the tale appearing to have awakened more than a fleeting interest in him.

"It was one of the worst killings that ever happened in those parts," he continued. "Bennett came back to find his wife murdered and the kid gone."

"Oh!" said the girl, in a shocked voice.

"Yes, there was the deuce of a time. The town rose up in a body, and we—you see, I happened to be there—we followed the man for weeks. We trailed him and the kid clear over the Nevada desert, where we lost them."

"Poor man!"

"Poor man?" the story teller raised his eyes and laughed sinisterly. "I don't see where that comes in."

"And you never caught him?"

"No. Not yet."

"He died of thirst in the desert, maybe, he and the little one."

"That's what we thought at the time, but I don't believe it now."

"How so?"

"Well, I've crossed his trail since then. No. Gaylord is alive today, and so is the girl. Some time we'll meet ——" His voice gave out and he stared again at the floor.

"Couldn't the little girl be traced?" said Necia. "What was her name?"

Stark made to speak, but the word was never uttered, for there came a deafening roar that caused Lee's candle to leap and flicker and the air inside the cabin to strike the occupants like a blow. Instantly there was confusion and each man sprang to his feet crying out afrightedly, for the noise had come with utter unexpectedness.

"My God, I've killed him!" cried Gale, and with one jump he cleared half the room and was beside Stark, with his revolver on the floor, where he had been sitting.

"What is it?" exclaimed Burrell; but there was no need to ask, for powder-smoke was beginning to fill the room and the trader's face gave answer. It was whiter than that of his daughter, who had crouched fearfully against the wall, and he shook like a man with ague. But Stark stood unhurt, and more composed than any of them; following the first bound from his chair, he had relapsed into his customary quiet. There had blazed up one momentary flash of suspicion and anger, but it died straightway, for no man could have beheld the trader and not felt contrition. His condition was pitiable, and the sight of a strong man overcome is not pleasant; when it was seen that no harm had been done the others strove to make light of the accident.

"Get together, al' of you! It's nothing to be excited over," said Stark.

"How did it happen?" Runnion finally asked Gale, who had sunk limply upon the edge of the bunk; but when the old man undertook to answer his words were unintelligible, and he shook his head helplessly.

Stark laid his finger on the hole that the bullet had bored in the log close to where he was sitting, and laughed.

"Never mind, old man, it missed me by six inches. You know there never was a bullet that could kill me. I'm six-shooter proof."

"Wha'd I tell you?" triumphantly ejaculated Lee, turning his one eye upon the lieutenant. "You laughed at me, didn't you?"

"I'm begining to believe it myself," declared the soldier.

"It's a cinch," said Stark, positively. Doret, of all in the cabin, had said nothing. Seated apart from the others, he had seen the affair from a distance, as it were, and now stepped to the bed to lay his hand on Gale's shoulder.

"Brace up, John! Sacre bleu! Your face look lak flour. Come outside an' get li'l' air."

"It will do you good, father," urged Necia.

The trader silently rose, picked up his hat, and shambled out into the night behind the Frenchman.

"The old man takes it hard," said Lee, shaking his head, and Burrell remarked:

"I've seen things like that in army quarters, and the fellow who accidentally discharges his gun invariably gets a greater shock than his companion."

"I call it damned careless, begging your pardon, Miss Necia," said Runnion.

Poleon led his friend down the trail for half a mile without speaking, till Gale had regained a grip of himself and muttered, finally:

"I never did such a thing before, Poleon, never in all my life."

The young man turned squarely and faced him, the starlight illumining their faces dimly.

"Why?" said Doret.

"Why?" echoed Gale, with a start. "Well, because I'm careful, I suppose."

"Why?" insisted the Frenchman.

"I—I—I— What do you mean?"

"Don' lie wit' me, John. I'm happen to be watch you underneat' my hat w'en you turn roun' for see if anybody lookin'."

"You saw?"

"Yes."

"I thought you were asleep," said Gale.

FARM LANDS—FOR SALE 651 Continued.

THINK BEYOND YOUR JOB.

Buy land in the most rapidly growing community in the Puget Sound country.

It's the opportunity of a lifetime to get just the kind of a place for a home that you have been looking for. A few facts should convince you. The soil is mostly shot clay. Twenty to thirty trains daily makes the transportation the best, especially when there is a depot right on the land—and it's on the main line of the Northern Pacific and O.-W. R. & N. railroads. A very fine new school. Fifty settlers pronounce it the best land in Western Washington. The Thurston County Farm association has the contract to supply the American Lake army cantonment with all the milk, eggs, vegetables, etc. (and there are 40,000 soldiers to be fed.) The railroad has ordered the depot enlarged and side tracks lengthened. The government has authorized a postoffice. There are two sawmills, and every settler is busy.

While wages are high take advantage of the opportunity to get yourself a home. Come to our office and make arrangements to go see the land. Some tracts have enough cordwood to almost pay for them. Many expert poultrymen have already purchased. You can start on the road to your future independence by obtaining one of our Thurston county ten-acre tracts on easy terms of $20 cash and $10 per month. $60 to $75 per acre. Send for free illustrated folder.

A. H. REID & CO.
314-317 NEW YORK BLK.,
SEATTLE, WASH.

YOUR CHANCE IS IN CANADA—RICH lands and business opportunities offer you independence. Farm lands, $11 to $30 acre; irrigated lands, $35 to $50; 20 years to pay. $2000 loan in improvements, or ready-made farms. Loans of live stock; taxes average under 20c an acre; no taxes on improvements, personal property or live stock. Good markets, churches, schools, roads, telephones; excellent climate; crops and live stock prove it. Special homeseekers' fare certificates. Write for free booklets. Alan Cameron, Gen'l Supt. Land Branch, Canadian Pacific Ry., 93 Ninth ave., Calgary, Alberta.

BIG CUT IN PRICE OF FARM LANDS in the best agricultural part of Snohomish county. $25 to $35 per acre; 10 yearly payments; railways, mills, factories, plenty of labor. The best proposition on the market for the man who wants a farm. Send for illustrated literature. Brownell Land Co., 904 Third ave., Seattle, Wash.

DO YOU WANT A GOOD FARM?

We have it—something to suit you—large or small, improved or unimproved—with stock and machinery if you want it—in Wash., Idaho or Mont. Call or write and tell us what you want. HEGE & WATKINS, 717 Paulsen bldg., Spokane, Wash.

Winchester Model 95

The big game gun of the world—

The Winchester Model 95 is the ideal weapon for the seasoned, serious hunter. All the big game animals of the world, from the thick-skinned "Rhino" of the African Jungles to the snarling grizzly of the Canadian Rockies have gone down before it.

The Model 95 is a marvel of strength and simplicity,—easy to handle and to climb with, absolutely sure to work, even in a swearing hurry,—and absolutely fool-proof.

It will stand up under great abuse and even some neglect. Drop it on the ribs of the Rockies or lay it in the alkali dust of Arizona, this good reliable rifle will still shoot strong and true because it is a Winchester and built to do its work under all conditions and in all climates.

The barrel *is* the gun

Men who know guns realize that the accuracy and durability of a rifle lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel *is* the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

The Winchester barrel

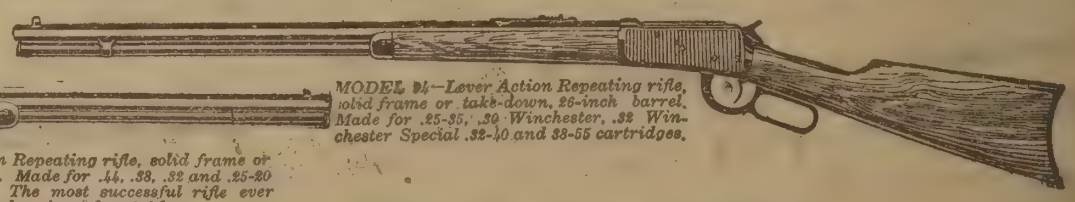
The barrel of the Winchester Model 95 has been bored to micrometer measurements for the cartridge it is meant to shoot. In rifling the barrel the exact twist that is necessary to produce the best results with a given cartridge has been mathematically calculated and is verified by exhaustive practical tests before leaving the factory.

A bullet fired from a Winchester barrel spins point on with unerring accuracy to the limit of its range. The nickel steel construction preserves the original accuracy forever.

The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

What (W) means

This mark on the barrel means *Viewed and Proved Winchester.* This stamp stands for Winchester's guarantee of quality, with 50 years of the best gun-making reputation behind it.

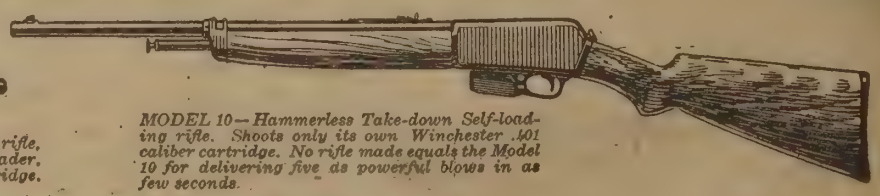


Every rifle that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process.*

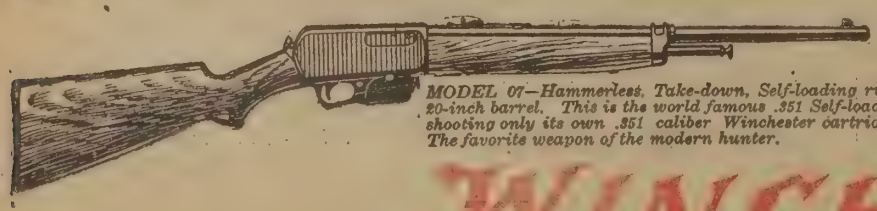
It is this thoughtful care in manufacturing that has produced in the Model 95 a rifle of unsurpassed game-getting qualities and that has made it the favorite with big-game hunters the world over.

Write for details of Winchester rifles, shotguns and ammunition

The Winchester catalog is an encyclopedia on rifles, shotguns and ammunition. Every hunter should have one. It gives detailed specifications of the Model 95 and describes at length the principles on which every one of the world-famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.



WINCHESTER REPEATING ARMS CO.
Dept. WT-4 New Haven, Conn.



MODEL 94—Lever Action Repeating rifle, solid frame or take-down, 26-inch barrel. Made for .25-35, .30 Winchester, .32 Winchester Special .32-40 and 38-55 cartridges.

MODEL 92—Lever Action Repeating rifle, solid frame or take-down, 24-inch barrel. Made for .44, .38, .32 and .25-20 Winchester cartridges. The most successful rifle ever made handling these popular sizes of cartridges.

MODEL 10—Hammerless Take-down Self-loading rifle. Shoots only its own Winchester .401 caliber cartridge. No rifle made equals the Model 10 for delivering five as powerful blows in as few seconds.

MODEL 07—Hammerless, Take-down, Self-loading rifle, 20-inch barrel. This is the world famous .351 Self-loader, shooting only its own .351 caliber Winchester cartridge. The favorite weapon of the modern hunter.

VOL. XL, NO. 47. NOVEMBER 22, 1917. ** WEEKLY.

"Render Thanks to God, the Ruler of Nations"

By the President of the United States of America. A Proclamation.

IT has long been the honored custom of our people to turn in the fruitful autumn of the year in praise and thanksgiving to Almighty God for his many blessings and mercies to us as a nation. That custom we can follow now, even in the midst of the tragedy of a world shaken by war and immeasurable disaster, in the midst of sorrow and great peril, because even amidst the darkness that has gathered about us we can see the great blessings God has bestowed upon us, blessings that are better than mere peace of mind and prosperity of enterprises.

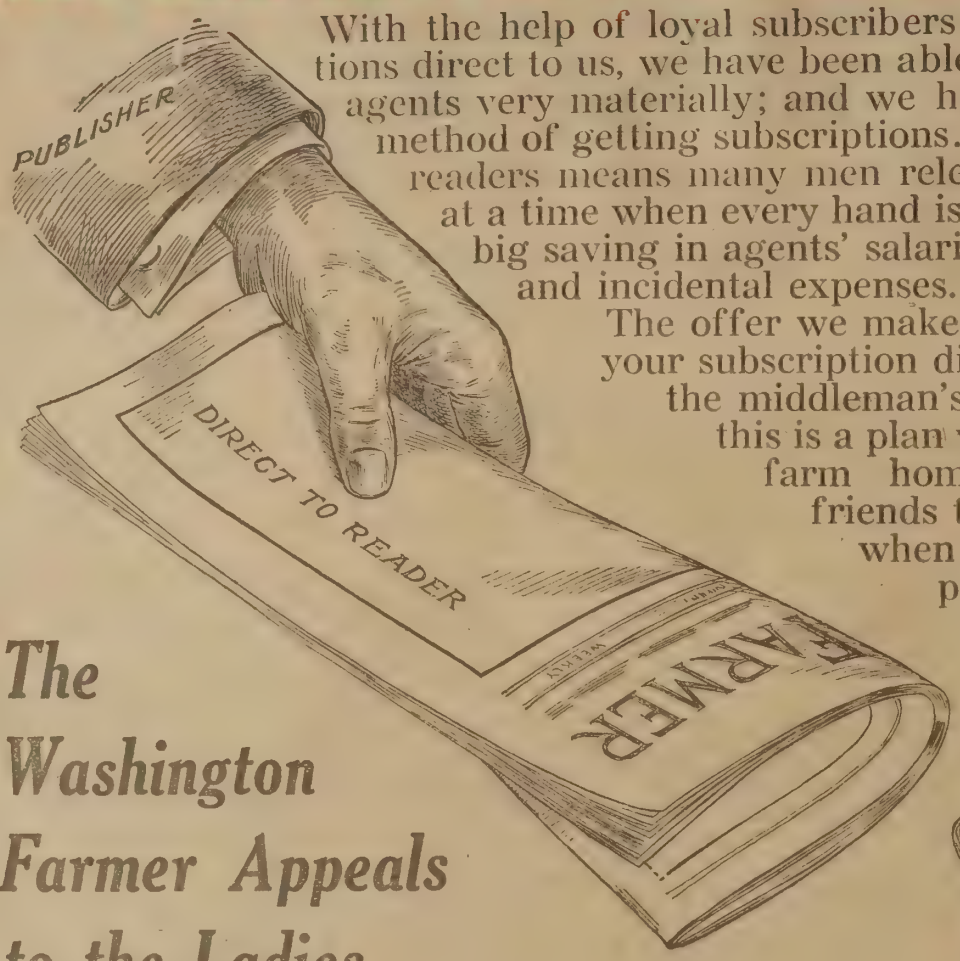
We have been given the opportunity to serve mankind as we once served ourselves in the great day of our Declaration of Independence, by taking up arms against a tyranny that threatened to master and debase men everywhere and joining with other free peoples in demanding for all the nations of the world what we then demanded and obtained for ourselves. In this day of the revelation of our duty, not only to defend our own rights as a nation, but to also defend the rights of free men throughout the world, there has been vouchsafed us in full and inspiring measure the resolution and spirit of united action.

We have been brought to one mind and purpose. A new vigor of common counsel and common action has been revealed in us. We should especially thank God

To the Boys Over There:

We have joined in the service of food conservation, and pledge ourselves to save meat, wheat, fats and sugar that you may ever be strong for the tasks set before you.

that in such circumstances, in the midst of the greatest enterprise the spirits of men have ever entered upon, we have, if we but observe a reasonable and practicable economy, abundance with which to supply the needs of those associated with us, as well as our own. A new light shines about us. The great duties of a day awaken a new and greater national spirit in us. We shall never again be divided or wonder what stuff we are made of.

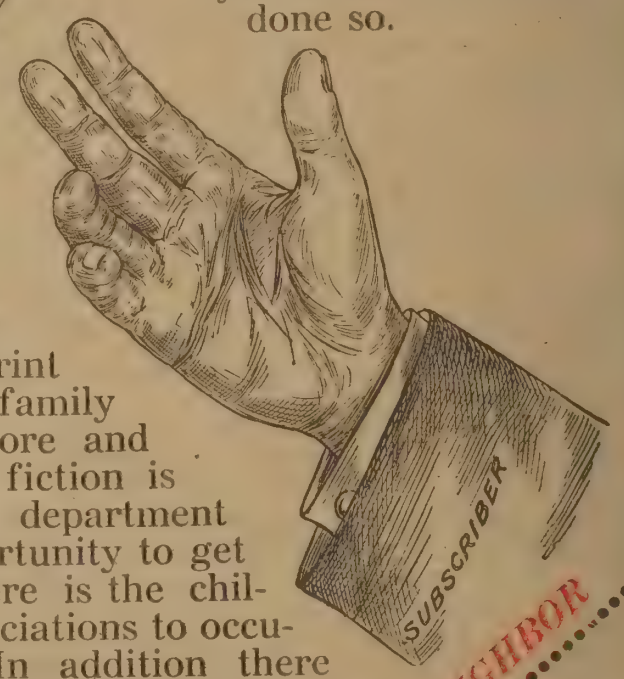


And while we render thanks for these things, let us pray Almighty God that in all humbleness of spirit we may look always to him for guidance; that we may be kept constant in the spirit and purpose of service; that by his grace our minds may be directed and our hands strengthened; and that in his good time liberty and security and peace and the comradeship of a common justice may be vouchsafed all the nations of the earth.

Wherefore, I, Woodrow Wilson, president of the United States of America, do hereby designate Thursday, the 29th day of November next, as a day of Thanksgiving and prayer and invite the people throughout the land to cease upon that day from their ordinary occupations and in their several homes and places of worship to render thanks to God, the great ruler of nations.

WOODROW WILSON.

By the president:
Robert Lansing, Secretary of State.



DIRECT TO YOU

With the help of loyal subscribers who have sent their subscriptions direct to us, we have been able to cut down our force of agents very materially; and we hope to wholly eliminate this method of getting subscriptions. This cooperation from our readers means many men released for other productive labor at a time when every hand is needed. It also means a great big saving in agents' salaries, railway fares, hotel bills and incidental expenses.

The offer we make our readers is this: Send in your subscription direct to the paper and pocket the middleman's profit yourself. We feel that this is a plan which is sure to appeal to every farm home in the state, enabling our friends to save on their reading matter when most things have soared in price. Prompt action is necessary from every one. Send in your subscription and at least one other today if you have not already done so.

The Washington Farmer Appeals to the Ladies

The Washington Farmer aims to be more than a state farm paper. It puts forth every effort to print the things which will please every member of the family circle; and we find that our paper is growing more and more popular with the ladies. Clean, entertaining fiction is one reason for this. Then there is the pattern department with its pictures of the latest styles and the opportunity to get the working patterns for a trifling sum. And there is the children's corner with its wholesome reading and associations to occupy the active minds of the coming generation. In addition there are tested recipes, household hints, crochet and tatting designs and health advice, to say nothing of the interesting general articles and features.

We appreciate the cooperation which our lady friends are giving us not only in sending in subscriptions for their own families but also in telling their neighbors about the low rates.

THE COST OF YOUR READING MATTER HAS BEEN CUT

Following Rates Now in Effect for Subscriptions to The Washington Farmer

City and Country Unite on Problems

Yakima Valley People Stage Valuable "Let's-Talk-It-Over" Meeting

By RAY W. FELTON

Keen interest in growing and marketing problems and a sincere desire to assist in solving them was manifested by North Yakima business men at a "let's-talk-it-over" meeting, held Monday evening, November 5, at the Yakima Commercial club rooms. The agricultural development of the Yakima valley, the part the valley is to play in helping win the war, and an appeal for more real cooperation and a better understanding between country and town people, were features of the discussions in which President E. O. Holland of the State College of Washington, County Agriculturist J. N. Price, Asher Hobson, director of farm markets, and Thomas B. Hill, editor of the Yakima Morning Herald and chairman of the commercial club's agricultural committee, participated. Governor Lister was to have been present, but was detained at the last moment and wired his regrets.

Farmers, fruit growers, stockmen and scores of others interested in agriculture, representative of all sections of the Yakima valley, were present, and the gathering was pronounced one of the most beneficial of its kind ever held in North Yakima. Yakima business men showed a real understanding of the rural situation as it exists in the valley, and a thorough appreciation of what community cooperation means in the development and prosperity of all interests.

Chairman Hill aroused his hearers when he gave $25,000,000 as a conservative estimate of the crop value of Yakima county this year, and County Agriculturist Price held the attention of the audience when he enumerated the crop output in detail. An interesting statement was that the Yakima valley, until recently considered impossible for the profitable production of corn, had this year grown 840,000 bushels from 14,000 acres. Other crop statistics for this year were given as follows by Mr. Price:

Crop.	Acreage.	Tonnage.
Fruit	46,000	10,000 cars
Alfalfa	100,000	500,000 tons
Wheat	15,000	450,000 bu.
Corn	14,000	840,000 bu.
Barley	6,000	360,000 bu.
Oats	8,000	480,000 bu.
Potatoes	12,000	84,000 tons
Sugar beets	6,400	96,000 tons
Beans	2,400	600 tons

Dry land about 15,000 acres of wheat at 10 bus., 150,000 bu.

Dairy products.	Amount.	Value.
Milk, gals.	133,000	$ 39,000
Cream, gals.	14,000	19,000
Butter, lbs.	1,400,000	490,000
Cheese, lbs.	500,000	125,000
Total value		$673,000

Live stock—Sheep, 117,000; milch cows, 12,000; other cattle, 27,000; horses, 15,000.

Chairman Hill, speaking of the development of the business of farming in the Yakima country, said he had heard persons express a desire that Yakima might share in the war prosperity experienced by the manufacturing districts of the east.

"Here we have a perpetual manufacturing district," said Mr. Hill. "There is no place that can be compared with it. Every farm is a factory. This year we have produced over $9,000,000 in excess of what we derived from our crops last year. Our farms constitute an aggregate factory employing some 60,000 persons. When the war is over even the manufacturing districts will experience their setbacks. Here we are on a sound, permanent basis. We have learned to diversify. We are in a position now where we will prosper no matter what comes, because if one crop fails or the market is at low ebb we still have many others on which we may fall back."

In introducing Mr. Hobson, Mr. Hill declared the proper marketing of our crops is what we must accomplish. It is, he stated, as important as producing them.

Must Have Standards.

Mr. Hobson declared we will not solve the problem of marketing our perishable and semi-perishable crops until fixed standards have been established and grades maintained.

"The prices we receive for our produce," said Mr. Hobson, "often are unsatisfactory because of the uncertain value of the commodity offered. The buyer doesn't know what he is going to get until he gets it, and the result is the breach between producer and buyer widens as the business increases."

Mr. Hobson cited instances of where consistent quality and a means of guaranteeing it had paid much larger returns in the long run than irregular grades, although the latter percentages might at times be higher than the known grade which always maintained the same standard and established a reputation as a result thereof.

"I am sorry to say that it has been the experience of some marketing associations that standard products offered by them have for a time failed to bring any more than those less desirable offerings," continued Mr. Hobson. "However, the fact remains that once we establish ourselves along those lines our markets and our prices are assured. It is just as hard to lose a good reputation as it is to get it. I venture to say that if anything should happen which would cause Yakima and Wenatchee to stop growing apples there would be Yakima and Wenatchee apples on the New York market for the next 15 years. When the market for all lines of farm produce is brisk most anything sells, but when it isn't you can rest assured that the standard article of known quality will move first."

What College Is Doing.

Dr. Holland spoke briefly of the work the state college is accomplishing, and dwelt at some length on America's task in the world conflict. Dr. Holland emphasized the necessity of providing trained leadership in all vocations, particularly agriculture. He cited Mr. Hobson as an example of trained leadership in the business of marketing crops.

"Two things we are trying to do at Pullman," said Dr. Holland. "One is, we are trying to teach boys and girls to stand on their own feet. Second, we are trying to teach them to live. Proper living is just as important as the business of making a living. We are doing a cooperative work that leads to a life of efficiency, harmony and happiness."

Dr. Holland explained the work of the various experiment stations, and announced that arrangements were nearing completion for another station near Prosser, appropriation for which was made by the last legislature.

Speaking of the war Dr. Holland said: "One thing I want to remind you of. There is no strike on the battle line. There they have to work not eight hours a day, but 24. This war is going to be won by democracy, but we've got to stay on the job here at home for the sake of the thousands of our boys who are on the job for us at the front."

Porker Goes "Over the Top"

Sales Indicate That Good Old Days Are Back

By B. E. SMEAD,
U. S. Agent in Animal Husbandry.

That swine production has gone "over the top" was made very evident by sales of purebred swine at the recent Northwest Live Stock show at Lewiston. For three years past there has been absolutely no demand for this class of stock and all breeders were practically sold out in the early part of the show.

The sale of older stock can mean only one thing, that swine raisers appreciate the wonderful opportunity that is now before them to throw out hogs at a profit, and have bought aged stock as the quickest means of increasing their herds.

To the older breeders it seems like the good old days of the past have returned, when yearling sows readily sell for $125 or better, and 6-months-old boars and gilts bring $60 to $80 a head. The price of $15.50 recently announced by the food administration, no doubt has been responsible for the optimism now displayed by hog men.

Government reports show that swine production in the past two years has decreased throughout every state in the nation, while local consumption and pork demand has increased enormously. Our army and the armies of our allies must have pork and the government intends to see that the swine grower will be assured of such a profit as to induce him to go into swine raising on an enlarged scale.

There is another factor that will make towards large profits for those people wise enough to keep all possible sows over the winter and raise as large a number of pigs next spring as their means will allow. The government control of wheat means a fixed price for mill feeds and because of the fact that the mills are grinding to capacity this year, there should be a good sized surplus of these feeds as soon as country dealers have replenished their stock. The writer has been given to understand that bran will sell for about $30 a ton, red shorts $33, white shorts or middlings, $45 per ton.

The writer has determined during five years of feeding purebred swine for breeding purposes, that red shorts for growing and breeding stock, especially when a small percentage (5 per cent) of tankage is added, makes a feed that keeps hogs thrifty and produces pork at less than 15 cents a pound on a basis of $33 shorts.

Those men who have the ability to size up food conditions are getting hold of every brood sow that they possibly can find. If they have no wastes on the farm they can well afford to carry these sows and their spring litters up to the time that stubble is available, on mill feed and then finish them on the stubble fields next fall, making in all a total profit far greater than can our middle west farmers, who must feed a grain ration from birth to maturity.

The tide has turned in the swine industry and the wise man will lost no time in preparing to share the profits of those already in the business.

Wheat Growers Win

Wheat Tangle Is Being Cleared

The injustice unintentionally done the wheat farmers of the northwest by the national grain buying corporation is about to be righted, according to announcement by M. H. Houser, northwest representative of the government's corporation.

Recently, The Farmer pointed out the injustice, showing that the producer was forced to hold his wheat indefinitely at his own expense, accept an arbitrary price fixed by an independent buyer or sell under the government plan and pay interest on a partial payment until such time as the wheat could reach a terminal and be graded and bought by the government.

Mr. Houser attended a conference at Chicago last week, and returned with the announcement that the government had made arrangements to absorb the holding costs, and through this arrangement to advance money on the wheat without interest. Either the grain will be graded and paid for in full at the interior points, or money will be advanced on it without interest and full payment made after it later reaches terminals and is there graded. This is the general interpretation of the government's new plan.

Farmers Buy Tractors.

New tractors have been delivered to George and John Gunnary, farmers in the diked district west of Kelso, Wash., who also purchased three bottom gang plows for use with the tractors. There are now eight tractors in Diking district No. 1, where two years ago there were none. A. Reinikka has purchased a power double disc plow for use with his caterpillar tractor. An improved large-sized power separator was added to his farm equipment by T. D. Dungan, Coweeman valley dairyman.

Crowds Learning and Having Fun.

The annual National Apple show is on this week at Spokane, Wash., and the crowds are both learning practical things and having undiluted enjoyment. More than ever is the spirit of education manifest. There are apple packing and grading demonstrations, cooking demonstrations, Hooverizing demonstrations and all manner of "schools," and an unusual interest is being manifested in them.

Judges Have Hard Work at Lewiston

Northwest Live Stock Show Brings Out Great Animals

By HORACE ADDIS.

With the exception of Shorthorn cattle and Poland China hogs, it is probable that every department of the Northwest Live Stock show, at Lewiston, Idaho, has been larger in some one of its past six exhibitions than this year's show, November 8-15. But it is the universal opinion of exhibitors and visitors that this show had fewer poor animals and a more even, high-class lot than ever before. Never was the task of the judges more trying, for never were they confronted with classes that called for more careful discrimination. A review of the many animals that presented more than ordinary merit would take too much space. But a slight description of the champion animals, many of which won by the closest margin, will give an idea of the character of the show.

The Horse Show.

With the largest numbers the Percheron show gave an exceedingly large number of close competitions. But the decisions of Professor Arnett, animal husbandman of the Montana Agricultural college, were universally satisfactory.

The entire list of judges was of the highest order and the management of the show deserves much credit for securing men of such ability.

Kroumir, Albert Hunter's grand champion Percheron stallion, is notable for his great bone, his size and his fine breed type. Mr. Hunter also won junior championship on the two-year-old Grace Kroumir, a daughter of the horse, bred by Mr. Hunter. She, like her sire, has size, quality and bone combined.

The junior champion stallion, Hindenburg, is a growthy, massive colt, with good bone and good action. As if to show how little there is in color, he is a dark bay. Metz & Son, the owners, say they will change his name. The senior champion mare, Gracieuse, owned by Mayer Brothers, although 13 years old, still shows wonderful quality. She is dam of the filly Harrietta, that defeated the celebrated Maud Carnot, at the Nebraska state fair in 1912.

The junior and grand champion Shire stallion, Hingest, owned by Mayer Brothers, won first in the futurity at the Chicago International. He is a two-year-old with a remarkably good front on him, a head to stop and look at, great size, deep body and fine action. The colt he defeated in class, bred by Mayer Brothers themselves, is a great colt. A. B. Riddell's senior champion, Rock's Golden Conqueror, is a very breedy type, has flat, flinty bone, good body, good heart and good action. He was junior champion at the Iowa State fair last year. Jolly B. the senior and grand champion mare, owned by Mayer Brothers, has been grand champion for the last five years. She is large; of best Shire type, flat bone, good action, and looks able to win again.

While ring side talent was divided on the placing of the grand champion Clydesdale, it is agreed that Metz & Sons' Dick Wentworth, is a great colt, with much finish. He had to be to win over the senior champion, Lowery's Heather Duke, that has been grand champion three times. He might carry a little more flesh, but is about as nearly a perfect Clyde as it is possible to find. Lowery's junior champion, Amaryllis, a yearling, promises to make a great mare. She is daughter of the great show mare, Graceful Lady. The senior and grand champion, Palmerston's Favorite, owned by A. B. Riddell, is half sister to a mare that won grand championship at San Francisco last year. She has true type and great quality.

Metz' champion Belgian stallion, Advance, is so good it is a pity he did not have competition. Riddell's champion mare is good all over. She has size, breed type, body and head and moves like a Hackney.

Percherons.

Stallian, four years and over—A. R. Hunter, first, on Kroumir; Brown & Mood, second, on Duke; Wren & Greenough, third, on Julep. Three year old—Brown & Mood, first, on Chub; A. R. Hunter, second, on King; Follett & Schooler, third, on Jerico. Two year old—S. Metz & Son, first and third, on Hindenburg and Chub; second, Brown & Mood, on Loubre. Yearling—A. R. Hunter, first and second, on Liberty Bond and Donald. Under one year—Mayer Brothers, first; A. R. Hunter, second, on Dudley Kroumir.

Mare four years and over—Mayer Brothers, first, on Gacieuse; Wren & Greenough, second and third, on Maude and Picture. Three year old—A. R. Hunter, first, on Albertina Third; Wren & Greenough, second, on Queen. Two year old—A. R. Hunter, first, on Grace Kroumir; Julius Giese, second, on Queen. Yearling—A. R. Hunter, first, on Folette. Under one year—A. R. Hunter, first, on Sister Kroumir.

Get of Sire—A. R. Hunter, first. Produce of Dam—Wren & Greenough, first; Mayer Brothers, second; Julius Giese, third.

Senior Champion Stallion—A. R. Hunter, on Kroumir. Junior Champion Stallion—S. Metz & Son, on Hindenburg. Grand Champion Stallion, Kroumir. Senior Champion Mare—Mayer Brothers, on Gracieuse. Junior Champion Mare—A. R. Hunter, on Grace Kroumir. Grand Champion Mare—Grace Kroumir.

Shires.

Stallion, 4 years and over—Bob McKissick first, on Jim Corbett; S. Metz & Sons second, on March Alma; G. A. Draper third, on William Crownover. Three-year-old—A. H. Riddell first, on Rock's Golden Conqueror; J. C. Cooper second, on Better Sort. Two-year-old—Mayer Brothers, first and second, on Logan Hingset and Mull Surveyor II. Yearling—S. Metz & Son, first and second, on Meddlesome Mettle and Kendel's Albert.

Mares—4 years and over—Mayer Brothers, first on Jolly B.; J. O. Cooper, second and third, on Highland Beauty and Pansy Blossom. Three-year-old—J. O. Cooper first and second, on Bonnie Duchess and Lady Diamond. Two-year-old—G. A. Draper first, on Flora Arbutus.

Get of sire—J. O. Cooper, first; G. A. Draper, second. Produce of dam—G. A. Draper, first.

Senior champion stallion—A. B. Riddell on Rock's Golden Conqueror. Junior champion stallion—Mayer Brothers on Logan Hingest. Grand champion stallion—Logan Hingest.

Senior champion mare—Mayer Brothers on Jolly B. Junior champion mare—G. A. Draper on Flora Arbutus. Grand champion mare—Jolly B.

Clydesdales.

Stallion 4 years and over—I. H. Lowery, first, on Heather Duke. Two-year-old—S. Metz & Sons, first, on Dick Wentworth. Yearling—I. H. Lowery, first and second, on Panfair and Trumpeter. Under one year—I. H. Lowery, first, on Marquis II.

Mare four years and over—A. B. Ryddell, first, on Palmerston's Favorite; I. H. Lowery, second, on Potlatch Queen. Three-year-old—I. H. Lowery, first and second, on Lady of Glencairn and Rose of Glencairn. Two-year-old—I. H. Lowery, first, on Bonnie Mae Queen. Yearling—I. H. Lowery, first, on Amaryllis.

Get of sire—I. H. Lowery, first. Produce of dam—First and second.

Senior champion stallion—I. H. Lowery on Heather Duke. Junior champion stallion—S. Metz & Sons on Dick Wentworth. Grand champion stallion, Dick Wentworth. Senior champion mare—A. B. Ryddell on Palmerston's Favorite. Junior Champion mare—I. H. Lowery on Amaryllis. Grand champion mare—Amaryllis.

Belgians.

Stallion 2 years and under 3—S. Metz & Sons, first, on Advance.

Mare 4 years and over—A. B. Riddell first, second and third, on Princess d'Uyt, Susanna and Sarah. Three-year-old—A. B. Ryddell first, on Juliet.

Junior and grand champion stallion—S. Metz & Sons on Advance. Senior and grand champion mare—A. B. Riddell on Princess d'Uyt.

Thoroughbred.

Mare 3 years and over—J. P. Hays, first.

Grade Horses.

Mare or gelding, 1700 pounds or over—Clyde Leachman, first. Mare or gelding, 1400 and under 1700 pounds—Clyde Leachman, first, second and third.

Pair mares or geldings in harness, 3400 pounds and over—Clyde Leachman, first. Pair mares or geldings in harness, 2800 and under 3400 pounds—Clyde Leachman, first.

THE CATTLE SHOW.

Animals that had won before generally won the purple ribbons in the Shorthorn classes. McCroskey & Sons' senior and grand champion bull, Cottonwood Sultan, is thick fleshed, has length and a deep, wide front. The junior champion, Escana Clipper, owned by A. D. Dunn, is a most promising calf. Topsy 4th, Day & Rothrock's grand champion, has kept on improving. She was first in class last year, but this year her smoother, thick covering, her sweet head and square body has been invincible wherever shown. Dunn's senior champion, Escana Blossom, is a great young cow and first prize winners, like Donald Gale's Ringleader's Ruly and others, made up a wonderful show.

Herefords have quality all down the line from Henry Theissen's grand champion bull, Prince Rupert 80th, that beat the senior champion, another Prince Rupert, owned by George Chandler, that had a little better head and front. But the wonderful quarters and good size of Theissen's younger bull won. A. B. Cook won both female championships, with new individuals that beat his own former champions. And in nearly every class the competition was the closest.

Only one herd of Aberdeen Angus was shown. But few herds in the United States can show equal quality. The old champion bull, Eileenmere, is still invincible. But the judge preferred the wonderfully sweet, typy calf, Yakima's Pride, to the grand old cow, Idessa of Rosemere, for highest championship honors. This with Professor L. H. Smith, live stock commissioner at the Chicago stock yards, judging.

Shorthorns.

Bull, 3 years and over—H. L. Summers, first, on Excelsior; 2-year old, J. H. McCroskey, first, on Cottonwood Sultan; Child & Ankeney, second, on Greanmeadow Master; A. D. Dunn, third, on True Baron; W. J. Townley, fourth, on Good Prospect. Senior yearling bull—Child & Ankeney, first, on Maxwalton Master; William Leonard, second, on Rightaway. Junior yearling—A. D. Dunn, first, on Escana Clipper; J. H. McCroskey, second, on Rare Count; Child & Ankeney, third, on King Mysie; Day & Rothrock, fourth, on Rusper Sultan Second. Senior bull calf—A. D. Dunn, first and third, on Supreme Chief and March Onward; Day & Rothrock, second and fourth, on Superb Clarion and Fair Cumberland. Junior calf—J. H. McCroskey, first, on Canadian; Child & Ankeney, second, on Royal King; Day & Rothroch, third, on Hercules Duke; A. D. Dunn, fourth, on Baron.

Cow, 3 years and over with calf at foot—H. L. Summers, first and third, on Mayflower 2d and Helen Cumberland; A. D. Dunn, second, on Lady Jane II. Two-year-old—A. D. Dunn, first, on Escana Blossom; Child & Ankeney, third, on Farmer's Beauty; G. W. DeLay, fourth, on Scottish Jane 3d. Senior yearling heifer—Day & Rothrock, first, on Topsy 4th; A. D. Dunn, second and third, on Sweeter Yet and Sweetest Ever; Child & Ankeney, fourth, on Daisie Green. Junior yearling—W. J. Townley, first, on Ringleader's Ruby; Day & Rothrock, second, on Village Rose 4th; Child & Ankeney, third and fourth, on Zora 32d, and Rose Ring. Senior heifer calf—Day & Rothrock, first and third, on Lady Missie 15th and Perfection's Pearl. J. H. McCroskey, second, on Dale's Lady; A. D. Dunn, fourth, on May Flower. Junior calf—Day & Rothrock, first and fourth, on Hercules Topsy and Golden Light; A. D. Dunn, second, on Dew Drop; G. W. DeLay, third, on Scottish Jane 4th.

Aged herd—J. H. McClokey & Sons, first; A. D. Dunn, second. Young herd—Day & Rothrock, first; A. D. Dunn, second; Child & Ankeny, third; J. H. McCloskey & Sons, fourth. Calf herd—A. D. Dunn, first; Day & Rothrock, second; Child & Ankeny, third; J. H. McCroskey & Sons, fourth. Senior Champion bull—J. H. McCroskey & Sons, on Cottonwood Sultan. Junior Champion bull—A. D. Dunn, on Escana Clipper. Senior Champion cow—A. D. Dunn, on Escana Blossom. Junior Champion cow—Day & Rothrock, on Topsy IV. Grand Champion cow—Topsy IV. Get of sire—Childs & Ankeny, first; Day & Rothrock, second. Produce of Cow—Day & Rothrock, first; Child & Ankeny, second.

Herefords.

Bull, 3 years and over—George Chandler, first, on Prince Rupert 60th; A. C. Huntley, second and third, on Grabriel, 38th, and Woodrow. Two-year-old—J. D. Miles, first and fourth, on Gray Field and Young Standard; A. B. Cook, second, on Sir Beau Donald 5th; George Chandler, third, on Council Grove. Senior yearling bull—Henry Thiessen, first, on Prince Rupert 80th; A. B. Cook, second, on Beau Banner 6th, J. D. Miles, third, on Gay Carlos 11th. Junior yearling—A. B. Cook, first, on Panama 37th; Henry Thiessen, third and fourth, on Truman and Tarkio Lad. Senior bull calf—A. B. Cook, first and second, on Panama 48th and Montana Fairfax 22d; Henry Thiessen, third, on Royal Perfect; George Chandler, fourth, on Lord-Generous. Junior calf—Henry Thiessen, first and fourth, on Lord Perfection and Perfection Rex; A. B. Cook, second, on Panama 49th; George Chandler, third, on Prince Donald.

Cow, 3 years and over—A. B. Cook first and fourth, on Lady Panama 7th and Princess R 2d; J. D. Miles second, on Prairie Queen; George Chandler third, on Vernette Prince 10th. Two-year-old—A. B. Cook first, on Lady Perfection 3d; George Chandler second, on New Lass; J. D. Miles third, on Ima Genuine; A. O. Huntley fourth, on Minnie Woodrow. Senior yearling heifer—Henry Thiessen first, on Rose Donald; A. B. Cook second, on Lady Kitchner 4th; J. D. Miles third, on Gray Field

(Continued on page twenty-five.)

This Good Colt Decided the Contest

The two animals here shown won first prize and silver cup for best grade mare and colt at the Sherman County fair at Moro, Ore., this fall. The mare was not the largest nor best mare shown, but the prize was for mare and colt and the remarkably good colt decided the contest in their favor. A. H. Barnum, the owner, is the man holding the colt. H. A.

Low Heading or High Heading

Short Lift Easier Than Long One in Apple Trees

By GRANVILLE LOWTHER.

An article has been going the rounds of some of the agricultural and horticulture journals recommending "high heading," in order to promote longevity, size and a long period of profitable bearing of apple trees. It may be remembered by some of the readers of this paper, that I have strongly advocated low heading. The conflict of opinions has led to some correspondence on the subject, and I have been asked to state my reasons.

Argument for High Heading.

It is never wise to undervalue the position of your opponent. In fact the old Greek proverb was correct: "We arrive at truth, by means of conflicting opinions." There is another fact, and that is that where two or more intelligent persons disagree on a subject about which they are both familiar, there is truth on both sides, and the problem is to discover a law of nature that includes them both. I therefore want to state, first of all, the position of the advocates of high heading, and give to their arguments due consideration:

1. It is argued that "The custom of the old apple growers in the United States was to head the trees from four to six feet from the ground, and hundreds of these old trees, planted more than a century ago, are still vigorous and prolific.

2. "The elimination of the trunk will prevent the full development of the top, restrict its growth, and the top will never attain its full development.

Arguments for Low Heading.

1. The trees are healthier.
2. The fruit is more easily gathered.
3. The tops are not so easily swayed by the wind, causing a leaning of the trunk.
4. The fruit is less liable to be injured by winds, storms, etc.
5. The cost of spraying is less.

High Heading Considered.

I grant that "the custom of the apple

(Continued on page eleven.)

Women and Young Folks Make Good

Labor Problem Is Practically Solved by Their Willingness and Ability

Civilization's war may be won by women and children. Certainly it will be won by the American farmer, and it is becoming evident that women and boys and girls are playing an unusually large part in the conduct of the business of the American farm. Letters given below are proof of it. Recently the Farmer sent out the following inquir yto representative citizens of the state:

In your community what have women and young folks done more than usual to relieve the shortage of labor?

To what extent has this unusual labor of women and young folks proved a success?

Is the quality of their work equal to that of men, and to what line of work are they best adapted?

What other means have been employed, either through additional use of machinery or exchange of work among farmers, to supply a shortage of farm labor?

Interesting Replies Received.

To these queries significant replies were received. The following are extracts from the letters:

JAMES N. PRICE, county agricultural agent, Yakima—The principal line of work in which the women and children assist in handling of the crops in Yakima county is largely in the fruit. A large number of women work in the picking and packing of apples every year, but we had a larger number this year than usual. This was due not only to the demand for labor, but also to the wages paid. In some districts where there was a threatened shortage of labor, during the fruit season and potato digging season, the schools were closed for a period of two weeks to allow the pupils to go into the orchards and fields and assist with the harvest. So far as the work of picking and packing of fruit is concerned, I think it is safe to say that this class of labor is practically as satisfactory as men, and if anything it is probably a little more dependable than some of our transient laborers. In handling the labor situation in Yakima county this year a county labor bureau was organized. This bureau had a representative in each of 10 districts in the county. It was the business of these committeemen to receive requests for labor in their community and to aid in the distribution of labor that was sent into the district. The office of county agriculturist worked in cooperation with these committeemen, supplying them with blanks for making requests for laborers, and these blanks were turned over to the United States labor agent at Yakima. We thought it was a better plan to handle all labor through the government labor bureau than to attempt to establish a separate office. This plan of the county labor bureau proved extremely successful in Yakima county and we were able to handle the harvesting of crops this year with very little labor shortage in any of the districts.

W. D. BOYNTON, Gig Harbor—In this section, running as it does to small ranches, where mixed farming of the lighter kinds is carried on, the women and children have always been helpful. Even in this year of extreme shortage of labor in all industries I can not say that it has struck me that our women people have been more active in the outdoor work of our farms than in former years. Where accustomed to the work, women are most excellent hands to care for small herds and flocks. Many of the women hereabouts get fine returns in a small way from two or three cows, or from a hundred or two of chickens. As I have before mentioned in these columns, many of the men and boys on these small ranches are away from home half the time or more working in the lumber camps, mills and elsewhere. The women folk on such ranches soon acquire an aptitude for carrying on the small ranch duties and are often more efficient and successful than the men, who grow to look at the ranch work as pretty small doings after their work in larger affairs outside. In the handling of the berry patches the women and children take a prominent part very much to the satisfaction and relief of the men folk, who do not take kindly to such activities. The much absent men folk usually try to get back for the heavier harvesting of the hay and grain that may be grown. Much of this cutting and hauling is done by exchange of labor between neighboring ranchers so that the necessity for hiring outside labor is almost entirely avoided. Here and there a farmer is found with a good team, mower and other tools. By an exchange of labor such are usually induced to do the cutting on small ranches not so well equipped.

CHARLES GRANT, Methow: The women and young folks have buckled right in and helped especially in the apple harvest. This never happened before. The labor of the women in picking apples has proved fairly successful. They can pick from the ground all right, but when it comes to standing on a ladder and picking a boxful of apples, as their picking bags hold, it is too much for the average woman. But they are more reliable than the men for staying with the job. The only experience I have had in labor shortage is that I am building a house, and it is simply impossible to hire men. The apple harvest has got to be attended to, and it is simply a case of helping the fellow who needs help most. Ten young men have left this small community for the war, and it surely tells. What next year will be is a puzzle.

BERT H. FAULKNER, Bickleton: The shortage of hired hands has not been acute enough for women to try to take their places in the harvest fields this season. In other lines some farm women here have been a great help in watering stock, going to town for repairs for machinery and in some cases even digging potatoes and helping haul hay. Young boys, from 12 to 16, have been a great help in the fields and on threshing rigs, according to their strength. There is lots of exchange work done among farmers, in fact we depend on this to a great extent, and it is a more reliable source of help than transients. In my opinion, the greatest labor-saving device in this country is the combine. There is a 12-horse combine put out that requires only two men to operate and seems to be the best solution to the labor problem that has yet struck this vicinity. About 25 were purchased this season here and in most cases gave satisfaction. If they continue to be a success, it is easy to see that the large threshing machines with a crew of 18 to 25 men and a drove of horses to eat up the farmer's grain, will soon be a thing of the past. The few big machines that ran this season charged 25 cents a sack for threshing and in many cases did poor work, blowing lots of grain in the straw stack. This condition is going to force nearly every farmer to own his own combine or small threshing outfit, so he can save his grain and get rid of the enormous expense of running such a large outfit.

E. E. SOULE, Winchester: This is an irrigated orchard country and the trees are not in bearing as yet, so we do not need any outside help. However, those who were not needed at home are spending the fall in the Wenatchee district helping with the picking, etc., and reports are, that they, both men and women, have proved themselves very capable workers.

JOHN DAHLEN, Hover: Women have helped to harvest and pack fruit, but not more this year than other years. Farmers exchange work for haying or filling silos, but have always done so. There is no real shortage of labor at present. In certain lines of work, women are of equal value to men. If work is properly done, it matters little what sex the worker is.

E. H. FAULKNER, Grandview: Women have done good work in the orchards. Many of them do as well as men. The women and high school young folks have done a great work in saving the apple crop. The strike of the loggers and millmen has helped farm work very much and in the orchards and packing houses. The apple crop is not nearly picked, but some are through, and that will relieve the shortage of men. There have been some pretty cold nights, but very little damage has been done.

C. B. SPRAGUE, County Agricultural Agent, Portland: I believe the women and young folks have done much in the county to relieve the labor shortage. I was out to a farm where the silo was being filled and found the women and children in the silo tramping and packing the ensilage, and it is needless to say that they were doing good work. The shortage of labor was most felt in the silo-filling work, and in this case the farmers exchanged labor and progressed with the work as best they could, in many cases taking double the time to do the same work as of former years. In two or more instances that I happen to know of women are managing the farms this season while their husbands are at work in the mills and the results are good where they can get competent help. During the potato harvest both women and children helped to good advantage. Earlier in the season, during the berry-picking season, girls and women were almost exclusively employed, and several growers expressed their preference for this kind of help, stating that they were more careful with the berries and could pick more rapidly.

MRS. WINNIFRED BUCKINGHAM, South Bend: The women and boys have helped out a great deal in the towns in offices, mills and stores. In harvesting some farmers called upon the boys and found them willing and energetic, but it many instances it took two boys to do the work of one man. For picking berries and other fruit, the women and boys proved equal to any man. The women have been very busy in their gardens, raising and canning their products. Jars are at a premium. A carload was shipped into Raymond and sold in a short time. The boys have taken up rabbit raising. In the valley, the children are interested in pigs.

A. R. HAHNER, county agricultural agent, Colville—With us there has not been such a serious shortage of labor this season as to require any unusual efforts on the part of women or children. Exchange of work among the farmers was common, though I am informed it has been so in the past. The shortage of crops partially solved the labor problem this season.

J. W. ALEXANDER, La Conner—In this community, while there has been labor shortage, the women have not been called upon to get out and do the farm work. It appears that the young folks have turned out in larger numbers than heretofore. In fact, the high schools in this county were not opened when the rest of the grades were, at least those in the farming districts were not, so that the boys might help take care of the crops. The shortage of labor has been keen and felt in every section and no doubt the fall work was hindered to a certain extent.

GEORGE HINGSTON, Mead: There has been no unusual amount of work done by the women and children of this vicinity this season. There has been more than the usual amount of exchange work among the people, and if the present labor condition continues more of this will be done next year.

LTE M. LAMPSON, County Agricultural Agent, Kennewick: The women and young folks have handled a great deal more of the fruit this year than usual. In many of the orchards most of the help has been women and children. This labor for fruit harvesting has been highly satisfactory. In fact, this class of labor usually handles the fruit carefully and is much more dependable than the men who drift from one locality to another. In harvesting tree fruits the women and children are able to do better at packing, sorting, etc. It is usually preferable to have men do the picking on account of its being much heavier work. In harvesting all crops the farmers have exchanged work and depended on each other a good deal more than usual. In some localities the schools have been dismissed for a few weeks and in others the business men were organ-

(Continued on page eighteen.)

Here are three women who "farmed it" this summer. They are daughters of George Alteneder of Orifino, Idaho. Thousands of others like them donned overalls and performed real toil on the northwestern farms.

Poultry Winners at Lewiston.

The following were winners in the poultry show held in connection with the Northwest Live Stock show at Lewiston:

Lewiston—R. G. Bailey, Oscar Nelson, C. E. Hershberger, Dr. M. S. Fite, James Manning, H. H. S. Rowell, Fred S. Jeffrey, Mrs. Foley, Junior Church, Claire Wellman, F. B. Gearhart, Mrs. Grace Bartlett.

Spokane—James G. Dickson, Fred Voss, Forest E. Lamb, Rolla Reynolds, T. J. Culbert, Jack Smith, J. N. Weldy, Mrs. H. A. Morenberg.

Boise—Mrs. Belle Silversmith.

Kendrick—B. E. Callison, Mrs. Frank Roberts.

Butte—C. S. Roberts.

Clarkston—G. Oren Baker.

Walla Walla—Mrs. W. S. Cotton.

Asotin—Lowell Berry.

Newberg—O. R. Winters.

Juliaetta—George W. Richards.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction, and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

A Wrong Rectified

M. H. Houser, northwestern agent of the food administration grain corporation, telegraphs from Chicago that "carrying arrangements have been fixed so that settlement on advances can be made farmers without interest."

This is tardy rectification of a wrong that never should have been permitted. The case is not at all debatable. In the interest of the consumers and for the public welfare the government took from the wheat grower his natural markets and compels him to sell his product exclusively through governmental agencies. It urged him to grow wheat, it urged him to sell it promptly, and then, through somebody's negligence or lack of sense of justice, the farmer found himself deprived of any market whatsoever.

It declared that he could not sell his grain until it had been inspected by government inspectors. It further declared that inspection must be made at the Pacific coast terminals, and then it laid an embargo on shipments of wheat from the interior to the terminals.

When complaint was properly raised against this impossible requirement the government's agents said they would make partial advances on wheat in the interior, but laid upon the grower the burden of interest on money thus advanced. Justly the growers objected to that inequitable requirement, and now the government agents have tardily and with seeming reluctance acknowledged their error.

The growers felt all the more keenly the injustice thus suffered because they had been unfairly accused of holding back their wheat from the nation and its allies.

It is earnestly hoped that henceforth the government's agents will act with greater efficiency and be guided by a higher spirit of fair dealing.

The Milk Delivery Problem

The new angle that has developed in the dairy problem in the Spokane, Wash., district is interesting, and will be watched closely by dairymen and consumers of dairy products throughout the northwest. The Inland Empire Dairy association is threatening to take the delivery of their product out of the hands of the regular distributors and do it themselves.

"We feel that we are not getting what we should for our product, and that the consumer is paying too much," says President H. S. Findley of the association.

Most students of the milk situation will agree with President Findley. The costs of production have gone up to such a degree that the producer of milk and cream and butter must have more and more for his product. And the cost of living has gone up to such a high place that the consumer can pay no more than is absolutely necessary. The producer must get more for his product or quit producing. The product must go no higher or the consumer will have to cease consuming. Both ends, it seems, must play against the middle—the middleman, the distributor.

Speaking of the milk service in the city of Spokane, President Findley says:

"I believe we can sell milk to the retail trade at 10 to 11 cents a quart in bulk, at least, and at 30 to 32 cents a gallon in 10-gallon cans to the larger customers."

Milk is now selling in bottles in Spokane grocery stores at 12 to 14 cents a quart. Practically none is sold in bulk at any price. It is selling, delivered by the distributors, at 14 cents a quart, bottled. In no case is it delivered in bulk.

The Inland Empire association is forming itself into a corporation for the purpose of controlling the milk situation in Spokane, and its success or failure will prove a step forward or a step backward in the struggle with the vital problem.

False Attacks on Farmers

A Baltimore stock brokerage company has issued a circular full of false attacks on the farmers of the United States, and a New York daily newspaper prints it with apparent approval. In part this libelous attack says:

> "They can form any combination, can hoard and withhold their products and fix any prices for them they choose. The government through the farm land banks will help them to do these things and will lend them money on their stock and crops, and even obligates itself to buy their wheat crop next year at $2 per bushel, war or no war, demand or no demand.
>
> "What do you, Mr. Hoover, think of the farmers refusing to sell their wheat—wheat which they do not need but are hoarding and holding for higher prices? Are you going to let them continue this unpatriotic practice, or are you going to commandeer this wheat and buy it for the government from the farmers at $2.20 a bushel? This is surely what should be done."

While it is true that a farmer can not be fined or imprisoned for holding his own produce, the food control law empowers the government to commandeer any and all foods and feeds held by any person in excess of his own valid requirements.

The growers can not "fix any prices for them they choose." The government fixes the prices for all commandeered products. The producer has a right to appeal to the courts against prices by him deemed unfair, but the judgment of the court (and the courts are the government) is final.

The farm loan banks lend money only on improved real estate, not on live stock and crops.

The farmers did not ask the government to obligate itself to buy their wheat crop next year at $2 per bushel. Congress took that action on its own volition, to stimulate increased production for the welfare of the nation, and as a slight measure of compensation for the government's arbitrary action in fixing this year's wheat prices below the prices the farmers would have surely received if the government had not fixed lower prices for the benefit of the consumers. The farmers would have been only too glad to have the government keep its hand entirely off wheat prices and let them take their chances with the law of supply and demand.

There is a lot of loose thinking and false talking about this matter. The truth is, the food control law was not enacted in the interest of the farmers. Its prime and avowed purpose is to hold down the prices of farm products and reduce the high cost of living in the towns and cities.

And as to the farmers "refusing to sell their wheat," and the appeal to Mr. Hoover to seize it, the food administrator will find it hard to resist a smile, knowing the facts as he knows them. Our farmers in the Pacific northwest would be delighted to have Mr. Hoover "commandeer this wheat and buy it for the government from the farmers at $2.20 a bushel."

They stand ready to deliver their wheat at the government quotations, which in this district run from $1.75 to $1.90, and are only complaining because the government is holding back on buying and throwing on the farmer the burden of carrying the crop until it suits the pleasure of its agents to make a market.

These are the facts, and any one who may doubt them has only to read the law and ask Mr. Hoover for their verification.

Washington Gleanings

J. B. Adams will have from 7000 to 8000 boxes of apples in his orchard at Leavenworth this season.

Grade Holstein cows sold for $160, $165, $175 and $177 at the public sale of Gerrit Noteboom of Lynden recently.

A. O. White, pioneer farmer of the Walla Walla district, disposed of 680 acres just east of Johnson to John Hoffman of Walla Walla at a purchase price of $80,000.

Charles and Frank Goetz of Viola marketed three loads of hogs in Colfax recently, which brought them close to $1000. Two of the porkers weighed almost 900 pounds.

Joseph Rosman has bought from Arthur B. French, 1049 acres a mile southwest of Creston, for a reported consideration of $81,500. The land is all in cultivation and planted to wheat.

The total seed crop of 1917 is estimated to have brought the growers of Skagit county $125,000, of which cabbage brought about $100,000. Spinach was next, bringing in $8400.

Lynden fruit growers received approximately $2000 for their prunes this year at the Lynden cannery. The pear crop, mainly the Bartletts, was small, amounting to about $500.

For the 1917 apple crop Washington takes the position of the largest commercial apple-producing state in the United States, according to an official federal government report this season.

Announcement has been made by Manager Horne of the Utah-Idaho Sugar company in the Yakima district, that the company will build two new factories for the 1918 season, one at Toppenish and the other at Sunnyside.

The Wishkah water project fund of $400,000, which will supply water to Aberdeen, has only $26,000 left, but the project is so near completion that this will be sufficient. The cost of construction is still $41,700 under the estimate.

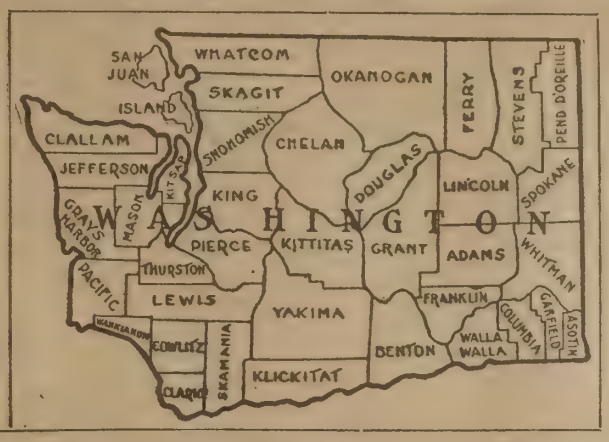
Some of the largest and finest stock beets ever grown in the Walla Walla valley are being harvested at the state penitentiary, where about 12 acres of the roots are being taken in. The crop is running as high as 40 tons of beets per acre.

Fruitvale claims the blue ribbon for producing more apples to the acre than any other district in the Yakima valley. Joseph Feser harvested 15,000 boxes from 20 acres, the crop being worth $26,000. Gross receipts from this ranch of 22 acres were $1220 an acre.

School children of all districts of the state will aid in the collection, between December 1 and December 10, of detailed data concerning the crops of food raised in 1917 and the outlook for food production in 1918, together with a census for the purpose of determining how many brood sows and breeding ewes have been kept.

What Others Say

Register, Wilbur: If the farmers could screen their wheat, retaining that which they sack and haul to market without return of any kind, they could realize a good return after feeding it to hogs.



Herald, Everett: The war has given a great stimulus to the seed industry, the great bulk of the product having previously come from Europe. The market for seed is assured; in fact this product is all contracted for before it is grown.

Enterprise, Washtucna: Successful corn growing is but one contribution to Yakima prosperity, but an important one. It is an example of the transformation of the district during the last five or six years from a one-crop country to one of diversified crops and interests.

Journal, Kent: Field peas are making quite a success east of the mountains and we believe they would here. Why not plant to try an acre or so for the coming year? A good plan is to fence a small piece of ground hog tight, plant to peas and when nearly ripe let the hogs harvest them.

Are Fall Fallowing Wheat Land

Little Seeding Is Being Done But Land Is Being Put in Shape for a Crop in the Spring; Experiment Is Being Tried Out

EPHRATA, Grant County, Wash., Nov. 8.—The plowing this fall has not been so great as it would have been had there been rain earlier in the season, however, in certan siections of the county considerable fall plowing is being done in place of summer fallowing next year. This land will be cultivated next summer to keep off the weeds. This method has given very good results and seems to be gaining in usage. There has been no fall seeding to amount to anything in this county. Considerable rye has been seeded in the southern part of the county, but as the moisture was too deep in the summer fallow no seeding has been done for fall wheat. No crop losses have occurred, owing to cold weather. Where the farmers have hogs the most of them use them to pick up the scattering heads that fall in the harvest so it is really a profit that would otherwise be lost, when they are gleaning the fields. Some of the farmers are fanning their lighter weight wheats which gives them a very cheap feed and also raises the grade of their wheat so that they get more from the wheat they sell than they would otherwise and are not docked on the cracked wheat. Some of the elevators are giving back to the farmers their cleanings from each lot. This seems to be an excellent plan and is meeting with the approval of a good many farmers. H. W. REAUGH.

Work at a Standstill.

FAIRFIELD, Spokane County, Wash., Nov. 13.—Fall work has been almost at a standstill owing to the very dry weather. Those that have tried plowing have given it up as a very bad job and are doing nothing but choring around. A small acreage of fall wheat was sown but has not done well. The pea land sown to wheat hasn't started at all. Some apples were lost by a hard freeze in October. Farmers, generally, are Hooverizing to some extent, but owing to the high cost of cornmeal and fish, they feel they can't afford very much of those luxuries. Hogs for the most part are making their own living in the stubble fields and are not being fed anything yet.

ROY G. ADAMS.

No Rain; No Seeding.

RITZVILLE, Adams County, Wash., Nov. 13.—No rain this fall and consequently no fall seeding; this is the third fall in succession that has been too dry to seed and winter wheat will have to be imported for seed another year. A number of farmers are right-lapping or double disking their stubble ground. Farmers are feeding their light wheat to what hogs are being fed. D. A. SCOTT.

Preacher Picks Apples.

NEPPEL, Grant County, Wash., Oct. 31.—The weather has been quite warm this fall, with no rain to permit of any fall seeding, though every one around here was prepared to seed a large acreage to fall wheat, and now will have to do all the spring sowing. Everything has matured well here and the alfalfa and apple crops have been safely gathered, in the face of a great shortage of extra labor. In fact, we ourselves have hauled the last load of alfalfa today and just succeeded in getting our minister. Rev H. M. Course, to gather our apples in time to escape the frost. Our potato crop of six acres was below normal, about 55 to 60 per cent, and they were saved only by the most strenuous efforts, as help was so scarce. Several here are preparing land to seed to alfalfa next spring where irrigation is possible. The crop here, as a whole, was fairly satisfactory and prices are good, but no more profit is made than in other years. The farmers are anxious over the outlook for labor, as all seeding must be done in the spring, and from the present appearance the next year's crop is liable to suffer for lack of help at a critical time in February and March. There is plenty of good spring seed wheat, early Baart and other varieties, so the situation, on the whole, appears favorable to the farmers, with the exception of the labor situation.

MARTIN PENHALLICK.

Farmers Not Discouraged.

BOSSBURG, Stevens County, Wash., Oct. 30.—The weather has been ideal for harvesting fall crops and farmers have about all the potatoes and root crops put up in good shape. We had a fair crop of potatoes on the high lands, but rather a short crop on the lower and sandy soil along the river. It has been too dry for fall plowing and seeding, but there has been quite a lot of plowing done though too dry to do good work. Conditions have not discouraged our farmers, as spring grain does as well as fall seeding here. There will be a larger crop put in next spring than ever before. Although this has been the lightest crop ever grown here the farmers are satisfied as prices are good and a market for all farm produce, and all feel sure of good prices for next year's crops. There is plenty of good seed in the country except oats and corn. Our oats were very light this year and will not be first class seed, but we expect to be able to get seed from the Colville valley. There has been some good corn grown along the Columbia river below Kettle Falls.

W. W. PALMER.

Farmers Do Own Work.

STEVENSON, Skamania County, Wash., Oct. 30.—Fall work is well up and the weather has been ideal for everything but plowing and seeding. It has been a very dry season. Some seeding has been done, but complaint is made as to it not sprouting or coming up, while some think reseeding will be necessary. Everything in this locality seems to be moving along in the same old way. The feed question causes considerable anxiety, as it is scarce and high and some are troubled about getting hay for cows. The labor situation remains in "status quo." There has been no very serious shortage, as the mills and lumbering industy has been able to go on as usual with no serious hindrance. As there is no heavy farming done in this county the labor shortage has not been a serious handicap. Some of the orchardists have been employing some female workers in gathering the crops and with fairly good results. Many small farmers have resolved to do their work themselves and do not employ outside help.

W. T. JACKSON.

Culling Their Herds.

DARRINGTON, Snohomish County, Wash., Oct. 30.—The crops are nearly all harvested. The potato crop was a trifle below normal on the average and the roots, carrots and mangels also, but owing to more ground being planted it will more than bring those crops up to normal. There are quite a number of beef cattle to be disposed of, as the market is not what it has been in previous years. Some of the farmers around here are culling out their herds, owing to the high price of hay and mill feds. Local hay is now selling at $25 per ton and oats straw at $10 and $12. All the straw in this section is taken care of and will be fed to the stock this winter. Eggs are selling at 55 cents per dozen. What potatoes have been sold for so far brought from $1.75 to $2 per 100 pounds. Indications are that there will be a drop in the price.

C. B. NEIDERPRUM.

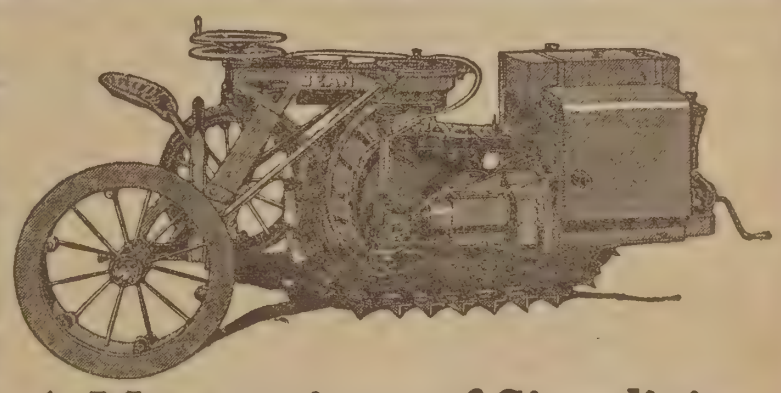
No Damage From Frost.

PROSSER, Benton County, Wash., Oct. 21.—The weather conditions of this fall are favorable to the maturing and harvesting of most crops in this locality and the first killing frost was October 17, but all the crops were out of danger at that time. There are lots of apples to be packed yet. There is no rain this fall and there will be but little wheat put in on account of no moisture in the ground. We have plenty of good seed for fall crops if we had rain to sow them. Some of the farmers are satisfied and some are not with the prices they are getting. Most of the fruit men do not know what they are going to get for their fruit yet, as they are shipping on consignment. It will take all of two weeks yet to get all of the fruit picked Some potatoes have not been dug yet. The threshing is finished and the wheat men are bringing in their wheat.

G. W. WILGUS.

Won't Feed Wheat.

LA CONNER, Skagit County, Wash., Nov. 1.—In some cases the fall work has been delayed on account of the heavy fogs and many showery spells; just enough of the latter to keep the threshing behind. There has been little fall seeding in this section and indications are that there will be very little done. Fall plowing is progressing very satisfactorily in many parts of the country. There has been little loss in any of the crops except straw, which amounts to very little. Most of the straw is baled when the grain is threshed, and the only loss has been that which has been wet in the stack. Most of the farmers have not begun to "Hooverize" on the food for the hog and the hogs are still feeding on the stubble and pastures. There is little chance for sustitution, for all grains are high priced, but I can not find any one who has planned to feed wheat this winter.



I. W. ALEXANDER.

Getting Ready for Winter.

FERNDALE, Whatcom County, Wash., Nov. 5.—Potato harvesting is almost finished here. In some districts, and especially on certain farms, the tubers have been seriously affected with the blight, especially those fields which were planted late and where the tops were green late in the fall. As the busiest season on the farm is soon over, and the nights are getting long, the attendance of the various granges is increasing and parent-teachers' associations are being organized in the different school districts.

CARL J. MENZE.

LILLY'S SEEDS
For Fall Planting
BEST FOR THE WEST
To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seed or seeds not acclimated.
We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seed—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.

A Masterpiece of Simplicity
with *Patented* Front-Drive

SEND the coupon below for our new catalog which describes the Bean TrackPULL Tractor—a masterpiece of simplicity, with patented front-drive which no other tractor has.

It is built by an old-established concern, the Bean Spray Pump Co., makers of the famous Bean Sprayers and Pumps.

A life-long reputation is staked on this tractor.

Note some of the things it does, then get the entire story.

Don't make the mistake of buying another type and then decide too late that you need the Bean. Think of a tractor that turns clear around inside a 10-foot circle (5-foot radius)—that weighs only 3100 pounds, but that will plow from 4 to 7 acres or cultivate from 10 to 15 acres in 10 hours.

Learn all about its 15 vital features. You'll want them all in your machine.

What Other Does These Things?
1. Pulls instead of pushes itself over the ground.
2. "Gees" and "haws" out of holes and soft places like a team.
3. Turns clear around inside 10-foot (5-foot radius) circle with full power on turns.
4. Cultivates as close up in corners as a team.
5. Goes under tree-branches only 4 feet off the ground.

There are 15 features. Read about the rest in the catalog we send you. Mail us the coupon now.

Good Mixed Ration

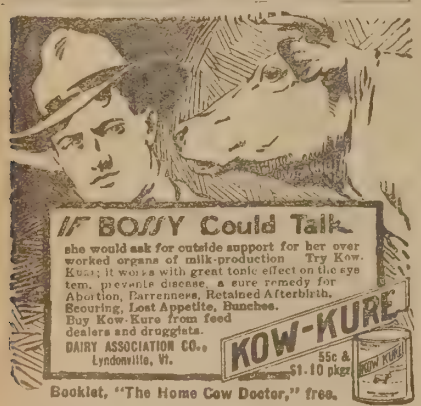
To the Editor: I have some barley and oats now. What other feeds would it pay me to get to mix a good ration for my cows? I have a few mangles, but not enough to carry me through, and no silo. I am feeding Puget sound hay. Shorts is now $32, bran $30, oil meal $3.40 per hundred, beet pulp $45.

K. S.

Silvana, Wash.

Answer.

By Puget sound hay I suppose you mean timothy hay or possibly a mixture of clover and timothy. Timothy alone is not a desirable hay for cows. It is better when clover is mixed with it, but clover alone is still better. Feed all of the hay that the cow will clean up without wasting any. Since you will not have sufficient mangles to carry you through the winter it would be well to feed very lightly of the mangles, figuring on having a little all the time rather than none a part of the time. For a grain ration to supplement this I would suggest that you mix 200 pounds bran, 100 pounds ground barley, 100 pounds ground oats and 50 pounds oil meal. This grain ration should be fed in the proportion of one pound grain for each three and one-half pounds of milk produced. If you run out of barley and oats feed the bran straight or a mixture of 200 pounds bran to 25 pounds of oil meal. Plan for a silo next year. A. B. N.



PURE BRED HOLSTEINS

have won more prizes and established more records than all the other breeds combined.

Purebred Holsteins are the choice of the experienced breeder and the amateur, whether he breeds for profit or the pleasure of winning blue ribbons, silver cups and prize money. Write for free information about this prize-winning, money-making breed.

SPOKANE, WASH.

Clallam County Association.

During the past month 440 cows were tested in the Clallam County (Wash.) Cow Testing association. The average production per cow for the 31 days was 548 pounds of milk and 27 pounds of butterfat, according to the report of E. O. Leonard, tester. Considering that many of the cows were on the last few days of their lactation period the average may be said to be good. One hundred fifty-two cows produced 30 pounds or more butterfat during the month. E. C. Blake had the herd which averaged the highest with a production of 67 pounds of milk and 35.4 pounds of butterfat.

A total of 44 cows produced over 40 pounds of butterfat for the month distributed among the association members as follows:

Albert Fasola, 8; E. F. Gierin, 7; E. C. Blake, 6; Ben Ridgway, 3; W. S. Brown, 3; Orin Babcock, 2; Bert Simdars, 2; Otto Simdars, 2; William Ward, 2; Albert Ecrett, 1; P. S. Govan, 1; Jack Ryser, 1; Price and Noble, 1; Jim Belfield, 1; A. A. Evans, 1; Ed. Pettit, 1; R. J. Dickensen, 1; Sam Kilby, 1.

Increased Cost of Feed.

The month of October shows another marked increase in the cost of feeding the dairy cow. The average feed cost was $9.31, or $1.45 more than for September, according to the report of Robert Cowan, official tester in the White River Valley (Wash.) Cow Testing association. Every dairyman except one was feeding both grain and roughage other than pasture. The average milk production per cow was 741 lbs. and the average butterfat was 27.83 lbs. This makes the average test approximately 3.57.

Of the 579 cows tested 114 gave over 1000 lbs. of milk, 82 gave over 40 lbs. of butterfat; 29 gave over 58 lbs. and 13 gave over 55 lbs. of butterfat.

Practically all calves are being sold for veal. Dairymen do not feel that they can afford to raise them when milk and feeds are so high. The high prices paid for veal is another inducement to sell the calves. If this practice continues very long, good dairy cows are going to sell at premium in the near future.

The silo is being appreciated more this year than ever before by dairymen.

Information Bureau

The Farmer will be glad to answer questions of general interest, as well as those of a practical nature, relating to the farm or farm home. There will be no charge for this service. Questions must be signed with your name and postoffice address and will be answered either by personal letter or by publication when of general interest.

Address Farmers' Information Bureau, Room 35 Review building, Spokane, Wash.

How to Measure Hay Stacks.

Question—Will you kindly tell me how to find the amount of hay in a stack when you have the width, length and distance over the stack? C. H. S.

To this inquiry the Farmer replied in part as follows:

It should be remembered that absolute accuracy can not be secured by any stack measurement rule. No two stacks are built just alike; no two kinds of hay weigh just alike; no two persons measure just exactly alike. Therefore, in considering the two rules given below, remember that the shape of a stack makes a great deal of difference, as well as do accurate measurement, kinds of hay, weather conditions and the time the stacks have had to settle.

Rule No. 1—Add the width to the over; divide by four; multiply the result by itself; multiply this result by the length; divide this result by the number of cubic feet in a ton of the kind of hay being measured.

(For grain and other hay comparatively heavy, 512 cubic feet are usually considered to make a ton. This assumes that the hay has stood in the stack long enough to have settled fairly well, 30 days being the shortest time that should elapse before taking a measurement. The Colorado Agricultural college is authority for the statement that for alfalfa hay 560 cubic feet should be allowed after 30 days' settling in the stack, 540 feet after 60 days, 512 after 90 days and 485 after 120 days.)

Illustration of rule: Say the stack measures 12 feet wide, 30 feet over and 40 feet long. Add the 12 to the 30, divide by 4, multiply this result by itself, multiply this result by the 40 and divide by 512. This shows the stack to contain 8.61 tons.

Rule No. 2—Subtract the width from the over; divide by two; multiply this result by the width and this result by the length; divide by the number of cubic feet in a ton. This gives the volume of the stack as 8.44 tons.

It will be noted that these two rules bring different results by approximately one-fifth of a ton in this particular stack.

In comparing these rules, the United States department of agriculture shows that the first is best adapted to measuring stacks of the medium-full type, while the second is best adapted to the narrower stack.

The department of agriculture has worked out a complex system of hay measurement. It can be obtained by addressing the office of the secretary at Washington, D. C., and asking for circular No. 67, entitled "Measuring Hay in Ricks or Stacks."

Question—What is the origin and significance of the Egyptian obelisks? J. R.

The monuments originated in Egypt. They were placed at the entrance of temples and palaces, both for decorative effect and as a record of royal deeds and victories. They were the Egyptian symbol of the supreme god. Their sides were generally covered with hieroglyphic inscriptions deeply cut into the granite. The first mentioned in history was that of Rameses, king of Egypt about 1485 B. C. The Arabians called them Pharoah's needles and the Egyptian priests the fingers of the sun. Many were made merely to extol the virtues of the king or prince to whom they were dedicated.

The obelisk in Central Park, New York, is one of two obelisks erected at Heliopolis by Thothmes III., about 1600 B. C. and removed to Alexandria by Augustus about 23 B. C., or, as some authorities say, by Rameses II. Nineteen centuries later the two were separated and one sent to London, the other to New York. These two are the most famous obelisks.

Esthetic Instinct Dates Far Back.

It would be interesting to know, if we could, when the first primitive manifestation of the esthetic instinct came to man. Certainly farther back than the written narrative of history or those anterior traditions that form his earliest myth and fable and religion go; farther, even, than his monuments of stone and prearchaic burial mounds, and almost farther than the geologic records of his presence tell.—Exchange.

Great Pyramids.

The largest pyramid in the world is that of Cholula, in Mexico, which covers 50 acres of ground. The largest in Egypt is that of Cheops, near Cairn, which covers 13 acres. It contains 90,000,000 cubic feet of stone and could not be built nowadays for less than $150,000,000.

SAVE MONEY on SEPARATORS

Buy direct from my factories, where I build the closest skimming, easiest cleaned, modern designed separators, from highest quality materials, and sell to you at lowest manufacturers' prices—less than wholesale.

Sheep Experiments

Shropshire and Delaine Merinos

During a period of five and a half years, from December 1, 1911, to July 1, 1917, the state experiment station of Pennsylvania carried on an investigation which had for its object a comparison of ewes of Shropshire breeding as representative of mutton sheep and smooth-bodied Delaine Merinos as representative of wool types. In detail the experiment has sought to discover the cost of maintaning breeding flocks of these two types of sheep, the value of wool and mutton produced and to study the breed characteristics of the two breeds as related to sheep raising in Pennsylvania.

The summary of the results of this investigation follows:

1. Shropshire ewes produce a higher percentage of lambs.

2. Shropshire lambs are heavier and make more rapid growth.

3. Shropshire lambs mature earlier and command 50 cents to $1 more a hundred weight on the market.

4. In the hands of experienced sheep men who can save a high proportion of lambs, Shropshires are slightly more profitable.

5. Delaine Merinos can be kept in larger numbers in pens and on pasture.

6. Delaine Merinos thrive better on pasture and especially during drouths, without extra supplementary feeds.

7. Delaine Merinos require less grain during the winter months.

8. Delaine Merino ewes require less careful attention at lambing time because ewes and lambs are hardier and thus a higher proportion of lambs is saved.

9. Delaine Merinos breed more regularly, earlier and in a shorter period of time.

10. Delaine Merinos are longer lived by one or two years as breeding animals.

11. Delaine Merinos are able to withstand hot, rainy and cold weather with smaller losses.

12. Delaine Merinos are less subject to parasitic infestation.

13. Delaine Merinos, due to their dense fleeces, have less chaff and burrs in their wool.

14. Delaine Merinos in Lot IV, during 1912 and 1913, and Lot II, Shropshires, similarly fed, showed an annual maintenance cost of $5.32 and $6.74 per ewe respectively. During 1914, 1915 and 1916, the annual cost of maintenance was $6.99 for a Delaine Merino ewe and $7.59 for a Shropshire ewe, Delaine Merinos, therefore, cost less for maintenance than Shropshires.

15. With a proportion of 100 lambs to 100 ewes, the Delaine Merinos were more profitable than Shropshires in 1914, 1915 and 1916.

16. For 1912 and 1913 the value of mutton produced was 41.9 per cent greater for the Shropshires of Lot II than for the Delaine Merinos of Lot IV, while the wool was 39.5 per cent heavier and 30.9 per cent more valuable for the Delaine Merinos than for the Shropshires during the same years.

17. Delaine Merino ewes require less exercise in winter quarters to warrant vigorous lambs than Shropshire ewes.

Ship Out Stock to Prevent Loss.

The unusual situation of having to transport stock to prevent their loss from lack of feed is reported from certain sections of western Texas. Cattle growers in that region have wired to Washington urging the government to send railroad cars immediately to ship stock to localities where feed can be obtained. The long continued drouth has so reduced the quantity of available feed that it is declared that stock can not profitably be wintered. The government is also asked to purchase some 1500 carloads each of cotton seed cake and hay to ship into western Texas to tide over the animals which can not be moved.

Must Raise Small Flocks.

Chancellor E. C. Elliott of the University of Montana and a member of the food conservation committee of the Montana state council of defense, has gone strongly on record in favor of the small flock of sheep, the two or three head of cattle and the pig or two program for every farm. In discussing the matter with the council of defense Mr. Elliott said:

"The surest and quickest way to increase the meat supply is to get over the notion that large flocks are necessary. If we can get the farmers to raise sheep and cattle we shall soon be in a position to supply more meat. We must carry on a campaign of education to show our farmers that each can raise a limited amount of stock."

CULL APPLES VALUABLE

Possibility as Stock Food Shown.

Interesting experiments and calculations relative to the value of apples as stock food have been made by J. F. Stephens of the Nampa (Idaho) district. The experiments are reported to have shown that cider from a number of varieties of apples yield as high as 15 to 16 per cent of sugar. It is also shown that 150 gallons of cider is frequently taken from a ton of such apples. It means that each ton of apples will produce from 150 to 175 pounds of sugar. Including the sugar left in the apple pulp it does not seem an excessive etsimate, if these figures are reliable, to calculate 20 pounds of sugar per ton of apples. Figuring the food value of sugar for live stock is a somewhat complex undertaking, but Mr. Stephens is reported to have figured that apples at $6 per ton make a cheaper stock food for stock that eat them than does barley at $50 per ton.

Veterinary

Dr. S. B. Nelson

Sores From Warts—I have a cow that had warts on her teats about two months ago. Since then the warts were pulled off while milking and have turned into sores which will not heal.
R. G. M.

Deer Island, Ore.

I think that you will find the following prescription of value: Chloral Hydrate dram 1 1-2, Acetic Acid absolute dram 1 1-2, Salicylic Acid dram 1, Spirit of ether dram 1, Collodion dram 4. Apply to the warts on the teats morning and evening after milking.

Pigs Get Lame.—I have some pigs that are getting lame in their hind legs, some in one and some in both. They do not eat good for a week, then they commence to get better.—L. A. L., Claytonia, Idaho.

It may be possible that your pigs are affected with rheumatism. This trouble simply occurs from the animals sleeping in a draft. I would recommend first that you provide sleeping quarters that are sufficiently protected that the animals are not in a draft. Second, as to the medicinal treatment, give each pig one ounce of castor oil in the feed. If they weigh 150 pounds give them two ounces. Divide them into bunches of about three in each bunch while you are giving this medicinal treatment. The next day or 24 hours later begin giving in the feed from 10 to 15 grains of potassium iodide, the dose depending upon the size of the pigs.

A New Wrinkle.

Mrs. McCarthy—Don't you stay in the room when your daughter has company, any more?

Mrs. Murphy—No. I'm trying the honor system.

JAMES DRYDEN
Editorial Contributor

Egg Prices and Feed

A year ago October 15 eggs were wholesaling in Portland at 42 cents, this year at 60 cents for the same grade. This is about 43 per cent increase. Throughout the summer and fall, however, the percentage increase has not been as much as this. Feed prices are about 75 per cent higher now than last year.

Such statements are frequently made and the poultryman feels that he can not afford to keep chickens and the chickens are sold. Good laying hens are marketed and good pullets are marketed because the feed is increasing in price faster than the eggs increase in price.

It doesn't follow that the price of eggs must increase in the same way, or show the same percentage increase as the feed in order to make the same profit. It will take about 75 pounds of grain to produce 12 dozens of eggs. If last year the grain cost $1.50 and this year 100 per cent more, or $3, and last year the eggs sold for 42 cents a dozen or $5.04, and this year for 60 cents a dozen or $7.20 for the 12 dozen, it is seen that a 43 per cent increase in egg prices more than offsets a 100 per cent increase in feed prices. The feed cost doubled, or an increase of $1 50, while the increase in value of eggs was $2.14. So that we actually make more profit on the eggs where the feed increased 100 per cent and the eggs only 43 per cent. We can not balance our books by percentages. The simpler method of addition and substraction is safer.

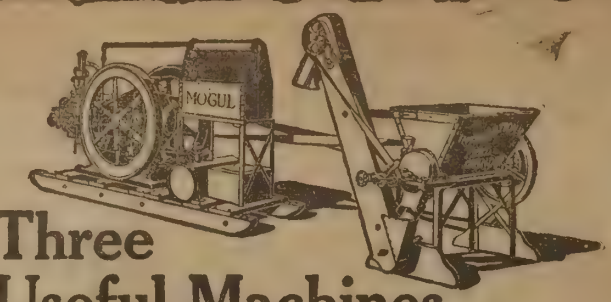
But we must not stop here in our calculations. A third factor must be taken into account. The first factor is the cost of feed, the second is the value of eggs and the third is the rate of production. If a hen laid only a dozen eggs instead of 12 dozen and eggs were selling at 42 cents a dozen, a 43 per cent increase in eggs would amount to only 18 cents, while the increase in the food was $1.50, asuming that the poor layer ate the same amount of food as the good layer, which would hardly be the case. The profit depends upon production as much as upon cost of feed or value of eggs. In other words, a good laying flock, one that averages say 150 eggs a year a hen, will make more profit this year with eggs selling at 60 cents than it would last year with eggs selling at 42 cents, even though the feed increased from $1.50 to $3 a hen, which is more than the cost at the present time.

At such prices of eggs and feed the hen would have to lay 100 eggs to make the increased value of eggs balance the increase in feed.

A poultryman of any pretensions can make his flock lay more than 100 eggs a hen. If he does that he is making as much profit as he made last year at this time. But a good flock with good care should average 150, and at that rate of production he is making more profit than he did last year at this time. If he is a good poultryman and has a good bred to lay flock he should get a production of 175 eggs. Then he will be making good money.

The price of eggs varies from month to month. The increase this year over last is not always as much as it is this month and if we want to know how we stand we have to figure up cost and profits every month. The only stable factor is the appetite or consumption of the hen. The war does not affect that. The consumption of food for a hen has been found to approximate 70 to 75 pounds of grain in a year.

The moral is that we should not get cold feet and kill off the hens because some one who figures in percentages says that feed prices have risen more than egg prices. J. D.



Idea That Turkeys Are Hard to Raise

Turkeys on the Sanders farm.

If you entertain the popular idea that turkeys are hard to raise, a visit to E. Y. Sanders' poultry farm at Roy, will convince you that either there isn't much in the old idea, or else that Mr. Sanders knows more about turkeys than most people. Probably you will be correct either way, or both ways. The fact remains that the 300 lively young turkeys on Mr. Sanders' place have been raised without much trouble and at a very low expense. It is generally supposed that little turkeys do not know enough to "go in out of the rain," but Mr. Sanders has no trouble from this source. His hens are confined in coops in a large yard and the little birds are allowed to run from the time the brood is put out. He has had practically no loss on young stock.

Mr. Sanders keeps about 50 breeders every year, bringing in a little wild blood of the native American turkey each year. His books show that each hen is earning an income of $5 a year in eggs sold for hatching, after keeping on the place eggs enough to produce the flock of 300 or more that Mr. Sanders raises each year.

Three Useful Machines

THREE International machines that will pay their way on any farm where there is corn to market or livestock to feed are:

An International Feed Grinder
A Keystone Corn Sheller
A Mogul Kerosene Engine

International Feed Grinders, for grinding small grain, corn on the cob, or corn in the husk, come in three styles with regular or special plates, 6", 8", and 10" in diameter. Capacities from 5 to 30 bushels per hour.

Keystone Shellers, adaptable to large or small ears, shell hard or soft corn clean without cracking the kernels or crushing the cobs. There are eight styles in 1, 2, 4, and 6-hole sizes, with capacities from a few ears shelled by hand, up to 4,000 bushels per day.

Mogul Kerosene Engines furnish steady, economical power for these and other farm machines. They operate on the cheapest fuels. Mogul kerosene mixers; built-in magnetos that make batteries unnecessary; enclosed crank cases; full equipment, ready to run; are features of all Mogul engines, from 1 to 50-H. P.

Equip your farm with a set of these three useful machines. See the local dealer or write the address below for complete information.

160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat at over $2 per bu. offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops

You Can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed Farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

There is now an extra demand for farm laborers to replace the many young men who have volunteered for service in war. The government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

A Comparison

Of Two Years of Fruit Growing

A comparison of last year with this in the fruit industry is revealing some interesting facts. Generally it is presumed that the profits this year in fruit are much larger than those of last year. These conclusions are premature because the returns for this year are not in; but on the basis of sales made and money received some kind of estimate can be made. However, I have generally found that growers have not sufficiently reckoned the greater cost of this year as compared with last. Take the following items as illustrative. Labor cost per day, last year averaged $2.75, this year $3.50. Cost of boxes last year averaged .09, this year .16. Cost of paper last year averaged .04 1-4, this year .09.

It will be seen from this that labor was more than 25 per cent higher than last year, that boxes were nearly twice what they were last year and that paper was more than twice.

Now in addition to this it must be reckoned that spray materials, nails and everything bought or used was at a greater cost this year than last year. Further, labor was at least 25 per cent less efficient than last year. In some orchards it was 50 per cent less efficient. There seemed no reason for it except the general agitation, unrest and tendency to boost prices. In fact, I do not believe that the laborer could save more at the prices paid than he could save last year, but neither can the grower make more, unless he gets more for his fruit. It has cost at least 30 per cent more to grow fruit than it cost last year. Will the grower get 30 per cent advance in the price above that of last year? My answer is that the sales made up to the present time do not indicate that he will.

The government estimates of the cost of growing fruit covering a period of years in the Wenatchee, Hood River and Colorado orchard sections show that the average cost was then 76 cents per box. This included interest on land, water duty and all other costs. Now suppose we add to that 30 per cent we have 98.9c as the cost. This lacks only a little more than one cent of $1 per box.

The sales with which I am familiar do not justify a belief that the growers when all the grades are averaged, will get much above $1. Unless they do the farmer is working for nothing, except that he has a job which pays him fair wages.

Of course we are hoping for better prices; something like the profits other farmers are receiving, but will we get them?

G. L.

Heading of Trees

Short Lift Easier Than Long One

(Continued from page four.)

growers a century ago was to head the trees four to six feet from the ground, and that hundreds of these old trees are still vigorous and prolific."

I do not grant that the reason they are vigorous and prolific is that they were headed high. I do not grant it because, after having visited the great apple growing sections in the United States in order to study conditions, I find other and what seems to me better reasons. For instance, I visited my old home, where I was born and brought up, in West Virginia. I visited our old orchard, the orchard of my grandfather, and those of our neighbors. At the time I made that visit the orchard of my grandfather should have been about 60 years old. There was not a tree standing where that orchard had been. I mean not a tree that was growing when we left that country 40 years before. Yet those trees had all been headed according to the custom of that age.

When I visited my father's orchard I was even more surprised.

We had a small orchard, planted about tho time I was borne, one facing the sun, as we called it "a south slope." We had another on the "north slope" and another on the hill some 300 feet above the house that stood on the bottom land. On neither slope of the hill sides, nor on the hill top, was there a tree standing, that was there 40 years before, yet, these trees are all headed high.

There were trees found in various orchards, 50 to 65 years old, but they were on the bottoms, in alluvial soil, generally near the foot of the hill, where they got the drainage and the wash from the hillsides.

I found the same things true in Albemarl county, Virginia, in Pennsylvania and New York, although my observations there were in orchards I had never seen before and my information received from the owners. I conclude therefore that the longevity of the trees was not on account of the method of heading, but on account of being located in a rich soil, where there was plenty of water and good drainage.

The second argument for high heading is "the elimination of the trunk will prevent the full development of the top, restrict its growth and the top will never attain its full development."

On this point I can not speak with quite so much confidence, but I do not believe it. I do not believe it for the following reasons:

1. In our own orchard we have trees planted 24 years ago. When we bought the orchard 13 years ago we found that there were certain trees more vigorous than the others, larger tops, bore more fruit than the others in about the proportion that the tops were larger and that these trees were headed at the ground, or but few inches above it.

This difference could not have been caused by a difference in location, for the difference was very marked in trees standing side by side. I made inquiry of a neighbor who had formerly owned the orchard and found that after one or two seasons growth after planting, some of the trees had been peeled by rabbits. He had to decide between cutting them off at the ground or digging them up. He concluded to cut them off. That year they put out new shoots, strong and vigorous and now the difference is so great, that I have had them photographed with the adjoining trees to show the difference in favor of low heading.

Why Is It True?

1. "The roots that gather the food and the leaves that manufacture it into protoplasm that builds the trunk, branches, bark, leaves, and fruit, are nearer together. From the place of collecting the food to the place of manufacture in a low-headed tree is a 'short haul.' In the high-headed tree from the place of collecting the raw materials to the place of manufacture is a long haul. That is why the tips of the branches die first, when there is 'general debility.' That is the trouble in 'apple rosette,' the root system cannot supply the food substances and the top limbs are affected first.

2. "There is force in all plant life called "capillarity.' It has been called the law of 'capillary attraction.' I made several tests with wood, cardboard and by irrigation. In the wood tests, I put parts of box shooks with one end immersed in water to a depth of one inch. 'Capillary attraction would in a given time raise the water another inch, so that the wood an inch above the line if immersion would be damp. To wet the next inch would require about twice to three times the time required to wet the second. The difference depending somewhat on the texture of the wood. Then there was a point above which the water could not be raised by capillarity. Now, when it is noted that plants take their food in solution, it will readily be seen how important this force is in raising food from the ground to the top of the tree. It is what hydraulic eningeers call 'a short lift.'

The same test I made with cardboard and with the same results, except that the cardboard raised water more rapidly than wood.

The test I made in irrigation was to make an earth basin about the roots of a tree, fill it with water and let it stand. The next day, the outer bark would be wet several inches above the water.

There is something similar to this law of capillarity in what is called "osmotic action;" which is a pressure of the substances akin to the pressure of gases.

There is also the law of the sun's attraction, that sucks the juices from the leaves, branches and exposed tissues, much in the same manner as it lifts the waters from earth and ocean, by the process of evaporation.

These are forces that lift, draw, mix the substances, manufacture these substances into protoplasm, distribute them to the various parts, etc. My theory is that a short lift is easier than a long one, a short haul is easier than a long one, and that there is no use of building a tall trunk if the tree is properly pruned for the building of a top system.

Be "U. S. Protected"
When Winter Storms Rage

"U. S. Protection" is the certain comfort assured every outdoor worker who wears the rubber footwear made to keep his feet warm and dry in all kinds of weather.

U. S. Rubber Footwear

does this and more. The reinforcing where the wear is greatest makes "U. S." give heavy service, double duty, makes it far outwear ordinary kinds. You save money when you wear "U. S."

There's a special "U. S." style for every outdoor activity and every pair bears the U. S. Seal, the trade mark of the largest rubber manufacturer in the world. Look for this seal. It is your protection.

For sale everywhere. Your dealer has your style of "U. S." or can get it for you.

United States Rubber Company
New York

U. S. Rubber Footwear

Hides Legal Tender.

Like most other things that used to be worth nominal prices, hides have gone up until they are nearly legal tender for the payment of debts. Receipts for large hides have been reported so high that they read almost fabulous. But they are real. Here is a recent market quotation for hides at Portland, Ore., illustrating their value:

Salted hides, 25 lbs. and up, 16c; salted stags, 50 lbs. and up, 14c; salted and green kip, 15 to 25 lbs., 16c; salted and green calf, 10 to 15 lbs., 22c; green hides, 25 lbs. and up, 13c; green stags, 50 lbs. and up, 11c; dry flint hides, 28c; dry flint calf, up to 7 lbs., 30c; dry salt hides, 23c; dry horse hides, $1.50@2.50; salted horse hides, $3@4.

Good Grounds.

Bait—On what grounds did Blinkley get his divorce?

Nibble—Claimed his wife made such poor coffee he couldn't drink it.

Bait—Coffee grounds, eh?

For High War Prices Look to 1861

Old Grocer's Invoice Shows Higher Prices Than 1917

On June 22, 1864, S. Hamill & Co., wholesale grocers of Keokuk, Iowa, sold a bill of goods to a country grocer. That old invoice, yellowed by time, has been resurrected and is a convincing proof that people who complain about present-day high cost of living are not yet fully acquainted with "war prices."

The general average of civil war prices as recorded in this old bill is 129 per cent higher than present-day wholesale prices in Iowa. Merchandise that cost the retail grocer $644 in civil war times can be bought now for $281. Yet wages are much higher now than then.

Believing that its readers, both old and young, will be interested in the prices paid by the American people when Lincoln was president and the boys in blue and the boys in gray were fighting under Grant and Lee, the Farmer herewith gives this old-time grocery bill in full:

	Lbs.	Prices —1864—		Prices —Sept. 18, '17—	
½ bbl. (55c) rice	117	$0.13	15.65	$0.09	$10.50
1 keg B. C. sodas	112	.10	11.20	.03½	3.92
1 box (25c) Dwight soda	60	.10	6.27	3.40	3.40
½ chest No. 25 Y. H. tea	54	1.88	101.52	.35	18.90
⅛ bbl. Imperial tea	60	1.75	105.00	.35	21.00
½ bbl (35) crushed sugar	83	.26	22.35	.10¾	8.92
½ bbl. (35) "Try Me" tobacco	37	.26	9.98	.34	12.58
½ doz. handled shoe brushes	½	2.50	1.25	2.25	1.13
1 doz. dom. shoe brushes	1	2.00	2.00	2.00	2.00
1 box (25) alum	29	.07	2.28	.04	1.16
1 box (25) copperas	30	.04¾	1.60	.02	.60
5 boxes matches	5	1.00	5.00	1.50	7.50
1 doz. long white cords (clothes lines)	1	3.50	3.50	2.50	2.50
1 coil 3-3-in. Ma. rope	39½	.25	9.88	.31	12.25
1 doz. 2-hoop pails	1	3.40	3.40	2.10	2.10
1 doz. 3-hoop pails	1	3.75	3.75	2.35	2.35
1 box (20) whiting	10	.05	.70	.06	.60
1 bladder putty	12	.07½	.90	.06	.72
1 box 9x12 city glass	1	5.75	5.75	4.50	4.50
½ bbl. No. 1 mackerel (100 lbs.)	½	10.75	10.75	15.65	15.65
7 bunches cotton yarn, 2-7, 3-8, 2-9	7	6.50	45.50	1.50	10.50
104 lbs codfish	104	.08½	8.85	.11	11.44
1 bbl. (45) sugar, yellow C	251	.17¾	44.35	8.55	21.46
1 bbl. (45) sugar, stand. A	281	.20½	58.05	8.85	24.87
1 can XX lard oil	10	1.15	11.50	1.50	15.00
1 box Star tins tobacco	20½	.85	17.45	.48	9.84
1 box Gold Cake tobacco	17	.80	13.60	.43	7.31
1 box Ne Plus tobacco	20	.65	13.00	.30	6.00
1 bag dry peaches	53½	.17	9.09	.12½	6.69
1 box W. R. raisins	20	5.50	5.50	5.00	5.00
1 box firecrackers, 40 pkgs.	..	4.50	4.50	1.10	1.10
9 bbls. bgs. paper, 3-80, 3-100, 3-125, 500 ea.	..	9.15	9.15	7.00	7.00
1 bb pint flasks	..	4.00	4.00	4.00	4.00
Drayage	..	..	.50	....	...
			$567.78		
1 bag prime coffee (green Rio)	166	.46	76.36	.11½	19.09
			$644.14		$281.61

It is noticeable that there are container charges for rice, Dwight soda, crushed sugar, "Try Me" tobacco, alum, copperas and whiting; barrel charges for yellow C and standard A sugar; also cartage charge for the entire bill.

The foregoing prices, it is true, were for the greenback dollar, and the gold dollar in 1864 would have purchased substantially as much as it will purchase today. But apart from the Pacific coast, no one ever saw a gold dollar then. The nation in general did business with the greenback. The farmer sold his produce for paper money. The wage-earner was paid in greenbacks.

Gold was scarce throughout the world in 1864, and by reason of its scarcity had high purchasing power. Gold is abundant now and its purchasing power has declined. The world's gold production in the last quarter of a century just about equals the previous production from the discovery of America by Columbus.

It is a little difficult to keep the mind clear on this. We are apt to think of the gold dollar as a thing of fixed value, whereas in fact it is subject to wide and sometimes violent fluctations. We are deceived by a false appearance, just as the eye of the man rising in a balloon is deceived by the false appearance of the earth falling away from him. He seems to be stationary, just as the gold dollar seems stationary, when in actual fact he himself is rising in one instance and the gold dollar is falling in the other.

GET THE COYOTES.

Should Allow None to Escape.

There are two good reasons for attacking the coyote now. This is the season when his fur is worth taking, and anything in the line of fur is valuable these days, even down to the rabbit and the mole.

Not only is this the season when the fur is good, but it is the season before the denning season, and the old adage that an ounce of prevention is worth a pound of cure applies in the eradication of the coyote. An ounce of prevention is worth anywhere from five to 12 ounces of cure, for every old coyote killed now means one less litter of from five to 12 pups in the spring.

Even in the thickly settled sections of the farming country of the northwest there are coyotes and they do real damage every year. They are especially harmful in the sheep-growing districts, and one coyote can do much damage to the farm flock, even though he actually fail to touch a single sheep. Sheep can't endure fright. One good scare from a coyote will actually cause a loss of several days' grain in a sheep. Sheep are really "scared out of a year's growth" if too many coyotes are allowed to visit him in the pasture.

Expert coyote hunters claim that winter is not the best time to trap coyotes, but they can be captured in traps at any season of the year, and the winter time is excellent for poisoning.

Mournful Numbers.

Clarice—The widow is awfully selfish about taking the men's attention. She is always looking out for Number One.

Beatrice—No, dear; she is merely looking out for Number Two.—Life.

To Sell War Stamps

Everybody Can Buy Without Hardship

A new and practical method of securing funds for the conduct of the war and at the same time of developing the thrift and saving habit in the lives of the American people has been announced by the United States treasury department. It is as simple as buying postage stamps. It has the unqalified indorsement of President Wilson and the government hopes that within a year $2,000,000,000, almost as much as the first Liberty loan, will be raised by the sale of stamps ranging in value from 25 cents to $4.12 each. The stamps will pay 4 per cent interest to the buyer, and will be payable by the government in five years. They may be bought during December and thereafter at postoffices, banks and most railroad stations. No person may purchase at one time more than $100 worth or hold at the time more than $1000 worth of these certificates.

These obligations of the United States will be evidenced by stamps of two demoninations—a war saving stamp costing from $4.12 to $4.23, according to the month in which purchased, and having a maturity value of $5 and a thrift stamp costing 25 cents.

Will Mature In 1923.

During December, 1917, and January, 1918, war savings stamps will be sold for $4.12 each. At the beginning of each of the succeeding months of 1918, starting February 1, the cost of a stamp will increase 1 cent a month. All war savings stamps issued during 1918 will mature on January 1, 1923, when they will be redeemed at $5 each.

The difference between the purchase price paid at any time during 1918 and $5 represents the interest the government will pay the holder.

With the first war saving stamp bought the purchaser will be given a war savings certificate containing spaces for 20 such stamps. If the 20 spaces are filled before February 1, 1918, the cost will have been $82.40 for the filled certificate and on January 1, 1923, the government will redeem the certificate at $100.

Will Sell Thrift Stamps.

Thrift stamps, costing 25 cents each, are to be affixed to thrift cards, which will be supplied without cost. The card when filled, at a cost of $4, may be exchanged for a war savings stamp bearing interest at 4 per cent, compounded quarterly, merely by turning the card in at the postoffice, bank or other sales agency and paying the difference between $4 and the current price of a war savings stamp. The thrift stamp feature of the plan will afford an unparalleled opportunity for the small investor to place money at interest with absolute safety. The privilege of surrendering a certificate to the government and receiving the cost thereof plus interest has been provided for those who may later find themselves in need of their money.

Italy Fights Hard.

At the end of a terrible week in the history of the Italian army, the soldiers and the people of Italy appear to have regained much of their confidence. After a successful, though costly, retreat from their advanced battle front to the Piave river, they made a stand that at this writing looks like it would bring the advance of the German-Austrian forces to a halt. The latter have fought desperately to gain a crossing of the river, but have failed, the Italians having stationed themselves on the home side for the defense of their native land.

Russia Still in Turmoil.

The Russian situation remains in great turmoil. Authentic reports of the condition in Petrograd are lacking. The contesting factions appear to be swinging back and forth, now one with the advantage, now the other. That there is no great change in so far as the power of Russia in the war against Germany is concerned is evident. While the conservative and radical elements strive with each other in civil war Germany has little to fear, and is free to divert her eastern front army largely to the western front. Germany's greatest offensive against Russia now is of a political nature—a constant stirring up of internal strife and discontent. In like manner, Germany has been working against Italy, but with comparatively little success. Whatever success of this nature is accomplished in either Russia or Italy will have to be borne by the soldiers of England, France and the United States on the western front, where Germany's increased military strength will be thrown.

Is the Submarine Solved?

The submarine has shown comparatively little effectiveness against allied shipping for the last few days, and hope is springing up that the battle against it has almost been won. For the week ended November 10 only six British ships were sunk, of which only one was of 1600 tons carrying capacity. It has been common for the week's toll to include from 10 to 20 vessels of this size. The four weeks last reported show the following British losses:

	Over 1600 Tons.	Under 1600 Tons.
Week ended Oct. 20 ..	17	8
Week ended Oct. 27 ..	14	4
Week ended Nov. 3...	8	4
Week ended Nov. 10 ..	1	5

For fear the ship building program and the efforts against the submarines will relax the government is warning the people against discrediting the further power of the submarine. It remains a great menace, says the government officials, and the construction of ships must be carried on with the maximum speed.

More Sweaters Needed.

The American Red Cross has issued an urgent appeal to the women of the country to knit more sweaters for the soldiers. More socks and wristlets are also needed. The need with the coming of winter is beyond the capacity of the organization to furnish without the aid of the women throughout the country. All knitting should be done under the direction of local Red Cross organizations, which are located in nearly every town in the country.

Self-Sacrifice Needed.

The greatest need of America at the present time is the spirit of self-sacrifice, says Secretary Wilson of the United States department of labor. So great a part of the world population is suffering so keenly that it becomes little less than criminal for those with plenty to live in ease and comfort when a little sacrifice would ease the suffering of others and save the lives of thousands who would otherwise die of want or exposure. In addition to this, says Secretary Wilson, there is the possibility that because of human selfishness the war will actually be lost for humanity, and Prussian frightfulness actually dominate the world.

Closer Cooperation.

At the recent national convention of the American Federation of Labor a movement was noted looking toward a closer relationship between the farming class and the labor organizations. A. C. Townley of the National Nonpartizan league urged that the affiliation of the farmer with organized labor was advisable. No action was taken on the matter in a formal way.

Y. M. C. A. Secures Funds.

After the country had risen to two huge Liberty loan issues, had subscribed loyally to the Red Cross and to the Armenian and Belgian relief funds, the Y. M. C. A. recently asked for $35,000,000 and got it. The Y. M. C. A. is doing a wonderful work in behalf of the soldiers in the army camps and on the battlefields, and the people of the nation during the last 10 days have responded loyally to its appeal for funds.

Mexico Still Amuck.

With the world so involved in the European struggle, it has been virtually overlooked that Mexico is still in the throes of civil war. Villa is now again in open warfare against Carranza, head of the government in Mexico. He is organizing his old forces as thoroughly as possible, and has captured certain towns in northern Mexico, where he has set up his headquarters.

Railroads Want Loans.

The possibility that the railroads of the country will ask the government for loans of money with which to increase equipment and transportation efficiency has been sounded in a statement by Samuel Rea of the Pennsylvania railroad. Mr. Rea said that it was extremely difficult for the roads to sell their own bonds at this time because of the gigantic number of government bonds of various classes recently placed on the market.

Railroad Strike Threatened

The four national brotherhoods of railway trainmen have again brought forward the possibility of a nation-wide strike to obtain higher wages or better working conditions. President Wilson has intervened by calling a conference of the brotherhood leaders for today, November 22, at which time he will urge upon them the settlement of their difficulties without recourse to strike.

"It is inconceivable to me that patriotic men should now for a moment contemplate the interruption of the transportation which is so absolutely necessary to the safety of the nation," says the president.

Organizes Pig Clubs

U. S. Agent Boosts Meat Growing

For the purpose of stimulating the growing of swine throughout the state of Washington the United States government through the state college at Pullman is conducting a pig club program. B. E. Smead, with the title of U. S. agent in animal husbandry and state pig club leader, is in charge of the work. He is now devoting his entire time to the organization of clubs among the boys and girls of the state.

Mr. Smead has had actual experience in producing hogs, having conducted a hog farm for five years at Opportunity, near Spokane. While he made a specialty in the production of Duroc Jerseys, his familiarity with the business extends to other breeds.

Mr. Smead reports increasing interest in the club work, several having been organized and others now in process of organization. His office is at the college at Pullman, where he can be reached by those wishing to undertake the production of pork by the pig club plan. Nearly all the time, however, he spends on the farms assisting in organizing clubs.

Great Show Is Now On

From Portland comes word that the Pacific International is this year outclassing former years in a number of respects. Animals from at least five states are entered.

Your Country Is Calling For More Products

The most important factor in this war is the raising of record crops and bringing new lands into cultivation. The high prices for all products makes this patriotic appeal also of personal advantage to you. Do your bit.

Your Opportunity to Serve Your Country is in Stevens County

Although prices for all products have increased our low prices and easy terms for logged-off lands near Springdale, Washington, have remained the same.

We will be glad to have you examine the property and talk to the neighboring farmers. Drop us a line when you will be at Springdale, Washington, and our man will be at your disposal.

Phoenix Lumber Co.

Dept. D.

Spokane, Washington.

Please send me your folder on Stevens county logged-off land.

Should Guard Food Supplies

Menace Calls Forth Proclamation by President

While the farmers are being urged to grow more food and the housewives of the country appealed to to prevent waste, the government has been amazingly negligent in its long failure to take proper steps to guard the nation's food supplies. Enemy aliens have applied the torch and enormous losses have been suffered.

Spurred to action by increasing criticism, the cabinet discussed this menace last week, and now the president has issued a proclamation prohibiting enemy aliens approaching within 100 yards of waterfronts, docks, railroad terminals or storage houses.

Unfortunately this proclamation applies only to German aliens, as technically we are at war only with Germany. In reality, as every one can see, we are also at war with Germany's allies—Austria-Hungary, Bulgaria and Turkey—but since no declaration of war has been made against those countries there is no authority of law to interfere with the movements of their subjects.

But even if the proclamation applied to them something more would be needed to protect the country's food supplies. Waterfronts, warehouses and food depots should be guarded, but the amazing and alarming fact remains that very little patrol service has been provided.

The truth came out with alarming candor at the convention in New Orleans, last week, of the Fire Marshals' Association of North America. Franklin H. Wentworth of Boston, secretary of the National Fire Protection association, assailed the complacency of the country in the face of fire hazard conditions generally known to be deplorable.

As is well known, New York is the great shipping point for the food supplies, munitions and other commodities we are sending to our soldiers in Europe and our allies. The long waterfront there is congested with these valuable supplies, and they were found to be practically unguarded.

To test conditions Mr. Wentworth sent a man along the waterfront. Without pass or permit this man visited the entire waterfront from Brooklyn bridge to Coney island, driving and walking about warehouses and piers overflowing with merchandise, foodstuffs and supplies intended for our allies and soldiers in Europe.

He was not stopped or questioned as to his business or why he was there. He found two soldiers on duty at the Erie basin, but even these did not question him.

These incidents, as Mr. Wentworth forcibly told the fire marshals, "show what amazing irresponsibilities and stupendous risks may stalk through the present gaps between local, state and national control of the fire hazard. What price may we not yet pay for lack of organization in the face of these great dangers as the war drags out its dreadful course into worse bitterness and hatreds?"

Presidential proclamations will not guard these unguarded food supplies and munitions. It takes men to do that—men with rifles and instructions to challenge every passer, to arrest suspicious characters and to shoot any one who may resist.

Will Unify Work

County Agriculturists Lay Plans

With a view to coordinating their work, all following out the same line of endeavor, the county agriculturists of the state have held four sectional meetings recently. One meeting was of southwest Washington agents, one of northwest, one of southeast and one of northeast.

The action is taken at this time especially with a view of making the work as efficient as possible in increasing production of foodstuffs. From time to time the agents of each district will meet for discussions and exchange of experiences. Occasionally a joint meeting will be held at the state college at Pullman, from which the work will radiate under the general government and college supervision.

Two prominent proposals have grown out of the meetings—the holding in the various localities of short schools for the benefit of the farmers on subjects vital in the production of increased crops and the organization of agricultural councils of farmers in the various counties of the state. A number of movements of this kind are expected to grow out of the movement of coordination.

Reports Prosperity

Industry Humming, Wages Good

To the Editor of The Washington Farmer: I never write anything for publication, but your course about doing away with traveling agents appeals so strongly to my way of thinking and doing that I am writing to heartily approve of it. Let me also say that I approve in the highest degree your exposure and running down of such scoundrels as the Northwest Trading company and other similar concerns.

While I am at it, will say that Lewis and surrounding counties were never better prepared than now to buy less and live better than ever before. There are more fruits and vegetables canned and preserved and the farming and dairying people are better off financially and otherwise than ever before. While there is a great scarcity of poultry, a great many have a pig or two to tide them a while when slaughtering time comes. Destroying young calves has almost stopped, as they are selling at from $2 to $3. Some fall plowing has been done, but not as much as should have been. Every industry throughout the country is humming and wages are good. If one could do away with food and feed speculators the people could lay away some money for a rainy day and all be contented.

A. R. KNOWLES.

Adna, Wash.

MAKE CORN MEAL

Home Process Shown at Corn Show.

The second annual corn show staged by the Exchange National bank of Spokane, Wash., is this week putting on a unique and valuable feature under the direction of extension department of the Washington State college. It is a demonstration of how to make and cook corn foods. The idea was worked out by George A. Olson, chemist of the state college, and is being illustrated by Misses Grace Coulter and Anna Walter of the extension department.

The process consists of soaking the whole corn in water of ordinary room temperature for 10 or more hours. It is then run through a meat chopper or other coarse grinder. When necessary it is run through two or three times to get it to the right fineness. The product of this operation is ready then for the making of corn bread, corn mush, corn muffins or other corn foods.

The corn show as a whole is highly satisfactory. The lobby of the bank is well filled with good displays.

Gourd Family Is Important.

The gourd family furnishes the human families with many edible fruits and it is believed that pumpkins and squashes are of American origin, though in nowise certain. On the other hand, it is known that watermelons, muskmelons, cucumbers and all that branch of the family are of Asiatic origin. Yet all countries have native species of this great family.

Wedding Custom From France.

The custom of wearing orange blossoms at weddings is of comparatively recent date in this country. It came to us, like most other fashions in dress, from the French, who in their turn derived it from Spain. In the latter country it had long obtained, and is said to have been of Moorish origin.

ATKINS SAWS

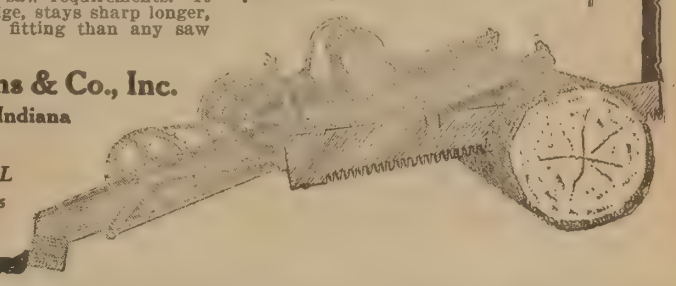
SILVER STEEL

The Choice of Expert Woodsmen

The time that you, and maybe a hired man, waste with a poor saw runs into dollars. It only takes a part of this waste to buy the best saw made—the famous ATKINS. It will do your work 25 per cent. faster than any other saw —will run easier and stay sharp longer.

Quicker—Cheaper—We'll Prove It

The Atkins Cross-Cut is *Segment Ground* (Atkins Patent). It tapers from the tooth-edge to the back and from the ends to the middle. Other saws have wide set teeth, but that isn't the same thing. Atkins teeth *cut*, they don't chew. Every stroke brings out a clean, thin ribbon of wood.



The Finest Steel.—Atkins Silver Steel, used in all our best saws, is the finest formulated for saw requirements. It takes a keen edge, stays sharp longer, and needs less fitting than any saw made.

Take an Atkins Saw home and try it. If it doesn't prove itself a timesaver and all we claim, your dealer will refund your money. The genuine ALWAYS has our name on the blade. All good dealers sell Atkins Saws and Tools.

Atkins Drag Saws

Why pay for a good machine and use anything but the best saw with it? Try Atkins Saws once and you will never try to "get along" with any other.

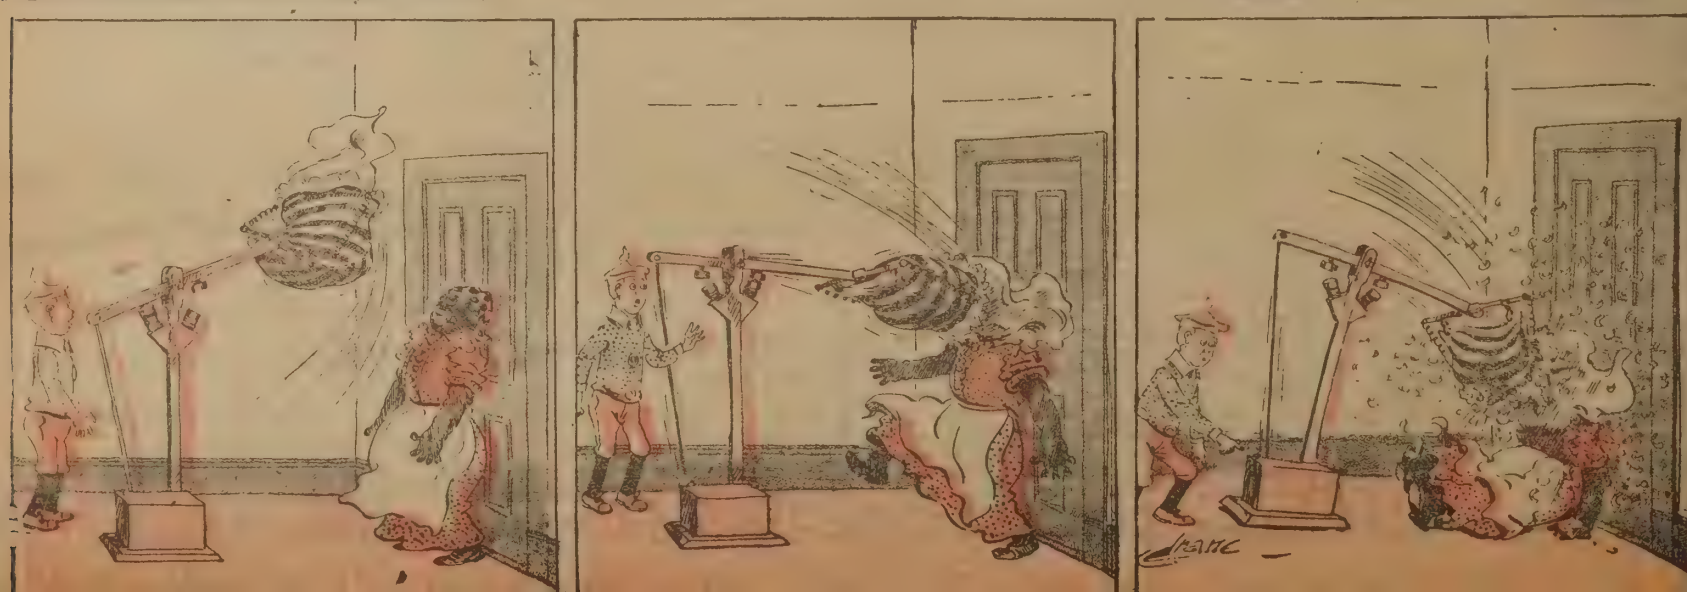
KATE AND KARL RIDE PIG-A-BACK



ONE OF WILLIE'S INVENTIONS THAT DIDN'T WORK

DEAR TOMMY: I made this adjuster so that Susan wouldn't have to hold our pillows in her teeth, which makes Mamma angry. It didn't work just right and banged a pillow over Susan's head until the feathers all came out. Maybe I can fix it!

Yours, etc.,
WILLIE

Is Belgian Hare to Have Its Day?

Valuable Source of Food Supply in Europe for Many Generations

The rabbit family have proved to be a very valuable source of food supply in Europe for many generations, and more especially during the war, which has been an impetus for the food experts of the United States department of agriculture to advocate the breeding and raising of the Belgian hare to reduce the cost of our meat supply. About a decade ago or more our government began the campaign and followed it up by issuing several farmers' bulletins on the care and raising of this very prolific and palatable animal. This and the newspaper agitation of the economical question of the production of this food supply, has caused the Belgian hare craze to extend from time to time among the farmers and townspeople throughout the land.

The head of the family down to the toddling youngster have sought to raise the toothsome bunny, to reduce the meat bill. A very few, some by mere chance were successful, but nearly all met disaster, by the simple process of feeding the young with too large a ration of green feed. Beginning at weaning time, and until half grown the youngsters were attacked with a bowel complaint, which is very contagious, and fatal as the cholera, usually killing the entire hutch, and the breeders wondered why. The government experts have admitted that this disorder is a disastrous feature of the industry, and that it was an unsolved problem; offering no remedy. A successful ration, and a sure preventive of this fatality among the young, is clean hay and some grain, but little green food until half grown.

In my 20 years' experience in raising and breeding rabbits, I have lost but a few of the young with this trouble. Three years ago I raised more than 400 hares, and lost quite a number of the youngsters that season, due to the fact that my quarters were overstocked, and I let several of my breeding does run loose in a large protected enclosure. They burrowed into the ground, as nature intended in bringing forth its young, and the little fellows had access to nothing but green feed with the surplus stock in the enclosure. I lost the entire litters of five does about weaning time, the result of the experiment.

The Belgian hare breeds very rapidly, the period of gestation being 28 days. The doe will produce 12 litters of from 5 to 10 rabbits annually; but it is not advisable to let her raise more than four litters. The Belgian hare and the Flemish giant rabbit are recommended for meat production, as these breeds are large and develop rapidly. I have found it profitable to cross the two breeds on that account and for vigorous stock. Inbreeding reduces the size, causes slow development and frail stock. With sanitary and varmint proof hutches the rabbit can be raised successfully in the basement, outbuildings, or out in the weather; they abhor filth, and are of very clean and thrifty habits.

The cost of production is less than any other meat, not excepting poultry. The supply can be quickly increased, without requiring space that may be required for the production of crops. They begin to breed at four months old; well fed the young reach a marketable size of from five to six pounds live weight at from three to five months old.

There is hardly a family in the land that can not keep one or two does, and raise rabbits from the waste of the houhehold, such as vegetable and fruit peelings, and vegetable tops for rough feed. Scraps of bread, left over mush, rice and meals take the place of the high-priced grains. If fortunate enough to have a garden, the rabbit-food problem is solved throughout the year, and the breeding stock can successfully be increased to from four to six does. For winter plant several rows of carrots, turnips or kale in the garden; the balance of the year your hutches will thrive upon the weeds and refuse that the garden will produce. After you have picked your peas, beans, and corn, pull the stocks up, wash or shake the soil from the roots; it is all food for thrifty bunny. When you do your pruning in the fall or spring, give bunny a chance to strip the limbs of the fruit tree or berry vine of its bark and twigs. At fruit canning time save all the pulp from the fruit and berries after you have extracted the juice; bunny relishes the salts, sweets, and acids you are casting away. There are many obnoxious weeds, such as the peppery dogfennel that bunny dearly loves; there is but one thing in the garden that grows you must not feed bunny—the parsnip which kills the bovine is also fatal to our little economic friend.

Of the many hundreds of the Belgian and Flemish giants that I have raised, we have used them all to reduce the meat bill, having sold none for market purposes, only a few for breeding purposes. Many has been the guest at our home, who abhor and refuse to eat bunny, who on leaving the table called the attention of the housewife to the well-browned fried chicken just served.

Bunny is also a useful machine; it is a lawn-mower at our house. Frames of various sizes covered with wire netting, also on the bottom to prevent bunny from burrowing, may be seen sitting on our lawns, or the clover growing between the fruit trees. Nice rich-green clover, too, the ground being renewed each time the grass is mown.

When killing a rabbit for use, never try to skin and dress it while warm. A small blow on the head makes it senseless; then with a sharp blade sever it head, and hang it up by its hind legs in a cool place until rigor mortis sets in, before skinning. When cool it is odorless and skins easily. In skinning make an incision on the back, and with each hand pull the skin each way down on the limbs and sever with your chopping ax at the lower joints of the limb, it is only a moment's work.

The Belgian hare probably originated in Belgium or northern France. It was quite generally known in the northern part of continental Europe before the attention of English fanciers was directed to it. As their first stock came from Belgium, that country was credited with having originated the breed, which was exploited in England and elsewhere as being a cross between the rabbit and the wild hare. This claim seems to have been fully disproved by many unsuccessful efforts to produce the same cross. The chief known reason for calling the animal a hare lies in its color resemblance to the wild hare.

Camphor Trees Profitable.

The camphor tree is one of the many plant importations from China that promise much in the United States. The trees grow well in hedges 15 feet apart in the south and the average of eight tons of clippings per acre yields on distillation about 200 pounds of camphor. This means a present profit of more than $150.

Lord God of Hosts, Be With Us Yet, Lest We Forget, Lest We Forget

One week from today nearly 20,000,000 American families will gather around the Thanksgiving table. Across the sea, "somewhere in France," American soldiers, to what number we know not, will be taking turns in little trench groups about their mess, while perhaps enemy shells are bursting about them. What will the menu be here? What will it be there?

This year the American soldiers in France will have plenty, though it will not be of the turkey-and-pumpkin-pie kind. This year, as usual, the average American home will not suffer deprivation. America has plenty of food. But what of next Thanksgiving? What of the twelve months intervening? What if the war continues over a second or even a third year? The mess tables of the allied soldiers of humanity may be bare of absolute necessities if we forget that our wheat and meat and fats and sugar must be conserved. Germany is not forgetting. The home folks are on rations in Germany, and more than that, they are working double shifts to produce and transport the necessities of life to the soldiers who are fighting America and England and France and all civilizatioin. If Germany wins, it will be because her people at home made sacrifices that the army might be fed and clothed and armed. If Germany loses, it will be because the American people sacrificed that the soldiers of humanity might be fed and clothed and armed for power and efficiency.

As we plan and eat our Thanksgiving dinners "over here," let us remember that the soldiers "over there" are dependent upon us for necessities, the necessities of victory over Prussian brutality and terrorism. "Lord God of Hosts, be with us yet, lest we forget, lest we forget."

First Liberty Bonds

Convert Now and Secure the 4 Per Cent Rate

The first Liberty bonds bear 3 1-2 per cent interest; the second issue 4 per cent.

Holders of first issue bonds, however, have the privilege of converting them into 4 per cents, provided they make application before May 15, 1918.

The Farmer advises its readers to make such application immediately, before December 15, 1917, in order to secure the 4 per cent rate from that date, when the first semi-annual interest payment falls due on the 3 1-2 per cents.

It is suggested that those who desire to convert have their own banks handle the matter for them with the reserve bank through which the securities were purchased in the first instance. In this way the owner of the bond may be sure that his conversion privilege will not be shackled with trifling but harassing mistakes, and at the same time have the satisfaction of knowing that the amount of detail labor assumed by the federal government will be thereby lessened, inasmuch as many of the banks undoubtedly will handle a volume of this business in an omnibus transaction.

While the loss of interest would be trifling to a holder of a 3 1-2 per cent bond who failed to make his application for conversion before December 15, this year, but prior to May 15, 1918, the transaction would be complicated.

For illustration, suppose that you did not make your application until after December 15. In the case of bonds which may be presented for conversion after December 15 and prior to the period when the right to convert expires—May 15, 1918—in addition to surrendering their coupon bonds, the holders thereof must pay to the government the difference between interest at 3 1-2 per cent and interest at 4 per cent from December 15, 1917, to the date of conversion, the sum of such interest payment to be figured, of course, on the amount of the bonds in accordance with an interest table supplied by the treasury.

The better and simpler way will be for you to take up this matter before December 15, with the bank through which you made your subscription. The bank will do the rest for you.

SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

Cheerfulness a Virtue That May be Cultivated With Care

Dr. Hirshberg

He that is of a merry heart hath a continual feast. The man who is cheerful about his yesterdays is apt to confident of his tomorrows. A sunny mood brings forth the best efforts of the flesh as well as of the spirit. The choleric, depressed, phlegmatic or blue-spirited person may be so because of some peculiar structural defect in his glands by inheritance or from disease. The investigation by research workers of 89 families show that in many instances the reappearance of similar temperaments and moods is distinctly hereditary.

The pattern of a temperament, whether moody, "dumpy" or cheerful, is laid in general outlines to inheritance. This does not mean that your hereditary temperament and passion can not be changed, but that if no special effort at discipline, association, control or training is attempted, it will have a trend of the majority of the family.

The melancholic character gives up easily, says this or that cannot be done or the other is impossible. He worries, weakens at simple difficulties and finds life more or less of a burden, with tears or complaints as a solace.

If such temperaments are taken in time; if in families where one of the four ordinary types of temperament prevails, the individual is made to associate with and is educated by those of a more cheerful, optimistic nature, no matter how strong the inherited traits are, the hammering and drilling of the outside influences soon counteract the less pleasant and less useful tendencies and change them to your great advantage.

Nonchalance, indifference, phlegmatic insensitiveness, blue devils, a worrisome flesh, pessimism or any other destructive, anti-earning weakness of nature, whether inherited ever so firmly and from the plagues of both houses, can be thoroughly overcome, if the victim or those near and dear to him have the will, the determination and the good sense patiently and persistently to try.

Women and Young Folks Make Good

(Continued from page five.)

ized into squads and taken to the orchards to harvest fruit. It is not a little encouraging to note, at the end of the season, that the additional effort of women and school boys and girls, the exchange of labor and the assistance of the business men has resulted in saving practically all of every crop. There has been a considerable shortage of labor during most of the season, yet, in spite of that fact, the waste this year has been almost inconsiderable compared with any previous year since I have been in Benton county.

H. H. BOONE, County Agricultural Agent, Walla Walla: The two fruit evaporators here are using women almost exclusively in the preparation of their products and the quality of their work for this purpose is better than man labor. One evaporator is paying but 20 cents per hour and the women are working the usual eight hours as the law requires. The third evaporator at the state "pen" started this week and of course will use convict labor in the operation of their plant. All the large apple packing plants in the county use women sorters and packers to a large extent and they do just as good work as the men. Last Sunday at the Baker Boyer 600-acre orchard, was staged what was called apple conservation day, a crowd of over a thousand men, women and children picked 50,000 boxes of apples and were payed at the rate of 30 cents per hour. During the last two or three weeks the schools at Waitsburg and Touchet have been dismissed in order to use the child labor on the farms in saving the fruit and potato crop. This sort of labor is all right when properly supervised, but the old saying that one boy is a boy; two boys are a half boy and three boys are no boys at all, applies where children are turned loose in an orchard to pick fruit, without somebody to oversee the job. Around Touchet and Gardena the hay growers have been exchanging labor in the harvesting and baling of their crops for some time, while around Walla Walla the dairymen have been doing the same thing when it comes to filling their silos. Last year nine neighbors went in together and filled their silos for 65 cents per ton. Around Wailtsburg and Prescott several wheat farmers have purchased 12-horse combines and will be independent of the transient labor feature for next year, one man will drive and the neighbor sew sacks. This is a little slower than the header or large combine method, but it is a whole lot surer. In addition to this feature they are not feeding a small army of men on high priced "grub" nor are they forced to feed a bunch of horses. Among the drawbacks to this method might be mentioned the chance of grain shattering if the acreage is large and the large amount of unthreshed grain that will result where the machine is not equipped with a motor or the number of horses is not sufficient to keep up motion when going up hill. In traveling about the county I have seen several women in overalls helping with the various farm operations. This is especially true in the irrigated sections.

GEORGE LA RUE, Twisp: The women and young folks of this community seem to be willing workers, and are anxious to help where their services are needed. One farmer hired two young women to help stack his alfalfa. Another made a threshing crew of his boys and girls. Farm help has been a little short, but it hasn't been necessary for women and children to do much hard drudgery farm work yet. There has been no complaint as to the quality of their work, but they shouldn't be expected to do as much hard work as a man. They are best adapted to light work that requires care and patience. The farmers did more exchange of work while threshing than usual. Farmers in this locality haven't been hit very hard yet by the labor shortage problem, but should be figuring on the question for next season. There is no doubt about there being a prize in store for every one that succeeds with farm crops or live stock next year.

F. P. CLARK, Sunnyside: Everybody has worked to relieve the labor shortage. Women and children have picked fruit and potatoes, shocked hay, and some of the stronger women have helped stack. If they had done as usual there would have been a great loss of food products in Yakima valley. In fact they are far superior to the "jungle stiff" so common in our country. Women and young people are good fruit pickers, especially the farmer class. Young and old seemed to realize that they must help harvest this crop if it was to be harvested. It is about all in now. Some potato men are using improved diggers that put the potatoes in boxes. The neighbors exchange work. One man has hay, another fruit, another potatoes or beets, so it works fine. Some men have gone as far as three miles to help in filling silos. That is one job women and children can not do. I depended entirely on our neighbors for help in the fruit harvest and got along very well, in fact better than previous years with transient help.

D. D. BIRKS, Ione: I do not know to what extent women or children have helped out in the labor shortage. I have no doubt, though, that the majority of the women are more dependable than the average of our men laborers. There has been some exchange of labor among the settlers, but most of us have done what we could ourselves and let the rest go.

One experience with labor this year was sufficient for me. I was unlucky enough to meet an I. W. W. who pretended he wanted to work. I supplied him with tools and went good for about $28 worth of provisions for him. After two or three days' work and the wasting of some good timber he skipped out with the provisions and tools, and I had the pleasure of buying back my own tools. I then decided to do what I could myself and let the rest of the work go.

R. H. HOLCOMBE, Kennewick—The work of picking and packing fruit has been done by high school scholars and women more this year than usual, and we have found the women equal to men in picking fruit except where the ladder is needed. In cutting asparagus we have hired girls that are quicker than men, but we have to have a man to pick it up and carry it to the packing house. In spraying some men have changed work to overcome shortage of help.

J. O. WOODS, Omak—In this section, mostly given to fruit raising, women and girls are used to a large extent in picking and packing, and in most cases give satisfaction, being careful and painstaking. Help has been very scarce this season, and there is danger of much loss if the weather turns cold soon. Car shortage is very serious, and if relief does not come soon there will be a great loss of fruit.

J. F. McCURDY, Wapato—From the commencement of the fruit season there has been a willingness shown on the part of the women and high school students to assist in the production and harvesting of the crops. The value of the effort varied with each individual, ranging from excellent to futile attempt to perform labor to which they were not qualified. The season here, owing to the extreme heat during the harvest, would not be a correct criterion by which to judge the quality or the amount of work that the women could perform. Not being used to outdoor work the average woman could not compare with the men. Women are depended upon to do practically all the fruit packing here, and there has not been many who have done work in the orchards. The fruit pickers generally were better than least season, owing, I think, to the vigorous measures used by the government to keep down labor agitation and holding the disorderly element in subjection.

J. P. CHRISTENSEN, Port Angeles—While farming in this county is not the paramount source of labor, conditions in this phase of our life is felt to a considerable extent. We find that women and girls are gradually assuming a share of the work. The local condition can best be illustrated by one of our farmer's expressions, as he said to the writer: "While there is much to be wished for, as regards the result of women's work, it is better than the class of work I get from the men I can pick up nowadays." He referred to the milkers in the dairy work.

O. C. GLEICHMAN, Kennewick—The women and young folks have responded readily to the call of fruit growers for help in harvesting our fruit. They had a great deal to do

CHAPTER VIII.

The Knife.

In every community, be it never so small, there are undesirable citizens; and while the little party was still at breakfast on the following morning three such members of society came around the cabin and let fall their packs, greeting the occupants boisterously.

"Well, well!" said Lee, coming to the door. "You're travelin' kind of early, ain't you?"

"Yes—early and late," one of them laughed, while the other two sprawled about as if to rest.

"How far are you goin'?"

"Not far," the spokesman answered.

Now, in the north there is one formality that must be observed with friend or enemy, and, though Lee knew these men for what they were, he said:

"Better have some breakfast, anyhow."

"We just ate." There was an uncomfortable pause, then the speaker continued: "Look here. It's no use to flush around. We want a piece of this creek."

"What are you goin' to do with it?"

"Cut that out, Lee. We're on."

"Who wised you up to this?" inquired the miner, angrily, for he had other friends besides those present whom he wished to profit by this strike, and he had hoped to keep out this scum.

"Never mind who put us Jerry. We're here, ain't we"

Stark spoke up. "You can't keep news of a gold strike when the wind blows, Lee. It travels on the breeze."

The harm was done, and there was no use in concealment, so Lee reluctantly told them of his discovery and warned them of the stakes already placed.

"And see here, you fellers," he concluded, "I've been 40 years at this game and never had a creek named after me, but this one is goin' to be called 'No Creek" Lee Creek' or I fight. Does it go?"

"Sure' that's a good name, and we'll vote for it."

"Then go as far as you like," said the miner, dismissing them curtly.

"I'll step along with the boys and show them where our upper stakes are," volunteered Stark, and Runnion offered to do the same, adding that it were best to make sure of no conflict so early in the game. The five disappeared into the woods, leaving the others at the cabin to make preparations for the homeward trip.

"That man who did the talking is a tinhorn gambler who drifted in a month ago, the same as Runnion, and the others ain't much better," said Gale, when they had gone. "Seems like the crooks always beat the straight men in."

"Never knowed it to fail," Lee agreed. "There's a dozen good men in camp I'd like to see in on this find, but it'll be too late 'gin we get back."

"Dose bum an' saloon feller got all de bes' claims at Klondike," said Poleon. "I guess it's goin' be de same here."

"I don't like the look of this," observed the lieutenant, thoughtfully. "I'm afraid there's some kind of a job on foot."

"There's nothing they can do," Gale answered.

"We've got our ground staked out and it's up to them to choose what's left."

They were nearly ready to set out for Flambeau when the five men returned.

"Before you go," said Stark, "I think we'd better organize our mining district. There are enough present to do it."

"We can make the kind of laws we want before the gang comes along," Runnion chimed in, "and elect a recorder who will give us a square deal."

"I'll agree if we give Lee the job," said Gale. "It's coming to him as the discoverer, and I reckon the money will be handy, seeing the hard luck he's played in."

"That's agreeable to me," Stark replied, and proceeded forthwith to call a miners' meeting, being himself straightaway nominated as chairman by one of the strangers. There was no objection, so he went in, as did Lee, who was made secretary, with instructions to write out the business of the meeting, together with the by-laws as they were passed.

The group assembled in the cleared space before the cabin to make rules and regulations governing the district, for it is a custom in all mining sections removed from authority for the property holders thus to make local laws governing the size of claims, the amount of assessment work, the size of the recorder's fees, the character of those who may hold mines and such other questions as arise to affect their personal or property interests. In the days prior to the establishment of courts and the adoption of a code of laws for Alaska, the entire country was governed in this way, even to the adjudication of criminal actions. It was the primitive majority rule that prevails in every new land, and the courts later recognized and approved the laws so made and administered, even when they differed in every district, and even when these statutes were often grotesque and ridiculous. As a whole, however, they were direct in their effect and worked no hardship; in fact, government by miners' meeting is looked upon to this day by those who lived under it as vastly superior to the complicated machinery which later took its place.

The law permits six or more people to organize a mining district and adopt articles of government, so this instance was quite ordinary and proper.

Lee had come by his learning slowly and he wrote after the fashion of a schoolboy, who gives his characters from every angle and follows their intricacies with corresponding movements of the tongue, hence the business of the meeting progressed slowly.

It was of wondrous interest to Necia to be an integral part of such important matters, and she took pride in voting on every question; but Burrell, who observed the proceedings from neutral ground, could not shake off the notion that all was not right. Things moved too smoothly. It looked as if there had been a rehearsal. Poleon and the trader, however, seemed not to notice it, and Lee was wallowing to the waist in his own troubles, so the young man kept his eyes open and waited.

The surprise came when they had completed the organization of the district and had nearly finished by adopting bylaws. It was so boldly attempted and so crude in its working out that it seemed almost laughable to the soldier, until he saw these men were in deadly earnest and animated by the cruelest of motives. Moreover, it showed the first glimpse of Stark's spite against the trader, which the lieutenant had divined.

Runnion moved the adoption of a rule that no woman be allowed to locate mining claims, and one of the strangers seconded it.

"What's that?" said Lee, raising his one eye from the note book in which he was transcribing.

"It isn't right to let women in on a man's game," said Runnion.

"That's my idea," echoed the seconder.

"I s'pose this is aimed at my girl," said Gale, springing to his feet. "I might have known you bums were up to some crooked work."

Poleon likewise rose and ranged himself with the trader.

"Ba Gar! I don' stan' for dat," said he, excitedly. "You want for jump Necia's claims, eh?"

"As long as I'm chairman we'll have no rough work," declared Stark, glaring at them. "If you want trouble, you two, I reckon you can have it, but, whether you do or not, the majority is going to rule, and we'll make what laws we want to."

He took no pains now to mask his dislike of Gale, who began to move towards him in his dogged, resolute way. Necia, observing them, hastened to her father's side, for that which she sensed in the bearing of both men quite overcame her indignation at this blow against herself.

"No, no, don't have any trouble," she pleaded, as she clung to the trader. "For my sake, daddy, sit down." Then she whispered fiercely into his ear: "Can't you see he's trying to make you fight? There's too many of them. Wait! Wait!"

Burrell attempted to speak, but Stark, who was presiding, turned upon him fiercely:

"Now this is one time when you can't butt in, Mr. Soldier Man. This is our business. Is that plain?"

The lieutenant realized that he had no place in this discussion, and yet their move was so openly brazen that he could restrain himself with difficulty. A moment later he saw the futility of interference, when Stark continued, addressing the trader:

"This isn't aimed at you in particular, Gale, nor at your girl, for a motion to disqualify her isn't necessary. She isn't old enough to hold mining property."

"She's 18," declared the trader.

"Not according to her story."

"Well, I can keep her claims for her till she gets of age."

"We've just fixed it so you can't," grinned Runnion, cunningly. "No man can hold more than one claim on a creek. You voted for that yourself."

Too late, Gale saw the trick by which Stark had used him to rob his own daughter. If he and his two friends had declined to be a part of this meeting, the others could not have held it, and before another assembly could have been called the creek would have been staked from end to end, from rim to rim, by honest men, over whom no such action could pass, but, as it was, his own votes had been used to sew him up in a mesh of motions and resolutions.

"No Creek" Lee had the name of a man slow in speech and action, and one who roused himself to anger deliberately, much as a serpent stings itself into a painful fury; but now it was apparent that he was boiling over, for he stammered and halted and blurted explosively.

"You're a bunch of rascals, all of you, tryin' to down a pore girl and get her ground; but who put ye wise to this thing, in the first place? Who found this gold? Just because there's enough of you to vote that motion through, that don't make it legal, not by a damned sight, and it won't hold, because I won't write it in the book. You—you" He glared at them malevolently, searching his mind for an epithet sufficiently vile, and, finding it, spat it out—"dressmakers!"

So this was why both Stark and Runnion had gone up the creek with the three new men, thought Burrell. No doubt they had deliberately arranged the whole thing so that the new arrivals could immediately relocate each of Necia's claims—the pick of all the ground outside Lee's discovery, and the surest to be valuable—and that Stark would share in the robbery. He or Runnion, or both of them, had broken Lee's oath of secrecy even before leaving camp, which accounted for the presence of these thugs; and now, as he revolved the situation rapidly in his mind, the soldier looked up at a sudden thought. Poleon had begun to speak, and from his appearance it seemed possible that he might not cease with words; moreover, it was further evident that they were all intent on the excited Frenchman and had no eyes for the lieutenant. Carefully slipping around the corner of the cabin, and keeping the house between him and the others, Burrell broke into a swift run, making the utmost possible speed for fear they should miss him and guess his purpose, or, worse yet, finish their discussion and adjourn before he could complete his task. He was a light man on his feet, and he dodged through the forest, running more carelessly the farther he went, visiting first the upper claims, then, making a wide detour of the cabin, he came back to the initial stake of Necia's lower claim, staggering from his exertions, his lungs bursting from the strain. He had covered nearly a mile, but even so, he laughed grimly as he walked back toward the cabin, for it was a game worth playing, and he was glad to take a hand on the side of the trader and the girl. Coming within earshot, he heard the meeting vote to adjourn. It could not have terminated more opportunely had he held a stopwatch on it.

From the look of triumph on Runnion's face, the lieutenant needed no glance at Gale or Poleon or Necia to know that the will of the majority had prevailed, and that the girl's importunities had restrained her advocates from a resort to violence. She looked very forlorn, like a little child just robbed and deceived, with the shock of its first great disillusionment still fresh in its eyes.

Runnion addressed the other conspirators loudly.

"Well, boys, there are three good claims open for relocation. I'm sorry I can't stake one of them."

"They won't lie open long," said one of the undesirable citizens, starting to turn downstream while his two companions made for the opposite direction. But Burrell stopped them.

"Too late, boys. Your little game went wrong. Now! Now! Don't get excited. Whew! I had quite a run."

Gale paused in his tracks and looked at the young man queerly.

"What do you mean?"

"I've jumped those claims myself."

"You jumped them!" cried Necia.

"Sure! I changed my mind about staking."

"It's a lie!" cried Runnion, at which Burrell whirled on him.

"I've been waiting for this, Runnion—ever since you came back. Now—"

"I mean you haven't had time,"—the other temporized, hurriedly.

"Oh, that sounds better! If you don't believe me take a look for yourself; you'll find my notice just beneath Miss Gale's." Then to "No Creek" Lee he continued, "Kindly record them for me so there will be no question of priority."

"I'll be damned if I do!" said the belligerent recorder. "You're worse'n these crooks. That ground belongs to Necia Gale."

Up to this time Stark had remained silent, his impassive face betraying not a shadow of chagrin, for he was a good loser; but now he spoke at large.

"Anybody who thinks the American army is asleep is crazy." Then to Burrell, "You certainly are a nice young man to double-cross your friends like that."

"You're no friend of mine," Meade retorted.

"I? What you you mean?"

"I double-crossed you, Stark, nobody else."

The Kentuckian glared at him with a look like that which Runnion had seen in his face on that first day at the trading post. The thought of these five men banded together to rob this little maid had caused a giddiness to rise up in him, and his passions were beginning to whirl and dance.

"There's no use mouthing words about it," said he. "These thugs are your tools, and you tried to steal that ground because it's sure to be rich."

Stark exclaimed angrily, but the other gave him no time to break in.

"Now, don't get rough, because that is my game, and I'd be pleased enough to take you back a prisoner."

Then turning to Lee he said: "Don't make me force you to record my locations. I staked those claims for Miss Gale, and I'll deed them to her when she turns 18."

Poleon Doret called to Runnion: 'M'sieu, you 'member w'at I tol' you yestidday? I'm begin for t'ink it's goin' be you."

The man paled in his anger, but said nothing. Necia clapped her hands gleefully.

Seeing that the game had gone against him, Stark got his feelings under control quickly, and shrugged his shoulders as he turned away.

"You're in the wrong, lieutenant," he remarked; "but I don't want any trouble. You've got the law with you." Then to Runnion and the others he said, "Well, I'm ready to hit the trail."

When they had shouldered their packs and disappeared down the valley, Gale held out his hand to the soldier. "Young man, I reckon you and I will be friends."

"Thank you," said Burrell, taking the offer of friendship which he knew was genuine at last.

"I'm in on that!" said "No Creek" Lee; "you're all right!"

Poleon had been watching Stark's party disappear, but now he turned and addressed the young soldier.

"You mak' some enemies today, M'sieu."

"That's right," agreed Lee. "Ben Stark will never let up on you now."

"Very well, that is his privilege."

"You don't savvy what it means to get him down on you," insisted Lee. "He'll frame things up to suit himself, then pick a row with you. He's the quickest man on a trigger in the west, but he won't never make no open

"The Barrier" By REX BEACH

(Continued from preceding page.)

play, only just devil the life out of you with little things till you flare up, then he'll down you. That's how he killed the gold commissioner back in British Columbia.

Necia had said little so far, but the look in her eyes repaid the soldier for his undertaking in her behalf, and for any mischief that might ensue from it. She came forward and laid her hand upon his.

"Promise that you won't have trouble with him," she begged anxiously, "for it's all my fault, and I'd—I'd always blame myself if any hurt came to you. Promise! Won't you?"

"Don't worry, daughter," reassured Gale. "There's nothing Stark can do, and whatever happens we're with the lieutenant. He's our kind of people."

Burrell liked this grizzled old fellow with the watchful eyes, and was glad now that he could grip his hand and face him squarely with no guilt upon his conscience.

By this time Doret had finished with their blankets and the four set out for town, but instead of following the others they accepted Necia as guide and chose the trail to Black Bear creek. They had not gone far before she took occasion to lag behind with the lieutenant.

"I couldn't thank you before all those people—they would have read our secret—but you know how I feel, don't you, Meade?"

"Why! It was a simple thing——"

"It was splendid when you defied them. My, what a fierce you are! Oh, boy! What if something should happen to you over this?"

"But there's no chance. It's all done, and you'll have your fine dresses and be able to hold your nose just as high as you want."

"Whatever I get I will owe to you. I—I've been thinking. Suppose—well, suppose you keep two of those claims; they are sure to be rich——"

"Why, Necia!" he exclaimed.

"They're yours, and I have no right to them under the law. Of course it would be very handsome of you to give me one—the poorest."

"You ought to have your ears boxed," he laughed at her.

"I don't see why. You—you—may be very poor, for all I know.

"I am," he declared, "but not poor enough to take payment for a favor."

"Well, then, if they are really mine to do with as I please, I'll sell one to you——"

"Thanks. I couldn't avail myself of the offer," he said, with mock hauteur.

"If you were a business man instead of a fighting person you would listen to my proposition before you declined it. I'll make the price right, and you may pay me when we get behind yonder clump of bushes." She pouted her lips invitingly, but he declared she was a minor and as such her bargain would not hold.

It was evidently her mood to reenter the land of whims and travel again, as they had on the way from town, but he knew that for him such a thing could not be, for his eyes had cleared since then. He knew that he could never again wander through the happy valley, for he vowed this maid should be no plaything for him or for any other man, and as there could be no honorable end to this affair it must terminate at once. Just how this was to be consummated he had not determined as yet, nor did he like to set about its solution, it hurt him so to think of losing her. However, she was very young, only a child, and in time would come to count him but a memory, no doubt, while as for himself, it would be hard to forget her, but he could and would. He reasoned glibly that this was the only honest course, and his reasoning convinced him; then, all of a sudden the pressure of her warm lips came upon him and the remembrance upset every premise and process of his logic. Nevertheless, he was honest in his stubborn determination to conclude the affair, and finally decided to let time show him the way.

She seemed to be very happy, her mood being in marked contrast to that of Poleon and the trader, both of whom had fallen silent and gloomy, and in whom the hours wrought no change. The latter had tacitly acknowledged his treachery towards Stark on the previous night, but beyond that he would not go, offering no motive, excuse, or explanation, choosing to stand in the eyes of his friend as an intended murderer, notwithstanding which Poleon let the matter drop—for was not his friend a good man? Had he not been tried in a hundred ways? The young Frenchman knew there must have been strong reason for Gale's outburst, and was content to trust him without puzzling his mind to discover the cause of it.

Now, a secret must either grow or die—there is no fallow age for it—and this one had lived with Gale for 15 years, until it had made an old man of him. It weighed him down until the desire to be rid of it almost became overpowering at times; but his caution was ingrained and powerful, and so it was that he resisted the temptation to confide in his partner, although the effort left him tired and inert. The only one to whom he could talk was Alluna; she understood, and though she might not help, the sound of his own voice at least always afforded him some relief.

As to Poleon, no one had ever seen him thus. Never in all his life of dream and song and romance had he known a heavy heart until now, for if at times he had wept like a girl, it was at the hurts of others. He had loved a bit and gambled much, with equal misfortune, and the next day he had forgotten. He had lived the free, clean life of a man who wins joyously or goes down with defiance in his throat, but this venomous thing that Runnion had planted in him had seeped and circulated through his being until every fiber was penetrated with a bitter poison. Most of his troubles could be grappled with bare hands, but here was one against which force would not avail, hence he was unhappy.

The party reached Flambeau on the following day, sufficiently ahead of Stark and his men for Lee to make known his find to his friends, and by sunset the place was depopulated, while a line of men could be seen creeping slowly up the valleys.

Gale found Alluna in charge of the store, but no opportunity of talking alone with her occurred until late in the evening, after Necia had put the two little ones to bed and had followed them wearily. Then he told his squaw. She took the news better than he expected, and showed no emotion such as other women would have displayed, even when he told her of the gunshot. Instead, she inquired:

"Why did you try it there before all those others?"

"Well, when I heard him talking, the wish to kill him was more than I could stand, and it came on me all at once, so that I was mad, I suppose. I never did the like before." He half shuddered at the memory.

"I am sorry," she said.

"Yes! So am I."

"Sorry that you failed, for you will never have as good a chance again. What was the matter with your aim? I have seen you hit a knot-hole, shooting from the hip."

"The man is charmed," declared Gale. "He's bullet-proof."

"There are people," she agreed, "that a gunshot will not injure. There was a man like that among my people—my father's enemy—but he was not proof against steel."

"Your old man knifed him, eh?"

She nodded.

"Ugh!" the man shivered. "I couldn't do that. A gun is a straight man's friend, but a knife is the weapon of traitors. I couldn't drive it home."

"Does this man suspect?"

"No."

"Then it is child's play. We will lay a trap."

"No, by God!" Gale interrupted her hotly. "I tried that kind of work, and it won't do. I'm no murderer."

"Those are only words," said the woman, quietly. "To kill your enemy is the law."

The only light in the room came from the stove, a great iron cylinder made from a coal-oil tank that lay on a rectangular bed of sand held inside of four timbers, with a door in one end to take whole lengths of cordwood, and which, being open, lit the space in front, throwing the sides and corners of the place into blacker mystery.

When he made no answer the squaw slipped out into the shadows, leaving him staring into the flames, to return a moment later bearing something in her hands, which she placed in his. It was a knife in a scabbard, old and worn.

"There is no magic that can turn bright steel,' she said, then squatted again in the dimness outside of the firelight. Gale slid the case from the long blade and held it in his palm, letting the firelight flicker on it. He balanced it and tested the feel of its handle against his palm, then tried the

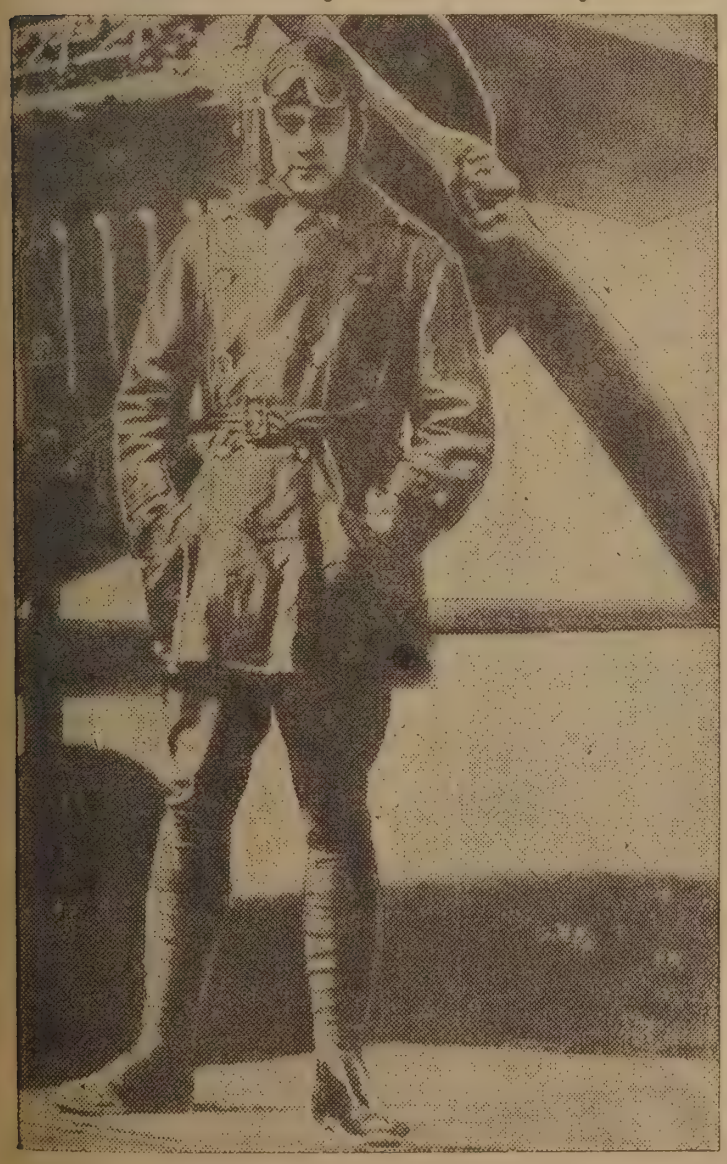
All the World's a Stage, and All the Men and Women Merely Players

Used in London's Air Defenses

This remarkable photo was obtained when the naval crew was practicing with this very useful gun. It will be remembered that it was near the Coast that some of the most effective shooting by anti-aircraft guns has been done during air raids on London and England. The rapidity with which these crews keep their guns firing is remarkable.

Walloped the President.

Colonel Daniel T. Moore, now commander of the 310th field artillery, who as a "husky young captain of artillery" walloped Colonel Roosevelt when the latter was president, causing him to lose the sight of his left eye. The captain was aide to President Roosevelt and frequently engaged his chief in boxing bouts. An unusually sharp counter landed, injuring blood vessels in the eye. Captain Moore never knew that he had blinded the former president until the colonel disclosed that fact recently.



Wilson Annoyers in Workhouse Garb

Copyright by International

Some of the White House pickets posed in the garb in which they appear in the workhouse, where they were sentenced. The uniform consists of underwear made of ticking, thick cotton socks, man's size shoes with thick soles, and a wrapper and apron made of gingham. A string tied about the waist serves as corset. In the pocket of the apron were carried comb and tooth brush.

He Will Fly for the Navy

Franklin K. Lane Jr., son of the secretary of the interior, has resigned from a commission in the aviation section of the signal corps of the army and has accepted a commission as a navy flier with the same rank. Lieutenant Lane is one of the youngest commissioned officers in the American service, being only 19 years of age. He is already a full-fledged flier. No reason has been given for young Lane's shift except a preference for the naval branch of the air service.

Vetch for Food

By N. S. ROBB, County Agriculturist, Lane County, Ore.

Vetch, when cooked correctly, will surpass some of the peas and colored beans, according to J. W. Hocaday of Irving, Ore.

Mrs. Hocaday has tried cooking vetch, and their family like it fine as a food.

Mrs. Hocaday states that it is cooked very similar to peas. The seed should be soaked and parboiled and seasoned with butter. It is cooked similar to dried beans or peas.

A small, hard, seeded vetch occurs occasionally in vetch. After one learns to distinguish this, the seed can be sorted out before cooking, and this difficulty remedied.

It has the flavor resembling the old black-eyed pea. It is mealy and is similar to butter beans. They have been using vetch right along lately, and plan on keeping enough on hand for a supply this winter.

Water Spots in Wool and Silk.

Some silks and wools are spotted by water. This probably dissolves some of the finishing or weighting down substances present and on evaporating these substances are deposited irregularly or in rings. A satisfactory method for removing such spots, says a bulletin on the Removal of Stains From Clothing and Other Textiles, issued by the United States department of agriculture, is to dampen the entire material evenly and press it while still damp. Either sponge the material carefully with clean water or shake it in the steam from a briskly boiling teakettle until it is thoroughly damp, then press it.

Coat of Red Chenille.

One of the best of the new red shades is shown in this coat of pigeon blood red chenille cloth, with nutria trimming the odd shaped cuffs, the flying side panels, and forming the luxurious high collar, says the Kansas City Star. Besides all this there are fur buttons and unobtrusive slot pockets.

Stains in Wool and Silk.

Wool and silk, being more delicate than cotton and linen require more careful treatment in removing stains from them, according to a bulletin on "The Removal of Stains From Clothing and Other Textiles," issued by the United States department of agriculture. The use of very hot water must be avoided since it turns both wool and silk yellow, shrinks wool and weakens silk and injures its finish. The silk materials are too delicate to stand much rubbing without breaking or separating the fibers and felts together the wool fibers and results in a shrinkage or thickening of the material. Both wool and silk are dissolved by alkalis and are injured even by washing soda or strongly alkaline soap. Acids, with the exception of nitric, which weakens and turns the fibers yellow, do not attack the wool and silk readily.

Ways to Cook Carrots

To the Editor: I think the children and adults too can be encouraged to eat more of the perishable vegetables and use less of wheat and meat if each cook will try to invent new ways of cooking them, or use the different ways, if she knows them. The homely carrot, for instance, some people think it is only fit for cow feed, others will try a "mess or two" during the winter and of course there are others who use them very often and no doubt know much more about them than I do. The carrot can be baked like parsnips, fried like potatoes, steamed and mashed and seasoned, boiled in meat stock and thickening added, diced cold boiled for salad and used with potatoes in vegetable hash. One of the best soups is carrot soup. Carrot spiced pickles (steam whole and pare and cut length ways before adding hot spice vinegar) are relished. Carrot preserves are fine and are made the same as green tomato pickles, using lemon and ginger. Carrot pie made like squash pie is good also. Some use carrot juice in cream to color butter or to tint and flavor colorless apple jelly, and a matured carrot keeps well all winter in a common frost proof cellar. The carrots that did not ripen are very tender and are very easily canned, as the Farmer canning chart in some back copy shows. Other vegetables have each a number of uses if put to a test. Owing to almost a 100-day dry spell here we will need to buy vegetables but they are cheaper, go farther and are more healthful than meat and I intend to have a variety of dishes from each kind.

BE SURE TO GIVE NUMBER AND SIZE.

To Clean Corsets.

A corset is one of the things that may be easily cleaned, although the average woman seems not to understand this fact, says the Kansas City Star. None of the steels or other fixings of the corset need be removed for the cleaning process, but the corset must be dried very quickly after washing, so that the steels won't rust. Soap the corsets with a good soap, lay on a flat surface and scrub with a brush. Then rinse several times in hot water to which has been added a tablespoonful or two of ammonia, and dry quickly.

Rain.

Little drops of water,
Falling with a thud,
Take the blowing landscape,
And turn it into mud.

Sturdy Warm Hosiery for Winter Months

If you like good, warm hosiery, buy Durable-DURHAM Fleece-lined. It is much heavier than most fleece-lined hosiery at the same price—25 cents a pair. The extra weight means extra value, extra warmth and extra wear.

DURABLE DURHAM HOSIERY

FOR MEN, WOMEN AND CHILDREN

Is Made Strongest Where the Wear is Hardest

Not only is Durable-DURHAM made in fleece-lined, but also for all occasions and all seasons. Durable-DURHAM will always save darning and cut down hosiery bills because the heels, toes and soles are strongly reinforced; the legs are full length; the wide elastic top can't be pulled off or torn by garters; the feet and toes are smooth, seamless and even; sizes are correctly marked; the color is fast because the famous Durham dyes prevent color from fading or turning green after wearing or washing; quality is uniform throughout. Durable-DURHAM Hosiery is made in all weights for all seasons of the year and sells for 15, 19, 25 and 35 cents. Buy Durable-DURHAM Hosiery for everybody in the family.

Ask your dealer to show you our women's 35c and men's 25c silk-mercerized hosiery with the patented anti-run stitch.

DURABLE DURHAM HOSIERY Trade-Mark

DURHAM HOSIERY MILLS, Durham, N. C.

The test of to-day is the Pocket Book test

Today home management is on a war, not a peace basis. "How much am I getting in nutriment for what I pay?" is the home manager's problem.

In peace or war Ghirardelli's Ground Chocolate makes good as an economical and appealing food. A blend of pure cocoa and sugar, two of the most nourishing foods known, it supplies energy and resupplies waste tissue at lowest cost. Use it freely as a food and you will practice food conservation.

Ghirardelli's Ground Chocolate

Comes in 1-2-lb., 1-lb. and 3-lb. cans. Order from your grocer.

D. GHIRARDELLI COMPANY

Since 1852 San Francisco

Alice Has a Little White Puppy.

Dear Aunt Nellie: I have written to the Corner before. I have a white puppy. It is a cute little fellow. We have some red pullets. They are beauties. I have lots of friends. I go to the Kennydale school. I am 8 years of age and am in the third grade. There are 15 pupils in my grade.—Alice A. Brown, Route 2, Box 10J, Renton, Wash.

Likes Horseback Riding.

Dear Aunt Nellie: I wrote to the Corner once before and saw my letter in print, so thought I would write again. By writing to the Corner I have gained two more friends, Anna McLean and Obera Prouty. I wish some more of the cousins would write to me. I am 15 years old and Arna is 14, but I am not much older than she is. My sister and I are going horseback riding this afternoon. I like horseback riding better than anything else.—May Prouty, R. F. D. 1, Outlook, Wash.

A Big Apple Orchard.

Dear Aunt Nellie: This is the first time I have written to the Corner. I like to read the letters very much. I am 10 years old on the 9th of May. Have I a twin? I live on a 20-acre apple orchard. We had 13 carloads of apples this year. I go to the Nob Hill school. I am in the fifth grade. My teacher's name is Miss Mabry. I have a mile and a half to go to school every day. I have two sisters, Gladys is 14 and Frances is 4 on Christmas. If this letter is printed I will write again. Donald Wimer, R. F. D. 4, North Yakima, Wash.

Beulah Loves the Letters.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I have got so that I love the letters. I like Aunt Nellie's letters so much I read every one of them. I also read every one of the cousins'. I wish the cousins would write to me. If they are not my age I would like them just as well. I would like to do something to help our country. I want to be a Red Cross nurse. There is a girl in the same town I am that is three days younger than I am. We play every day at school. I am 9 years old. My birthday is April 11.—Beulah Shaw, Grandview, Wash.

The Red Cross Is Just the Thing.

Dear Aunt Nellie: I have written to you before, but I see the Corner is getting low in letters. We had a meeting the other night at our schoolhouse and had speeches on food conservation, also talks on buying Liberty bonds. In our town they have Red Cross meetings. They are knitting scarfs, sox, comfort kits, helmets, sweaters and mittens for the soldiers. Three young men of our neighborhood have gone to the training camps. All the teachers around here are having meetings in the schools. Our teacher hasn't started clubs yet, but I think she will. All the children like our teacher fine. I think the Red Cross meetings are just the thing to help the poor home boys in the trenches.—Cora Draper, R. F. D. 1, Farmington, Wash

Cooking Lessons Twice a Week.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I think it is getting quite big. I was going to write a long time ago, but I did not know what your address was. I am 11 years old. My birthday is July 2. I am in the sixth grade in school. I have five sisters and three brothers. I have a little baby sister. She is 4 months old. Her name is Mildred. I live in the country three miles from Mount Vernon. I go to the Meadow school. It is one-half mile to our schol. One of my sisters is in the fourth grade. In our school we have all kinds of games. The girls play basket ball and the boys play football. My teacher's name is Mr. Bentze. He has been teaching two years before and this will be his third year. I like him very well. My sister is in the little room. Her teacher's name is Miss Sponheim. We have manual training and domestic science in our school. Last year the girls only had sewing, but this year they have cooking, too. They have us take it twice a week. We have electric lights, so we do not have to burn kerosene. It is so much safer and brighter than the lamps. We live on a 20-acre farm. We have eight cows and 10 calves and three horses. We have 36 ducks and several hundred chickens. Twenty of the ducks are mine. I set the eggs and raised them to be big ducks. They are ready to sell, and it is time now, but I don't have time to sell them. We had the silo fillers Sunday forenoon and Saturday afternoon. We had to do so many dishes that I got tired of them.—Selma Lillquist, R. F. D. No. 5, Box 89, Mount Vernon, Wash.

Hilda's Second Corner Letter.

Dear Aunt Nellie: This will be the second time I have written to the Children's Corner, and I hope to see my letter in print. I enjoy reading The Farmer very much. I will be 11 years old on the 14th of November. Have I a twin? If I have I would like to have them write to me, and I will gladly answer. I am in the sixth grade. My teacher's name is Mr. Robertson. He is a good teacher. There are 26 children in our school. I like to go to school. There are three scholars in the sixth grade. We had a school picnic not very long ago. I have two sisters older than I. Their names are Lempi and Snelma. I have two younger sisters. Their names are Esther and Sylvia. I have a lot of fun with them when I do not go to school. Now, I will tell about the farm. I live on a 20-acre farm. We have six cows. Their names are Daisy, Bossie, Beauty, Bessie, Rosie and Busly. We have two yearlings and one calf, whose names are May, Lilly and Jennie. We have two horses, too. Their names are Molly and Billy, and we also have two pigs, two cats and one little dog.—Hilda Kuki, R. F. D. No. 1, Box 66, Buckley, Wash.

Goes to School on a Stage.

Dear Aunt Nellie: This is the first time I have written. I am 12 years old the first day of May. Have I a twin? If so I wish she or he would write. I have been reading the Children's Corner for a short time and I think the letters are very interesting. We live on a 10-acre farm in Ferndale. My teacher's name is Miss Nichols and I like her well. We have other teachers. Their names are Miss Brown and Miss Van Liew. Miss Brown is the principal. Miss Van Liew is the primary teacher. We have two dogs. Their names are King and Towser. We have two horses. One is bay and the other one is white. I have two brothers and one sister. Their names are Carl, Roy and Clara. We have a Ford and we go to Bellingham in it. I go to school on the stage. I have a mile and a quarter to go to school.—Nora Zimmer, R. R. 2, Ferndale, Wash. (Of course you belong to the Corner now, Nora, and we are all glad to have you for a cousin. You must write often.)

To Graduate in January.

Dear Aunt Nellie: I wish to thank you for the interesting book entitled Heidi which you sent to me as a prize. I took it to school for the teacher to read aloud and the school children enjoyed it as much as I did. I was very much surprised to find that my letter got a prize because when I wrote it I did not think about getting one. I live on Twin Oaks farm, near Roy. I have three brothers all younger than myself. I go to the Oak Knoll school and am in the eighth A grade. I expect to graduate this January. I am 13 years old. I have found my twin. Her name is Marcia Mossman and she lives near Raymond. I enjoy reading the other cousins' letters and I hope they like to read mine.—Esther M. Bower, Roy, Wash.

When a Feller Needs a Friend.

THE BARRIER

(Continued from page twenty.)

edge of it with his thumb-nail, and found it honed like a razor.

"A child could kill with it," said Alluna. "Both edges of the blade are so thin that a finger's weight will bury it. One should hold the wrist firmly till it pierces through the coat, that is all—after that the flesh takes it easily, like butter."

The glancing, glinting light flashing from the deadly thing seemed to fascinate the man, for he held it a long while silently. Then he spoke.

"For 15 years I've been a haunted man, with a soul like a dark and dismal garret peopled with bats and varmints that flap and flutter all the time. I used to figger that if I killed this man I'd kill that memory, too, and those flitting, noiseless things would leave me, but the thought of doing it made me afraid every time, so I ran away, which never did no good—you can't outfoot a memory—and I knew all the while that we'd meet sooner or later. Now that the day is here at last, I'm not ready for it. I'd like to run away again if there was any place to run to, but I've followed frontiers till I've seen them disappear one by one; I've retreated till my back is against the circle, and there isn't any further land to go to. All the time I've prayed and planned for this meting, and yet—I'm undecided."

"Kill him!" said Alluna.

"God knows I've always hated trouble, whereas it's what he lives on. I've always wanted to die in bed, while he's been a killer all his life and the smoke hangs forever in his eyes. Only for an accident we might have lived here all our days and never had a 'run-in,' which makes me wonder if I hadn't better let things go on as they are."

"Kill him! it is the law," repeated Alluna, stubbornly, but he put her aside with a slow shake of the head and arose as if very tired.

"No! I don't think I can do it—not in cold blood, anyhow. Good night! I'm going to sleep on it." He crossed to the door of his room, but as he went she noted that he slipped the knife and scabbard inside the bosom of his shirt.

(To Be Continued).

A Thanksgiving Task

You have all read the story of the first Thanksgiving in these United States in 1621, when the Pilgrims, in the tiny settlement of Plymouth, after gathering their first harvest, felt that they ought to set apart a day in which to express their gratitude, says the New York Tribune. You are quite sure to remember from your history lessons the names of some of the people who took part in the first Thanksgiving day.

There were Governor Bradford and Captain Miles Standish and John Alden and his Priscilla. One account says that Massasoit and his chiefs were invited to share in the rejoicings and that they remained three days.

Today you will learn how to make a miniature John Alden, just to remind you of that first Tranksgiving. If you follow directions quite closely you will have a little figure that might pass for a typical Pilgrim of that early day.

Mark the head of a clothespin with a serious expression, such as John Alden probably had. Stick two pieces of thick paper to the sides to form the arms and build up a body out of another piece of the same heavy paper, pasting it against the front and back and leaving it a little loose at the sides.

Knee breeches and jacket should be made from Quaker gray colored tissue paper, fitted around the neck. The hat is made from stiff paper of the same shade as the jacket. The rim of the hat is a circular piece with a hole in the middle which fits over the round crown. The hat can be either stuck to the clothespin or fastened on with a pin inside the hat crown.

John Alden.

Rydes Pig Meal

The high price of pork is known to all. Increase your profits by feeding Rydes pig meal.

25-lb. bag, **$1.50**; 50-lb. bag, **$2.85**; 100-lb. bag, **$5.50**.

Seattle, U. S. A.

News for Breeders

S. M. Mears, the Woodland, Wash., Poland China breeder, has recently purchased the herd boar Superba Jr. from the Royston estate at Payette, Idaho. Superba Jr. is reported to weigh 900 pounds. He is strictly big type and is a proven breeder of high-class stock. Mr. Mears has a fine lot of medium type sows of Willard breeding, and the product of the mating should be a high class lot of pigs.

N. P. Paulson of Madras, Ore., who is breeding Hampshire swine, has used Billy Sunday, a very fine boar from the J. M. Fruitts herd at Enterprise, Ore. This boar grew very large and his offspring were universally good. When the hog market went to pieces over two years ago Mr. Paulson cut down his herd and still keeps only a few, selling most of his stock to neighbors while quite young. But he has the best of Hampshire breeding and will build up his herd again when feed prices show a good prospect of dropping.

Mr. Dobson, banker of Redmond, Ore., will this winter try feeding silage to sheep. With G. W. Beaver, on his place near town, he will carry about 150 sheep through the winter. The 84-ton silo was filled about two-thirds full from seven acres of corn. The sheep will be fed cut oats straw with the silage and a little alfalfa hay. This will be the first feeding of silage to sheep in this locality. It will be watched with interest and the Farmer will try to report the result next spring.

Judges Have Hard Work

(Continued from page four.)

Queen; A. O. Huntley fourth, on Princess Perfection. Junior yearling—A. B. Cook first, on Miss Joy; Henry Thiessen second, on Lady Rex 29th; George Chandler third, on Lady Princeps. Ewe, 2 years and over—Mrs. Jackson first and second; Ed Schoel third. Yearling—Mrs. Jackson first and second; Ed Schoel third. Ewe lamb—Mrs. Jackson first and second; Ed Scoel third and fourth.

Flock—Mrs. Jackson first. Four lambs bred by exhibitor—Mrs. Jackson first; Ed Schoel second.

Champion ram—Mrs. Jackson. Champion ewe—Mrs. Jackson.

Fat Sheep.

Middle wool wether, 1 year and under 2—Brown Brothers first and second; J. G. S. Hubbard & Sons third. Pen of three yearling wethers—Madden Children first. Pen of three wether lambs—Robert Anderson first; Madden Children second. Champion wether in above class—Brown Brothers.

Long wool yearling wether—Hubbard & Sons first.

Carload fat lambs—E. S. Sweet first.

Carload fat ewes—G. D. Riggs first; E. S. Sweet second; Brown Brothers third.

Champion carload—G. D. Riggs first.

THE HOG SHOW.

The hog awards were published last week, but it may be said that especially in Poland Chinas few shows in the northwest have equaled it for all-round quality or for outstanding animals. The Durocs were good and two herds made strong competition. And while only one herd of Chester Whites were shown, the breed was well represented.

SHEEP

Hampshire Ewes

For Sale

500 yearlings, 300 two to five; 200 ewe lambs. Will sell in any number.

BROWN SHEEP CO., Twin Falls, Ida.

20 Oxford Down Rams 20

Yearlings and ram lambs; will make special price on the lot. All stock registered. No ewes for sale.

C. P. Kizer, Harrisburg, Ore.

OXFORD RAMS

Thirty choice Oxford ram lambs for sale. Prices reasonable.

HISK FARM, Spring Valley, Wash.

POULTRY

Rhode Island Reds and Whites

Rose comb and S. C. blue ribbon winners. Utility and show stock. 100 cockerels at $3 up. Bronze turkeys and Toulouse geese. Now is the time to buy for next year's breeding, from blue ribbon stock. Sale of pedigreed Rufus Red Belgian hares, bargains at $3 each. Registered Airdale bitch at a bargain if taken at once.

HIGHLAND FRUIT AND POULTRY RANCH.
J. NONNENMACHER.
R. F. D. 3. NORTH YAKIMA, WASH

Breeders' Department

JERSEY CATTLE

Waikiki Farm Jerseys

We offer several young bulls and heifers of exceptional breeding. Send for descriptions and breeding.

WAIKIKI FARM, R. 7, Spokane, Wash.

JERSEY BULL FOR SALE.
Year old, good individual, priced reasonable. Dam gave 45 to 50 lbs. of milk a day, test 4.8. Sire, Island bred.
MRS. J. F. PEFFER, Dayton, Ore.

HOLSTEIN CATTLE

Registered Holsteins

Both sexes for sale. Bulls include some 30-pounders from Grand Champion sire and dam, others with 15 nearest dams averaging 25 and 27 lbs. Prices low. Write promptly to

H. R. BOOMER, New Plymouth, Idaho.

POLAND CHINA SWINE

POLAND CHINAS

Service Boars, Bred Sows and Gilts, Brunk's Kind.

THOS. W. BRUNK, rt. 2. Salem, Ore.

YORKSHIRE SWINE

Spring Boars and Gilts

Gilts, bred or open, boars ready for service. Also weanling pigs. Best of breeding.

WM. NEUENSCHWANDER, Gaston, Ore.

HORSES

WILL SELL MY BELGIAN HORSES.
All thoroughbreds and registered. Three mares, one imported stallion, two yearlings, mare and stud. Sacrifice price.
ANDREW NIELSON, Mondovi, Wash.

SHORTHORN CATTLE

Shorthorn Cattle

Registered bulls and heifers of breeding age for sale. Some from extra heavy milking dams.

A. D. DUNN, Wapato, Wash.

Hercules Shorthorns

For particulars write

DAY & ROTHROCK

Grain and Produce Markets

Chicago Grain.

CHICAGO, Nov. 19.—Enlargement of supplies, together with improvement in the quality of arrivals, had a bearish effect today on the corn market. Prices although steady at the close, were 1-4c to 7-8c net lower with January $1.16 3-8 to $1.16 1-2 and May $1.15 1-4 to $1.15 3-8. Oats finished unchanged to 1-4c higher and provisions up 2 1-2 to 10 cents.

Receipts of corn here showed a liberal total for the first time in a long while, the aggregate being 417 carloads of which 270 were new corn. A decided handicap to the bulls lay in a special government report which seemed to imply that the latest federal crop estimate, 3,191,000,000 bushels, did not include the worst damaged corn and therefore meant a larger percentage of good corn than traders generally had figured on.

Provision prices were swayed by changes in the value of hogs. Most of the buying came from shorts.

Three Billions of Corn.

A corn crop larger by more than 66,000,000 bushels than ever grown in the history of American agriculture is the production of the farmers of the United States this year. The department of agriculture, in its preliminary estimate of the crop, places the quantity at 3,191,083,000 bushels. Conditions since the October forecast caused a reduction of about 19,700,000 bushels in the indicated output.

Preliminary estimates of other crops follows:

	Bushels.
Buckwheat	16,813,000
Potatoes	439,686,000
Sweet potatoes	84,727,000
Tobacco (pounds)	1,185,478,000
Flax seed	9,648,000
Pears	11,419,000
Apples	177,733,000
Apples (commercial crop bbls.).	21,461,000
Sugar beets (tons)	7,621,000
Kafirs	73,380,000
Cranberries (barrels)	240,000
Beans	15,957,000
Broom corn (tons)	50,000
Sorghum syrup (gallons)	17,486,000

Portland Wheat.

PORTLAND, Ore., Nov. 19.—Wheat buying in the northwest, which has been held in check since November 5 by the embargo put on shipments to Coast terminals, will be resumed this week. M. H. Houser, agent of the Food Administration Grain corporation, who returned from the east Saturday, announced that arrangements have been perfected to reimburse all dealers and warehousemen for the wheat they have been carrying so they in turn can now settle with the farmers in full whenever they can agree on the grades of wheat. Where they can not agree they can pay practically in full and final settlement will be made when the wheat is passed upon by licensed inspectors. The Grain corporation, however, will only pay for wheat when it reaches terminals or at such other points where it can be inspected. It is not likely, in the opinion of Mr. Houser, that there will be further delay in marketing the crop.

The mill feed market is firm at the recent advance of $1 a ton, as the demand continues in excess of the output. Because of the feed advance, millers were enabled to reduce the price of flour 20 cents a barrel to the $10 basis for patents.

Portland Market.

PORTLAND, Ore., Nov. 17.—There is much speculation among poultry dealers as to the probable price of Thanksgiving turkeys. It is the general opinion that the market will settle around 30 cents. Shippers are looking for a higher price, but the trade here believes that this quotation, which means a 35-cent market at retail, is as much as consumers will stand.

Live poultry of all descriptions cleans up readily in the face of larger receipts. Dressed meats are also firmer.

The egg market continues sluggish with the supply of fresh stock, though small, fully up to requirements at present prices. Storage eggs are slow and weak.

There was a better demand for cube butter at the close of the week and extras were scarce. Prints were unchanged.

Cheese is firm for the best grade and may advance because of higher markets east, but much poor cheese is offering here for which there are no buyers.

There was a fair demand from California for potatoes at the close of the week, with buyers offering $1.35@1.50 for fancy and $1.25 for choice stock. The car shortage restricts shipments.

There is very little trading in the Oregon bean market. Farmers are offering liberally, but because of the government restrictions on speculation buyers are only filling their immediate needs. The leading buyers quote to the farmer 9 cents for choice navy, 9 1-2@10 cents for fancy navy, 9 cents for Lady Washington and 8@8 1-2 cents for colored beans.

Hide prices were lifted 1@3 cents at the close of the week because of strong and higher markets in the east.

Inquiries for wool are coming in daily, but buyers and sellers can not get together on prices. The government census, recently completed, shows Portland to rank third in the United States in point of stocks of wool in warehouses.

In the following list of quotations the grain, hay, mill feed, hop, wool and hide prices are those paid to producers. The other quotations are prices from jobbers to retailers.

Oats—No. 1, $50.25 per ton.

Millstuffs—Bran, $31 per ton; shorts, $34.

Barley—No. 1 feed, $52; brewing, $53; rolled, $55@57.

Hay—Buying prices: Timothy, eastern Oregon, $27; alfalfa, $22.50@24; grain, $20.

Eggs—Oregon ranch, case counts, 50@51c per dozen; candled, 55@58c.

Poultry—Hens, 17 1-2@20c; ducks, 18@20c; turkeys, live, 23@24c; geese, 13@14c.

Butter—City creamery, prints, 45@49c per pound; cubes, extras, 43 1-2c.

Cheese—Tillamook triplets, 23c; Young Americas, 24c.

Dressed meats—Veal, 14 1-2@15c; pork, 19 1-2@20c.

Hops—1916, 16c; 1917 crop, 25@25 1-2c.

Potatoes—Oregons, buying price, $1.25@1.50 per hundred.

Wool—Eastern Oregon, 40@65c; valley, 58@60c.

Beans—Buying prices: Oregon navy, 9@10c; Lady Washington, 9c; colored, 8@8 1-2c.

The Wool Market.

BOSTON, Nov. 16.—The Commercial Bulletin will say tomorrow:

"The market for wool has been but moderately active during the past week, interest here being confined very largely to the medium and the low grade scoured wools suitable for military requirements. Prices are exceedingly firm. Manufacturers are well occupied on old orders, but find new business on civilian account rather slow. New government contracts continued to be placed more or less steadily."

Scoured basis—Texas: Fine 12 months, $1.68@1.72; fine eight months, $1.55@1.60.

California: Northern, $1.70@1.75; middle county, $1.50@1.55; southern, $1.35@1.40.

Oregon: Eastern No. 1 staple, $1.80; eastern clothing, $1.50@1.60; valley No. 1, $1.60@1.65.

Territory: Fine staple, $1.80@1.85; half-blood combing, $1.75@1.80; 3-8-blood combing, $1.45@1.50; fine clothing, $1.60@1.65; fine medium clothing, $1.55@1.60.

Pulled: Extra, $1.80@1.85; AA, $1.70@1.80; A supers, $1.60@1.65.

BUTTER AND EGGS.

PORTLAND, Ore., Nov. 17.—Butter prices—Prints, extras, 45@49c; cubes, extras, 43 1-2c; prime firsts, 43c; dairy, 33@35c.

Butter fat, Portland delivery—No. 1 sour cream, 52c.

SAN FRANCISCO, Nov. 17.—Butter—Fresh extra, 40c.

Eggs—Fresh extras, 55 1-2c; fresh extra pullets, 53 1-2c; extra firsts pullets, 52c.

Laurel as National Flower.

England is fighting now with the rose as her national flower. The United States has no national flower, recognized as such, but the mountain laurel comes nearer to being the right candidate for the honor than any other bloom particularly characteristic of the United States.

The mountain laurel is not found in other lands. It is hardy, permanent, beautiful and widespread in its distribution. The great artist Henry Turner Bailey finds in it all the symbolism necessary to make it Uncle Sam's flower.

New Wheat Order

Can Be Bought in the Country

SEATTLE, Nov. 17.—Puget sound millers, grain buyers and farmers secured what is regarded as an important concession from the food administration this week, according to telegrams received from Max Houser, representative for this district, now in Washington, that the government had consented to a modification of its buying rule so that the grain will be stored and bought in the country in place of at seaboard.

It is believed that Seattle millers were first to advocate this plan as the only feasible one, predictions being made at the time that it was the only one that would work satisfactorily in cleaning up the crop, turning it into cash for the growers, who would weary of long holding, and avoid the dangers of the acts of alien enemies in starting fires at terminals. The Baltimore fire was recalled as an instance of great centralization of foodstuffs in time of war. It will also nullify the effect of the advance of wheat storage charges scheduled by the Seattle port commission, to take effect November 25. Controversies between grain buyers, millers and shippers over the necessity for a car embargo to prevent congestion at tidewater terminals will now end. The new order will greatly conserve the car supply.

The embargo placed against the shipment of wheat to Puget sound terminals two weeks ago automatically checked down arrivals. Farmers were holding in the country, while at the same time the rule of the grain corporation prevented the government from buying excepting where the grain was in storage at tidewater. Growers were in need of cash and were anxious to save carrying charges and clean up.

The effect of the new order simply stated will be that grain dealers in the country will list their wheat with the federal grain corporation, and on approval 2 cents per bushel for carrying charges will follow the wheat absorbed by the corporation. It practically turns over the unsold portion of the crop to the corporation. When millers want wheat they will advise the corporation, buying as close to point of manufacture, as in the case of country mills, as possible. The wheat, inspected as shipped out, will obviate the necessity of a multiplicity of inspectors.

Mill feed this week advanced $1 per ton and automatically soft wheat flour declined 20 cents per barrel. Millers assert this week that they could get $5 per ton above the market price for 10,000 tons spot delivery if they had it.

Seattle Market.

SEATTLE, Wash., Nov. 17.—Due to the disregard of grading rules in spuds that have been coming on a cash basis to Western avenue dealers, the services of Fred N. Rhodes, district state horticultural inspector, has been called in, and he is inspecting all cars and returning a report of his findings. If the report is adverse, dealers will reject the spuds and hold them to the disposal of shippers.

BUYING PRICES.

Unless otherwise stated, the following prices are fixed on a jobbing basis and are average prices obtained in reports of transactions by jobbers.

The following prices are offered to the producer by the local dealers for delivery in round lots f. o. b. Seattle:

Eggs—Local, 56c per dozen; pullets, 45c dozen.

Poultry—Live hens, fat, over 4 lbs., 21@22c per lb.; 4 lbs. and under, 17@19c; old roosters, 14c per lb.; squabs, large, $3.50 per dozen; geese, fat, live, 15c per lb.; springs, live, 21c per lb.; hens and young tom turkeys, 28@29c per lb.

Beef—Buying prices: Prime beef steers, 7@8c per lb.; cows, fat, 7@8c per lb.; heifers, 6@8c per lb.

Hogs—Light, 16@18c per lb.; heavy, 12@13c per lb.

Veal—Fancy light, 14@15c per lb.; heavy, 9@13c per lb.

Hides—Salted, 18c per lb.; flint-dry hides, 32@33c per lb.; salt kip, 18c per lb.; green hides, 15c per lb.; green calf, 28c per lb.; dry calf (under 5 lbs.), 34c per lb.; bulls and dry salts, 4c per lb. less; green bulls, 12c per lb.; dry full wool sheep pelts, 36@38c per lb.; salt bulls, 14c per lb.

Advances in Meat Animals.

WASHINGTON, Nov. 16.—Prices of meat animals—hogs, cattle, sheep and chickens—were 62.2 per cent higher on October 15 than a year ago, 87.3 per cent higher than two years ago and 88.1 per cent higher than the average of the last seven years on that date, the department of agriculture announced today.

Prices increased 1.9 per cent from September 15 to October 15 compared with an increase of 1.4 per cent increase in the same period in the last seven years.

Choice Poland Chinas

Weaned pigs, $10; 60 lbs., $15, and the best bronze turkeys in the state. Magnibest bronze turkeys in the state. Magnificent markings. Pearl guineas, Toulous

E. A. KRUSE, Roseburg, Oregon.

Women and Young Folks Make Good

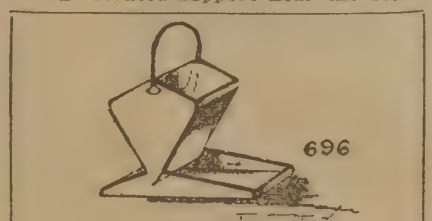
(Continued from page eighteen.)

in relieving the labor shortage. Their labor has been a success in only certain ways. Neither young folks or women are strong enough to pick fruit all day without slacking up a great deal in the afternoon. They can not keep up this work all day. Therefore, if we growers pay them 30 cents per hour we get only full value during half the day, and they commanded that wage. I must say that women and girls are very apt at sorting and packing fruit. They can do as well at sorting and almost as well at packing as men. In our packing plant we have only two men packers, while the rest of the packers and sorters are all girls and and women. We have adopted carrier belts, gravity rollers and all modern machinery which eliminates man power, and must say that man power is five times as expensive as any other power, namely gasoline or electricity. This year has been a most trying one in regard to labor, for two reasons. The I. W. W. for one and so many of our boys going to the call of the "colors." I was very fortunate in harvesting my crop of 6000 boxes of apples, as I have eight professional pickers who come here every year and pick my crop. I pay them by the box, therefore, each man earns according to his ability. Some make as much as $6 per day.

F. J. O'BRIEN, Richland—The women and young girls have been a great factor in relieving the labor shortage in this district. In fact they were employed to a large extent in the packing and picking of the fruit crop. About 75 per cent of our fruit this year was packed by women and girls, and in a general way they have proved very efficient and more dependable than the transient male workers, who are usually employed in this class of work. The farmers generally are cooperating one with another, thereby relieving the labor shortage and doing away with the necessity of employing outside help, and if the labor situation does not become any more acute than at the present time we do not anticipate any trouble in this district.

JOHN VAN TROJEN JR., Chimacum.—In our community the shortage of labor has not been such as to call the women to unaccustomed farm work, but boys under 16 have done their share. The boys especially helped out in haying and harvesting. We have used all the machinery we were able to get in meeting this shortage of labor.

E. E. STARKEY, Prosser.—Young folks and women have done more farm work than usual in harvesting and picking fruit and potatoes. The school was dismissed for a time to aid in this work, which has been the means of saving many products that would otherwise have been lost. Most of the work they have done has been equal to that of the men, but the children do not equal the women.

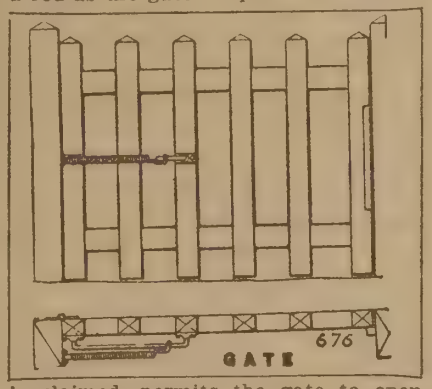


A resident of Okanogan county, not wishing his name used in print, yet gives some facts of interest in this discussion on the part played by women and boys in supplying labor shortage during these war times. He says: The utilizing of women as a substitute for farm labor will not meet with the success it does in Europe for two reasons—the precedent already established as to the work they are fitted for, and the acceptance of the slogan "Like wages for like work." For instance, any healthy woman is physically able to drive a mower or rake, etc., and yet I would feel like a brute in hiring a woman for that work; in other words, we are not brought up to work our women in the major activities that are a part of farm life, and we would have to pay nearly if not as much for women as for men helpers, which would be a real financial burden. So, if our women are to be used on the farm I believe they must be used in work that precedent has decreed as properly their sphere and where they can sucessfully compete with men. These requirements narrow the field very materially, but I believe any attempt to ignore these premises will meet with failure. In my locality there is a decided shortage of help to pick and pack apples. In this work a woman can do as much as a man, thus releasing a large number of men for other work. Economically speaking, every man working in this field when there is shortage of labor elsewhere is an absolute loss which can be turned into the profit column by utilizing woman labor. Regarding young people, those in the upper grades of school, I believe, during the war, with its deletion of labor power, that the schools or upper grades at least should be closed during harvest, if in an apple country for a few weeks preceding frost; if in a wheat country, for the threshing season, etc. This would be a tremendous factor in the labor situation, and, while it would shorten the school term, might be offset from an educational standpoint by adopting some plan to encourage thrift and patriotism by fostering competition between different classes and schools, in the purchase of bonds, and Red Cross work, with money earned. Roughly estimating, 80 per cent of our present farm labor as absolutely necessary to carry on our farm work. I believe 20 per cent could be done, with no real loss in efficiency, by women and young people of school age, if this class of labor could be drawn on at certain periods when needed most and in particular lines in which they are fitted.

Inventions

By C. J. LYNDE, Macdonald College, Quebec.

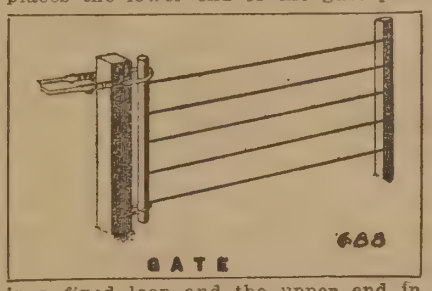
It Saves Labor.



The advantage claimed for this hod is that it can be placed on the stove or on an elevated support near the stove

where the coal can be obtained without stooping and without the labor of lifting a heavy scuttle.

Gate or Door Closer.



One end of the spring here slides on a rod as the gate is opened and this, it

is claimed, permits the gate to open smoothly, because the tension is uniform in all positions.

Wire-Gate Fastener.

In using this fastener, the operator places the lower end of the gate post

in a fixed loop and the upper end in the yoke; he then tightens the gate by swinging the handle up and out.

IRRIGATED LANDS—WANTED 666

FOR SALE VERY CHEAP—13-ACRE IRRIgated orchard tract, 4 miles from Caldwell, Idaho. About 7 acres commercial bearing trees. Will take Liberty bonds. Call or write G. H. Summers, 121 South Lincoln st., Spokane, Wash.

TO EXCHANGE—REAL EST. 705

WHAT WILL YOU TRADE FOR 640 acres wheat land in Douglas county, near Waterville? Consider trades for smaller farm, 5 to 40 acres in western Wash.; also lease on 160 acres school land. Modern 9-room house, barn for 32 head stock, several outbuildings, plenty water, farm implements. Valuation with stock and implements $40,000; without, $25,000. Write John Schillereff Sr., Douglas, Wash.

GIANT POWDERS Lift them out

It will pay you to test Giant Farm Powders in competition with any other stumping powder.

In the last year more than 2,000,000 pounds of these Giant Powders were used for stump blasting in Washington and Oregon alone. The users included farmers in every county in both states, the largest lumber and development companies, and the United States Government. They use the Giant brands because they have found that

GIANT FARM POWDERS
STUMPING — AGRICULTURAL

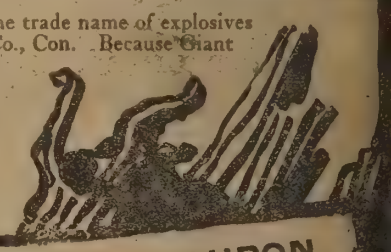
always give satisfaction and do their work at the lowest possible cost and in the most thorough manner.

In the Pacific Coast states the farmers require explosives that will disrupt, crack, split and heave the stumps and at the same time lift and loosen the roots for easy handling. Giant Farm Powders do this because they are made especially to suit western conditions. Because of their wider-spread force, they remove the stumps more economically than powders or dynamites that merely shatter and pulverize.

Test one case. Compare it with any explosive that you have ever used for stump blasting. After you have blasted a dozen stumps you will understand why farmers who have once used them always continue to use the Giant Farm Powders. Fill out and mail the coupon at the right, and we shall arrange with our nearest distributor to supply you promptly at the lowest market price.

There are two Giant Farm Powders—Giant Stumping Powder, used for blasting in wet soil, and Eureka Stumping Powder (which costs a little less) for blasting in dry soil. Both resist cold to a remarkable extent, seven days' exposure to a temperature of 32 degrees failing to freeze them. Ask your dealer for these brands.

THE GIANT POWDER CO., CONSOLIDATED HOME OFFICE: SAN FRANCISCO ESTABLISHED 1866



"Everything for Blasting"

BRANCH OFFICES: Seattle, Spokane, Portland, Salt Lake City, Denver

Have You Our Stump Book?

It is the most helpful and interesting book ever issued on Stump Blasting. It tells and shows how to save money and make land-clearing easier. It is written by Western men, from the Western viewpoint, and is full of pictures showing latest methods of blasting. Mark and mail the coupon and get it free. Other books—on boulder blasting, tree planting, ditching and subsoiling with explosives—also free on request. Mail the coupon *now*, before you lay this aside.

Warning. Giant Powder is the trade name of explosives manufactured by the Giant Powder Co., Con. Because Giant Powders are best known everywhere, many have assumed that all high explosives are Giant Powders. Insist upon having the genuine, made only by the Giant Powder Co., Con. If your dealer has only ordinary dynamite, write us and we will see that you get the genuine.

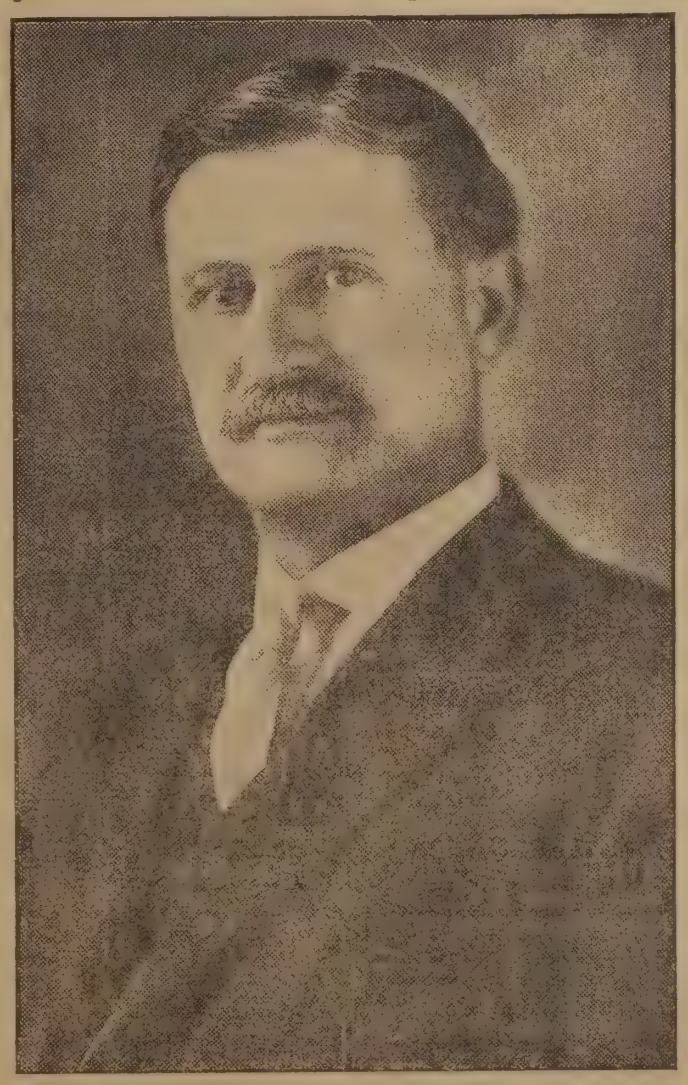
THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

VOL. XL. NO. 48. NOVEMBER 29, 1917. ** WEEKLY.

Spillman Is Coming

To Be Dean of Agriculture at W. S. C.



Official announcement has been made by President Ernest O. Holland of the Washington State college at Pullman that W. J. Spillman, now head of the United States department of farm management at Washington, D. C., has accepted the position of dean of the college of agriculture of the state college. This is one of the most important announcements from the standpoint of the farming interests of the state of Washington that has been made in recent years, as Professor Spillman is recognized as one of the foremost promoters of agriculture in America. The government has assigned him the task of making a nationwide survey of the farm labor situation, which task he must complete before assuming his new duties in this state. It may be April before he reaches Pullman.

Last June the regents of the state college reorganized the departments of that institution so that the college of agriculture now includes the agricultural experiment station, the department of agriculture, the department of horticulture and the department of forestry.

Professor Spillman will have general direction of all these departments. Since the resignation last spring of Ira D. Cardiff as director of the college experiment station, Professor George Severance has been serving in the double capacity of acting director of the experiment station and acting head of entire college of agriculture.

It is of special interest to note that Professor Spillman was formerly a member of the state college faculty, having been one of the chief organizers of the department of agriculture with President E. A. Bryan in the early days of the college. He is thoroughly familiar with Washington farm conditions

Continued on page five.

—Harris & Ewing, Washington, D. C.

Above is shown Professor W. J. Spillman, whose acceptance of the deanship of the college of agriculture of the State College of Washington has been announced.

Farm Loans Popular

Farmers Ask Hundred Ninety Millions

All doubt regarding the popularity of the federal farm loan system is now swept away by the record. Up to November 1 the 12 farm loan banks had received applications for loans aggregating the stupendous total of $193,250,945.

This represents the applications only of the 3000 organized farm loan associations, of which about 1500 have actually been chartered, and the remaining 1500 yet awaiting the decision of the farm loan board on their applications for charters.

In addition to the 3000 associations now organized, the federal land banks estimate that there are approximately 2000 other farm loan associations being organized in the United States.

Up to November 1 the 12 federal land banks had paid over to farmers in 5 per cent loans a total of $21,040,138. One-third of that total was paid out in October. In the same month the 12 banks received applications for loans amounting to $27,416,463, and approved loans amounting to $20,119,240. Evidently it will be some time before the banks will catch up with the volume of business rolling in upon them.

A report issued by the federal farm loan board indicates that up to November 1 farm loan bonds to the amount of $21,500,000 had been disposed of to investors of the United States. Of this amount $18,850,000 of bonds were distributed through bond houses and $2,650,000 were sold direct by the 12 federal land banks to investors.

These bonds bear 4 1-2 per cent interest and are entirely tax free. They are sold at 101 1-8 and are secured by the first mortgages taken in exchange for loans made to the farmers by the 12 federal land banks and they

"Hard Work and Little Sporting"

Farmers Are "Hooverizing" by Hard Work and Sacrifice of Much That Is Often Considered to Be Necessary in City Circles.

RITZVILLE, Adams County, Wash., Nov. 14.—There is but little work and no seeding done on account of the continued dry weather. No crops damaged by the cold weather. In my estimation we are all Hooverizing by hard work and little sporting. Hogs are very scarce, and fabulous prices are being paid for stock hogs. We feed them wheat, as corn is fully as expensive. Everybody is short on feed for stock and we hope that the winter will be mild. Nothing new is going on in this locality.

JACOB HARDER.

More Than Hoover Asks.

RAINIER, Thurston County, Wash., Nov. 10.—October was a fine month for farm work with scarcely any rain. More rain would have been better for fall seeding and pasture. November opened up with warm rains. There is some potato digging to be done yet. Potatoes are good in quality and size, but not as heavy a yield as last year. Grain sown about October 1 is looking well. It has been found that winter sown vetch and wheat make a good crop the next season. I think, in spite of the late, fine fall that a good many farmers find themselves behind with their work, because of having to do the work themselves, as labor was so high. Lumber mills take the best help at high wages. The farmers and people in general are Hooverizing somewhat and to a greater extent than asked by Mr. Hoover. We do well if we get meat two days a week, with bacon at 45 to 50 cents a pound, and are advised to eat fish, which is mighty scarce here. Peanut butter is a good substitute for high-priced butter and helps out on the meat question. Hogs are a scarce article. About 150 farmers of Thurston county have organized a cooperative association for the purpose of selling milk and farm products. I notice the farmers are putting up good wood piles for winter. L. F. DAVIS.

No Hay; Sell Cows.

MT. VERNON, Skagit Couty, Wash., Nov. 10.—Weather conditions in the Coast country have been well near ideal for fall work, potato digging especially. It has been a little too dry for fall sown crops such as wheat and rye. Little hay has been fed up to the present and feed conditions have been good. Feeds are high but most of the farmers have most if not all of their hay for the winter. Those who did not have hay have sold their cows. Cows sell high this fall. From $150 to $200 is not uncommon, while from $100 to $150 might be considered an average price for good cows. Farm labor has been scarce, yet there has been no very serious shortage. We see women replacing men in some clerical positions but otherwise we see few women doing strictly men's work.

C. S. PHILLIPS.

Some Rye Is Seeded.

OTHELLO, Adams County, Wash., Nov. 12.—Fall work in this part of the Big Bend usually consists principally of seeding grain, and as this is another year of no rain there has been no seeding; only a few isolated cases of small acreage of rye. The writer has 120 acres seeded to rye, the largest of any in this vicinity. A good deal of building is being done, especially on farms. The hog crop is down very low. The farmers are using mill feed to put through what hogs there are. There is a movement on foot to gravel seven miles of road east of here. If this is completed it will be a great step in the right way to help transportation. There does not seem to be any special effort made by the women and young folks to relieve the labor shortage. We have not experienced any grievance in that line to speak of. If another contingent of soldiers is taken from this county we will notice a labor shortage by another year, and then some of the girls will have to don the coveralls and help in the fields. The ladies of Othello are doing much work for the Red Cross. I often wonder why the girls don't take deeper interest in this great work. The girls of the west have not as yet awakened to a sense of their duty like those of the middle and eastern states.

A. O. LEE.

Reservation Is Prosperous.

TOPPENISH, Yakima County, Wash., Nov. 11.—Potato digging is more than half done, the yield is not as heavy this year as last, but the acreage is heavier. While the general yield is not up to the average, there are a few fields that have made the heaviest yields in the history of the reservation. There was some loss from freezing after being dug, but in general the weather has been fine. It has been necessary to pit most of the crops, as cars could not be had and storage was not available. The demand is good if cars could be secured, but there is not sufficient available cars to establish a market. Apples are not quite all picked and of those that are picked many are not yet graded and packed. The same trouble in getting cars for apples has been experienced as for spuds. There is very little hay moving. In fact, it seems an impossibility to get cars for any kind of shipment. Much difficulty is had in getting in fuel and other articles of merchandise. There have been a larger number than usual of public sales of live stock and implements this fall. Many dairy herds have been sold. But they have all been bought by local men, so that practically no cows have left the community. There has been a strong tendency to weed out the poorer cows. Hogs have been in good demand, but horses have attracted very few bidders. The corn crop, while very late, is well matured, owing to the late continued mild weather. The yield is better than an average and the quality is good. Perhaps 75 per cent of the sugar beets are harvested and the yield is good. The yield on the reservation is about four tons heavier than anywhere else in the valley and the growers are getting good returns. The later apples are of a good quality and are much freer from worms than the earlier varieties. The establishment of a large cannery in the valley has stimulated the planting of cling peaches, cherries, apricots and other soft fruits. The cannery is offering 15-year contracts on many soft fruits. The extraordinary uniform profits on prunes for the last seven years has induced many to plant prunes, mostly Italian and Tragedy. In a good many instances they are pulling out undesirable varieties of apples and replacing them with prunes, cherries or apricots. The returns from bees were the best this year in the history of the valley. The honey production was good and the prices were the best ever realized in the west. There has been considerable immigration to the Yakima valley this summer, coming mostly from Montana, Wyoming and California and from the Sound country. Every house in every town and village is occupied and there is demand for more. There has been employment for all at a good price. In most instances ordinary laborers have been paid $3 for both men and women. Potato pickers have earned from $4 to $8 per day; fruit packers about the same. Fruit pickers, where doing piece work, earned about $4; by the day they were paid $3. Beet toppers were able to earn from $4 to $5, while the demand for teams for hauling is good. The stress of work will be over in three weeks and the total loss of crops will be light if reasonable care is taken to protect them from frost. The merchants have had a profitable fall and summer and are expecting a good winter trade. In spite of the extreme high prices of hay and silage there is a large number of cattle and sheep being fattened in the valley. The number of hogs has decreased a small per cent and a great number of poultry raisers have entirely quit the business, being driven out by the high prices of feed. The slogan, "raise poultry and help feed the army," has no meaning when it takes twice the value of wheat or corn to raise it that it is worth. Many lovers of corn bread who would gladly have many wheatless days wonder why corn meal is much higher than flour when corn is much cheaper and the cost of manufacture is only about half what it is for flour. Corn meal as sold here costs the consumer $7.30 per hundred while flour costs only $6. If Mr. Hoover will stop that leak he can save millions of pounds of flour for the soldiers and allies.

C. A. WYCKOFF.

No Rain Since May.

BICKLETON, Klickitat County, Wash., Nov. 2.—The long dry spell still continues. We have had no rain since May. Conditions are unfavorable for fall grain. Part of the farmers are seeding in the dust, others are waiting for a rain. We have had several frosts but as most crops are taken care of no damage resulted. The farmers are not very well satisfied with conditions this year. It is almost impossible to sell wheat at our local shipping points; the warehouse men are lending the farmer $1.50 per bushel on his wheat and charging him 6 per cent interest on his own money until they can get a chance to ship it to Portland and get the price and test down there. This makes it very disagreeable for the farmers who want to turn their crop into money so they can settle their obligations. As the terminals are congested with unloaded cars of wheat, it is hard to tell how long the farmer will be paying the grain buyer's interest for letting him use a little of his own money. The farmers in general are very cautious about buying anything on time as the general opinion is that while the war lasts the farmers will not be able to make anything more than a living and expenses. As a consequence real estate is not changing hands, and land is being bought, only in a few cases, on a cash basis.

BERT F. FAULKNER.

Seed Is Plentiful.

KENNEWICK, Benton County, Wash., Nov. 7.—The weather conditions have been very favorable for the harvestng of crops. The grain was all harvested in first class condition and practically all fruit has been saved. Even with the shortage of labor almost nothing has gone to waste this year. The weather has not been favorable for fall seeding of grain, consequently most of the farmers are preparing for spring seeding. A very large acreage will be seeded. Probably the chief limiting factor will be labor to do the seeding and harvesting of next year's crop. The farmers generally are very optimistic over farming prospects for next year. Seed of most kinds is available in sufficient quantities. Securing seed potatoes of the right varieties is probably the most perplexing problem in connection with seed for next year's crops. Growers are just now harvesting the last of their apple crop and results are highly satisfactory, both in regard to yield and price.

LEE M. LAMPSON.

Trouble Selling Wheat.

CENTERVILLE, Klickitat County, Wash., Nov. 17.—The weather conditions have been very favorable for the harvesting of all fall crops but not favorable to germination of the sown grain, and there is quite an opinion going around that next year's prospect is very slim for a crop of fall sown grain. There is a great deal of dissatisfaction through this part of the country with regard mostly to the selling of our grain as the elevators will hardly take the grains for storage, so it makes it almost impossible to realize any money on the crop. Probably this will be remitted in time. The hog crop here will soon be at a finish as the crop is very short even with the price on the decline. It will be impossible to get and keep a stock of hogs on hand. This part of the country will go out of the hog business and into sheep raising to a great extent. The seed is in good stock for both fall sowing and spring sowing here.

C. A. LESTER.

Demand for Farm Land.

MEAD, Spokane County, Wash., Nov. 10.—There has been but little fall plowing done yet on account of the exceedingly dry condition of the soil. With the exception of a very few potatoes there has been no crop losses this fall by freezing, and no losses of any kind from wet. "Hooverizing" among the farmers seems to run largely to putting up extra quantities of fruits and vegetables. There will be less meat than ordinarily used by those who buy their meats, but little change among those who raise their own. There is, somewhat, more mill feed used for hogs and less wheat than usual. There being so few hogs in this district now the saving of wheat by feeding other feeds will be small. Farm lands in this vicinity seem to be growing in demand and a number of sales have been made lately at $60 to $150 an acre. GEORGE HINGSTON.

Women Work in the Fields.

PROSSER, Benton County, Wash., Oct. 31.—The school board closed school the last of September to relieve the labor shortage here and that gave us plenty of help for the fruit season. Most of the young people, as well as the women, put on overalls and went into the fields and orchards and made good. They earned from 25 cents to 35 cents per hour for picking and grading. School began again October 29 as most of the fruit is picked now. The packing houses will run from four to six weeks yet and in some of the packing houses they are using grading machinery which saves labor. Women are equal to, if not better, than men, as packers. The farmers exchanged work in haying. All of the women that are able to go in the fields and orchards work in this community.

Yakima Products

Figures on Potatoes and Corn

Erwin T. Marchetti, U. S. field agent for the bureau of crop estimates, has just issued his preliminary report on the crop outlook for the state of Washington for 1917.

Every county in the state produced potatoes, Yakima county having 11,260 acres, the largest acreage in the state, with Clarke having 4350 acres, the second largest in the state.

Figures on the corn acreage are given on 34 of the 39 counties, the largest yield is in Yakima county, 598,900 bushels. Thine Marchetti report of the acreage of potatoes by counties follows:

Adams, 1109 acres; Asotin, 185; Benton, 510; Chelan, 1236; Clallam, 673; Clarke, 4356; Columbia, 627; Cowlitz, 1647; Douglas, 2100; Ferry, 330; Franklin, 300; Garfield, 198; Grant, 639; Grays Harbor, 1300; Island, 1228; Jefferson, 231; King, 5167; Kitsap, 554; Kittitas, 1795; Klickitat, 1385; Lewis, 2455; Lincoln, 1821; Mason, 435; Okanogan, 1294; Pacific, 396.

Pend Oreille, 450; Pierce, 3960; San Juan, 317; Skagit, 1980; Skamania, 277; Snohomish, 2130; Spokane, 12,900; Stevens, 2050; Thurston, 1655; Wahkiakum, 110; Walla Walla, 1560; Whatcom, 2640; Whitman, 2640; Yakima, 11,260.

The following table shows Marchetti's estimate on the potato and corn crop of the state given in bushels:

	Corn.	Potatoes.
Adams	11,500	49,900
Asotin	16,900	17,500
Benton	168,000	71,400
Chelan	79,000	132,960
Clallam	.....	132,369
Clarke	6,000	410,940
Columbia	98,000	61,700
Cowlitz	2,000	196,940
Douglas	55,000	94,500
Ferry	5,500	23,100
Franklin	6,000	15,000
Garfield	38,000	19,800
Grant	13,500	41,740
Grays Harbor	.....	195,000
Island	.....	224,952
Jefferson	.....	43,890
King	.....	877,700
Kitsap	.....	77,560
Kittitas	9,500	296,730
Klickitat	8,500	110,840
Lewis	1,000	330,425
Lincoln	26,000	80,124
Mason	.....	60,900
Okanogan	89,000	118,850
Pacific	.....	71,280
Pend Oreille	2,500	36,000
Pierce	.....	694,000
San Juan	.....	47,000
Skagit	1,700	388,000
Skamania	.....	27,700
Snohomish	.....	390,000
Spokane	49,000	772,000
Stevens	58,500	164,000
Thurston	.....	260,000
Wahkiakum	.....	20,600
Walla Walla	91,000	274,300
Whatcom	.....	490,000
Whitman	85,000	401,000
Yakima	598,900	2,159,300
Totals	1,520,600	9,880,000

Marvelous Banyan Tree.

The giant banyan under which Alexander is said to have camped with 7000 men, now measures nearly 1000 feet across the head, contains about 3000 trunks and forms a dense canopy through which the sunshine never penetrates. Several other species also propagate in like manner.

Government Studies Milk

Federal Commissions Will Investigate Industry

Through commissions to be appointed by the United States food administration the federal government hopes to bring about a satisfactory settlement of the long-standing controversy between milk producers, distributors and consumers.

The following commissioners for the territory supplying the city of New York were appointed last week:

Joan Mitchell, New York state food commission; Dr. L. P. Brown, New York city board of health; Dr. W. H. [illegible] director New York agricultural experiment station; John T. Galvin, New York city board of water commissioners; Jacob H. Schiff, New York; Miss Mabel Kittredge, New York; Eugene Schoen, New York city; [illegible]es M. Dow, Jamestown, N. Y.; [illegible] Utica, N. Y.; C. S. Shed[illegible] federal food administrator for New York city.

[illegible]missions will soon be appointed for other districts. The Farmer has not yet advised whether the government will name a commission for the pacific northwest, but there can be little doubt that it would take that action if urged to do so by the producers and consumers.

These commissions are empowered to determine, after hearing, the reasonable prices of milk to be paid by the distributors to the producers and by the consumers to the distributors, such prices to be based upon the cost of production and distribution, with a reasonable profit added.

While they will have only advisory powers Mr. Hoover believes that the high character of their members, the fact that their findings will be disinterested and the patriotic appeal made by the war situation will bring about harmonious relations between the three parties in interest.

It is an encouraging beginning that the distributors and producers in the New York district have agreed that no increase in milk prices to consumers will be made while the commission is conducting the inquiry.

The New York commission hopes to report not later than January 1, 1918.

Should the Government Take Over the Meat Packing Industry and Commandeer Feedstuff?

[illegible] Pinchot, whose long and [illegible]nt fight for conservation of [illegible]l resources has endeared him [illegible]lions of people, has resigned [illegible] the national food administration [illegible]ganization. E. C. Lassater, [illegible] cattle grower, has also re[illegible]ey were serving with[illegible].
